PREFACE

The aim of *Current Biography Yearbook 2007*, like that of the preceding volumes in this series of annual dictionaries of contemporary biography, now in its seventh decade of publication, is to provide reference librarians, students, and researchers with objective, accurate, and well-documented biographical articles about living leaders in all fields of human accomplishment. Whenever feasible, obituary notices appear for persons whose biographies have been published in *Current Biography.*

Current Biography Yearbook 2007 carries on the policy of including new and updated biographical profiles that supersede earlier articles. Profiles have been made as accurate and objective as possible through careful researching of newspapers, magazines, the World Wide Web, authoritative reference books, and news releases of both government and private agencies. Immediately after they are published in the 11 monthly issues, articles are submitted to biographees to give them an opportunity to suggest additions and corrections in time for publication of the *Current Biography Yearbook.* To take account of major changes in the careers of biographees, articles are revised before they are included in the yearbook.

Classification by Profession–2007 and *2001–2007 Index* are at the end of this volume. *Current Biography Cumulated Index 1940–2005* cumulates and supersedes all previous indexes.

For their assistance in preparing *Current Biography Yearbook 2007*, I thank the staff of *Current Biography* and also the staffs of the company's Computer and Manufacturing departments.

Current Biography welcomes comments and suggestions. Please send your comments to: The Editor, *Current Biography*, The H. W. Wilson Company, 950 University Ave., Bronx, NY 10452; fax: 718-590-4566; E-mail: cthompson@hwwilson.com.

List of Biographies

Jessica Abel, *Comic-book writer and artist* 1

Joan Acocella, *Writer and critic* 3

David S. Addington, *Lawyer and vice-presidential aide* 7

Arthur Agatston, *Cardiologist and author of* The South Beach Diet 11

Doug Aitken, *Video and multimedia artist* 14

Fouad Ajami, *Professor of Middle East studies and political adviser* 18

Eric Alterman, *Journalist, historian, media critic, and educator* 23

Jonathan Ames, *Writer and performance artist* 25

Tom Anderson and Christopher DeWolfe, *Co-founders of MySpace.com* 28

Winston A. Anderson, *Cell biologist, cancer researcher, educator, and historian* 31

Susan Athey, *Economist and educator* 34

Kate Atkinson, *Writer* 37

James A. Baker 3d, *Co-chairman of the Iraq Study Group and former U.S. secretary of state* 40

Tyra Banks, *Model, actress, and television host* 47

Patricia Barber, *Jazz singer, songwriter, and pianist* 50

David Barsamian, *Founder, director, and host of the program* Alternative Radio 54

Bruce Bawer, *Writer and critic* 57

Kent Beck, *Computer programmer* 61

Tom Bergeron, *Television host* 65

Wolf Blitzer, *Anchor of the CNN program* The Situation Room 68

William Blum, *Writer and political dissident* 72

Cory Booker, *Mayor of Newark, New Jersey* 75

Andy Borowitz, *Comedy writer* 80

Troy Brown, *Football player with the New England Patriots* 83

Doyle Brunson, *Poker player and writer* 87

Ursula M. Burns, *President of the Xerox Corp.* 90

Steve Carell, *Comic actor* 92

Majora Carter, *Environmental activist and founder of Sustainable South Bronx* 95

Matthew Carter, *Typographer* 98

Cat Power, *Singer and songwriter* 101

Steve Chen, Chad Hurley, and Jawed Karim, *Co-founders of YouTube* 104

Kyung-Wha Chung, *Violinist* 108

Richard Cohen, Washington Post *columnist* 111
Mary Sue Coleman, *President of the University of Michigan* 115
Ronnie Coleman, *Bodybuilder* 118
Daniel Craig, *Actor* 121
Ryan Crocker, *U.S. ambassador to Iraq* 124
Daunte Culpepper, *Football player with the Oakland Raiders* 128
Robert Dallek, *Historian and biographer* 132
Antonio R. Damasio, *Neurobiologist, educator, and writer* 136
Evelyn Y. Davis, *Activist for shareholder rights* 139
The Decemberists, *Music group* 142
Kiran Desai, *Writer* 145
Linda Deutsch, *Associated Press trial reporter* 147
Charles Dodge, *Composer and educator* 151
Billy Donovan, *Head coach of the University of Florida men's basketball team* . . 153
Tony Dungy, *Head coach of the Indianapolis Colts football team* 157
Ed Dwight, *Sculptor* 162
Dale Earnhardt Jr., *Race-car driver* 165
Danny Elfman, *Musician and composer for film* 169
Keith Ellison, *U.S. representative from Minnesota* 174
Kerry A. Emanuel, *Meteorologist* 178
William J. Fallon, *Commander of the U.S. Central Command* 181
Drew Gilpin Faust, *President of Harvard University* 185
Adrian M. Fenty, *Mayor of Washington, D.C.* 188
America Ferrera, *Actress* 191
Robert M. Gates, *U.S. Secretary of Defense* 193
Susan George, *Social scientist, activist, and writer* 197
Marcelo Gomes, *Ballet dancer* 201
Michel Gondry, *Filmmaker* 204
Alison Gopnik, *Psychologist and writer* 207
Leonard P. Guarente, *Molecular geneticist* 211
Gary Gygax, *Designer of* Dungeons & Dragons *and other role-playing games* 214
Angela Hewitt, *Classical pianist* 218
Dave Hickey, *Art critic and educator* 221
Jack Higgins, *Editorial cartoonist* 225
Ryan Howard, *Baseball player with the Philadelphia Phillies* 228
Terrence Howard, *Actor* 232
Ben Howland, *Head coach of the UCLA men's basketball team* 235
Jennifer Hudson, *Singer and actress* 238

Charlie Hunter, *Jazz guitarist* 241
B. K. S. Iyengar, *Yogi* 245
Paul E. Jacobs, *Telecommunications executive* 248
Daymond John, *Fashion designer* 251
Avery Johnson, *Head coach of the Dallas Mavericks basketball team* 255
Sheila Crump Johnson, *Co-founder of Black Entertainment Television and co-owner of the Washington Mystics basketball team* 258
George L. Jones, *Chief executive officer of Borders Group Inc.* 261
Leila Josefowicz, *Violinist* 264
Miranda July, *Writer, filmmaker, musician, and performance artist* 267
Elena Kagan, *Dean of Harvard Law School* 269
Frederick W. Kagan, *Military historian and writer* 272
Dirk Kempthorne, *U.S Secretary of the Interior* 276
Ilya Kovalchuk, *Hockey player with the Atlanta Thrashers* 279
Fred Krupp, *President of Environmental Defense* 282
Alexander Kummant, *President and chief executive officer of Amtrak* 285
Jared Kushner, *Newspaper publisher and real-estate developer* 289
Ann Huntress Lamont, *Venture capitalist* 292
Robert J. Lang, *Physicist, engineer, and origami artist* 294
Cathy L. Lanier, *Chief of the Metropolitan Police Department of the District of Columbia* 297
Tom Lantos, *U.S. representative from California* 301
Jim Lanzone, *Chief executive officer of Ask.com* 304
Hubert Laws Jr., *Flutist* 307
John Legend, *Singer, songwriter, and pianist* 310
Ray Lewis, *Football player with the Baltimore Ravens* 313
Bernie Marcus, *Co-founder of Home Depot and philanthropist* 318
Matisyahu, *Reggae singer/songwriter* 321
Daisuke Matsuzaka, *Baseball player with the Boston Red Sox* 325
Joe Mauer, *Baseball player with the Minnesota Twins* 329
Donnie McClurkin, *Gospel singer and minister* 332
Mike McConnell, *U.S. director of national intelligence* 336
John McNeil, *Jazz trumpeter, writer, and educator* 340
Danny Meyer, *Restaurateur* 343
Jerry Mitchell, *Choreographer and director* 346
Elisa Monte, *Dancer and choreographer* 349
Gabriela Montero, *Classical pianist* 353
Tracy Morgan, *Actor and comedian* 356
Markos ("Kos") Moulitsas Zúniga, *Blogger, social activist, and writer* 358

Dan "the Automator" Nakamura, *Music producer* ... 362
Don Nelson, *Head coach of the Golden State Warriors basketball team* ... 366
Christina Norman, *President of MTV* ... 371
Grover Norquist, *Conservative activist* ... 373
Kassim Ouma, *Boxer* ... 378
Svante Pääbo, *Molecular biologist and paleogeneticist* ... 381
Deval Patrick, *Governor of Massachusetts* ... 384
Elizabeth Perkins, *Actress* ... 388
David H. Petraeus, *U.S. Army general and commander of multinational forces in Iraq* ... 391
Michael Pollan, *Nature and science writer* ... 396

Courtesy of Jessica Abel

Abel, Jessica

Nov. 15, 1969– Comic-book writer and artist

Address: c/o Fantagraphics Books, 7563 Lake City Way, N.E., Seattle, WA 98115

"I have nothing against the mainstream," the alternative-comics artist Jessica Abel said in an interview for the Web site SilverBulletComicBooks.com. "It just isn't inherently interesting to me." Abel's comic-book series *Artbabe* launched her to stardom in the world of alternative—or underground—comics, which take a literary approach to the medium, often addressing complex social issues as well as the minutiae of everyday life. Rather than formulaic story arcs featuring buxom super-heroines in revealing costumes, *Artbabe* focused on a realistic depiction of the trials and tribulations of young adults. *Artbabe*, which ran in serialized form from 1992 to 1999, was embraced by a new generation of comic-book readers, many of whom were adolescent and 20-something females. The success of *Artbabe* led to comics-journalism assignments for Abel, including a book co-written with the popular public-radio host Ira Glass of *This American Life*. Old and new fans welcomed her second major series, *La Perdida*, which ran from 2001 to 2005 in serialized form and appeared as a graphic novel in 2006. In addition to her work as an artist and writer, Abel teaches a course on drawing and writing comics at the School of Visual Arts in New York City. She has also taught and lectured at the Wexner Center for the Arts at the University of Ohio; the Institute of Contemporary Arts, London; Syracuse University; and Parsons School of Art.

Jessica C. Abel was born on November 15, 1969 and spent her childhood and adolescence in the Chicago, Illinois, area, primarily in the city of Evanston. As a child she read comic books and was particularly fond of a *Ms.* magazine publication from the early 1970s that collected some of the 1940s *Wonder Woman* comics by Charles Moulton and H. G. Peters. The publication included an introduction by the noted feminist Gloria Steinem and critical essays from other authors; Abel's interest, however, lay strictly with the stories and artwork of the comics themselves. She sometimes sneaked glances at her stepbrother's comic books, including *Daredevil* and *Electra*, which he kept in his room, and also developed an intense love for Saturday-morning TV cartoons. She made several illustrated books as a child, including one about a monster who ate her beloved gym teacher. When she entered early adolescence, Abel lost interest in comics for a time. Then, at 15, when she was working at a local hardware store, she began reading the comic books in the racks at the convenience store where she went for lunch. "I thought it was pretty rebellious and 'punk' to be a girl and yet reading comics . . . ," she recalled for her Web site, JessicaAbel.com. "However, I was still pretty lost in a comics store at that point; I didn't have much of a clue what I liked. I also didn't know anyone else who read comics, so didn't have anyone to talk to about it." At around that time, such "serious" comics as Art Spiegelman's *Maus* began to appear, with the result that "there was a huge buzz in the mainstream media about 'comics aren't just for kids anymore,'" as Abel recalled for her Web site. "Of course I got those books, and they kept me going deeper into comics."

At Evanston Township High School, Abel became the news editor of the school paper, the *Evanstonian*. That job led to her first attempt at comics-style illustration. She recalled for JessicaAbel.com, "It depicted me and my best friends as members of a hypothetical though extremely cool band, the Liliputians. We were doing something or other that involved being in a hole in the ground. I can't remember what." After graduating, Abel went on to Carleton College, in Northfield, Minnesota. As a freshman, she stated on her Web site, she encountered what was, "without a doubt, the most important influence on my comics, my conception of what comics are and can be, and my choice to become a cartoonist": *Love and Rockets*, by Jaime, Gilbert, and (occasionally) Mario Hernandez. That series "totally blew me away, and more importantly blew away all the limits I had known up to that point as to what could be done in comics." *Love and Rockets*, begun in 1981 and published by Fantagraphics Books, led the underground comics movement of the 1980s, providing an alternative to the traditional superhero tales offered by the mainstream publishers Marvel Comics and DC Comics; the series, which is still published, was considered highly unusual at first, as all of its main characters were female, while the authors were men. Abel told Neda Ulaby for National Public Radio's *All Things Considered* (March 31, 2002), "Both Jaime and Gilbert are incredibly sensitive to the way it feels to be female, and I still have no idea why that is, why they're able to do that."

Inspired by her rediscovered love for comics, Abel proposed that she create for her course in ancient Greek literature a comic in place of a traditional final paper. Her professor agreed, and Abel received an "A" for her comic-book version of Euripides' *Medea*, set in outer space. That work was Abel's first sequential-art comic. She transferred to the University of Chicago in her sophomore year; during that fall semester she noticed a flyer put up by a student-run comics club that was soliciting submissions of original comics to be published in an anthology. At the organizational meeting, she met a fellow student, Ivan Brunetti, then the writer of a comic strip in the *Chicago Maroon*, the University of Chicago's student newspaper. (Brunetti later went on to publish a wide array of work, including the critically acclaimed autobiographical comic-book series *Schizo*.) The first volume of the student anthology, *Breakdown*, was edited by Brunetti and included the first half of Abel's story "The Junkie." The story was based in part on erotic writing by Abel's best friend from Evanston Township High School. Abel recalled for her Web site, "Looking at it now, it's a bit embarrassing for both of us, but at the time, it felt really powerful." In her junior year Abel served as the editor of *Breakdown*. She graduated with a bachelor's degree in English, with honors, in 1991.

In 1992, on her own, Abel began publishing *Artbabe*, a comic-book series about young adults. Each cover of *Artbabe* featured a portrait of a bespectacled 20-something female artist who did not appear as a character in any of the stories. From the first issue, readers speculated that Abel, herself a bespectacled 20-something artist at the time, was the model for the character. Abel has repeatedly refuted the theory. She stated for JessicaAbel.com, "Artbabe is a fictional character who graces the front covers of my comic book series *Artbabe* . . . but so far, never in *Artbabe* itself. She is a painter. She is based on a real person I once knew. . . . That said, even my closest friends insist that I am Artbabe, even though I look nothing like her. . . . They're very adamant about it. But, I mean, a lot of people wear glasses, for god's sake!"

Abel won a contest to meet Peter Bagge, an artist with an enormous following in the alternative-comics community. Bagge, the author of the cult-hit comic-book series *Hate*, arranged to meet Abel at a comic-book convention in Chicago. Abel brought 50 copies of *Artbabe* #1 with her and showed them to Bagge and his editor, Gary Groth of Fantagraphics Books. While Groth was not particularly impressed, Bagge wrote favorably about the comic book in *Hate* #10. That publicity, combined with word-of-mouth advertising, allowed Abel to continue self-publishing *Artbabe* with her earnings from orders and from her day job in the administration department at the School of the Art Institute of Chicago. As *Artbabe* grew in popularity, Abel became something of an icon in the latest wave of the alternative-comics movement, with her books selling in independent bookstores and in some comic-book stores. As Joy Press observed for the *Village Voice* (March 21, 2006), "Influenced by the likes of *Love and Rockets* and dominated by clever glam-rock chicks wrangling with angsty romantic entanglements or hanging out with girlfriends in grungy bars, *Artbabe* became a hot underground comic at a moment when few other women were drawing them."

In 1996 Abel began drawing the comic strip *Chicagophile* for the *University of Chicago Magazine*, the alumni publication of her alma mater. Later that year she won a grant from the Xeric Foundation, a nonprofit organization founded by Peter Laird, co-creator of the popular comic-book series *Teenage Mutant Ninja Turtles*. Abel used the grant to put out the first full-sized, professionally printed issue of *Artbabe*. That issue attracted the attention of Groth, who signed Abel to publish *Artbabe* with Fantagraphics.

In 1997 Abel won the prestigious Harvey Award for Best New Talent in Comics, named for the cartoonist Harvey Kurtzman, the founding editor of the comic book *Mad*. That year Abel also won the 1997 Lulu Award for Best New Talent, whose name comes from *Little Lulu*, the 1930s comic-strip character created by Marjorie Henderson Buell; Lulu Award winners are chosen by members of the Friends of Lulu, a nonprofit organization that works to involve more women in the male-dominated comics industry.

In 1998 Abel moved to Mexico with her boyfriend, the cartoonist Matt Madden. While there, she decided to end the *Artbabe* series. She told Carla Garcia for the Web site OstrichInk.com (December 2003), "I felt like, I'm done with this. I've had these experiences [depicted in the *Artbabe* stories] or something like them in the past, and now I'm not living there and not doing these things, so why am I still writing about it? And it felt sort of weird, so I stopped at that point, and I figured that maybe some time I'll be inspired again to do stuff with sort of that milieu I was using in *Artbabe*, but it seems sort of unlikely because I'm not going to go backward in my life." While in Mexico she continued working on the comic strip *Chicagophile*.

During her two years in Mexico City, Abel reassessed her drawing style and set out to make distinct changes in the way that she created images. In an interview for the Web site of the PBS television series *POV* (2006), Abel told Rebecca Bengal, "Among other things, I realized that when you draw in such a tight, controlled style, you open yourself up to (in my case, my own) criticism that things aren't quite right. If [a] room is drawn so carefully, when a detail is wrong or missing, it's wrong or missing. The reader's imagination doesn't add the detail in. . . . Then, of course, there's the time issue. Those pages took me forever, and gave me major hand/arm pain. So when I was living in Mexico, I . . . plunged into a period of doing exercises and research to develop a new way to draw. The result was a style that implies more than it shows, and so, ironically, feels more 'true' to the scene I want to draw than a style that is more specific. It seems to me that the reader's imagination is able to fill in the gaps more effectively than I ever could."

In 1999 Abel was contacted by Ira Glass, the host of the popular Public Radio International program *This American Life*. Glass had not seen much of Abel's work but had clipped and saved one of her stories years earlier; wanting to speak with her about a possible assignment, and discovering that she no longer lived in Chicago, he found her telephone number in Mexico and called her with his offer. The result was *Radio: An Illustrated Guide*, a 32-page "inside" look at radio. Illustrated by Abel, and co-written by Abel and Glass, the book was used as a premium for *This American Life*'s winter 2000 fund-raising drive. Abel told Greg Stump for *Comics Journal* #270 (August 2005) about the work, "That was a good and satisfying book, but it took me three or four months of back-breaking work to put it together. Not that I wouldn't do it again for the right piece, but it would have to fall in my lap. I'm not looking for it."

In 2000 Madden and Abel moved back to the U.S. They were married that July and moved to Brooklyn, New York, later in the year. Also in 2000 Fantagraphics Books published *Mirror, Window*, a volume of *Artbabe* stories. Eric Searleman wrote for the *Arizona Republic* (December 7, 2000), "Whether she's working in fiction or nonfiction, Abel is struggling to make sense of the cold, uncaring universe. Her best story brings together two women who, despite being friends, seem to live in different worlds. In another story, she playfully juggles the points of view of her two love-smitten protagonists. One thing is certain: The universe is a better place when Abel is at her drawing table." In 2001 Fantagraphics Books brought out *Soundtrack*, a compilation of Abel's earlier work.

That same year Abel began teaching in the Cartooning Department at the School of Visual Arts in New York City; she told Joy Press in 2006 that women make up 30 to 40 percent of her students. "My age and above," Abel said, "I could count the active female cartoonists on one hand. But there are a *ton* of young women starting now." She told Stump, "I'm very proud to say that my students do not come out of my class looking like me, none of them have. They come out looking more like *themselves*. I think I can teach them a lot of stuff. I can't teach them to be artists; I can't teach them the central spark."

From 2001 to 2005 Fantagraphics published Abel's comic *La Perdida* in serialized form. *La Perdida* follows the adventures of an American woman, Carla, who moves to Mexico City on a journey of self-discovery. For that series Abel employed the new, more fluid style of drawing she had developed during her time in Mexico. In 2002 Abel won the Harvey Award for Best New Series for *La Perdida*. In 2006 *La Perdida* was published in a single volume by Pantheon.

Life Sucks, a graphic novel co-written by Abel and Gabriel Soria and illustrated by Martin Pleece, was slated for publication by First Second in early 2008. Abel's first prose novel for teens, *Carmina*, will be published by HarperCollins. Abel and her husband, Matt Madden, are writing a textbook about creating comics. The couple live in Brooklyn.

Acocella, Joan

Apr. 13, 1945– Writer; critic

Address: The New Yorker, *4 Times Sq., New York, NY 10036-6592*

Joan Acocella is best known as a dance critic, a label that belies the widely varied topics about which she has written. While covering dance for numerous publications, including, since 1998, the *New Yorker*, Acocella has also produced acclaimed works of biography and literary criticism as well as volumes on psychology and psychiatry. *Mark Morris* (1993), a biography of the dancer and choreographer, was followed in 1999 by *Creating Hysteria: Women and Multiple Personality Disorder*, in which Acocella scrutinized the trend among psychotherapists of arriving at diagnoses of multiple-personality disorder. *Willa Cather and the Politics of Criticism* (2000) represents Acocella's attempt to point out the timeless felicities of Cather's fiction while engaging those academics

Joyce Ravid, courtesy of Random House

Joan Acocella

who have alternately elevated and denigrated Cather as a feminist, rightist, or lesbian writer. For *Twenty-Eight Artists and Two Saints*, a volume published in early 2007, Acocella gathered many of the essays she had published in the *New Yorker* and the *New York Review of Books*. The collection's 31 pieces shed light on the lives and work of such comparatively obscure writers as Marguerite Yourcenar, Italo Svevo, Joseph Roth, and Stefan Zweig; provided portraits of geniuses in the field of dance, including Vaslav Nijinsky, Mikhail Baryshnikov, Suzanne Farrell, and George Balanchine; and sought to correct what Acocella regards as the mistaken views of biographers of such figures as the writer Primo Levi. Kathryn Harrison, writing for the *New York Times Book Review* (February 16, 2007), called Acocella's essays "highly readable" and added that Acocella is "knowledgeable without being a show-off, meticulous in her research and energetically conversational."

The writer was born Joan Ross on April 13, 1945 in San Francisco, California, to Florence (Hartzell) Ross and Arnold Marcus Ross. She grew up in nearby Oakland and was educated at the University of California at Berkeley, receiving her B.A. degree in English in 1966. In that year she married Nicholas Acocella (they were divorced in 1991), using his surname from then on in her professional capacity. In 1968 she and her husband moved to New York City; she continued her education at Rutgers University, in New Brunswick, New Jersey, studying comparative literature. (She received her Ph.D. degree in 1983.) In New York she was exposed to the choreographer George Balanchine's work for the New York City Ballet, which, as she told Alden Mudge for *BookPage* (February 2007, on-line), was "a transforming experience" for her. "I saw the works of Balanchine when he was healthy and when the company was simply wonderful, and I really lost my heart." She then made what she described to Mudge as her "swerve to dance," or, rather, dance writing, a field she entered largely self-taught. She lectured in literature only briefly, as a teaching assistant at Rutgers, before teaching dance history and dance criticism. Subsequently—in part because "I had a child, we needed money," as she told Mudge—Acocella turned to journalism. While teaching intermittently at the State University of New York at Purchase in the 1980s, she served as an editor at *Dance Magazine* from 1983 to 1985 and as a dance critic for *7 Days* from 1988 to 1990. She wrote for the New York *Daily News* for three years in the early 1990s and covered dance for the London *Financial Times* from 1993 to 1996. From there she moved to the *Wall Street Journal* in 1996 and to the *New Yorker* in 1998.

While writing chiefly about dance for those high-profile publications, Acocella devoted time to others of her eclectic interests, as well. Her first book, published in 1977, was *Abnormal Psychology: Current Perspectives*, co-written with James F. Calhoun and Leonard D. Goodstein. Acocella and Calhoun also collaborated on *The Psychology of Adjustment and Human Relationships* (1978). *Physical Anthropology and Archeology*, which she co-authored with Clifford J. Jolly and Fred Plog, appeared in 1979. In the mid-1980s Acocella—by then a recognized dance critic—collaborated with Lynn Ager Wallen to edit *The Spectrum of World Dance: Tradition, Transition, and Innovation: Selected Papers from the 1982 and 1983 CORD [Congress of Research in Dance] Conferences* (1987). In 1988 she contributed to *The Art of Enchantment: Diaghilev's Ballets Russes, 1909–1929*, compiled by Nancy Van Norman Baer. The practice of dance criticism was the topic of *Andre Levinson on Dance: Writings from Paris in the Twenties*, edited by Acocella and Lynn Garafola and published in 1991.

Acocella's first book-length solo venture as a dance writer was *Mark Morris*, a biography and appreciation of the noted choreographer, which appeared in 1993. The book won unanimous praise. Janice Berman declared in *Newsday* (December 5, 1993), "Acocella comes quite close to giving us a key to Morris' dances. She builds her theory on the time he spent as a young dancer with a folk-dance company called Koleda. It was like a '60s commune. The emphasis was on the community; individual differences didn't matter when the dancing was going on. . . . Acocella sees Morris' dances not as mere choreography but as the microcosm of an ideal, and when she says of Morris, 'It's wonderful to think what he may do,' readers will be hard put not to share her enthusiasm." The "mere fact that Mr. Morris could inspire a book as good as this is a credit to him," John Rockwell wrote for the *New York Times Book Review* (January 23, 1994).

Rockwell called *Mark Morris* "a deft blend of biography, dance history, backstage detail and critical analysis. . . . What is especially impressive in Ms. Acocella's book is how everything in it supports everything else; there is no waste. Biographical information contributes to analytical insight. Particular dances are discussed in themselves, but also in relation to larger themes in Mark Morris's work and times: his spirituality and simultaneous celebrations of the body; his preference for the love of community over heterosexual monogamy as idealized in the balletic pas de deux; his unusual involvement with text, narrative and the inner workings of music; and his shifting balance between irony and sincerity. The author maintains a tempered tone, a prevailing judicious adoration that only occasionally breaks into outright rapture." Margo Jefferson noted for the *New York Times* (January 5, 1994) that Acocella "navigates the life" of Morris "competently and the work terrifically."

The Diary of Vaslav Nijinsky (1999), edited and with an introduction by Acocella, offered a view into the mental deterioration of the great Russian dancer and choreographer. Nijinsky, world famous in the early part of the 20th century, partnered with Sergei Diaghilev—in life as well as in the creation of radical ballets—to bring Russian ballet to its greatest modernist flowering. Then, in 1919, married and with a small child, Nijinsky left the world of dance. He wrote continuously for nearly two months, chronicling his descent into what was diagnosed as schizophrenia, and was then hospitalized almost until the time of his death, in 1950. Nijinsky's wife, Romola, who published her husband's diary in 1936, had a vested interest in cutting and reshaping it to create a more favorable portrait of herself and to blur the truth about Nijinsky's sexuality. With her annotations and introduction to Kyril FitzLyon's translation of the unexpurgated diary, Acocella presented what she called, according to Janice Ross in the *Los Angeles Times Book Review* (March 14, 1999), "the only sustained, on-the-spot (not retrospective) written account, by a major artist, of the experience of entering psychosis." Ross concluded that "with Nijinsky's diary at last available in its entirety, in a richly literate and annotated translation, his final tortured effort to communicate his inner demons is complete. Acocella is a masterful midwife to this extraordinary tale."

In *Creating Hysteria: Women and Multiple Personality Disorder* (1999), Acocella used her background in psychology, acquired through writing textbooks in the field, and her critical acumen to scrutinize the newly popular diagnosis of multiple-personality disorder and the recovered-memory movement in psychotherapy—the latter a form of therapy whose practitioners seek to uncover blocked memories of childhood sexual abuse. In the 1980s the idea that childhood sexual abuse was so painful that it caused its victims to "dissociate" themselves from the memories, and therefore develop multiple personalities, became prevalent among some groups of therapists. *Creating Hysteria* is a strong polemic against those therapists, whose patients have often been women of lower socioeconomic status who are easily hypnotized. Those women "almost always meet criteria for other, better-established mental disorders. M.P.D. [multiple-personality disorder] provides a particular form for suffering, one that is more compelling, for both patient and doctor, than run-of-the mill depression or anxiety, " the psychiatrist and writer Peter Kramer noted in his assessment of *Creating Hysteria* for the *New York Times Book Review* (November 21, 1999). "Acocella traces that form to the 1974 best seller *Sybil*, an account of . . . early sexual abuse in the case of a housewife with 16 alters [alternative personalities]." The psychiatrist who treated "Sybil," rather than merely observing her personalities, seems to have pushed her into acting them out, as Kramer noted. "Acocella identifies psychiatrists who played a lead role in this fiasco," he added. "But her story's hero is also a psychiatrist . . . who wrote: 'Close the dissociation services and disperse the patients to general psychiatric units. Ignore the alters. . . . Pay attention to real present problems.'" Kramer concluded, "Acocella sees the furor as having lessened the pressure for substantive solutions to the problems of disadvantaged women and children. For her, the crucial target is not sexual abuse but poverty." The *Publishers Weekly* (August 9, 1999) reviewers, Jeff Zaleski and Paul Gediman, noted that "Acocella builds a highly convincing case against mental health professionals whom she portrays as exploiters who prompted the mass hysteria and witch-hunts that have resulted from recovered memory syndrome and the MPD diagnosis. . . . However, she proceeds to undercut her own argument by destroying all in her path: the child-protection movement, the credibility of women who say they were abused as children, the self-help (AA) movement, the feminist movement, insight-based psychotherapy, 'New-Age spirituality' and postmodern theory are just a few of the victims of her sweep."

Acocella has been viewed not only as a master critic of dance but also as a master of the analysis of criticism itself. She reinforced that view with the 94-page *Willa Cather and the Politics of Criticism* (2000), in which she attempted to restore the American writer of the title to a place of honor in the literary canon, by pointing out the beauty of her style and of her conscious restraint. The book, which grew from an article Acocella had published in 1995 in the *New Yorker*, is "both a brisk appreciation of Cather's artistic achievement and a stern, even cutting assault on modern Cather scholarship . . . ," according to Terry Castle, writing for the *London Review of Books* (December 14, 2000). "The original article was a fairly devastating attack on the various ways in which Cather—in Acocella's view the only American novelist besides [Henry] James to rival Tolstoy and Flaubert for beauty of style and moral depth—had been manhandled by contemporary academic critics." Discussing the original essay, Castle credited Acocella with having "cut through the [academics'] verbiage to offer a purified, if somewhat old-fashioned, model of literary appreciation: one distinguished, like Cather's fiction itself, by modesty, tact and unshakable common sense." Reviewing the expanded work, Castle called Acocella a "marvelous, canny writer" but faulted her for going too far in attacking scholars who had embraced or disdained Cather for extraliterary and perhaps misguided reasons—from those who accused her of being oblivious to social forces to those seeking to "out" her as a lesbian. "Acocella swells with righteous anger at those theory-mad pigeonholers . . . ," Terry Teachout wrote in an assessment of the book for the *National Review* (March 20, 2000). "Out of that anger, she has made this eloquent, wholly admirable book."

Acocella collected essays originally published in the *New Yorker* and the *New York Review of Books* for her volume *Twenty-Eight Artists and Two Saints* (2007). The 31 pieces in the book include essays on nine figures from the world of dance, among them Jerome Robbins, Martha Graham, Bob Fosse, and Twyla Tharp; 17 writers, including Italo Svevo, Stefan Zweig, Simone de Beauvoir, Primo Levi, Saul Bellow, and Susan Sontag; the biblical figure Mary Magdalene; and the 15th-century French freedom fighter Joan of Arc. (The two last-named figures are the saints of the title.) Acocella noted in her introduction to the book, as quoted by Joyce Carol Oates in the *New York Review of Books* (March 15, 2007, on-line), that a theme running through the essays is "difficulty, hardship"; the individuals under examination demonstrate that while "many people are brilliant," what "allows genius to flower" is—contrary to the beliefs of some—"not neurosis, but its opposite, 'ego strength,' meaning (among other things) ordinary, Sunday-school virtues such as tenacity and above all the ability to survive disappointment." "Acocella casts a sympathetic eye on the lives and misfortunes of her subjects, one by one, and tries to trace connections to their work," Julie Phillips commented for *Newsday* (February 4, 2007). "Basically, that's the project of biography, and in fact these essays, like all good biographies, aren't really held together by theories. The threads that run through them are Acocella's intelligence, intellectual curiosity, empathy and wonderful prose." Oates called the essays in the book "exemplary," adding, "Acocella's enthusiasm for certain of her subjects makes the reader want to seek out their work immediately, to read and to reread."

Despite the eclecticism reflected in her body of work, Acocella remains best known as a dance critic. In one piece representative of her work for the *New Yorker*, she wrote for the November 22, 1999 issue, "However New York City Ballet, founded by George Balanchine, is doing with his work (often, miserably), several other companies, not founded by him, are doing very well. Last month, Miami City Ballet brought to Newark's New Jersey Performing Arts Center three Balanchine ballets, including the evening-length *Jewels*, and suddenly we saw again the thing that N.Y.C.B. had in the past and doesn't have in the present—that shivering hyper-aliveness. You look at it, and your hair stands on end." In another, discussing the state of the Bolshoi Ballet, she wrote for the August 7, 2000 issue, "Of the three young men who led the Lincoln Center season, not one is a finished classical dancer. Sergei Filin, though handsome and stylish, needs to get a lot stronger. Andre Uvarov . . . doesn't plié when he lands. Nikolai Tsiskaridze, a big, grinning Georgian, has a lovely jump, but in smaller steps he takes a long time to figure out where his feet are supposed to be." For the March 18, 2002 issue, she wrote about Mark Morris, "Morris's concern with music has resulted in some choreographic curiosities. All his work hews close to its music, but every now and then he creates a piece so faithful to its score, and so devoid of any other reference, as to deserve the term 'music visualization' . . . . As far as I can tell, Morris's effort, in his music-visualization pieces, simply to reflect the score is not an evasion of emotion; it is an act of deference to the emotion contained in the music."

In 2002 Acocella participated in a panel discussion, called "Criticism and/or Journalism," which was sponsored by Columbia University's National Arts Journalism Program. During the discussion she expressed her wish that "when I'd started out" as a critic, "I hadn't been so mean and so arrogant. I was so insecure, and I really didn't know what the hell I was talking about. I'm from the one art that is not taught in the university. I was a literature student, and I was self-taught in dance. But it's one thing to read a lot of dance history, and another thing to go and see the Alvin Ailey [company] or the Merce Cunningham company for the first time and will yourself to pretend that you can write about this. You read others—of course, the reason I became a dance critic was I read dance critics who I admired. But in the beginning, I was really mean, because I was trying to have authority. . . . Sometimes I think I was more fun then. Wooh, the things I said! I was really a tough cookie."

Joan Acocella lives in New York. She has one son, Bartholomew Acocella.

Addington, David S.

Jan. 22, 1957– Lawyer; vice-presidential aide

Address: The White House, 1600 Pennsylvania Ave., N.W., Washington, DC 20500

In the years since the administration of George W. Bush began coming under harsh criticism for what are widely considered as abuses of executive power, a relatively little-known White House lawyer, David S. Addington, has emerged as the person many hold most responsible for promoting those abuses. A career government lawyer who has never run for elective office, Addington has worked closely with Vice President Richard B. "Dick" Cheney since the 1980s, when the latter was the ranking Republican on a House of Representatives select committee investigating the Iran-Contra scandal. In 2005 Addington became Cheney's chief of staff, succeeding I. Lewis "Scooter" Libby, who resigned after he was charged with perjury and obstruction of justice in a matter involving the leak of classified information—specifically, the identity of Valerie Plame, who was then working for the Central Intelligence Agency (CIA). Since the terrorist attacks of September 11, 2001, according to knowledgeable sources, Addington has been the dominant member of an insular group of top Bush administration officials overseeing the U.S.'s controversial counterterrorism measures, among them the indefinite detention of terror suspects who have no legal recourse, aggressive interrogation methods (including what the Geneva Conventions define as torture), and warrantless wiretapping of domestic phone calls. Addington's unusual influence may stem from his being an expert on national-security law in an administration that includes few other lawyers. He is also a dedicated advocate of heightened executive power, and together with Cheney he has sought to return greater authority to that branch of the government, in the belief that it has been increasingly marginalized since the Vietnam War era. Jane Harman, a ranking Democrat on the House Intelligence Committee, speaking of Cheney and Addington, told Jane Mayer for the *New Yorker* (July 3, 2006),"They're focused on restoring the Nixon Presidency. They've persuaded themselves that, following Nixon, things went all wrong."

Addington is also known for his belief that the executive branch has the right, if not the duty, to conduct much of its work in secrecy. He insists on maintaining his personal privacy as well. He does not give interviews and refuses to be photographed for news stories. Colleagues of his told Mayer that, as she wrote, he "keeps the door of his office locked at all times . . . because of the national-security documents in his files." "David can be less than civilized. He can be extremely unpleasant," an unnamed official told Chitra Ragavan for *U.S. News & World Report* (May 29, 2006), and a former high-ranking national security lawyer told Mayer, "He's a bully, pure and simple." "He's powerful because people know he speaks for the Vice-President, and because he's an extremely smart, creative, and aggressive public official," a former White House lawyer, Bradford Berenson, told Mayer. "Some engage in bureaucratic infighting using slaps. Some use knives. David falls into the latter category." Addington famously carries in one of his pockets a copy of the Constitution and sometimes cites it in arguments.

The youngest of the four children and the only son of Jerry Addington, an electrical engineer with the U.S. Army, and Eleanore Addington, a homemaker, David S. Addington was born on January 22, 1957 in Washington, D.C. "A traditional Catholic military family," as Mayer wrote, the Addingtons moved often; for a while they lived in Saudi Arabia. Jerry Addington retired from the military with the rank of brigadier general in 1970, when David was 13, and, after settling in a middle-class community in Albuquerque, New Mexico, he began teaching middle-school math. David Addington attended Sandia High School, in Albuquerque. His high-school friend Leonard Napolitano (whose sister, Janet, is currently the Democratic governor of Arizona) told Mayer, "I don't think that in high school David was a believer in the divine right of kings." He added, though, that Addington was "always conservative." Napolitano also said that he and Addington were "the brains, or nerds" in school and were fond of all-night poker sessions; unlike many of their peers, they were not out to "challenge authority." Irwin Hoffman, one of Addington's history teachers, told Mayer that Addington believed that the U.S. "should have stayed and won the Vietnam War, despite the fact that we were losing." He also said, "The boy seemed terribly, terribly bright. He wrote well, and he was very verbal, not at all reluctant to express his opinions. He was pleasant and quite handsome. He also had a very strong sarcastic streak. He was scornful of anyone who said anything that was naïve, or less than bright. His sneers were almost palpable." Many have speculated that Addington's personal crusade to increase the power of the president stems from his reaction to events that occurred around the time he graduated from high school, when a series of congressional hearings made public various legal transgressions of the Central Intelligence Agency (CIA) and the administration of President Richard Nixon. (The hearings followed events triggered by the Watergate scandal, which refers to break-ins by Republican operatives at the Democratic National Committee headquarters at the Watergate complex, a mixture of commercial and residential spaces in Washington, D.C.) At that time, Mayer wrote, "Congress passed a series of measures aimed at reinvigorating the system of checks and balances, including an expanded Freedom of Information Act and the Foreign Intelligence Surveillance Act, the law requiring judicial review before foreign suspects inside the country could be wiretapped." In addition, congressional oversight of the CIA was greatly increased, with the creation of the House and the Senate Intelligence Committees.

After Addington graduated from high school, in 1974, he briefly attended the U.S. Naval Academy, in Annapolis, Maryland. He quit before he completed his freshman year, because "the academy wasn't academically challenging enough for him," as Napolitano told Mayer. He next enrolled at Georgetown University, in Washington, D.C., where in 1978 he earned a B.S. degree summa cum laude from the Edmund A. Walsh School of Foreign Service. In 1981 he received a J.D. degree from the Duke University School of Law, in Durham, North Carolina. At around that time Addington married his first wife, Linda Werling, who was then a graduate student in pharmacology; the couple later divorced.

Addington began his professional life as an assistant general counsel at the CIA. He spent two years there, devoting his efforts to "curtailing the ability of Congress to interfere in intelligence gathering," as Mayer wrote. He then worked on Capitol Hill as counsel to the House Intelligence and Foreign Affairs Committees. In that position he met Cheney, who was then a congressman from Wyoming and a member of the Intelligence Committee. Cheney shared Addington's views about the erosion of executive power as a result of Watergate and the Vietnam War. As the ranking Republican staff member on the congressional committee investigating the Iran-Contra affair, Cheney commissioned a report on President Ronald Reagan's activities. (Members of the Reagan administration, defying the will of Congress, had secretly sold arms to Iran, an enemy of the U.S., and used the proceeds to support the Contras, an insurgent, anti-Communist guerrilla group who were fighting the leftist, Sandinista government in Nicaragua.) Addington helped write that document—the Minority Report (1987)—which Mayer described as "scholarly-sounding but politically outlandish." It expressed the view, held by Addington and Cheney, that the law prohibiting aid to the Nicaraguan contras was unconstitutional and improperly interfered with executive power. "The report . . . defended the legality of ignoring congressional intelligence oversight," Mayer wrote, "arguing that 'the President has the Constitutional and statutory authority to withhold notifying Congress of covert actions under rare conditions.'" Cheney has since cited the report as a reference for those who wish to understand his views regarding the importance of executive power. According to Jane Mayer, many consitutional experts question Addington's interpretation of the parts of the Constitution that deal with the powers of the president.

Starting in 1987 Addington served as a special assistant to President Reagan for about one year and as his deputy assistant for roughly another year. In 1989, after Reagan's successor in the White House, George H. W. Bush, named Cheney secretary of defense, Cheney hired Addington as his special assistant and later named him deputy secretary of defense. In 1992 Addington assumed the job of general counsel—chief lawyer—for the Defense Department, a position in which he was regarded by many as Cheney's "gatekeeper," a zealous defender of the secretary's interests. David Gribben, who at that time served as Cheney's chief of staff, told Ragavan that Addington "became the most powerful staffer in the Pentagon" (the Defense Department's headquarters), reviewing all the papers that passed to and from Cheney and the deputy defense secretary (the department's second-highest-ranking official), Donald J. Atwood. "Using a red felt-tipped pen, he covered his colleagues' memos with comments before returning them for rewrites," Mayer wrote; she quoted a former military official who had worked with him as saying, "His editing invariably made arguments sharper, smarter, and more firm in their defense of Cheney's executive powers." During that period Addington became embroiled in a power struggle with the judge advocates general (JAGs). (Each arm of the U.S. military—the army, air force, navy and marine corps, and coast guard—has a judge advocate general, who is both an officer and a lawyer, and a staff of officer/lawyers, who provide the secretary of the relevant military branch with legal advice in all matters not under the purview of the general counsel to that branch.) The power struggle began when Addington wrote a memo requiring each JAG to report to the general counsel of his service branch. A retired navy JAG, Rear Admiral Don Guter, told Ragavan that the JAGs opposed a requirement that "came under the rubric of civilian control of the military. It's centralization. It's control." The JAGs, aided by Congress, successfully fought the measure. Addington responded with a memo stipulating that the general counsel of each service, not the JAGs, had the authority to issue final legal opinions. When Addington joined the administration of George W. Bush, Guter warned his fellow JAGs that the conflict would flare up again. Indeed, Addington and his associates in the administration have found some of their harshest opposition among the JAGs, who have been "marginalized from the decision making on military tribunals and detainee treatment policies," as Ragavan wrote.

During the presidency of Bill Clinton, from 1993 to 2001, Addington worked as a lawyer for several firms and organizations, among them the American Trucking Associations, in all of which he held "high-level management positions," according to his biography on American President.org. In the mid-1990s he also headed a group set up to explore the possibility of Cheney's running for president. After the election of Bush and Cheney in 2000, Mayer wrote, "Addington helped oversee the transition, setting up the most powerful Vice-Presidency in America's history"—one in which, as Addington reportedly told Napolitano, the president and vice president would be symbolically united in a single "executive office." As Cheney's legal counsel, Mayer wrote, Addington arranged that "virtually all important documents relating to national-security matters were seen by the Vice-President's office." Addington still held considerable sway at the Defense Department, and he "helped his protégé William J. Haynes secure the position of general counsel" there, according to Mayer. A former White House lawyer told Mayer, "It's obvious that Addington runs the whole operation" at the Pentagon's legal office.

Nancy P. Dorn, who served Cheney as an assistant for legislative affairs before she became the deputy director of the Office of Management and Budget, in 2002, told Ragavan that Addington and Cheney are so close that they "hardly even have to communicate with words." In 2001 Cheney convened at the White House a series of secret meetings of an energy task force, attended by influential energy-industry lobbyists. The lobbyists participated in the drafting of energy policy, and Cheney "suggest[ed] a package of tax breaks and other incentives for their companies," as Charlie Savage wrote for the *Boston Globe* (November 26, 2006). The meetings led to an outcry from environmentalists, who were left out of them. Cheney and Addington rebuffed attempts by members of Congress and watchdog groups to obtain the names of the lobbyists and records of what was discussed at the meetings; in legal battles that reached as high as the U.S. Supreme Court, the refusal of Cheney and Addington to release any information was upheld. In letters to David Walker, the comptroller general of the Government Accountability Office, Congress's investigative arm, Addington asserted that it was important that neither Congress nor the courts "intrude into the heart of executive deliberations," to avoid suppressing the "candor" needed for "effective government," according to Ragavan.

Addington is best known for his role in the creation of the post–September 11 national-security measures that gave unprecedented control in a broad sphere to the executive branch. "In the months after the attacks," Ragavan wrote, "the White House made three crucial decisions: to keep Congress out of the loop on major policy decisions like the creation of military commissions, to interpret laws as narrowly as possible, and to confine decision making to a small, trusted circle." That circle included Addington; the current attorney general, Alberto Gonzales; Gonzales's deputies Timothy Flanigan and David Leitch; William Haynes; and John Yoo, a lawyer for the Justice Department's Office of Legal Counsel (OLC). "Traditionally, OLC staffers tend to be longtime career lawyers who ensure that the tenor of the legal opinions rendered is devoid of political overtones," Ragavan wrote. "After 9/11, however, OLC lawyers drafted a series of opinions that many career Justice Department attorneys viewed as having traduced the office's heritage of nuanced, almost scholarly, legal analysis. Addington, according to several Justice Department officials, helped Yoo shape some of the most controversial OLC memos."

"It seems clear," Mayer wrote, "that Addington was able to promote vast executive powers after September 11th in part because he and Cheney had been laying the political groundwork for years." After September 11, 2001 the Pentagon and Joint Chiefs of Staff suggested that authorization of military force in response to the terrorist attacks be limited to actions against the terrorist organization Al Qaeda and its offshoots, as well as Afghanistan's Taliban regime. Scott Horton, the chairman of the Committee on International Law of the Bar Association of the City of New York and an expert on the interrogation of terror suspects, told Ragavan that Addington and Cheney wanted the meaning of "authorization of military force" to be "defined more broadly, because it provided the trigger for this radical redefinition of presidential power." In response to the Pentagon and Joint Chiefs' suggestion, the OLC issued a memo asserting that Congress could not "place any limits on the president's determinations as to any terrorist threat, the amount of military force to be used in response, or the method, timing, and nature of the response." The statement, which, according to many observers, clearly showed Addington's influence, was written by Yoo, who would draft several such memos and would also make controversial statements affirming the legality of the torture of, and denial of rights to, "unlawful enemy combatants"—the broad label with which the administration identified its detainees.

The handling of war criminals became one of the most controversial of the policy issues that arose following September 11. In discussions about it held by government officials, Timothy Flanigan, one of Gonzales's deputies, represented the Addington/Cheney inner circle. After an interagency group within the administration, led by Pierre Prosper, the State Department's ambassador at large for war-crimes issues, examined various options for the treatment of those captured in battle, Ragavan wrote, Flanigan "wrested away the group's work product," which dealt with military tribunals—military courts designed to try members of enemy forces during wartime. With Addington's help, Ragavan continued, "Flanigan wrote a draft order for the White House, based on an OLC memo arguing that the president had the legal authority to authorize military commissions—period." Bush thus felt empowered to authorize the secretary of defense to create military commissions applying to all people characterized as "unlawful enemy combatants." According to Ragavan, "The Pentagon's entire corps of JAG officers was kept in the dark" about the creation of the commissions, as were Prosper, Condoleezza Rice, who was then the national security adviser, and Colin L. Powell, who was then secretary of state. Furthermore, Addington's circle rejected the idea, proposed by Prosper and others, that the creation of military commissions be subject to an independent review, possibly led by civilians, to allay "the distrust of European governments toward all things military," in Ragavan's words, and some of the public's uneasiness regarding the administration's controversial actions.

In early 2002 Flanigan wrote a memo, reportedly with Addington's input and signed by Gonzales, expressing the view that the war on terrorism represented a "new paradigm," as quoted by Ragavan, that "render[ed] obsolete" the Geneva Conventions' rules regarding the treatment of prisoners—including limits on the handling of interrogations and other legal protections the Conventions afforded prisoners. Addington and Yoo also produced a second memo, in August 2002, which the head of the OLC, Jay Bybee, signed. The memo interpreted a prior U.S. law that both prohibited torture and implemented the U.N. Convention Against Torture, deeming those precedents to be "unwarranted infringement on executive-branch power," according to Ragavan. Ragavan wrote that in the memo, "the three lawyers agreed that the president could override or ignore the statute, as needed, to protect national security. And they concluded that those who engaged in conduct that might violate the law might nevertheless have an appropriate legal defense based on 'self-defense' or 'necessity.'" That unprecedented defiance of the torture statute sparked consternation among Justice Department lawyers, many of whom were politically conservative. When Jack Goldsmith replaced Bybee as head of the OLC, in 2003, the memo that Bybee had signed was withdrawn. Instead, according to Ragavan, another OLC lawyer, Daniel Levin, drafted a more limited legal opinion "that scrapped whole sections of the Bybee memo." Levin distributed this memo more widely than Bybee had and revised it along lines suggested by Justice Department officials and State Department lawyers.

Goldsmith, determined to return the OLC to "its more traditional role" as a provider of nonpartisan legal advise, as a former Justice Department attorney told Ragavan, insisted that more consultation among agencies was necessary, and he ordered that all the "war on terror" memos written by Addington, Bybee, and others be reviewed. Goldsmith, along with the Justice Department lawyer Patrick Philbin (both of whom Ragavan described as "extremely conservative and pro-presidential power"), also expressed doubts about the legality of the National Security Agency's conducting of electronic surveillance inside the United States without taking the precautions mandated by the Foreign Intelligence Surveillance Act—another controversial activity that President Bush approved after the events of September 11. According to Ragavan, Addington and other conservative administration lawyers argued that Bush "had the authority to order the secret surveillance under his constitutional authority as commander in chief and by the authority granted to him by Congress's use-of-force resolution before the invasion of Afghanistan." But Goldsmith and Philbin, Ragavan wrote, "found Addington and Yoo's legal analysis and opinions to be sloppy and overreaching." Administration officials, Ragavan, wrote, reported to her that Addington, rejecting that finding, "excoriated Goldsmith over what he viewed as his betrayal."

Most recently, Addington has been identified as chiefly responsible for the Bush administration's frequent use of signing statements—statements added to bills passed by Congress and signed by the president, in which, as an alternative to vetoing the legislation (which would make it possible for Congress to override the vetoes), the president offers his own interpretation of what the laws stipulate. "The statements assert the president's right to ignore the laws because they conflict with his interpretation of the Constitution," Charlie Savage wrote for the *Boston Globe* (May 28, 2006). Signing statements were originally created to clarify a president's understanding of ambiguous laws, but in the Bush administration they have reportedly been used to circumvent, change, or abandon specific parts of laws. As of May 2006 Bush had appended more than 750 signing statements since he entered the White House, significantly more than all previous presidents combined, while he has not issued a single veto. In effect, he has used signing statements as line-item vetoes—that is, a veto of part of a piece of legislation rather than the whole piece, a step that the Supreme Court has ruled unconstitutional.

Addington lives with his second wife, Cynthia, and their three daughters in Arlington, Virginia. According to Jane Mayer, he is "a tall, bespectacled man . . . who has a thickening middle, a thatch of gray hair, and a trim gray beard, which gives him the look of a sea captain." He has been described as courteous and family-oriented and as having a fiery temper. Unlike most other high-ranking administration officials, who are chauffeured to work, he commutes to his job using the Metro train. According to Chitra Ragavan, he has often spent weekends "cheering at his daughters' soccer games."

Agatston, Arthur

Jan. 22, 1947– Cardiologist; writer; nutrition researcher

Address: c/o Author Mail, Rodale, 33 E. Minor St., Emmaus, PA 18098

"If a patient of mine has a heart attack, I ask myself: 'What have I done wrong?,'" the cardiologist, nutrition researcher, and writer Arthur Agatston said to John Tanasychuk for the Fort Lauderdale, Florida, *Sun-Sentinel* (April 11, 2004). For the past several years, the Miami Beach, Florida–based Agatston has been widely known as the "South Beach diet doctor," a moniker that refers to the eating regimen he created with the help of the dietitian and nutritionist Marie Almon, a colleague of his at Miami's Mount Sinai Medical Center, where he has headed the division of noninvasive cardiology for many years. The label also links him with his books, all of which contain the words "South Beach diet" in their titles. He wrote them, as he has often said, not to enable people to look good in bathing suits or drop a clothing size or two in a few weeks but to help them avoid getting heart disease or having strokes. The first of Agatston's books, *The South Beach Diet: The Delicious, Doctor-Designed, Foolproof Plan for Fast and Healthy Weight Loss* (2003), has sold more than nine million copies and has been translated into some three dozen languages. Among his other books are cookbooks (one of which landed on Amazon.com's top-five sellers before its publication date), a manual for maintaining a healthy heart, and a guide to "good" fats and "good" carbohydrates (carbs, as they are called colloquially), which rank low on the so-called glycemic index, a scale, devised by a Canadian scientist, that Agatston used in developing the South Beach diet. "It has been a great revelation to me that weight loss is not about low carbs or low fat, but the right carbs and the right fats . . . ," Agatston has said, as quoted by *Market Wire* (April 25, 2005). "I am seeing a growing consensus among nutrition experts about the importance of the right carbs like whole grains, fruits and vegetables in the diet, as well as including unsaturated fats like olive and canola oils—all consistent with The South Beach Diet." In 2004 Agatston used part of his earnings from *The South Beach Diet* to set up the Agatston Research Institute, in Miami, whose goal is to find ways to prevent obesity and heart disease. In 2005 he signed a contract with Kraft Foods, which launched a line of South Beach Diet prepared meals and other items. He also maintains the South Beach Diet Web site, which as of early 2007 had half a million subscribers; for a fee of $5.00 per week, they have access to recipes, meal-planning tools, and "private discussions" with on-line nutritionists.

Agatston's approach to healthful eating is not without critics. "What it comes down to," Marion Nestle, a professor of nutrition, food studies, and public health at New York University, said to Abby Goodnough for the *New York Times* (October 7, 2003), "is that this is a standard 1,200- to 1,400-

calorie-a-day diet, so of course people are going to lose weight. I do think there's something to the glycemic index, but I just don't think it's the be-all and end-all, and that it's the root of obesity." In a conversation with Alex Witchel for the *New York Times* (April 14, 2004), Nestle said that the South Beach diet does not address the fundamental issue of overeating. "I don't understand why it's gotten the attention it has," she said. "For the first two weeks it's a standard low-carbohydrate diet. It's very hard to argue with restricting bread, white rice, pasta, soft drinks, all great ideas when trying to lose weight. But the hype is [Agatston] never talks about quantity. It's calories that make a difference in losing weight or not." Robert Eckel, the president of the American Heart Association, told reporters for *People* (April 16, 2004) that Agatston is "respected in cardiology," but he voiced concern that Agatston was "playing into the carbohydrate message." "Obesity is calories—there is nothing magic about carbs versus fat," Eckel added. In response to such criticism, Agatston told Witchel, "When choosing the right fats and the right carbohydrates, in general, the quantity takes care of itself." Thus, he explained, weighing one's foods, as people following certain diets must do, is unnecessary. "Also," he said, "I'm not claiming any unique vision; I've learned a lot from other people. The diet is a consensus of current opinion." He repeated that point in his conversation with Tanasychuk, saying, "The country was ready for [the South Beach diet]. Because a lot of what we have in the book has been percolating through doctors and the public. . . . Everything in there was kind of obvious. If you've really been on top of nutrition, there's nothing in there that's really controversial. There's no substance to the criticism as far as I'm concerned."

Arthur Stephen Agatston was born on January 22, 1947 in New York City to Howard James Agatston and Adell (Paymer) Agatston. He has two sisters and one brother. His paternal grandfather, Sigmund Agatston, had the surname "Agatstein" when he immigrated to the U.S. from Poland; fearing anti-Semitic prejudice, he changed his name when he applied to medical school. He graduated from Columbia Presbyterian Medical School in 1903 and became an ophthalmologist; his innovative technique for early detection of eye disease became standard in the field. Arthur Agatston's father, Howard James Agatston, was also an ophthalmologist; he practiced in Roslyn, New York, on Long Island, where Agatston grew up. "I knew since I was in elementary school that I wanted to be a doctor," Agatston said to Marie Guma-Diaz for the *Miami (Florida) Herald* (December 10, 2005). "I watched my dad's work in the community, and learned to like the doctor-patient relationship. The love for the academic studies came later."

Agatston earned a B.A. degree from the University of Wisconsin at Madison in 1969 and an M.D. degree in 1973 from the New York University (NYU) School of Medicine, in New York City. He completed his internship and residency in internal medicine at the Montefiore Medical Center, which is affiliated with the Albert Einstein College of Medicine, in the New York City borough of the Bronx. From 1977 to 1979 he was a cardiology fellow at NYU Medical Center. The next year he joined the staff of the Mount Sinai Medical Center, in Miami, which is associated with the University of Miami School of Medicine. He has headed the center's division of noninvasive cardiology for many years.

In 1988, with his colleague Warren Janowitz, a radiologist, Agatston began working on a way to determine the amount of calcium present in people's coronary arteries. Excessive levels of calcium often lead to arteriosclerosis, a chronic disease that impairs blood circulation and places people at risk for heart attacks or strokes. Agatston and Janowitz were later members of a team that developed electron beam tomography (EBT), a fast, noninvasive technique for scanning every part of the body; with EBT, doctors can detect and quantify even small calcium deposits in the arteries that carry oxygenated blood to the heart. The so-called Agatston score is a measure of the amount of calcium in the coronary arteries. In a conversation with Soriya Daniels for the *Cleveland (Ohio) Jewish News* (February 13, 2004), Agatston said that the widespread adoption of EBT was his "most rewarding experience."

Beginning around the late 1980s, Agatston noticed that among his patients who suffered from hypertension and other heart-related ailments, a majority were gaining weight and were developing abnormal blood chemistries. He, too, had become a little fatter around his midsection, and in the U.S. as a whole, obesity was becoming increasingly common. Agatston thought that the problem might be related to the growing popularity of low-fat, high-carbohydrate diets, such as the one that the American Heart Association had been recommending. "If it was low-fat, [we thought] you could eat with impunity, and I did, as did the country in general," Agatston told an interviewer for *People* (April 26, 2004). Agatston feared that U.S. food companies, reacting to the advice of the American Heart Association and others, were selling too many items containing processed carbohydrates. Foods of that kind contain large amounts of flour, sugar, and high-fructose corn syrup. "Nobody in the history of man ever ate complex carbohydrates like we have," Agatston said to Abby Goodnough for the *New York Times* (October 7, 2003).

Agatston began investigating how the body processes carbohydrates. "My concern was not with my patients' appearances," he told Soriya Daniels. "I wanted to find a diet that would help prevent or reverse the myriad of heart and vascular problems that stem from obesity." During his research he learned about the glycemic index (GI), developed in the late 1970s by David J. A. Jenkins, a specialist in the nutritional sciences at the University of Toronto, Canada. The glycemic index ranks foods, on a scale of zero to 100, according to how much the quantity of glucose in an individual's blood increases within two to three hours of eating those foods. Foods with a high GI score include baked potatoes, white bread, and most pastas; those with low scores include foods rich in fiber, such as whole- and multi-grain bread, lean meat, and most vegetables. Foods with high scores (over 55) are digested more quickly than those with low scores, and people often feel hungry much sooner after eating the former than after consuming the latter. Using that information Agatston drew up what he called the "modified carbohydrate diet"—the precursor to the South Beach diet. He and a select group of his private patients who tested the diet began to lose weight.

In about 1996 Agatston, in collaboration with Marie Almon, the chief clinical dietitian at Mount Sinai, worked out a more detailed diet, one that did not need to be supplemented with exercise. They printed instructions for following the diet and distributed them to a greater number of people than had tested the diet earlier. In addition to weight, the cholesterol levels decreased in most of the people in the new sample. Agatston presented his findings at national meetings of the American College of Cardiology and the American Heart Association. Meanwhile, word of the diet had spread in the Miami area and reached the media, which dubbed it the South Beach diet, referring to an upscale section of Miami Beach. Several Miami eateries changed their menus to appeal to diners on the diet. What had "started as research . . . got the glitz added to it by the local media," Agatston commented to Howard Cohen for the *Miami Herald* (May 1, 2003).

In April 2003 the health-and-fitness publishing house Rodale, based in Emmaus, Pennsylvania, published Agatston's first book, *The South Beach Diet: The Delicious, Doctor-Designed, Foolproof Plan for Fast and Healthy Weight Loss*. The book remained on the *New York Times* best-seller list for 38 consecutive weeks. Among Agatston's other books are *The South Beach Diet Cookbook: More than 200 Delicious Recipes that Fit the Nation's Top Diet* (2004), which had a first-run printing of 1.5 million copies—a record for a cookbook; *The South Beach Diet Good Fats/Good Carbs Guide: The Complete and Easy Reference for All Your Favorite Foods* (2004), which was *Publishers Weekly*'s number-one best-seller for 18 weeks; *The South Beach Diet Dining Guide* (2005); and *The South Beach Heart Program: The 4-Step Plan that Can Save Your Life* (2006).

The South Beach diet is divided into three stages. In phase one, which lasts two weeks, no foods rich in carbohydrates—pasta, potatoes, fruit, bread, cereal, and rice—are permitted; alcoholic beverages are also off-limits. Meals consist of "normal-size portions of lean meat, fish, eggs, reduced-fat cheese, nonfat yogurt, nuts, and plenty of vegetables." According to Agatston, dieters can lose as many as 13 pounds in those first two weeks. (The Web site factsaboutfitness.com reported that in one study of the diet, the results of which were published in the *Archives of Internal Medicine*, the "average weight loss among the subjects was 13.6 pounds in 12 weeks, . . . not the first two weeks.") In phase two, dieters may eat certain fruits and carbohydrate-laden foods having low GI scores (whole-grain items, for example); they are advised to remain in that stage until they reach their desired weights. Alex Witchel characterized the final stage of the diet, meant to be adopted permanently, as "a more lenient version" of the second phase.

The South Beach diet has often been compared with another popular regimen, introduced in 1972 in the book *Dr. Atkins' Diet Revolution*, by Robert Atkins, who maintained that the harmful effects of saturated fats had been highly exaggerated and that high-carbohydrate diets were far more harmful than diets consisting mostly of proteins and fats. People who maintain the Atkins diet avoid refined sugar, milk, white rice, white potatoes, or white flour (found in white bread, most cakes, cookies, and pastries, and most pasta). They may eat virtually unlimited amounts of meat, poultry, fish, eggs, cheese, and cream, and, after the first two weeks on the diet, limited amounts of fruits, vegetables, and whole-grain foods. One major difference between the Atkins diet and the South Beach diet, according to experts, is that Atkins practitioners enter a metabolic state known as ketosis, in which the body, lacking sufficient carbohydrates, converts stores of fat into energy. Agatston has said that when he designed his diet, he consciously tried to avoid triggering ketosis in his patients, because, in hypertensives, it can cause serious adverse effects.

The popularity of *The South Beach Diet* led to Agatston's alliance with Kraft Foods, one of the world's largest food and beverage companies. In 2004 Kraft began placing the South Beach Diet trademark on some of its products. The next year the company introduced a line of South Beach Diet products, among them frozen entrees and snacks. "Things can be nutritious and come from a package," Agatston's collaborator Marie Almon said to Lisa Belkin for the *New York Times Magazine* (August 20, 2006). "It depends what's in the package, not the fact that there is a package." Some of Kraft's South Beach items came under attack because of their high levels of sodium; daily ingestion of sodium in greater than moderate amounts has been linked with hypertension. Speaking with Howard Cohen and Kathy Martin for the *Miami Herald* (May 5, 2005), Agatston acknowledged that he would not recommend some of the new Kraft products to patients suffering from heart disease or high blood pressure, but he defended the South Beach diet's overriding principle. "America is overfed . . . ," he said. "If you lose weight and reverse the metabolic syndrome, blood pressure comes down."

Thanks to his book, Agatston told Lisa Belkin, he gained "a bully pulpit and an opportunity to change the way Americans eat. One of the obvious places to start is with children. And that means schools." In July 2004 Agatston, as the head of the Agatston Research Institute, signed a contract with the Osceola County School District, in Florida, that allowed him to take control of the meals supplied by cafeterias in four elementary schools, all in Kissimmee, a city whose population is about 50,000. Starting in the fall of 2004, he began testing a program called HOPS—Healthier Options for Public Schoolchildren—in which more nutritious and fewer high-fat foods were on the schools' menus, and some items (among them white bread, turkey or pork with gravy, sweetened breakfast cereals, and Tater Tots—deep-fried, small cylinders of grated potatoes) are banned. Currently, the HOPS program reaches 9,000 students in the Miami-Dade County School District, and Agatston plans to introduce it to schools outside Florida. In terms of the effectiveness of the program, as measured by a decrease in the number of overweight children in the test schools, Agatston told Belkin that "true trends" will be discernible only after HOPS has been in place for five years. "If the data don't show what we want to see," he said, "we aren't going to throw up our hands and say, 'Let them eat what they want.' All that will mean is that we aren't doing this as well as we can, so we will have to find a way to do it better."

In addition to his duties at the University of Miami School of Medicine, where he serves as an associate professor of medicine, Agatston has maintained a private practice as a partner with South Florida Cardiology Associates, in Miami. He lectures on nutrition nationally and internationally, serves as a consultant for the Clinical Trials Committee of the National Institutes of Health, and co-directs the Symposium on Prevention of Cardiovascular Disease, which meets annually.

Agatston and his wife, Sari Agatston, a lawyer, married in 1983. Sari Agatston has assisted her husband with all his books, which is why he often uses the first-person plural when talking about them, and she handles the financial and other aspects of his businesses. The Agatstons are the parents of two sons, Adam and Evan, and live in Sunset Island, a section of Miami Beach. Interviewers have described Agatston as approachable, self-effacing, and friendly and as trim but not buff. In his leisure time he enjoys reading books about history and politics and playing golf.

Aitken, Doug

Mar. 18, 1968– Video and multimedia artist

Address: 303 Gallery, 525 W. 22d St., New York, NY 10011

In January 2007 *Sleepwalkers*, a work by Doug Aitken, a multimedia artist who specializes in video, debuted at the Museum of Modern Art (MoMA) in New York City, one of the world's most prestigious showcases for contemporary art. Comprising carefully synchronized short films that depict daily routines of five city dwellers, *Sleepwalkers* was projected onto the surfaces of the museum's shiny exterior walls, transforming them into palettes of color and light visible to pedestrians. With a "soundtrack" composed only of ambient noises in Midtown Manhattan, *Sleepwalkers* was, in Aitken's words, a "silent film for the 21st century," according to Sia Michel in *New York Magazine* (January 15, 2007), one that "vaults humans into an architectural scale," as Simon Houpt wrote for the Toronto *Globe and Mail* (January 15, 2007). "Our way of living today is expanded, fragmented, kaleidoscopic . . . ," Aitken said to Jori Finkel for the *New York Times* (January 7, 2007). "A film that takes place simultaneously with multiple projects in different combinations every time it runs is closer to our human experience than a traditional film. I don't think we really see life as a novella. I don't think we see life in ways that have clear beginnings and ends." "Cinema has reached stalemate," Aitken said to Clare Henry for the *Financial Times* (January 19, 2007). "Directors resort to more violence, more sex. I aim to open things up, take moving images out of the cinema into a nocturnal space. I want to make challenging work accessible to pedestrians, to the general public, yet transform people's experience and concept of the city." Aitken's fascination with fractured narrative, time, space, and memory informed his earlier works as

Roger Kisby/Getty Images

Doug Aitken with singer Cat Power (Chan Marshall) onstage at MoMA

well. After honing his skills as a music-video and commercial director, he produced polished video installations that used exterior and interior spaces, among them *Dawn* (1994), *Monsoon* (1995), and *Electric Earth* (1999), the last of which earned the Golden Lion International Prize at the Venice Biennale. (In some sources the names of his works are spelled without capitals.) "On some level, all of my work is related to what I see as certain new tendencies in the culture," Aitken told Jeffrey Kastner for the *New York Times* (October 6, 2002). "Accelerated nomadicisim, self-contained, decentralized communication—these things are at the core of this space we're living in, a terrain that is radically different from the past." "What I like about his work," Mary Spirito, the director of the 303 Gallery, Aitken's New York representative, told Jacob Bernstein for *WWD* (March 13, 2006), "is that he's able to take a very Hollywood or commercial language and apply it to ideas that have a home in the art world, that you would never see in a larger popular context." Connie Butler, a curator for the Museum of Contemporary Art in Los Angeles, told Amy Gerstler for *Los Angeles Magazine* (November 1, 2000) that Aitken "has taken on the challenge of trying to work in an area somewhere between popular video and art video. . . . He's trying to find a kind of in-between space." Aitken's work has been displayed in more than three dozen solo exhibitions, overseas (in Austria, the Czech Republic, Denmark, England, France, Germany, Italy, Japan, Spain, and Switzerland) as well as in many American cities; his work has also been included in nearly 100 group exhibitions. "Like everyone else, I'm just a satellite dish with roots," he told Kristine McKenna for *LA Weekly* (March 17, 2000). "The amount of information that surrounds us is absolutely staggering—and that's one of the things my work is about."

An only child, Doug Aitken was born on March 18, 1968 in Redondo Beach, California. His mother was a journalist, his father a lawyer. "Some of my earliest memories are of trying to find ways to steal notepads from one of my parents' offices so I could draw when they'd drag me to work with them," he told Amy Gerstler. He has traced his lack of interest in nostalgia or romanticism to his growing up in Southern California, "where there is virtually no sense of history, not like you have in Europe," as he told Simon Grant for the London *Evening Standard* (October 8, 1999). "When people talk about things that are historical they might be talking about a building that is four years old. We live in a present and this is what I look at in my work " Aitken attended Marymount College, a two-year school in Palos Verdes, California, in 1986–87, then enrolled in the illustration program at the renowned Art Center College of Design, in Pasadena, California. Less concerned with developing personal aesthetics than with "learning the language of mass communication," as he said to Kristine McKenna, Aitken quickly grew disillusioned with the limitations posed by drawing and illustration. Referring to "forms of communication and concepts and finding ways of stretching them apart," he told Jeffrey Kastner, "I found myself frustrated trying to bring these ideas to life. . . . I felt that I wasn't able to activate the mediums I was working in." He gravitated instead toward film and video, according to Kastner, as a means to document "stray moments of perpetual poetry." He graduated with a B.F.A. degree in 1991.

For his first work after college, entitled *Inflection* (1992), Aitken "mounted a surveillance camera inside a high-powered rocket, and launched it above the neighborhood where it was created," as he told McKenna. In his essay "Building Images" for the *Sleepwalkers* catalog (2007), Klaus Biesenbach, the chief curator of MoMA's Department of Media, wrote that the images recorded by the airborne camera "recall the perspective of an orbiting satellite, revealing patterns and topographic rhythms in the suburban structures." To produce *Superstar* (1993), Aitken climbed the letters of the famous "Hollywood" sign, on Mount Lee, in Los Angeles, photographing his movements with a camera mounted on his back. According to Biesenbach, *Superstar* reflected the "spatial and temporal pairing of the camera's moving and the action it records."

Over the next few years, Aitken filmed in a variety of exotic locations, experimenting at times with character studies. He also accepted a series of commercial art projects, most notably as music-video director for Fatboy Slim, a British hip-hop dance artist, and for the Barenaked Ladies, a Canadian alternative rock band, and as director of television advertisements for Budweiser and Converse. Commercial videography refined Aitken's production skills and visual grammar (also called film grammar, referring to such aspects of filmmaking as technique and style), evident in later video works that critics deemed "cinematic" and "visually seductive," according to Gerstler. Meanwhile, in the early 1990s Aitken had moved to New York City, where he began trying to stretch the bounds of traditional two-dimensional video exhibition by incorporating more elaborate, multi-screen showcases for "reimagined" spaces—a technique he dubbed "exploded cinema." "I wanted to find a way to expand the work into something that became more topographical," Aitken told Kastner, "that became a kind of psychological space, with less of a distance for the viewer. I didn't want that glass barrier of the single screen—that frame, like a painting. I wanted to see if it was possible to blow that open and create a space of pure content and communication." The notion of video and space—or, rather, video *in* space—was explored in *Dawn* (1994), Aitken's first solo show in New York, in which three suspended television monitors showed a montage of images extracted from commercial teenage "angst" films. "Paced like a movie trailer but read[ing] more like a riddle," as Jerry Saltz wrote for *Art in America* (April 1994), *Dawn* refashioned the Hollywood teen film genre into a subtle, mythical autobiography.

Aitken next turned to photographing the "entropy of landscapes . . . ," as he told Kristine McKenna, or documenting "the way landscape can transform into something else." He traveled to Jonestown, Guyana, in 1995, to film at the site of the mass suicide committed in 1978 by members of the People's Temple, a religious cult founded by Jim Jones. The resulting work, *Monsoon*, was, Aitken told McKenna, "extremely quiet, and I hope it conveys some sense of the stillness and silence of the place." The following year Aitken journeyed to Namibia, in southern Africa, to investigate a 75,000-square-mile diamond-mining region that had remained off-limits to the public since 1908. The fruit of Aitken's journey—*Diamond Sea* (1997)—is as "sensual and vivid as any IMAX film," in Gerstler's words. "Picturesque footage is intercut with shots of ghostly, decimated structures and junked equipment that the desert sands are reclaiming." Susanne Weaver, the assistant curator of contemporary art for the Dallas Museum of Art, in Texas, described the three-wall projection of *Diamond Sea* at that museum as "a spellbinding and breathtakingly beautiful journey into the true nature of reality and the mystery of perception at the end of the century," as quoted by Janet Kutner in the *Dallas Morning News* (June 20, 1999). Kutner herself was less impressed, calling Aitken's installation "disorienting in a frustrating sort of way. We never get a feel for where we are or why—merely a jumble of quick impressions that are all but impossible to piece together."

Aitken's breakthrough in the international art world came in 1999, with *Electric Earth*, an eight-screen video installation divided among four different rooms, which chronicled the nocturnal journey of a solitary man making his way across a deserted urban landscape, accompanied by the pulsating beats of a techno-music soundtrack. As the protagonist jerked, twitched, and danced past vending machines, laundromats, gas stations, and other familiar structures, intoning all the while that "I dance so fast that I become what's around me," the images blended into an ethereal, neon-lit fantasy. "Sometimes in my work a literal physical space will start to transform itself into psychological space. Places start to become fictions," Aitken told Gerstler. Elaborating on the protagonist's attempts to synchronize with his surroundings, Aitken said to Hugh Hart for the *Los Angeles Times* (March 26, 2006), "Are we moving faster, or are our surroundings just moving faster? Do we harmonize or are we left behind, or are we constantly between the two?" Aitken described the plight of the protagonist—and in turn that of the engaged viewer—in another way for Jeffrey Kastner: "The character finds himself caught between consciousness and subconsciousness—it's like he's the only person on earth, and things begin to open up, experience begins to expand, and perception becomes more omnidirectional." The precisely choreographed interplay of image, rhythm, light, and character in *Electric Earth* drew rave reviews at the 1999 Venice Biennale, a major international art showcase, where it captured the Golden Lion International Prize. Critics specifically praised Aitken for his ability to draw viewers into the cinematic space, so that they become "part of the experience," as the art curator Francesco Bonami told Gerstler. Assessing *Electric Earth* in "Building Images," Klaus Biesenbach wrote, "Typical pop-culture encounters tend to be with short narratives, such as music videos; *electric earth* translates and refines such encounters into an accomplished, precise form, connecting them to the cinematic and museum practices of contemplation, observation, and experience."

In the work *Glass Horizon* (2000), Aitken projected the image of a pair of eyes onto the exterior of the Vienna Secession Building, in Austria (associated with Gustav Klimpt and others who introduced what is known as Art Noveau, in the late 19th and early 20th centuries). The effect of eyes peering at Viennese cityscapes reflected Aitken's notion of art as "urban interruptive."

Aitken's next major piece, *New Ocean* (2001), was shown at the Serpentine Gallery in London, England. It presented images of water droplets, snowy landscapes, waterfalls, icebergs, and oceans photographed in places as far-flung as the Arctic and Argentina, interspersed with images of urban sojourners (in one instance, a female trapeze artist swinging against the backdrop of a dark metropolis) in a liquid apocalypse; the basement, roof, and other parts of the gallery building served as a "blank canvas" for the work. "We live in a temporal landscape where everything about our being is constantly in flux," Aitken said to Hugh Hart. "In that sense, it's a fraud that so many films and so much literature feels this necessity to create a conclusion, a beginning and an end. It denies a lot of the mystique of life." In his review of *New Ocean* for the London *Guardian* (October 16, 2001), Adrian Searle wrote that Aitken's imagery "implies a very modern, apocalyptic kind of drowning," while Richard Cork, writing for the London *Times* (October 17, 2001), argued that "Aitken offers us a salutary reminder, in the midst of our terrorist-haunted trauma, that we have ourselves imperilled the world with the spectre of unchecked solar meltdown and rising floods." By contrast, William Packer, a critic for the London *Financial Times* (October 16, 2006), wondered whether the semblance of narrative in *New Ocean* amounted to anything more than "a banal restatement of the old truth, of man's insignificance and puny aspiration in the face of the grand, implacable immensity of nature, and the passage of time."

In *New Skin* (2002) Aitken examined the notions of memory, sight, and perception in a multiscreen video that showed a Tokyo woman descending into blindness. The narrative of *New Skin*, as Aitken explained to Hugh Hart, "moved around constantly, almost like a lotus blossom expanding, so that the piece wouldn't dictate to the viewer when it began and finished. You could walk in at a different time and pick up the story in a different place." To create the illusion of circularity, Aitken employed four oval screens, placed in a petal-like formation, which showed the woman indoors and outside, struggling to retain the images fading from her vision while reciting "The more I see, the less I believe in the images I find." An electronic countdown, which periodically interrupted the visual narrative, served as the marker of inevitability for both the protagonist, facing total darkness, and the viewer, witnessing it from the outside. In another piece, *Interiors*, exhibited in the same year at the Henry Art Gallery, in Seattle, Washington, Aitken offered four visual narratives filmed in Mexico, Japan, Los Angeles, and a U.S. helicopter factory, respectively, with each projected in one of four square rooms arranged in the shape of a Greek cross. *Interiors* invited viewers to recombine the characters and settings (all of them urban) and form their own narratives. "It is about the idea of chaos and order, harmony and disharmony," Aitken noted for the Henry Art Gallery press kit, as quoted by Tracey Fugami in *Afterimage* (July 1, 2005). "It looks at how moments in time come together and then separate. It is a composition in the musical sense, like a piece of cacophonic music in which rare moments collide to create larger meanings. It is a piece about time." The effect, Klaus Biesenbach wrote, was "less about duration than it is about simultaneity, symmetry, lack of hierarchy, and the validity of any given scene at any given time."

Aitken has traced the genesis of *Sleepwalkers*, his first public art showcased in the U.S., to an evening walk he took through Midtown Manhattan in the early 2000s. "I had this kind of vision at that moment," he recalled to Simon Houpt, "and I was imagining: if only there was a way the skyscrapers could communicate with each other, if they could contain narratives, if they could somehow become flesh and blood, pulsing, breathing." "This is a city that resembles a human body in every way, from the sidewalks, Internet cables, and subway tunnels that are its veins, to the people and vehicles, fueled by gasoline, coffee, and alcohol, that surge through the veins like blood," he wrote for the *Sleepwalkers* catalog (2007). "The city's heart pulses to the rhythm of the street noise and flashing traffic lights, but it's the mind that drives everything. The city's visceral human nature—its passion, violence, and lust—is obsessed with time, as the city, like the body, constantly replenishes itself. The city lives nowhere more strongly than the present." Later, when Aitken saw the reflective façades of the newly renovated MoMA—a "brilliant, glowing light box," as he described it to Jori Finkel—he envisioned a "kind of hybrid space between architecture, film and sculpture . . . ," as he told Kevin West for *W* (January 1, 2007). "I think I've seen this project as a way to try to create a liquid architecture, by turning architecture into a waterfall of changing, shifting narratives." With support from MoMA and Creative Time, a New York–based public-arts organization, Aitken turned his ideas into reality.

Sleepwalkers debuted at MoMA on January 16, 2007 and was exhibited nightly from 5 p.m. to 10 p.m. throughout its highly publicized four-week run. Consisting of seven vast projections on the outer walls of the museum (some of them in its enclosed courtyard), it featured five archetypal city inhabitants—a business executive, a postal clerk, a bike messenger, an electrician, and an office worker—engaged in mundane activities. "I saw the characters almost as signifiers," Aitken explained to West, "as vehicles for this movement and flow of the city running through you." As each narrative ended, the characters reappeared on different façades. By using the visual and aural backdrop of Manhattan—adjacent structures and street sounds—*Sleepwalkers* transcended the conventions of two-dimensional theatrical viewing to achieve an "expanded cinema," as Peter Eleey, then with Creative Time (and now the visual-arts curator at the Walker Art Center), wrote in his essay "The Exploded Drive-In" for the *Sleepwalkers* catalog. Reviewing *Sleepwalkers* for the *New York Times* (January 18, 2007), Roberta Smith wrote, "It is an outstanding example of what might be called archivideo or videotecture," and she praised Aitken for "creating a postmodern Cubist symphony for the house [that is, MoMA] that Cubism built." (Cubism was a 20th-century art movement whose adherents rendered subjects from multiple viewpoints.) A. M. Homes, writing for *Vanity Fair* (December 2006), described *Sleepwalkers* as a "cinematic wonderland . . . a transcendent love letter where memory and narrative come together and then part" and credited Aitken with redefining "pop culture and high art with images that are accessible to all and sublime to those in the know." Those less enthusiastic or not at all impressed with *Sleepwalkers* included Ariella Budick, who wrote for *Newsday* (January 19, 2007) that Aitken's vision was "cliched, unsatisfying, and even false."

Aitken's other video installations include *Moment* (2005), which employed a hall of mirrors; *Eraser* (1998), a video work that showed his journey across the Caribbean island of Montserrat; and *Into the Sun* (1999), his exploration of the Bollywood film industry, in India. Aitken has written texts that accompany some of his video pieces, including *I Am a Bullet: Scenes from an Accelerating Culture* (2000, co-written by Dean Kuiypers), *Notes for New Religions, Notes for No Religions* (2001), and *Doug Aitken: A-Z Book (Fractals)* (2003). *Broken Screen: Expanding the Image, Breaking the Narrative: 26 Conversations with Doug Aitken* (2006) contains transcriptions of talks between Aitken and some of his contemporaries about nonlinear narratives in art.

"Aitken's a fascinating guy," Peter Eleey told Sia Michel. "He has a kind of sensitive, poetic attention to the world, and to be able to balance that with the [managerial] demands of the large-scale productions he does is a very rare gift." After residing in New York City for many years, Aitken moved to Venice, California, where he lives with Elizabeth Paige Smith, a furniture designer. "In my work, I like to create spaces that are in between departure and destination," he told Amy Gerstler. "I've always had wheels for feet. I'm gone about sixty percent of the time, but these days, I'm in L.A. more than anyplace else."

Ajami, Fouad

Sep. 19, 1945– Professor of Middle East studies; political adviser; journalist

Address: Johns Hopkins University, Nitze Bldg.
Rm. 200, 1740 Massachusetts Ave., N.W.,
Washington, DC 20036

In 1990, when Iraqi troops invaded Kuwait, Fouad Ajami was recognized among academics, government advisers and decision makers, and political pundits as an authority on the Middle East, in particular the Arab world, but he was little known among the general public. Then, in 1991, during the brief war in which a U.S.-led coalition ousted the Iraqis from their neighbor's land, media demand for Ajami's analyses and views grew manyfold; with his frequent appearances on *CBS News* and other television news broadcasts and current-events talk shows, untold numbers of lay viewers, too, came to perceive him as an expert on Middle East affairs. Since that time Ajami has established himself as an influential—and highly controversial—voice in the evolving discourse on the Middle East and its future. Ajami's convictions have changed since his teenage years, when he was attracted to pan-Arabism, which calls for cultural and political unity among Arab nations. A native of Lebanon, Ajami is a descendant of Iranians, or Persians, who are not considered Arabs; readily available sources do not reveal whether he regards himself as Arab, but he is usually identified as such—and by some detractors as a "self-hating" Arab. Ajami has lived in the U.S. since 1963, when he began his undergraduate education. In 1980,

Fouad Ajami

less than a decade after he earned his doctorate, he became the Majid Khadduri professor and director of Middle East Studies at the Johns Hopkins University's Paul H. Nitze School of Advanced International Studies (SAIS), in Washington, D.C. Ajami's support for the U.S.-led war in Iraq launched in 2003, and his optimistic predictions regarding its outcome, have earned him plaudits from American government officials including Secretary of State Condoleezza Rice, politically conservative or neoconservative commentators and politicians, and some more-neutral observers. Salim Mansur, for example, who teaches political science at the University of Western Ontario, in Canada, and is a board member of the Center for Islamic Pluralism, in Washington, D.C., described him in a column for the *Toronto (Canada) Sun* (online) as a "penetratingly astute observer of Arab politics." Among many in the Arab world, however, and many American observers, he is seen as harboring anti-Arab bias and pro-Israel sentiment. "His unpardonable sin is to write disparagingly of Arab culture, especially in its nationalist mode," Edward Mortimer wrote for the *Los Angeles Times* (February 22, 1998). In a review of Ajami's most recent book, Noah Feldman, a professor of law at New York University and a senior fellow at the Council on Foreign Relations (of which Ajami is a member), wrote for the *New York Times Book Review* (July 30, 2006, on-line), "Respected by politicians who disdain most academics, and excoriated by antiwar academics who detest the present [U.S.] government, Ajami richly deserves the attention of both camps."

A naturalized American citizen, Ajami has written many op-ed pieces and other essays for the *New Republic*, *U.S. News & World Report*, the *Wall Street Journal*, and other widely read periodicals. He is also the author of seven books, including *The Arab Predicament: Arab Political Thought and Practice Since 1967* (1981); *The Vanished Imam: Musa al Sadr and the Shia of Lebanon* (1986); *Beirut: City of Regrets* (1988); *The Dream Palace of the Arabs* (1998); and *The Foreigner's Gift: The Americans, the Arabs, and the Iraqis in Iraq* (2006). To understand the Middle East, he has said, according to the SAIS Web site, "you have to find the magic of the middle ground between that which passes under the name of policy analysis and that which passes under the name of cultural analysis—the study of history and civilization." In 1982 Ajami received a John D. and Catherine T. MacArthur Foundation Fellowship, often called the "genius grant." His other honors include a National Humanities Medal, awarded at a White House ceremony in 2006. Also in 2006 he won a Bradley Prize, from the Lynde and Harry Bradley Foundation, for his achievements in promoting "liberal democracy, equality and democratic capitalism."

Fouad Ajami was born on September 19, 1945 in Arnoun, a village in southern Lebanon, to parents of Iranian descent. (The name "Iran" means "land of the Aryans," which refers to a nomadic, Indo-European tribe who migrated to the Middle East from what is now southern Russia and Turkistan. Iranians speak Farsi, not Arabic.) Ajami's mother and father were tobacco farmers and devout followers of Shii Islam. (The second-largest sect among Muslims, Shiites are also called Shi'ites, Shias, and Shi'as. Although the U.S. media often refer to them as a monolithic bloc, they are not a single, cohesive group, and their religious beliefs vary.) With limited acreage, Ajami's parents found themselves unable to provide adequately for their growing family, and when Fouad was four, the family settled in a semi-rural Armenian community in Beirut, Lebanon's capital city and chief seaport. The Ajamis were eager to assimilate into the local culture, which was mostly Sunni Muslim and Maronite Christian. "We were strangers to Beirut's polish, to her missionary schools, to her Levantine [eastern Mediterranean] manners. We wanted to pass undetected into the modern world of Beirut, to partake of its ways," Ajami wrote in an op-ed piece for the *Washington Post* (September 11, 1988). In Beirut as a whole at that time, Christians lived apart from Sunni Muslims, and both lived apart from residents of the upscale enclave whose culture, in Ajami's words, was "Anglo-Saxon, self-consciously so." Outside his own community, Ajami discovered, "anything Persian, anything Shia, was anathema. . . . Speaking Persianized Arabic was a threat to something unresolved in my identity," as he once wrote, according to Adam Shatz, writing for the *Nation* (April 28, 2003). An unidentified friend of Ajami's told Shatz that in school, among his mostly Sunni classmates, "Fouad was taunted for being a Shiite, and for being short. That left him with a lasting sense of bitterness toward the Sunnis." During the 1950s Ajami identified with sympathizers of the pan-Arabist ideology championed by the president of Egypt, Gamal Abdel Nasser; a revered symbol of Arab pride and dignity, Nasser called for ethnic and religious unity among Muslim and Christian Arabs. (The concept became known as Nasserism.) At the same time Ajami harbored a secret fancy for American popular culture, as depicted in American-made films.

In 1963 Ajami immigrated to the United States and enrolled at Eastern Oregon College (now Eastern Oregon University), in LaGrande, where he earned a bachelor's degree. He later matriculated at the University of Washington at Seattle to pursue doctoral studies in political science and international relations. His dissertation was entitled "The Multinational Corporation: Expanding the Frontiers of World Politics." In 1973 Ajami joined the faculty of the Department of Politics and the Center of International Studies at Princeton University, in Princeton, New Jersey, where he won two postgraduate fellowships. His monograph *Global Populists: Third-World Nations and World-Order Crises* was published by Princeton's Center of International Studies in 1974. In that work Ajami provided an economic history of recent years, a description and analysis of economic conditions in developing nations, and a discussion of world politics beginning at the end of World War II. Another monograph, *Human Rights and World Order Politics* (1978), was published by the Institute for World Order (now the World Policy Institute, a part of the New School).

In academic circles during that period, Ajami became known as a progressive thinker and advocate for Palestinian self-determination. While he outspokenly opposed what was widely perceived as aggression (political and social as well as military) on the part of Israel, he criticized what he viewed as the shortcomings of the Arab nations. In "The Fate of Nonalignment," published in *Foreign Affairs* (Winter 1980/1981), Ajami challenged Third World societies to reexamine their dependence on the global superpowers—namely, the United States and what was then the Soviet Union—and forge renewed alliances with one another: "Overwhelmingly, the cultural and economic traffic from the Third World has been in the direction of Europe, or of America, or of the Soviet bloc," he wrote. "Third World societies need more sustained traffic among themselves. To do so they have to shed some of the self-contempt that the once-colonized bring into the world and project onto people more or less like themselves. There have to be alternative sources of aid to what the superpowers promise."

In 1980 Ajami moved to Washington, D.C., and took the position of Majid Khadduri professor and director of Middle East Studies at the Johns Hopkins University School of Advanced International Studies. Meanwhile, he was becoming more prominent as a writer, with articles in such periodicals as *Harper's*, *Foreign Policy*, the *Nation*, *Maclean's*, *U.S. News & World Report*, the *New Republic*, and the *New York Times Book Review*; he also appeared with increasing frequency on television as a commentator, most notably, beginning in 1985, for *CBS News*.

Ajami's book *The Arab Predicament: Arab Political Thought and Practice Since 1967* was published in 1981. In tracing the rise and collapse of various Arab ideological movements since the late 1960s, while expressing his own disillusionment over the demise of Nasserism, Ajami produced a poetic, elegiac account of "shattered dreams," as Jacquelyn S. Porth wrote in a review for *Defense & Foreign Affairs* (January/February 1983). In his book he warned Arabs of the dangers of their "desire to escape from politics, to trust it all to grand schemes—at times liberal schemes, for others, Marxist schemes, more recently, fundamentalist, restorationist schemes." Porth praised *The Arab Predicament* as "the most important work written by an Arab in this generation . . . a thoughtful book, thoroughly informed, and courageously presented." Arab critics in the West, however, accused Ajami of "papering over the injustices of imperialism and blaming the victim," as Adam Shatz wrote, and faulted him for favoring Israel. *The Arab Predicament* positioned Ajami as the rare Middle Eastern émigré intellectual who analyzed Middle Eastern politics with an outsider's eye. Many pro-Israel intellectuals hailed Ajami's conservative leanings and anticipated his becoming a formidable rival to the noted Columbia University scholar Edward W. Said, a prominent and controversial Arab-American advocate of the Palestinian cause.

Ajami recognized that his views straddled both sides of the ideological spectrum. On one hand, he opposed Israel's invasion of Lebanon in 1982, arguing in an op-ed piece for the *New York Times* (June 21, 1982) that it "came with a great delusion: that if you could pound men and women hard enough, if you could bring them to their knees, you could make peace with them." Ajami also criticized the U.S.'s involvement in the Lebanese conflict, telling a writer for United Press International (December 6, 1983), "What we've done is we've placed enough presence there to make the Syrians look heroic, to make us look like enemies of the Arab world and to implicate us in Israeli policies in the region. It's a long-time presence and it's an exposed presence." On the other hand, Ajami also criticized the Palestinian guerrillas in Lebanon and cast his sympathies with the Lebanese Shiite minority. He also distanced himself from Said, with whom he had once shared a litany of criticisms against American foreign-interventionist policies. The Lebanese journalist Hisham Milhem described to Shatz the fundamental difference between Ajami and Said by referring to a favorite writer of both—the Polish-born English-language novelist

Joseph Conrad (1857–1924): "Edward and Fouad are both crazy about Conrad, but they see in him very different things. Edward sees the critic of empire, especially in *Heart of Darkness*. Fouad, on the other hand, admires the Polish exile in Western Europe who made a conscious break with the old country."

In 1982 Ajami received a John D. and Catherine T. MacArthur Foundation Fellowship. The following year, by invitation, he became a member of the Council on Foreign Relations, a New York City–based foreign-policy think tank. His next book, *The Vanished Imam: Musa al Sadr and the Shia of Lebanon* (1986), is about an Iranian-born philosopher who became a religious and political leader of Lebanese Shiites. Al Sadr disappeared in 1978, after arriving in Libya to talk with officials in the government of the dictator Muammar Al-Qaddafi; his fate remains unknown. In the introduction to the book, Ajami explained why he had chosen to write about al Sadr: "Now and then a man, through no act of premeditation on his own part, serves as some kind of refractor. Standing at some remove from him, we see many lights converge on him; and then we see him illuminating the landscape around him." In an assessment of *The Vanished Imam* for the *New York Times Book Review* (May 25, 1986), the cultural anthropologist Mary Catherine Bateson commended Ajami for achieving "fairness without abandoning his own background as a source of insight, drawing the reader close to the passion and particularity of a most beautiful and battered country. . . . This work celebrates one of the paramount facts of the Middle East, the fact of pervasive ambiguity." Elizabeth R. Hayford, in a critique for *Library Journal* (July 1986), wrote, "What begins as a narrow study of a relatively minor figure becomes a sensitive and probing analysis of current Middle Eastern society." The *New York Times Book Review* listed *The Vanished Imam* among the 10 best books of 1986.

Ajami wrote the text that accompanies Eli Reed's photographs in *Beirut: City of Regrets* (1988). In what ended up as a sentimental ode to the city of his youth, Ajami conjured old Beirut, an exemplar of religious and ethnic diversity until 1975, when civil war broke out. During the next 15 years, fighting among sectarian Lebanese groups and military actions by Syrian and Israeli troops devastated the city. In the *Washington Post* (December 25, 1988), David Ignatius described Ajami's text as "probably the best brief explanation available of the Lebanese paradox—and of why the country continues to exert such a powerful fascination for those who at one time or another fell in love with the place. Ajami . . . has written an elegy for the Beirut of his memory, a charming, seductive but ultimately impossible city that is now as dead as ancient Phoenicia."

In 1991, in what became known as the Gulf War, the United States led a 20-nation coalition mandated by the United Nations to liberate Kuwait from an Iraqi takeover masterminded by the then-dictator Saddam Hussein. Many in the media turned to Ajami to elucidate American foreign-policy matters for the Arab world. "We want to make sure—we just want to liberate Kuwait," he said in one broadcast, as transcribed for *CBS News* (January 17, 1991, on-line). "We're not here to conquer Iraq. We're not here to annex Iraq. We're not here to impose our order of things on Iraq." According to Shatz, Ajami's academic reputation, as well as his media cachet, soared during the fighting and in the following months. Administrators at Harvard University, in Cambridge, Massachusetts, for example, courted Ajami, without success, for a departmental chairmanship; in June 1992 the members of the Council of Foreign Relations elected him to a five-year term on the group's board of directors. Augustus Richard Norton, a professor of anthropology and international relations at Boston University, told Shatz that Ajami, an immigrant to the United States from "a place no one had heard of" in Lebanon, had "reached the peak of power." "This was a true immigrant success story," Norton continued, "one of those moments that make an immigrant grateful for America. And I think it implanted [in him] a deep sense of patriotism [for the U.S.] that wasn't present before."

In 1993 Ajami sparked heated debates in foreign-policy circles with his fierce rebuttal to "The Clash of Civilizations," an essay by the Harvard University professor Samuel P. Huntington for *Foreign Affairs* (Summer 1993). In his essay Huntington wrote that he envisioned the post–Cold War geopolitical landscape as being divided into eight major civilizations (Western, Confucian, Japanese, Islamic, Hindu, Slavic-Orthodox, Latin American, and African) and argued that international conflict would be framed as the collision of civilizations rather than nation states. "It is my hypothesis that the fundamental source of conflict in this new world will not be primarily ideological or primarily economic. The great divisions among humankind and the dominating source of conflict will be cultural. . . . The principal conflicts of global politics will occur between nations and groups of different civilizations. The clash of civilizations will be the battle lines of the future." In his response for *Foreign Affairs* (Fall 1993), Ajami expressed the view that Huntington's scenario "underestimated the tenacity of modernity and secularism in places that acquired these ways against great odds," citing as an example Indian secularism and the rise of the Indian middle class, which led to the overthrow of British rule and the formation of the modern Indian nation-state. "They will not cede all this for a kingdom of Hindu purity," Ajami wrote. He ended with the contention that "civilizations do not control states, states control civilizations." Reactions to Huntington's and Ajami's arguments came from foreign-policy experts all over the world. Kishore Mahbubani, for example, a longtime Singaporean career diplomat who is currently Singapore's ambassador to the United Nations, agreed with Huntington, telling John Shiry for the Toronto, Canada, *Financial Post* (October 12, 1993), "The West seems to be almost deliberately pursuing a course designed to aggravate the Islamic world." The Georgetown University professor and former U.S. ambassador to the U.N. Jeane Kirkpatrick supported Ajami's view. "The most important and explosive differences involving Muslims are found within the Muslim world itself," she told Shiry.

Ajami's book *The Dream Palace of the Arabs: A Generation's Odyssey* (1998) is a tribute to the generation of Arab writers and intellectuals who wrestled with the transition from Arab traditionalism to modernism. The title comes from the book *Seven Pillars of Wisdom*, by T. E. Lawrence (known as Lawrence of Arabia), in which Lawrence confessed to his failed attempts, on behalf of the Arabs, to "build a dream palace of their national thoughts." In the introduction to *The Dream Palace of the Arabs*, Ajami wrote, "I am a stranger, but no distance could wash me clean of that inheritance," as quoted by Edward Mortimer in the *Los Angeles Times* (February 22, 1998). Devoting several chapters to influential intellectuals in the Arab modernist movement, such as the revolutionary Lebanese poet Khalil Hwai and the Syrian writer Ali Ahmad Said, Ajami, as Mortimer wrote, seemed to "share the pain, and even some of the shame, that other Arab intellectuals feel about the shipwreck of the nationalist dream, even if he is not prepared to join them in what he would consider futile denunciations of Israeli or American policy." Adam Shatz asserted that *The Dream Palace of the Arabs* reflects Ajami's "sympathy for the world he left behind, although there is something furtive, something ghostly about his affection, as if he were writing about a lover he has taught himself to spurn." Andrew Rubin, also in the *Nation* (March 23, 1998), offered a harsher view: "For Ajami to reduce modern Arab intellectual history to a series of generational (and highly gendered) conflicts between the old and the new, between fathers and sons, between modernists and traditionalists, between secularists and clerics, is to ignore the complexity, the sophistication and above all the possibilities of renewal that exist in other spheres of civil society that Ajami does not even recognize as modern."

Following the September 11, 2001 terrorist attacks, and continuing after the U.S. invasion of Iraq in 2003, the American media and members of the administration of President George W. Bush frequently consulted Ajami for his political insights. A strong supporter of President Bush's Middle East policies—in particular, Bush's proposals for creating conditions for a democratic Iraq—Ajami argued in *Foreign Affairs* (January/February 2003), "Above and beyond toppling the regime of Saddam Hussein and dismantling its deadly weapons, the driving motivation of a new American endeavor in Iraq and in neighboring Arab lands should be modernizing the Arab world." He told Michael Douglas for the *Akron (Ohio) Beacon Journal* (March 2, 2003), "The very brutality that the Iraqis have endured under Saddam may be Iraq's saving grace if redemption comes its way. There may come relief after liberation—and a measure of realism." Ajami's pro-American and, many argued, pro-Israeli stance drew heated criticism from Arab scholars who saw Ajami's perspectives on the modern Arab world as unflattering and simplistic. "I think most of the time what Fouad Ajami does is tell an American audience, and very often a Jewish American audience, what it wants to hear about Arabs," Hussein Ibish, the national communications director of the American-Arab Anti-Discrimination Committee, told Eric Boehlert for *Salon* (December 21, 2001). In the same article, James Zogy, head of the Arab-American Institute, attributed Ajami's rise to prominence to "his basic willingness to deconstruct legitimate Arab positions in public opinion here [in the U.S.]." More recently, with mounting evidence suggesting flaws in U.S. intelligence and foreign-policy strategies, Ajami has tempered his views concerning the U.S. mission in Iraq, while remaining hopeful for its success. During the July 14, 2006 broadcast of the *Charlie Rose Show*, Ajami said, "I'm a total hawk. We owe the Arab world no apology for anything. . . . The terror attacks of 9/11 . . . emanated right from the heart of Arab society." But he also said that although he regarded the war in Iraq as "noble," it might turn out to be a "noble failure." "Sometimes a noble effort can fail," he acknowledged.

Ajami's latest book, *The Foreigner's Gift: The Americans, the Arabs, and the Iraqis in Iraq*, is a collection of vignettes, interviews, and reflections that reveal his guarded optimism concerning U.S. involvement in Iraq and the Middle East. Highly critical of Iraq's indigenous Sunni Muslims for their spread of sectarianism and violence, Ajami argued that Iraq's primary challenge was to "build an inclusive form of national identity that could subsume the country's traditional sectarian, ethnic and tribal loyalties," according to R. Stephen Humphreys in a review for the *Washington Post Book World* (August 6, 2006). Humphreys called Ajami "eloquent and sometimes moving, but his struggle to convey the complexities of Iraq heightens the sense of ambivalence that infuses the book."

Ajami and his wife, the former Michelle Saltmarsh, live in New York City.

Alterman, Eric

Jan. 14, 1960– Journalist; historian; media critic; teacher

Address: Brooklyn College, Dept. of English,
2308 Boylan Hall, 2900 Bedford Ave., Brooklyn,
NY 11210

The historian and unapologetically liberal media critic Eric Alterman has become a favorite target for conservatives because of his politically charged books, which have questioned the existence of the so-called liberal media bias and condemned the George W. Bush presidency, among other stands. Alterman is a columnist for the *Nation* magazine and the author of a Weblog (more commonly known as a blog) called "Altercation," which was featured for several years on MSNBC.com and can now be found on mediamatters.org. He is also a senior fellow at the liberal think tank Center for American Progress, for which he writes and edits the column "Think Again," and a professor of English and journalism at Brooklyn College and the Graduate School of Journalism at the City University of New York. Alterman first came to widespread notice with the book *Sound and Fury* (1992), an indictment of the attention and authority granted right-wing pundits by the media and the public. In subsequent years Alterman, who went on to write *What Liberal Media?* (2003) and *When Presidents Lie* (2004), among other books, has inspired considerable attention himself—generating heated attacks from those on the right and equally passionate defenses by his supporters. "My audience is the universe of sensible people," he told Elisabeth Eaves for *Publishers Weekly* (January 27, 2003). "You don't have to see the world my way to agree with what I'm saying. I make the argument—I give you the evidence."

Eric Ross Alterman was born on January 14, 1960 in the New York City borough of Queens; he grew up in Scarsdale, New York, an upper-middle-class suburb of New York City. Alterman's mother, the former Ruth Weitzman, was a school psychologist, and his father, Carl, was a salesman and engineer. According to George Gurley, in an article for the *New York Observer* (April 14, 2003), Alterman worked at the Bronx Zoo for a time while a student. Alterman described himself in an article for the *Nation* (March 9, 2005, on-line) as "a pretty serious Jew—bar mitzvah, educated in Israel, lights candles on Friday night, goes to shul, sends the kid to Hebrew school, contributes to [the Jewish periodical] the *Forward.*" (Despite such a background, Alterman is frequently called on to defend himself against charges of anti-Semitic or anti-Israel bias, because of what has been construed as his strong support for Palestinian rights. He wrote to *Current Biography* that he is, rather, "a strong defender of the Israeli peace movement and of the necessity of a just peace between Israel and the Palestinians, rather than of Palestinian rights per se.")

Alterman attended Cornell University, in Ithaca, New York, earning his B.A. degree in history and government in 1982. In 1986 he earned a master's degree in international relations from Yale University, in New Haven, Connecticut, and then went on to study for a doctoral degree in U.S. history from Stanford University, in Palo Alto, California. During his student years he wrote on a freelance basis for such publications as *Mother Jones*, the *Nation*, the *New Republic*, *Harper's*, *Vanity Fair*, and the *New York Times*. His first book, *Sound and Fury: The Washington Punditocracy and the Collapse of American Politics*, was published while Alterman was still at Stanford. (Later editions featured a different subtitle, *The Making of the Punditocracy.*) In the book Alterman, who graduated from Stanford in 1993, described what he saw as a decline in the nation's public discourse, which he attributed to the rise of right-wing pundits—opinionated print and television personalities including Pat Buchanan, Robert Novak, and George Will—and to an eclipse of journalistic values by what he described to *Current Biography* as "entertainment values." Alterman took as his starting point the year 1896, when the publisher Adolph S. Ochs championed a policy of objectivity at the *New York Times*. At that time such a policy was an exception—most papers freely featured the opinions of their writers. As objectivity progressively became the media standard, pundits appeared, according to Alterman, to supply the missing opinions. Unlike today's "talking heads," the early pundits, Alterman contended, used their positions not to argue endlessly but to champion bipartisan views. That changed in the 1960s, when many of the most influential political commentators began voicing their distrust of government officials. In order to balance its content in the face of criticism from President Richard M. Nixon's Republican administration, the *New York Times* hired such conservative op-ed writers as George Will and William Safire, and other publications followed suit. Those men, Alterman argued, had little background in journalism but were employed because they were the only conservatives available. That scenario eventually led to what Alterman saw as the control of the media by "the punditocracy," right-wing figures whose visibility and influence were detrimental to political discourse. Many reviewers of *Sound and Fury* noted Alterman's insightful points but complained about his angry tone and his exaggeration of the pundits' power. Alterman was invited to appear on several popular television talk shows to promote the book, which, he told Gurley, he had hoped would make at least some of the right-wing pundits "afraid to show their faces in public again, because I had so humiliated and revealed them for the charlatans that they were—but, in fact, nothing changed at all. Everything went back to the way it was." Alterman began appearing as a regular commentator on the MSNBC cable channel in 1996. (His association with the company—first as a television personality and columnist, then as a blogger—would last for a decade.)

In *Who Speaks for America? Why Democracy Matters in Foreign Policy*, published in 1998, Alterman argued that American foreign policy reflected too little participation on the part of the public. He contended that the country's system of diplomacy had become increasingly corrupt and ineffective, due to the government's progressively sinister policy of expansionism, willingness to make covert deals that bypassed the Constitution, and susceptibility to the influence of special-interest groups. Alterman suggested that those problems could be remedied by calling on foreign-policy advisory committees—composed of ordinary citizens—to make recommendations to Congress and the White House. Many critics, while questioning whether the American public was as well suited and eager to guide the country's actions abroad as Alterman implied, still found the book valuable. Gregg Easterbrook wrote for the *Washington Monthly* (December 1998), "*Who Speaks for America?* sits square in the tradition of the book that should be read precisely because it's full of material we think we do not need to read. Alterman has produced a volume that is well-written, vigorous and perceptive." "Alterman paints with a broad brush. . . . More a successful polemic than a judicious analysis, [the book] should nonetheless be widely read and its arguments heeded," John Dumbrell wrote for *Perspectives on Political Science* (Summer 1999).

In 1999 Alterman, by then widely known as a regular columnist for the *Nation*, published the nonpolitical *It Ain't No Sin to Be Glad You're Alive: The Promise of Bruce Springsteen*. The book, which took its title from a line in the Springsteen song "Badlands," examined the iconic rock musician's New Jersey childhood and relationship with his father, his rise in the music industry, and his breakthrough success with the 1975 album *Born to Run*. Springsteen had been a powerful influence on Alterman's teenage years; Gurley quoted Alterman as writing that the title single of *Born to Run* "exploded in my home, in my mind and changed my life." Miriam Longino, in a review for the *Atlanta Journal-Constitution* (January 23, 2000), wrote that "as a 15-year-old ticked off at the world, Alterman hung out on the high school football field drinking Miller eight-packs, boom box turned up loud, shouting [Springsteen lyrics] to the sky." She continued (drawing on the lyrics of the song "Born to Run" herself), "[Alterman's] analytical, middle-aged mind, combined with an almost teenlike worship of Springsteen, makes this music bio much more than gossipy patter. For the Springsteen fan, it's an insightful, fuel-injected ride on a runaway American dream."

Alterman returned to the familiar realm of politics for his next book. In the exhaustively footnoted *What Liberal Media? The Truth About Bias and the News* (2003), he countered the claims of left-wing bias in the media that had been made in such widely read titles as Bernard Goldberg's *Bias: A CBS Insider Exposes How the Media Distort the News* (2001) and Anne Coulter's *Slander: Liberal Lies About the American Right* (2002). Regarding the success of his opponents' books, Alterman told Eaves, "There's a conservative movement in this country and it's big. One of the opening quotes of [my] book is [the musician] Paul Simon's 'A man hears what he wants to hear and disregards the rest.' I think people like to buy books that confirm what they believe they already know, and there are a lot of them on the conservative side. They're very good at getting the word out." He explained to Eaves that he had written the book because of his "frustration at the power of a dangerous and destructive myth [of liberal media bias]. . . . You say the words 'liberal media' and it conjures up a whole host of images and alleged facts that make it possible to make a case without actually making the case. It's a kind of shorthand and substitute for careful thinking, to say nothing of actual journalistic proof." As evidence that the media more often tilted not to the left but to the right, Alterman pointed out that many journalists had called for the impeachment of Democratic president Bill Clinton, who had lied under oath about his extramarital affair, and largely remained silent in the wake of the Republican George W. Bush's controversial 2000 election victory after the Florida recount. Some critics saw Alterman's claims that the media favored the right to be the inevitable convictions of a passionate liberal, while others found the book a refreshing alternative to the right's rhetoric. Chauncey Mabe, in one representative review, wrote for the Fort Lauderdale, Florida, *Sun-Sentinel* (April 13, 2003), "While it comes as no surprise that an out-and-out liberal scribe like Alterman finds little liberal bias, he reaches his conclusions in ways that are difficult if not impossible to refute."

The Book on Bush: How George W. (Mis)Leads America (2004) is a broad critique of Bush's presidency, co-authored by Alterman's fellow New Yorker Mark Green, who had been the Democratic nominee against Michael Bloomberg in the city's 2001 mayoral election. The book attacked, among other things, the Bush administration's energy policy and the president's invocation of God to defend his foreign policy. The authors also exposed inconsistencies between the president's public image and his actions in office; they contended that Bush had presented himself as moderate in his 2000 campaign but, once elected, had introduced policies reflecting the interests of the extreme right. An anonymous critic for *Kirkus Reviews* (February 9, 2004) called the book "carefully researched and plenty passionate: a veritable bible for Bush-bashers." Other critics were impressed by the scope of the book, though they questioned whether that comprehensiveness helped the authors' case. While acknowledging that Alterman and Green "stay above . . . the snobbish preoccupation with malapropisms that cheapen[s] so many critiques of the Oval Office occupant," James P. Pinkerton wrote for the *Washington Post* (February 1, 2004) that the book still failed to account for Bush's popularity.

Alterman's next book, *When Presidents Lie: A History of Official Deception and Its Consequences*, also published in 2004, examined four examples of presidential deception in the 20th century. It covered Franklin Roosevelt's secretive deals with the Soviet dictator Joseph Stalin; John F. Kennedy's unpublicized compromises with Russia during the Cuban missile crisis; Lyndon B. Johnson's distortion of the Gulf of Tonkin incident, which led to the increased presence of the U.S. in Vietnam; and the Ronald Reagan administration's cover-up of arms sales in the Iran-Contra scandal. John W. Dean wrote for the *Washington Monthly* (November 2004) that *When Presidents Lie* is "an astute study of presidential decision-making—if lying instead of telling the truth can be so dignified—along with critical examination of the news media's unfortunate but recurring role in facilitating presidential lying." Viking Press is slated to publish Alterman's seventh book, *Why We're Liberals: A Political Handbook to Post-Bush America*, in 2008.

In 1992 Alterman won the George Orwell Award, given by the National Council of Teachers of English to honor honesty and clarity in the public use of language, for *Sound and Fury*, and in 1999 he received the Stephen Crane Literary Award for *It Ain't No Sin to be Glad You're Alive*. Besides his fellowship at the Center for American Progress, Alterman holds fellowships at the New School's World Policy Institute and the organization Media Matters for America, the latter of which agreed to post the blog "Altercation" on its own Web site (mediamatters.org) after MSNBC decided in 2006 not to retain Alterman. (Although the company claimed that his dismissal was purely a business decision, some of Alterman's supporters have theorized that it was actually an attempt by management to censor his viewpoints.) Alterman is also a professor of English at Brooklyn College, part of the City University of New York (CUNY). In 2003 he was asked to audition for the role of a reporter on the HBO series *The Sopranos*, but he did not win the part. He was later hired as a historical consultant for HBO.

Alterman, whose first marriage ended in divorce, has lived for more than 10 years with Diana Silver, who teaches at New York University, where she also earned her doctorate in public administration. They live in Manhattan and have a daughter, Eve Rose. Alterman is sometimes reported to have a demanding, mercurial personality. "Eric is difficult," Katrina vanden Heuvel, one of Alterman's editors, told Gurley. "But behind that difficult, gruff exterior is someone who cares deeply about progressive ideas and democracy in this country."

Ames, Jonathan

Mar. 23, 1964– Writer; performance artist

Address: 181 Wyckoff St., Brooklyn, NY 11217

"All writers have to provoke a reaction," Jonathan Ames said to Sarah Stodola in an interview for *Me Three* (June 2004, on-line). "You have to hold the reader's attention. My first goal as a writer is not to bore." With the novels *I Pass Like Night* (1989), *The Extra Man* (1998), and *Wake Up, Sir!* (2004) and essay collections including, most recently, *I Love You More Than You Know* (2006), Ames has provoked reactions that range from admiration and raucous laughter to discomfort and revulsion—but probably not, to date, boredom. A chief feature of both Ames's fiction and nonfiction is the unflinch-

Travis Roozée, courtesy of Jonathan Ames

Jonathan Ames

ing openness he brings to topics usually referred to euphemistically or not mentioned at all, such as sexual obsession and perversion or various body ailments (irritable bowel syndrome is just one example). While the characters and themes of his novels have led Ames to be compared to such past prose masters as F. Scott Fitzgerald and P. G. Wodehouse, his nonfiction pieces have been likened to those of his contemporary David Sedaris. "I steal from all the writers I love," Ames admitted to Stodola. "It probably doesn't show since I'm a slug and they're gods, but I steal from them."

The only son of Irwin Ames, a salesman of textile chemicals, and Florence Mann, a special-education teacher, Jonathan Spencer Ames was born on March 23, 1964 in New York City. He grew up 40 miles outside the city, in the middle-class New Jersey town of Oakland. His parents instilled in him a love of reading. Each month Ames's mother, who wrote poetry, would order a wide variety of books and magazines, including sports biographies and comic books, through a school-affiliated catalog, allowing Ames to choose whatever he wanted. He recalled to *Current Biography*, "We weren't rich, but when it came to books there seemed to be no cutting corners." Edgar Rice Burroughs's Tarzan books and the novels of J. R. R. Tolkien sparked Ames's desire to be creative and have adventures. In addition to making up games that involved running through the woods, Ames and his friends channeled much of their energy into fishing, swimming, and playing a variety of sports.

Ames attended Valley Middle School and Indian Hills High School. In those years he read the offbeat novels of Kurt Vonnegut as well as Hunter S. Thompson's nonfiction work *Fear and Loathing in Las Vegas*, the latter of which fed Ames's desire to be, as he put it to *Current Biography*, a "crazy journalist." During his sophomore year of high school, under the tutelage of a teacher, Anne Peters, he began writing sports pieces for the school newspaper, *Drumbeats*; he also contributed sports articles to a weekly town paper, the *Wyckoff News*. In addition, he had humorous pieces printed in the Bergen County, New Jersey, *Record*, a major daily in the area. In 1981, when he was 17, he purchased a copy of Jack Kerouac's novel *On the Road*, whose first chapter contained a line that would serve thereafter as a reference point for Ames: "I was a young writer and I wanted to take off." Ames became the editor of *Drumbeats*, graduated among the top 15 students in his class, and earned five varsity letters in sports including soccer, cross-country running, and tennis. He was also one of the top three saber fencers in the state and among the top 12 in the country.

The latter achievement helped Ames to win admittance to Princeton University, in Princeton, New Jersey, where he enrolled in September 1982. During his college years, as he informed *Current Biography*, he "fell in with the artists and the nuts and the malcontents." In 1986 the esteemed novelist Joyce Carol Oates, who was Ames's thesis adviser, gave him a copy of Hubert Selby Jr.'s cult novel, *Last Exit to Brooklyn*, as he was starting work on his thesis, a novella entitled "I Pass Like Night." Selby's novel, along with the works of Raymond Carver, Ernest Hemingway, and Jerzy Kosinski (particularly his 1968 novel, *Steps*), served as the main influences for the novella. Ames graduated from Princeton in 1987. In the following year he expanded his novella into a full-length novel, which was published in 1989. Ames, who had been living in Paris, France, for several months, returned to the U.S. in time for the book's publication.

Reviewers of *I Pass Like Night* found much promise in the fledgling author's debut, noting that its scenes of urban decay were reminiscent of such films as *Midnight Cowboy* and *Taxi Driver*. The coming-of-age novel's narrator and protagonist, Alexander Vine, defies his Jewish family's expectations that he will attend college and enter a prestigious profession; instead, he ekes out a living in the harrowing streets of the Bowery, mostly from tips acquired as a hotel doorman. When night falls, Vine, chiefly out of ennui, engages in drunken homosexual affairs and visits prostitutes. Critics were quick to compare Vine to Holden Caulfield, the teenage narrator of J. D. Salinger's much-celebrated novel *The Catcher in the Rye*. Hugo Giles, assessing Ames's novel for the *Hobart (Australia) Mercury* (December 23, 1989), wrote, "In the jaded 80s *I Pass Like Night* is unlikely to achieve the same shock impact as *Catcher* but it is a moving and anguished reflection of a generation in crisis." Some complained that because Vine was not given to introspection, readers were prevented from developing an attachment to the character. For the most part, however, the debut was well-received.

Despite the acclaim, Ames would spend most of the next decade, as he recalled to *Current Biography*, leading "a hand-to-mouth existence." For two years beginning in 1990, finding himself with little money, he drove a taxi in Princeton; meanwhile, he worked on a second novel. In 1992 he enrolled in the graduate writing program at Columbia University, in New York, earning an M.F.A. degree in 1995 with the aim of securing a teaching position. In addition to other jobs he held during that period, Ames taught composition at a business school and creative writing at the Gotham Writer's Workshop. He also launched his oral storytelling career with a monologue at New York's Fez nightclub and other venues. Ames completed his novel *The Extra Man* in September 1996 and began shopping it around to prospective publishers; the book was rejected by 20 houses before Scribner accepted it. Published in 1998, *The Extra Man* follows the adventures of Louis Ives, who, after getting fired from a teaching position at a Princeton prep school because of a cross-dressing incident, goes to New York and meets up with an eccentric, asexual playwright, Henry Harrison. Henry, who serves as an "extra man" for elderly high-society women at dinner parties, schools Louis in everything from maintaining chivalrous behavior and dressing in a sophisticated manner to sneaking into Broadway plays and escaping notice while relieving himself in the street.

Ames's comedy of manners got a warm reception, with Scott Eyman writing for the *Seattle Post-Intelligencer* (November 2, 1998), "In Henry and Louis, Ames has created—or transcribed—two of the most startlingly human characters in recent fiction." Francine Prose wrote for the *New York Observer*, as posted on Amazon.com, "Ames has the one thing [F. Scott] Fitzgerald lacked: a sense of humor. . . . *The Extra Man* wins us over with its sheer energy and good will, its confidence in the ability of its own humor and intelligence to widen our ideas about the possibilities of love, and about the permissible range of inner and outer lives to which today's young gentleman may properly aspire." The novel won comparison to such classic odd-couple tales as the movie *Harold and Maude* and John Steinbeck's novel *Of Mice and Men*; Ames, for his part, has said that he based Louis Ives in part on the man-about-town characters of Fitzgerald and Oscar Wilde. (Like some of Wilde's sexually adventurous characters, Ives enjoys the company of the transgendered.) Ames's own fascination and personal experiences with transvestites were reflected in a passage in *The Extra Man* that finds Ives in one of his favorite bars, where a drag queen tells him, "You're not really straight, but you're not really gay. You're straightish." Ames told Matthew Flamm for *Newsday* (August 30, 1998), "I don't know what straight people think of me." He described himself as "probably the gayest straight writer in America" and added, "I don't know what I think of me."

In 1999 Ames received a Guggenheim fellowship and mounted a one-man, Off-Off-Broadway show, *Oedipussy*—a cocktail of self-deprecation, surrealism, and sex that made references to figures ranging from Sigmund Freud and Marcel Proust to Porky Pig. Some critics praised the show, likening Ames's storytelling style to those of Woody Allen and Lenny Bruce, while others were less favorably impressed. A reviewer for the *Village Voice* (February 16, 1999) wrote, "There are some hilarious moments in Jonathan Ames's *Oedipussy*, but his . . . shtick is utterly cliched." In a reference to a radio "shock jock," the reviewer added that *Oedipussy* seemed like "a master's thesis from the creative writing program at Howard Stern University."

In late 1996, meanwhile, Ames had begun writing essays for *New York Press*; he was given his own column there in the fall of 1997, attracting a cult following with his humorous, self-deprecatory style. In 2000 he left *New York Press* to teach creative writing for two semesters as a visiting professor at Indiana University. While there he published a book of his "City Slicker" columns from the *New York Press*, titling the collection *What's Not to Love?: The Adventures of a Mildly Perverted Young Writer*. The book's largely autobiographical subject matter ranges from sex and venereal disease to bodily sensations not generally mentioned in print or polite conversation. "Like any good (albeit shticky) performer—[Woody] Allen, [Jerry] Seinfeld, and a thousand Catskills comedians before them—Ames openly provokes the reader to have fun at his own expense, even as he admits to thoughts of suicide," Maya Kremen wrote for the *Village Voice* (June 27, 2000). In 2004 *What's Not to Love?* inspired a Showtime television network pilot in which the humorist played himself; the pilot did not develop into a series.

Ames returned to New York in 2002. That year he followed up *What's Not to Love?* with a second autobiographical work, *My Less Than Secret Life*, comprising five short stories and 42 essays, the latter including past *New York Press* installments, book reviews, and e-zine contributions. As posted on Amazon.com, a contributor to *Publishers Weekly* noted about the book, among whose pieces are "Booty and the Beast," "The Orgy," and "The Nista Affair," that Ames is "like the dirtiest, smartest kid on the playground: you might cringe, but you can't help being transfixed." In 2003 the late-night talk-show host David Letterman came across one of Ames's books, and afterward the writer appeared on Letterman's *Late Show* three times in 18 months.

Ames's third novel, *Wake Up, Sir!* (2004), paid homage to the humor novelist P. G. Wodehouse. (Ames has said that rediscovering Wodehouse's works in the early 2000s helped to lift him from a bout of depression.) The novel's main character, a talented, alcoholic writer named Alan Blair, goes to an artists' colony, where he falls in love with a mannish female sculptor. Blair is helped throughout by his discreet, preternaturally efficient butler, Jeeves (one of Wodehouse's most memorable characters). Reviewers of the novel compared Ames to his fellow humorist David Sedaris, with D. K. Row writing for the *Oregonian* (July 18, 2004), "Ames is a better writer than the more famous Sedaris. . . . Ames is more genuine, daring and unabashed than other humorists he's often grouped with, tackling everything from homosexual impulses to Jewish self-loathing. He exposes himself more, literally and figuratively, leaving no thought, person or psychosis unexamined. And he does so with a humanity and a style that, on a phrase level, is rarely matched by many essayists and humorists today." In another assessment of *Wake Up, Sir!*, Ben S. Pollock, writing for the *Arkansas Democrat-Gazette* (September 19, 2004), hailed Ames as "a humorist for our age."

In 2005 Ames brought his fascination with transsexualism to the editing of a book, *Sexual Metamorphosis: An Anthology of Transsexual Memoirs.* The volume is comprised of excerpts of writings by transsexuals, taken from books and manuscripts housed at Indiana University's Kinsey Institute. (The institute is named after its founder, the famed sex expert Alfred Kinsey.) Jim Nawrocki, writing for *Gay & Lesbian Review Worldwide* (January 1, 2006), called Ames's choice of material "very good," adding that it is "fairly representative of the range of transsexualism." The anthology begins with case studies from the late 19th century and ends with memoirs from as recent as 2003.

In early 2006 Ames published his third collection of autobiographical essays, *I Love You More Than You Know.* The collection juxtaposes the outrageous and the sentimental; in one piece, for instance, he recalls leaving the library, where he is supposed to be working while his mother looks after his young son, to visit a dominatrix; in another, he gives a sweet account of visiting his 90-year-old great-aunt, Doris, in her Queens, New York, apartment. That essay includes the passage, "I love her desperately and as she gets older—especially of late, as she becomes more feeble—my love seems to be picking up velocity, overwhelming me almost, tinged as it is with panic: I'm so afraid of losing her." D. Grant Black wrote for the Toronto *Globe and Mail* (March 18, 2006), "When you think all this guy can be counted on is to deliver toilet and pervert humour, he changes gears with a sentimental vignette." Ames explained to Ruth Graham for *New York Sun* (April 22, 2005) about his work, "I tend to find that I work best from a first-person vehicle, taking a weird aspect of my personality and then expanding it into a character—kind of like those shrinky dolls that might be tiny and then you pour water on them and they grow."

Ames, whom D. Grant Black described as "a prematurely bald man with the health afflictions of a senior," lives in Brooklyn, New York. He has a number of projects underway or recently completed, including a cover story on the musician Marilyn Manson for the June 2007 issue of *Spin* magazine and a graphic novel, *The Alcoholic*, which will be published in 2008 by DC Comics, with illustrations by Dean Haspiel. Ames has written screenplay adaptations for *The Extra Man* and for Darcy O'Brien's novel *A Way of Life, Like Any Other.* He is an occasional orator and host of a storytelling series called "The Moth," organized by a nonprofit group based in New York City that is dedicated to fresh takes on the art of storytelling. Retaining his interest in sports, Ames has developed a passion for boxing and has even competed in amateur matches. On July 26, 2007 he defeated the Canadian writer Craig Davidson in a bout at Gleason's Boxing Gym in Brooklyn. In the press Ames has been linked romantically to the singer-songwriter Fiona Apple.

Anderson, Tom and DeWolfe, Christopher

Co-founders of MySpace.com

Anderson, Tom
Oct. 13, 1975– Co-founder of MySpace.com

DeWolfe, Christopher
1966(?)– Co-founder of MySpace.com

Address: Fox Interactive, P.O. Box 900, Beverly Hills, CA 90213

In 2003 Tom Anderson, a former film student and struggling musician, and Christopher DeWolfe, an on-line marketing executive, started the social-networking site MySpace, which had its official launch the following year. Setting out to establish a Web site that would evoke a nightclub atmosphere, Anderson and DeWolfe enlisted as its first users acquaintances from the club scene in and around Santa Monica, California, where they were based. The site, as Saul Hansell wrote for the *New York Times* (April 23, 2006), tapped into "three passions of young people: expressing themselves,

Tom Anderson (left) and Christopher DeWolfe. (Photo: Evan Agostini/Getty Images)

Tom Anderson and Christopher DeWolfe

interacting with friends and consuming popular culture," and it quickly became, as Matt Krantz wrote for *USA Today* (February 13, 2006), "a cultural phenomenon for the under-30 set, much as MTV captivated the generation before." The most significant aspect of MySpace.com, however, seems to have been the greater freedom it gave users. Reflecting Anderson and DeWolfe's professed—if vague—dislike of rules, MySpace lured users away from on-line social networks that had more limits on what their members could do. Now, MySpace "is home to [more than] 2.2 million bands, 8,000 comedians, thousands of filmmakers, and millions of striving, attention-starved wannabes—100 million actually," Patricia Sellers wrote for *Fortune* (September 4, 2006), adding that "on a typical day, it signs up 230,000 [new users]—roughly the population of Scottsdale [Arizona]."

Tom Anderson was born on October 13, 1975. His father was an entrepreneur who "had one crazy idea after another," Anderson noted on his MySpace page, as displayed on *Fortune.com* (September 4, 2006). He attended the University of California at Berkeley, where he earned a B.A. degree in English and rhetoric in 1997. After his graduation he played in a series of bands, among them Swank, for which he sang and played guitar. He next enrolled in the film school at the University of California–Los Angeles (UCLA), from which he graduated in 2000. Unprepared by his education or professional background for any well-paying career, Anderson was, he told Sellers, "rescued . . . from a lifetime of unemployment" by Christopher DeWolfe, who was the vice president of sales and marketing at Xdrive Technologies, a company that offered users extensive free on-line storage. DeWolfe was born in Portland, Oregon, in the mid-1960s—sources date his birth as early as 1963 and as late as 1967; his 2006 profile in *Fortune* gave his age as 40, leading many to give his birth year as 1966. His parents were teachers. He studied business at the University of Washington, earning a B.A. degree in finance in 1988. After college DeWolfe went into sales and later entered the M.B.A. program at UCLA, earning his degree in 1997. In the same year he took a position as the vice president of marketing at the First Bank of Beverly Hills (FBBH).

In 1999 DeWolfe left FBBH to join Xdrive. It was in that capacity that DeWolfe, in 2000, met Anderson, who answered an ad to earn $20 by testing an Xdrive product. Anderson hated the product, "but DeWolfe . . . liked Anderson's candor and offered him a job" as a copy editor, Sellers reported. Anderson enjoyed working with DeWolfe because of the independence the job afforded him. "I remember, I asked Chris, 'What do I do?' He said, 'Go figure out how to make money.' . . . It was never, 'Here's the job I want you to do.'" The men offered different accounts on ABC's *Nightline* (May 10, 2007), telling Mary Fulginiti that Anderson was about to quit his job with Xdrive because he disliked his boss. "And then Chris, kind of, rescued me and pulled me into his department. He said, 'Don't leave.' And that's sort of where we started off." In any case, when Xdrive went bankrupt, in 2001, and the two were laid off, DeWolfe and Anderson formed the Internet marketing firm Response Base, which devised marketing strategies with the help of Spam, pop-ups, and other aggressive forms of on-line advertising. The business took off, and the next year they sold it for several million dollars to eUniverse, a larger on-line marketing company. Later in the year DeWolfe was appointed to the board of directors at Fog Cutter Capital Group, a real-estate firm.

Around that time Anderson began thinking about developing a social networking site. Both Anderson and DeWolfe, as well as other employees of eUniverse, had accounts with Friendster, a popular on-line social network that was launched in 2002. "I had looked at dating sites and niche communities like BlackPlanet, AsianAvenue, and MiGente, as well as Friendster," Anderson told Sellers. "And I thought, 'They're thinking way too small.'" Anderson and DeWolfe persuaded eUniverse's CEO, Brad Greenspan, to let them create their own social-networking site. "Recognizing the potential of the Friendster concept," Trent Lapinski wrote for the computer-industry blog *Valleywag* (September 11, 2006), "a plan was hatched to quickly mimic the appealing features of the site, rebrand it as MySpace [a name apparently stolen from a competitor of Xdrive that went out of business in 2001], and then out-market them using eUniverse's resources." The first version of MySpace was ready within 10 days. Anderson and DeWolfe changed more than just their competitors' marketing strategy, however; despite doubts about the profitability of their model, they insisted on building an open site—that is, one that gave users almost complete control over the content. Local bands and club owners whom Anderson and DeWolfe recruited were the first to create pages, establishing from the start MySpace's value as both a promotional tool for bands and a forum for fans. Music has remained an important element of the site, and since its launch such bands as R.E.M., Black Eyed Peas, and Weezer have streamed new albums onto it before releasing them.

"We didn't do traditional marketing, but we did try to find photographers and creative people because we thought that would make the site more interesting," Anderson told Natalie Pace for *Forbes* (January 4, 2006). "In the beginning, it was all Los Angeles—actors, photographers and musicians. That made for an interesting community, and brought in a lot of people. A lot of the early growth, however, had to do with the features and what our competitors were not allowing people to do." MySpace, for example, allowed pages to be dedicated to such entities as cities, dogs, or even ideas, while Friendster deleted such pages. The absence of such rules proved popular, and people began switching from Friendster to MySpace. The development of MySpace went "remarkably easy for us," Anderson told Pace. "I can't say that we struggled for a long time; we only struggled for about a month. When we were about a month into it, I remember thinking, 'This may not work out.' . . . One day . . . we saw this huge spike because of people telling each other. It just went crazy from there." Anderson, who emerged as the face of the site, is the one whom users are most likely to know; he is the first "friend," so his is the first user photograph a new subscriber will see. "Peering coquettishly over his shoulder from every profile page, he has attained an almost mystical status—somewhere between Jim Morrison and Steve Jobs," James Verini wrote for *Vanity Fair* (March 2006). Jeff Phillips, the singer for the band Hollywood Undead, who achieved popularity on MySpace, told Alex Williams for the *New York Times* (August 28, 2005), "Tom is a god. Literally, anywhere I've seen him, when we're out with him, people just stop on the street. They're like, 'Tom!' They want his autograph, pictures taken with him. It's like he's a rock star." By contrast, DeWolfe, who is regarded as the brains behind the business, has worked mostly behind the scenes. His MySpace page, for instance, is private; users can view it only with his permission. "Tom and I . . . have gotten to know each other's strengths and weaknesses," he told Fulginiti. "So, he focuses a lot more on, you know, the front-end user experience. And I focus more on building the organization and growing the business, and in making sure that this . . . becomes a global empire."

Commentators have voiced varying degrees of skepticism about the authenticity of the two men's public profiles. Verini noted that DeWolfe and Anderson are "almost too perfectly cast for their roles as elder business-school pragmatist and young visionary with a film degree and guitar." Lapinski challenged their story outright: "Most users don't know that Tom Anderson is more of a PR scheme than anything else—the mascot designed to give a friendlier feel to a site created by a marketing company known for viral entertainment website, pop-up advertising, spam, spyware, and adware . . . ," he wrote. "With his almost alternateen good looks, Tom Anderson has served as an exceptionally convincing distraction" from the parent company's unappealing advertising practices.

In September 2005 NewsCorp., owned by the Australian media mogul Rupert Murdoch, purchased eUniverse—which, by that time, had been renamed Intermix Media—for $580 million. The acquisition, Sellers wrote, "puts the MySpace guys in an awkward spot. They founded their website on the principles of user control, grass-roots growth, and authenticity. . . . But now [they] have NewsCorp.'s financial targets to hit, a 'chief revenue officer' to contend with and serious pressure to make MySpace safe for advertisers." Murdoch admitted to Sellers that Anderson and DeWolfe initially "weren't too keen on the deal," explaining, "They could get more money later, if they waited to sell. And they had a reluctance about being corporatized." The transaction brought them an estimated $15 million each in bonuses, and Murdoch "provided them with the cash to reinforce MySpace's shaky computer system and to hire armies of sales representatives to bring in more money from the banner ads and sponsored pages that MySpace sells," Hansell reported. Anderson and DeWolfe have described the deal in mostly optimistic terms, with Anderson telling Williams that it would change little about how MySpace operated. "We get to keep doing what we're doing, and have more money to do it," he said. "We're not moving over there, they're not coming over here. We just kind of go talk to them once a month and let them know what's up."

Murdoch, however, made changes. Over Anderson's protests that moving the company would damage its laid-back culture, MySpace headquarters relocated from Santa Monica to Beverly Hills, where NewsCorp. was consolidating its Internet properties. Murdoch also made plans to tap into the site's tremendous advertising potential, something its creators had strategically ignored. When the site began, "although its scrappy backer was hungry for cash," as Hansell observed, DeWolfe "resisted pressure to flood MySpace with advertising and to turn all of its members into money." MySpace's advertising potential rested in part with its enormous number of user pages. While NewsCorp.'s emphasis on advertising risked alienating MySpace's users, it also increased the business possibilities, and a number of projects are being considered, are in development, or have already been launched, including pacts with Google and eBay; a record label; a service that would allow users to call each other; and a sports site, to name a few. "Anything you can do on the Internet, I want you to be able to do on MySpace," Anderson told Steven Barrie-Anthony for the *Los Angeles Times* (May 10, 2006). "That's the goal and ambition. Almost all the things you can do online can be enhanced by the social structure of MySpace."

In June 2007, in an effort to compete with YouTube, the Internet's leading provider of video content, MySpace launched MySpace TV. DeWolfe told Brad Stone for the *New York Times* (June 27, 2007) that "no one has really pointed out that MySpace has been focused on video and has quietly come within striking distance of YouTube."

In his on-line profile Anderson has listed among his interests weight lifting, hiking, traveling, studying the history of communism, and listening to music. Asked by Krantz what he does in his spare time, he said, "I do nothing else but work." His marital status, as noted on MySpace.com, is "single." DeWolfe is married to a former record executive; the couple became first-time parents in 2006. According to a mockup of his MySpace Web page, as created by Fortune.com, he spends "weekends at a beach a little north of LA (Hint: a downmarket rental in Malibu). In the winter, I ski in a chic Colorado town (Hint: it begins with an A)."

Anderson, Winston A.

July 26, 1940– Cell biologist; cancer researcher; educator; historian

Address: Howard University Dept. of Biology,
415 College St., N.W., Washington, DC 20059

Over the last several decades, the Howard University biology professor Winston A. Anderson has led a triple life. He has built an impressive career as a cell biologist and as a researcher specializing in the growth of cancer cells; he has been heavily involved in efforts to improve the education of minority students, heading, among other committees, the Fogarty International Center's Minority International Research Program, which supports the global training of minorities in the biomedical sciences; and he is best-known to some as the cofounder of the Sandy Spring Slavery Museum and African Art Gallery, in Maryland, devoted to chronicling the past experiences of Africans and African-Americans. In 2006 the Howard Hughes Medical Institute (HHMI) presented Anderson with a $1 million grant, with which he plans to expand the scientific research and learning facilities at Howard and to place carefully selected honor students from Howard in mentoring programs at leading research centers. "If it sounds a little like an academic version of the Marine Corps," as the HHMI Web site put it, "that's not far off." The Jamaican-born Anderson has long stressed the importance of being a mentor and has urged others to undertake that role. In the lecture he gave in 1999 upon receiving the E. E. Just Award, presented by the American Society for Cell Biology (ASCB), he said, "It is a good feeling to wake up to *Good Morning America* to see your student being interviewed for making major advances in breast cancer research or in the biomedical sciences; so by influencing the lives of students you will receive rewards that money cannot buy."

Winston A. Anderson was born on July 26, 1940 in rural Jamaica, into a family "that pushed race-consciousness when I was growing up," as he explained to Michael H. Cottman for the *Washington Post* (January 11, 2001). He attended Calabar High School, in Kingston, Jamaica, from 1952 to 1959; in 1958 he completed the University of London, Higher School Certificate Examination in Jamaica. (Jamaica is a former colony of the United Kingdom; a number of universities and other bodies in the U.K. offer exams overseas, particularly in former colonies, through which students qualify to pursue higher education.) At 17 Anderson went to Washington, D.C., where he studied at the historically black Howard University, earning a B.S. degree in zoology in 1962 and an M.S. degree in the same subject in 1963. Anderson studied in the U.S. during some of the key events of the civil rights movement, including the 1963 March on Washington, and he was exposed to the rhetoric of civil rights and black-power advocates including Stokely Carmichael. Those developments fed what Anderson described to Cottman as his "great interest in race relations," one that led him to begin collecting historical items related to the African-American experience—such as shackles used for slaves, emancipation papers, and Ku Klux Klan artifacts—which now fill his home and are displayed at the museum he co-founded.

Anderson won the Beta Kappa Chi Award for Academic Excellence at Howard before continuing his education at Brown University, in Providence, Rhode Island. He has credited his teachers at Howard with guiding him toward a career in biomedical science and with encouraging him to attend Brown, since "it was in my best interest not to get three degrees from the same institution," as Anderson recalled in his E. E. Just Award lecture. He studied cell biology at Brown, where, he said in his lecture, he was one of a tight-knit group of 11 graduate students who considered themselves "cytonauts," or explorers in the field of cytology, the area of biology concerned with the structure and function of cells. He and the other students set about "discovering and defining, rediscovering, and redefining the structure and functions of organelles," which are distinct parts of cells. While taking part in the emerging study of mitochondrial DNA (that is, DNA found in the mitochondrion, the organelle that converts food molecules into energy), Anderson and his fellow students presented a paper on what he termed "the greatest mitochondrial DNA repository," located in the kinetoplast of a trypanosome. (A trypanosome is any parasitic protozoa in an animal or human, usually transmitted through an insect bite; a kinetoplast is a DNA-bearing organelle within the mitochondria of the trypanosome.) Anderson called his group's paper on mitochondrial DNA his "first citation classic." From 1963 to 1966, during his graduate-school years, he published 10 papers in prestigious journals including the *Journal of Cell Biology*, *Experimental Cell Research*, and *Zeitschrift für Zellforschung*. Since then Anderson has contributed to such journals regularly, usually with one or more co-authors.

Anderson earned a doctoral degree in biomedical sciences from Brown in 1966. He then spent two years in France as an American Cancer Society postdoctoral fellow, studying with Jean Andre in the Faculty of Sciences, University of Paris. There, he said in his E. E. Just Award lecture, he assisted in the effort to visualize the production of mitochondrial DNA and RNA through autoradiography (the creation of photographic images through radiation). The scientists also studied energy sources in cells. In his E. E. Just lecture, Anderson called his time in France "a most fascinating chapter in my life," which "provided lifetime links with several leading scientists of the time." In 1968 Anderson served as a postdoctoral fellow with the cell-biology pioneer and first ASCB president, Don Fawcett, in the Department of Anatomy at Harvard Medical School, in Boston, Massachusetts. In the 1969–70 academic year, Anderson worked as an instructor in anatomy there. "At Harvard," Anderson said in the Just lecture, "it was possible to realize many of my aspirations in teaching and research." He learned from Fawcett and others that "good research was an important key to success in the academic profession; however, only as a responsible mentor can one ever become a good university professor. I believe that my career was launched at that time."

Having to, as he said in the lecture, "grow up and find a real job," Anderson next took an assistant-professor post in the Department of Anatomy at the University of Chicago's Pritzker School of Medicine. For two years beginning in 1973, he was an associate professor of anatomy there. In 1975 Anderson received the prestigious Anne Langer Award for Cancer Research, for his studies of breast cancer and uterine physiology. He also earned the first Distinguished Teacher Award at the Pritzker School of Medicine, recommended by the freshman and sophomore medical classes. Anderson began teaching at Howard University in 1975, serving from that time until 1984 as chairman of the school's Department of Zoology. In 1983 he received the College of Liberal Arts Award for Academic Excellence, and in 1984 he was presented with the Citation for Excellence in Graduate Education from the Graduate School of Arts and Sciences. Much of Anderson's recent research has centered on identifying the causes of cancer, specifically the role of estrogen, the naturally occuring or synthetic steroid that contributes to the growth and maintenance of the female reproductive system; he is also concerned with identifying triggers of cancer at the subcellular level.

While Anderson's research has been well documented in science journals over the past several decades, his activity outside academia has received more mainstream press coverage. In 1988 he and his brother Bernard, a surgeon at D.C. General Hospital, bought an acre of land in Sandy Spring, Maryland; that area was home to the earliest free black community in Montgomery County, Maryland, and an important "stop" on the Underground Railroad, the network through which many blacks escaped slavery. Anderson learned about the history of Sandy Spring by talking to older African-American residents who grew up there and had ancestors in the area. In Sandy Spring he and his brother co-founded the Sandy Spring Slavery Museum and African Art Gallery. "We were fascinated by this area," Anderson told Cottman. "It is steeped with history, and the black experience was overshadowed by the greater community, but we decided to focus on the heritage of black people, and we wanted to put the museum in the center of the hidden or neglected part of Sandy Spring." The town was settled by Quakers, who either did not own slaves or freed them long before the Emancipation Proclamation of 1863; the Quakers taught many local African-Americans to read and write.

The museum includes a 25-foot-tall replica of a slave ship, built by Anderson, with 50-foot sails. "In the hull of the ship . . . are models of slaves from various tribes, chained and sitting in a tight, confined area, much the same way they were on the months-long passage from Africa," Cottman wrote, noting that Anderson had made many of the models out of papier-mâché and given them faces resembling those of people he knew. Using thousands of dollars of his own money, and with help from his brother, Anderson built the replica over a span of 18 months in the early 1990s. "People were skeptical at first when I started building it," Anderson told Barbara Ruben for the *Washington Post* (March 30, 2000). "They'd say, 'You think you're Noah or something?' But pretty soon neighbors whose families had lived here for generations began stopping by and bringing me glasses of water." The museum is located on Brooke Road in Sandy Spring, along which, in the 19th century, many of the area's free blacks built their houses. In the decade after the completion of the slave ship, the Anderson brothers added to the museum a log cabin that had been dismantled and relocated from a nearby estate; the cabin exemplified the simple, poorly furnished slave dwellings in Maryland and the southern United States in the 1850s. The cabin "is only big enough for a bed and a table on its first floor and a loft above, but it was home to 13 people at one time," Ruben wrote. "The cabin has no windows on its first floor, and the one oil lamp cast barely enough murky light to see the drying tobacco hung from the ceiling and the burlap-covered straw bed." An artifact-filled pavilion, also part of the museum, was built to resemble a round African hut called a tukul; items from Africa and the African diaspora, including beaded skirts from South Africa, Haitian sculptures, and Ethiopian tapestries, are displayed there. Anderson taught himself the art of stained glass in order to create the building's windows, which depict several historical scenes. A more recent addition to the museum is a building to house civil rights artifacts and slavery memorabilia; it consists of four galleries as well as a gathering space for lectures and other events. In all, Anderson told Cottman, he spent roughly $90,000 of his own money on the museum, in addition to small donations. "It has brought a sense of accomplishment and pride," he said. Cottman wrote that Anderson is "soft-spoken, but when it comes to his love of history, particularly about African Americans, he speaks with a quiet power."

Anderson has presided over numerous committees, and secured an impressive number of grants, in his efforts to improve career preparation for minorities in the sciences. For 10 years beginning in 1977, he directed Life Science Careers for Minority High School Students in the United States, funded by Howard University and the Rockefeller Foundation. The program provided summer research opportunities at sites around the country for more than 800 high-school students, of whom 70 to 80 percent subsequently enrolled in college. Another program overseen by Anderson, and supported by the Pew Charitable Trust, recruited and trained more than 50 Washington-area high-school students in science and mathematics at Howard's labs and more than 35 others at the labs of Yale, Brown, and other universities. An award from the National Science Foundation sponsored the Research Careers for Minority Scholars in Sciences, Engineering and Mathematics program (RCMS), through which 33 undergraduates performed specialized research in 12 laboratories, from 1991 to 1994. Anderson noted on his résumé that during that time 12 RCMS students graduated with B.S. degrees—six cum laude, five magna cum laude, and one summa cum laude; six were inducted into Phi Beta Kappa. In addition, nine students enrolled in Ph.D. programs: one in astrophysics at the University of Michigan, one in biochemistry at Purdue University, one in chemical engineering at Stanford University, two in mathematics at Howard, one in medicinal chemistry at Howard, and three in medical school. One student, after earning an engineering degree, went to work for the Xerox Corp. The program also awarded advanced teaching certificates and offered a master's degree program in education for high-school science teachers. Through another program, funded by an anonymous donor to Howard University, Anderson has assisted in training 300 ninth- and 10th-grade high-school teachers in Ethiopia.

In 2006 Anderson was one of 20 scientists who each received $1 million from the Howard Hughes Medical Institute, to be spent at their discretion. The award was given to individuals, selected from more than 100 research universities, who had outstanding records of helping to place graduates in medical or graduate schools. According to a profile of Anderson on the HHMI Web site, his plans for the money include helping Howard establish core research labs with state-of-the-art facilities for work in computational mathematics, biophysics, cell and molecular biology, DNA research, and research into proteins. Intensive training in those disciplines, he proposed, would give minority students entering biomedical research fields the "competitive edge" that insufficient funding had previously made unattainable for them. Anderson was quoted on the site as saying that at present, "students cannot be adequately trained at our institutions because of a lack of resources." Despite those conditions, science is popular among students at Howard; by contrast, there has been a nationwide decrease in interest in science among high-school and college students. "We don't have a problem [with that] at Howard," Anderson maintained, according to the HHMI site. "We have 700 science majors"—roughly 10 percent of Howard's undergraduates. As part of his proposal for using the $1 million award, Anderson intended each year to choose 20 juniors and seniors from among his honors science undergraduates to take part in various mentoring programs at research centers and have their work published in peer-reviewed journals. Also, a proposed summer exchange program would take students to African countries including Ghana, Ethiopia, Mali, and Nigeria, to study tropical diseases and ethnopharmacology, the use of indigenous plants for medicinal purposes. To cultivate younger talent, Anderson intended to upgrade introductory science courses to prepare honors sophomores for the junior and senior honors research program, and to grant admission to Howard courses to advanced-placement science students in local high schools. "If you provide these core units, identify the students early, and get them trained the right way, then they can be competitive," Anderson said.

Among his many distinctions, Anderson is the first minority scientist ever elected to the prestigious American Society for Cell Biology Council, and he is a founding member of the ASCB's Minority Affairs Committee. Other honors Anderson has received include the 1988 F. E. Mapp Biomedical Research and Service Award from Morehouse College, in Atlanta, Georgia, and selection as the King, Chavez, Rosa Parks Scholar at Oakland University, in Rochester, Michigan, in 1990. In 1992 he received Brown University's Outstanding Graduate Alumnus Award. That same year Howard awarded him the Certificate of Appreciation from the Division of Academic Affairs on behalf of Research Careers for Minority Scholars. In 1999 he received the Outstanding Doctoral Student Trainer in Biology award from Howard's Graduate School of Arts and Sciences. In 2002 he received a White House Millennium Award for outstanding achievement in research.

Anderson's wife, Carol, was born and raised in Kansas City, Missouri. He has two daughters, Laura and Lea, and a son, Michael.

Athey, Susan

Nov. 29, 1970– Economist; educator

Address: Dept. of Economics, Harvard
University, Cambridge, MA 02138-3001

Courtesy of Harvard University

"When I'm working on a mathematical or conceptual problem in economic theory, there is a sense of creating another world inside my mind. I'm not aware of the world around me. If I have to run an errand, I'll bring my notes, and anything that comes into my life is an unwanted distraction. . . . I work all the time." The economist Susan C. Athey offered those observations about herself to John Koch during an interview for the *Boston Globe* (August 2, 1998) conducted three years after she earned her doctoral degree and joined the faculty of the Massachusetts Institute of Technology (MIT). The theory Athey had presented in her Ph.D. dissertation, in 1995, had struck economists in academia as so extraordinary that she had received offers of jobs from 23 colleges and universities in addition to MIT—and might have received more, had she not announced that she would not consider any others. "We fought really hard to get her," Bengt Holmstrom, the Paul A. Samuelson professor of economics at MIT, told Sylvia Nasar for the *New York Times* (April 21, 1995), in a front-page article in the Business section that identified Athey as "the hottest prospect among the new Ph.D.'s in economics" that year. "I've rarely seen somebody about whom there was as much unanimity," Holmstrom added. After working at MIT for six years, Athey became an associate professor at Stanford University; she held the title of professor there when she left, in 2006, to assume the same post at Harvard University. The next year Athey received the John Bates Clark Medal; given every two years by the American Economic Association (AEA) to the most promising economist under the age of 40, the award is second in prestige only to the Nobel Prize for economics. Among the 30 economists so honored to date (11 of whom went on to win the Nobel Prize), Athey is the only woman. "Susan's work on the foundations of economic theory is of fundamental importance," the Oxford University economist Paul Klemperer told a reporter for the *Economist* (April 28, 2007), "showing economists when they can have confidence in their 'equilibrium' theories and when they can't."

"Economics lets you rigorously analyze something and come back with insights and answers you didn't have before," Athey told Alvin Powell for the *Harvard University Gazette* (November 9, 2006, on-line). "I will sometimes go into a topic very deeply and abstractly, but eventually there's going to be a link to changing the world in some way, even if it's sometimes indirect." Athey's specialties are microeconomic theory, which focuses on decisions made by consumers (individuals, families, and businesses) and producers regarding purchases, investments, and other matters related to economics; industrial organization, a branch of microeconomics that deals with competition and other behavior of companies and government agencies acting as consumers; and econometrics,which involves the use of quantitative and statistical tools to analyze economic data and make predictions. According to the AEA's Web site, Athey is "an applied theorist"; she has formulated economic theories and also applied those theories to real-world problems and situations in strikingly original, eminently useful ways. Writing for the Web site Economicprincipals.com (April 22, 2007), David Warsh described Athey's theoretical work as "complicated in the extreme"; with few exceptions, laypeople would find it incomprehensible. Her applications, however, involve such familiar matters as diversity and affirmative action in organizational settings (including schools and businesses); 911 emergency-response systems; and auctions held by private concerns (for items ranging from fresh fish and flowers to real estate and antiques) and governments (for items ranging from treasury bills, auctioned by the U.S. Treasury Department, to natural resources, including timber, auctioned by the U.S. Forest Service, and oil and gas leases, auctioned by the Bureau of Land Management of the U.S. Department of the Interior).

In awarding the Clark Medal to her, the AEA cited as groundbreaking contributions to economics several papers written or co-authored by Athey that appeared in the *Quarterly Journal of Economics*, the *Journal of Political Economy*, the *Review of Economic Studies*, and *Econometrica*; she has also published articles in the *American Economic Review*, the *International Economic Review*, and the *Rand Journal of Economics*. Athey's work has been supported by funding from MIT, Stanford University, and, continuously since 1995, the National Science Foundation. Since 2001 Athey has been a research associate with the National Bureau of Economic Research, which describes itself as "a private, nonprofit, nonpartisan research organization dedicated to promoting a greater understanding of how the economy works." She is a principal with the firm Market Design Inc., which, according to Alvin Powell, "advises governments on the design of auctions for items as varied as public resources, pollution permits, and the procurement of electricity." Several times in 1999, 2000, and 2001, she served as a consultant to the Research Department of the Federal Reserve Bank of Minneapolis, in Minnesota. She has been a senior consultant to Criterion Auctioneers of London, in England, since 2006.

"I love being in the middle of the research process, or the beginning," Athey told Rachel Croson for the *CSWEP Newsletter* (Spring/Summer 2001), published by the AEA's Committee on the Status of Women in the Economics Profession. "Coming up with a new theory, and developing a model, and proving some results, and then changing the model, and getting to the point where you have just the right model and into discovering how it works—just the moment when the model really 'sings' to you—is just a 'high' that it's hard to match anywhere else." By her own account, Athey regards one of the most important—and gratifying—aspects of her work the mentoring of students. "That gives me a lot of meaning—it feels like the impact that I have there will outlast a lot of the other things that I do," she told Croson. Athey hopes to influence her female students not only as an accomplished woman in the field but as one of the first at the top of the profession to enjoy marriage and motherhood along with her career.

The younger of the two daughters of Elizabeth Johansen, an English teacher, and Whit Athey, a physicist, Susan Carleton Athey was born on November 29, 1970 in Boston, Massachusetts, and grew up in Rockville, Maryland. Her sister, Jennifer Athey, is a psychiatrist. Her father worked for the U.S. Food and Drug Administration; after he retired, he co-founded the free on-line magazine *Journal of Genetic Genealogy*, which he edits. Whit Athey tried to imbue in his daughters his love for math and science, while his wife inspired in them an energetic optimism and a feeling for language. Athey's father has suggested that having a precocious older sister who earned many "kudos" made Susan "determined that she could do just as well," as he told Sylvia Nasar for the *New York Times* (April 21, 1995). A gifted student, Susan Athey sometimes purposely got poor grades so that she would fit in among her classmates. During her teens she played field hockey and other sports and had a series of odd jobs, among them telemarketing for a lawn service and working in pizza eateries. Unlike the vast majority of her peers, she read a newspaper (the *Washington Post*) daily. When John Koch asked her whether she was a nerd in high school, Athey replied, "No. I partied a lot. I found it hard to be a teenage girl and be real serious about math and school at the same time. I ended up not paying much attention to academics for a couple of years, but I knew that I wanted to achieve a lot in my life, so I decided to graduate early." Athey completed high school in three years and at 16, along with her sister, enrolled at Duke University, in Durham, North Carolina. According to economicprincipals.com, her parents divorced around that time.

At Duke Athey relished being in an environment in which intellectual pursuits were highly valued. She chose as her majors math and computer science, taking a few economics courses with the idea that she might someday enter the computer business. In her sophomore year a sorority friend of hers introduced her to Duke's microeconomics specialist Robert Marshall, and she became his full-time research assistant that summer. Earlier, she had worked for a computer business that had acquired a contract with the federal government through what is known as a procurement auction. Under Marshall's guidance Athey studied a flaw she had noticed in the auction system: the low cost of disputing the government's decision appeared to encourage losers to protest an inordinate number of outcomes. They would then receive payments from the winners through legal settlements. In what Marshall and Athey termed "procurement oversight by protest," the winners and losers were actually cooperating on bids. Athey wrote a paper about the problem, and later, in June 1991, she was present when Marshall testified before a subcommittee of the U.S. Senate Committee on Government Affairs about the need to change the auction process. "It was a neat chance to see how theoretical research in economics could influence public policy," she told Rachel Croson. Athey added economics to her majors at Marshall's urging and after she attended a seminar on game theory and industrial organization that fascinated her. (Game theory, a branch of applied mathematics and economics, is concerned with ways to make the best possible decisions, usually to maximize gains or minimize losses, in situations in which specific information is known and in which others are similarly engaged.) "What I liked about economics, early on, was that it was very rigorous and analytical, yet it could be applied to real-world policy problems," she told Croson. Athey graduated magna cum laude from Duke in 1991 with a B.A. degree in economics, math, and computer science. She was elected to the honor society Phi Beta Kappa.

Athey next enrolled at the School of Business at Stanford University, in Palo Alto, California, to pursue a Ph.D. in economics. As she wrote for the Harvard Department of Economics Web site, in what was labeled "a (somewhat) less technical introduction" to her research, at Stanford Athey observed that only tall, athletic male students were invited to join the informal departmental basketball team; women (even if they had basketball skills, as she had) as well as short or unathletic men were unwelcome. Moreover, faculty members who played with the team recruited their research assistants only from among the students on the team; the latter thus benefited professionally from their suitability for that particular recreational activity. When Athey learned that her fellow students also enjoyed weightlifting, she took up that sport, solely to advance her career. That tactic worked: "I wasn't left out of the networking and informal conversations that can sometimes lead to collaborations," as she wrote. After those experiences, she continued, "I was left puzzling over what economic theory would have to say" about them. "What was missing from standard models that would account for these real effects of being a minority?" Working with two other students, Christopher Avery and Peter Zemsky, she constructed what she called "an 'applied theory' model of diversity in organizations that captured the idea that similarities among workers of different 'types'—gender or race, for example—make mentoring more productive." In her "first economic paper," "Mentoring and Diversity," which (because of publication delays) appeared in *American Economic Review* in September 2000, Athey, Avery, and Zemsky wrote, as paraphrased by Athey, "Firms face a tradeoff between maximizing the mentoring that goes to the majority type—where type-biased mentoring implies majorities are more likely to be promoted—and implementing voluntary affirmative action programs that lead the firm more quickly to full diversity, which allows the firm to provide intermediate amounts of mentoring to the best and brightest workers of both groups."

In her doctoral dissertation Athey presented new mathematical methods for analyzing risky business decisions involving, for example, foreign investments or technological advances. The tools she created, which have become standard in economic research, were outstandingly original. "I remember being just totally stunned," the economist Paul Milgrom, one of her doctoral advisers, told Mark Whitehouse for the *Wall Street Journal* (April 21, 2007). "This was a problem that had occurred to me that I thought was just too hard."

Athey's work at Stanford led to unprecedented interest in her on the academic job market. The economist John Roberts, another of her Ph.D. advisers, told Elizabeth Kelleher for USInfo.state.gov (May 1, 2007) that when she completed her Ph.D., Athey was "the hottest thing ever. Normally, a graduate of a good program in economics might have two or three [job] offers. She stopped accepting requests to interview when she had 24 offers." Roberts also said of her, "She is very dedicated and ambitious in a good way. But ultimately, what it is all about is just how smart she is." In 1995 Athey joined the faculty of MIT as an assistant professor; from 1997 to 1999, when she was promoted to associate professor, her titles bore the prefix Castle Krob Career Development. She won tenure before she turned 30—a rarity in her field. In 1997 and 1998 Athey was a Cowles Foundation visiting assistant professor at Yale University, in New Haven, Connecticut. In 2001 she left MIT, returning to Stanford as an associate professor in the Economics Department; she became a full professor in 2004, teaching students in the Graduate School of Business as well as undergraduates.

According to the great British economist John Maynard Keynes (1883–1946), "The master-economist must possess a rare combination of gifts. He must reach a high standard in several different directions and must combine talents not often found together. He must be mathematician, historian, statesman, philosopher—in some degree. He must understand symbols and speak in words. He must contemplate the particular in terms of the general, and touch abstract and concrete in the same flight of thought. He must study the present in the light of the past for the purposes of the future. No part of a man's nature or his institutions must lie entirely outside his regard. He must be purposeful and disinterested in a simultaneous mood; as aloof and incorruptible as an artist, yet sometimes as near the earth as a politician." In an example of a concrete application of Athey's work, in 2004 she was hired to assist Bob Friesen, an official with the British Columbia, Canada, Ministry of Forests, in constructing an auction-based system for selling government-owned timber (trees that are potential sources of lumber). "We wanted to make sure that we had a world expert so the system would be a sound system that wasn't under attack," Friesen later told Lisa Priest for the Toronto, Canada, *Globe and Mail* (April 23, 2007). Forestry is a major industry in British Columbia; currently, income from wood and paper products amounts to about 10 percent of the province's gross domestic product. For years, in setting the fees that lumber companies paid to the province in return for the right to harvest trees, British Columbia had relied on a comparative-value pricing system. Athey, who had studied timber auctions beginning during her years at Duke, used a statistical model to analyze data from past British Columbian timber auctions to determine prices that more accurately reflected market values. "Once you have those prices [at auction], those prices can be used as a benchmark for setting prices on timber that cannot be sold by auction," Athey explained to Priest. "What you want is something that reflects the price that a private landowner might receive." The new system helped to settle a trade dispute between Canada and the United States, which had accused its northern neighbor of subsidizing timber exports. Athey has also worked with the Australian government regarding timber auctions.

Athey has remained in academia rather than taking a full-time job in the corporate world, where she could earn far more, because she regards the mentoring of students as essential to her work. "I tend to have close relationships with students," she told Kelleher. "It helps humanize the leadership of the profession to them." She told Rachel Croson, "I feel lucky that I've already had the chance to see the effect that I've had on a few students' lives." Although women are not nearly as rare in economics as they were in the recent past, they are still underrepresented. Currently, women earn about one-third of the bachelor's degrees and one-third of the Ph.D. degrees awarded annually in economics, but at the universities that grant those Ph.D.s, only 8 percent of full professors in economics are women, according to the *CSWEP Newsletter* (2006, on-line). When Athey taught at Stanford, she was the only female tenured faculty member in the Economics Department. As of the spring of 2007, she was one of only three tenured women in Harvard's Economics Department. Athey told Kelleher that her selection as a Clark award winner had generated an "overwhelming response" from women in the profession. "To the extent that I become a role model for younger women, that's really exciting," she told Lisa Priest.

Athey's honors include her winning a half-dozen scholarships and fellowships, among them the Duke University Alice Baldwin Memorial Scholarship (1990–91), a National Science Foundation Graduate Fellowship (1991–94), and the AEA's Elaine Bennett Research Prize (2001). In January 2007 she delivered the Toulouse Lectures in Economics, in France; her subject was "Dynamic Contracts and Games with Hidden Information." Athey and her husband, Guido Imbens, a native of the Netherlands and Harvard professor of economics, have collaborated professionally on two papers, on the subjects of what economists call discrete-choice models and difference-in-difference models. The couple live in Cambridge, Massachusetts, with their son, Carleton, born in 2004, and daughter, Annalise, born in 2006. Before she became a mother (and had a bit more leisure time), Athey's recreational interests included running, biking, and in-line skating.

Kate Atkinson

the works of more established writers. With that book and her two follow-up novels, *Human Croquet* (1997) and *Emotionally Weird* (2000), Atkinson, a onetime Ph.D. candidate in literature, established a reputation for works whose sometimes deliriously comic tone belied the seriousness of their themes: bleak family histories, parents' betrayals of children, and irreparable loss. Following the publication of her 2002 story collection, *Not the End of the World*, Atkinson turned to the mystery/thriller genre, to write the well-reviewed novels *Case Histories* (2004) and her most recent work, *One Good Turn* (2006). In the London *Telegraph* (August 29, 2004, on-line), Helen Brown expressed the view that the writing of mysteries is well-suited to Atkinson's talents. Referring to Jackson Brodie, the detective-protagonist of *Case Histories*, Brown wrote, "Considering the intimate details of other people's lives for a living is something Jackson and Atkinson have in common."

An only child, Kate Atkinson was born in York, England, on December 20, 1951. Her parents ran a surgical-supplies store, and the family lived in an apartment above the store until Atkinson was two years old. Atkinson read voraciously as a child; among her favorite books were Richmal Compton's 1922 comic novel *Just William* and the works of Lewis Carroll, including *Alice's Adventures in Wonderland*, which she has recalled reading once a week between the ages of five and 10. She attended a private elementary school and the Queen Anne Grammar School for Girls before enrolling at Dundee University, in Scotland; she matriculated there after failing the entrance examinations at Oxbridge University and the University of Edinburgh. (Between secondary school and college she worked briefly as a maid in a hotel, a fact that the press would later publicize widely. She has also, by her own account, worked as a legal secretary, headed a welfare-benefits office, run a youth program for visiting the elderly, and served as a home aide, among other jobs. "The more experience you get the better," she wrote for the Web site Write Words, with reference to becoming a writer.) Atkinson graduated from Dundee with an M.A. degree in English literature in 1974, and thereafter she made Scotland her home. In 1973 she had married another Dundee student; her first daughter, Eve, was born in 1975, and Atkinson was divorced soon afterward. She remained at Dundee, where, having become fascinated by the work of American writers including Donald Barthelme and Kurt Vonnegut, she studied for a Ph.D. degree in American literature and completed a dissertation, "The Post-Modern American Short Story in Its Historical Context." She failed her oral examination, however, and fell short of obtaining her degree. Having done so, she "suddenly had no creative outlet" and was "very unhappy," as she stated for Write Words. She added, "Unhappiness is a great kick start to writing."

Atkinson married for the second time in 1982, giving birth to her second child, Helen, the same year. After five years that marriage, too, ended. Meanwhile, she had begun working part-time and writing fiction. One of her short stories won the *Woman's Own* magazine prize in 1988, and two years later she was runner-up for the Bridport Short Story Prize. She told Wendy Smith for an interview in New York *Newsday* (June 22, 1997), however, that she did not make a conscious commitment to a writing career until she was 40. Her career took off in earnest when she won the prestigious Ian St. James Award for her story "Karmic Mothers—Fact or Fiction?"

Atkinson's first novel, *Behind the Scenes at the Museum*, appeared in 1995. She has recalled that the inspiration for the book came in part from a dream she had; in it, she was visiting the Castle Museum of Yorkshire Life, in York, when the displays came to life. The novel brought its author the Whitbread Book of the Year Award, winning over the celebrated novelist Salman Rushdie's *The Moor's Last Sigh*, among other books by better-known writers. (In response, one British newspaper ran a headline reading, "44 Year Old Chambermaid Wins Whitbread.") Ruby Lennox, the narrator and protagonist of *Behind the Scenes at the Museum*, mainly presented as a teenager, describes a century of events in her family prior to—and including—her own birth. She also tells of her life in York, spent above the family pet shop with her two older sisters and her bickering parents—a philandering father and a mother who admits to not liking children. While the novel is in some respects reminiscent of the York author Laurence Sterne's 18th-century comic tour de force *Tristram Shandy*, Ben Macintyre noted for the *New York Times Book Review* (March 31, 1996) that even "by traditional standards of Yorkshire gloom, what happens to the intervening generations of Ruby's family is pretty dire. Most end up married to people they cordially detest or with children they did not expect or much want; many die violent, early deaths and almost all are miserable, some quite happily so. . . . . Like Yorkshire itself, *Behind the Scenes at the Museum* is all sharp edges; it is a caustic and affectionate portrayal of a world in which bleak but nourishing wit is the only safety net." Georgia Jones-Davis, writing for the *Los Angeles Times* (December 27, 1995), called the novel "a powerhouse of storytelling, a treasure chest bursting with the painful, pitiful, sad, always fascinating details of the most ordinary of lives." In addition to the Whitbread, *Behind the Scenes at the Museum* earned Atkinson the Lire Book of the Year prize, from France, and the *Yorkshire Post* Book Award for best first work. Atkinson was presented with the E. M. Forster Award from the American Academy of Arts and Letters in 1997.

Stung by assumptions that *Behind the Scenes at the Museum*, set in her native York, was the story of her own life, Atkinson deliberately made *Human Croquet*, her 1997 novel and the second in what she termed a trilogy, "purely a product of the imagination," as she said to Wendy Smith. Isobel Fairfax, the main character in *Human Croquet*, slips "in and out of linear time" and "experiences Christmas Eve and Day, 1960, over and over again, with increasingly and hilariously disastrous results," in Smith's words. Isobel and her older brother, Charles, grow up without their mother, who "ran off with a fancy man," according to the children's aunt; the novel's humor aside, its "central motif," as Rosemary Goring noted in *Scotland on Sunday* (March 9, 1997), is "a profound sense of loss." Claire Harman, writing for the *Independent* (March 9, 1997), called *Human Croquet* "interestingly confusing" and noted that "the device of time-warping . . . is taken very much further than the reader anticipates, beyond the point at which it appears fanciful and into a region where all sorts of possibilities open up. . . . Once you've given up trying to follow the real plot—if there is one—the problem of the book having no message becomes irrelevant; the author makes you attend to her contradictory stories for their own sake." Rosemary Goring observed, "Atkinson stirs together her cast like a witch flavouring her cauldron, the result a faintly gothic and beguiling concoction that is inimitable. One of her talents is to invest mundane detail with surreal significance, while at the same time deflating horrors, such as violence or abuse, by the clarity of her observation, unloaded with comment, but seen as through a youngster's camera eye. . . . The joists of life, where farce and dullness and cruel despair lie beneath a placid surface, are Atkinson's terrain."

In her novel *Emotionally Weird* (2000), set in the early 1970s, Atkinson again explored the themes of family history and mother-daughter relationships. Effie, while studying at Dundee University and maintaining her relationship with her drug-addled boyfriend, shares a house—and trades dubious autobiographical stories—with Nora, the woman she believes at first to be her mother. Meanwhile, Effie realizes that she is being followed. Rosemary Goring noted in *Scotland on Sunday* (February 20, 2000) that *Emotionally Weird* forms a continuum with *Behind the Scenes at the Museum* and *Human Croquet*. Each of the first two novels, she wrote, "took the form of family archaeology, the narrator prying into secrets, digging up the past and piecing together the fragments until a whole, if cracked, picture emerges. In both books we were drawn into the past as well as watching the unfolding present, Atkinson slipstreaming into history with the ease of a greased diver cutting through the waves." Goring found that with *Emotionally Weird*, Atkinson had used the same approach, and taken on similar themes, less successfully. "The design and central issues of *Emotionally Weird* are identical, but where the earlier books held their plot tightly controlled, and with it your interest, this time the structure is stretched so thin it's transparent. . . . Atkinson's cast of hundreds and attention to specifics is a good idea that runs out of control." Stephanie Zacharek, writing for the *New York Times Book Review* (June 25, 2000), arrived at much the same conclusion, noting that *Emotionally Weird* starts with "lively, crackling prose" and "deft character descriptions" but ultimately finding that "a problem with too much clever wordplay and so many enticingly detailed descriptions" is that "they can build you up just to let you down. . . . Atkinson is so good at describing her characters that she introduces altogether too many of them, and many of the better ones don't have much to do. . . . *Emotionally Weird* is clearly supposed to be a rumination on the bond between mothers and daughters, and Effie's shaggy-dog story is most likely intended as a metaphorical reflection of her emotional state. Too bad it untwirls itself halfway through."

Atkinson explained to Kim Bunce for the London *Observer* (March 12, 2000) her realization that her first three books were "based on *Alice in Wonderland* in one way or another but the young girl has now reached 21 and is grown up." She added, "I've had enough of that kind of writing." Accordingly, she next wrote *Not the End of the World* (2002), a short-story collection. The 12 stories each stand alone, but there are recurring characters among them; the first and last stories, both of which are set in a drastically decayed London and feature the characters Charlene and Trudi, fully reveal the thread running through the book. "These jazzy, offbeat stories studded with pop cultural references will appeal to Atkinson's fans and all readers of smart, trendy fiction," Barbara Love wrote in a review of *Not the End of the World* for *Library Journal* (September 1, 2003).

Case Histories, Atkinson's 2004 novel, marked another departure for the writer. That book, her first crime novel, centers on the policeman-turned-private-detective Jackson Brodie, who attempts to solve the mysteries surrounding three events of years past: the disappearance of a three-year-old girl; the killing of a young woman; and the ax-murder of a young husband and father, apparently by his wife. In describing her choice of a protagonist, Atkinson said to Helen Brown, "I wanted to write about a man man, who's interested in cars . . . you know? A man man. It's been said that the men in my books have been absent, or weak, or creepy. Jackson is 'the last good man standing.'" Carrie O'Grady wrote for the London *Guardian* (October 2, 2004), "*Case Histories* is essentially a balancing act, with evil and ignorance stacked opposite truth and healing. In this aspect the book is more satisfying than many detective novels—not just because it is so well written, but in its defiant refusal to let the dark side win the day merely for the sake of looking gritty and 'real.' Of course, *Case Histories* is not all sunshine and trite happy endings, but this is a book that rests on a strong and well-constructed moral framework, and is all the more powerful for it." Katie Owen, writing for the London *Daily Telegraph* (August 29, 2004, online), pronounced *Case Histories* to be Atkinson's "best book yet."

In *One Good Turn* (2006), her most recent book, Atkinson again turned to the crime/mystery genre—this time to tell the story of Martin Canning, a 50-year-old, sedentary mystery writer who performs an uncharacteristic act of physical bravery that makes him the target of a killer. Assessing the novel for the *New York Times Book Review* (October 29, 2006, on-line), Liesl Schillinger observed that prior to Atkinson's forays into crime fiction, "her novels and stories were puzzles of interpersonal connection: sometimes homey and nostalgic, like a jigsaw, sometimes experimental, like a Rubik's Cube, but always recognizable once assembled. Paradoxically, murder has given her a framework that helps liberate her insights on the living, as the lurking presence of corpses reminds readers that there are worse offenses than bad parenting and worse fates than unhappy marriages." Once, Schillinger concluded, "domestic dynamics were Atkinson's whole subject. Now they're her fuel tank."

Atkinson lives in Edinburgh. Catherine Lockerbie reported in the *Scotsman* (February 3, 1996) that contrary to an article in the *Daily Mail* describing Atkinson as being "pale" and "rather pimply" with "unwashed" hair, and as looking "like any tired London tourist," the novelist is "a strikingly beautiful and vivacious woman—with very well-washed hair." In addition to publishing fiction, Atkinson has written dramatic works. Her short 1996 play, *Nice*, was written for the Traverse Theatre, in Edinburgh. Her play *Abandonment* was published in 2000 and opened at the Edinburgh Festival in the same year.

NOTE: An earlier article about James A. Baker 3d appeared in *Current Biography* in 1982.

Apr. 28, 1930– Organization official; former government official

Address: James A. Baker III Institute for Public Policy, 6100 Main St., Rice University, Baker Hall, Suite 120, Houston, TX 77005

Few figures in American politics have had as much influence over the events of the last quarter-century as James A. Baker 3d. Baker served most recently as the co-chair of the Iraq Study Group, the bipartisan blue-ribbon commission charged in 2006 with making recommendations to President George W. Bush and Congress for a new direction in the Iraq War. The son of an old-money family in Houston, Texas, Baker is an unusual political figure, known for his prowess as both a Republican partisan, capable of doing whatever is needed to win elections, and a dealmaker, prepared when necessary to reach across a domestic or international divide. Baker first became well-known through his work on Gerald R. Ford's unsuccessful 1976 presidential campaign; his closest political association—dating back nearly four decades—has been with former president George H. W. Bush, for whom he served as campaign manager, chief of staff, and secretary of state. Frequently called the elder Bush's *consigliere*—the Italian word for adviser or counselor—Baker was instrumental in getting Bush to serve as Ronald Reagan's running mate in the 1980 presidential election and in guiding Bush's own successful campaign for the White House in 1988. Baker's association with the Bush family remains close; he led George W. Bush's

team during the ballot recount in Florida, following the 2000 presidential election, and aided the current president on the issue of Iraqi debt in 2003.

As the face of the Republican Party during the 2000 vote recount, Baker saw the erosion of the above-the-fray image he had crafted as secretary of state from 1989 to 1992. Once known for helping to forge the deals that controlled the former Soviet Union's nuclear stockpile, reunified Germany in 1990, and created the international coalition that drove the Iraqi army from Kuwait in 1991, Baker came to be regarded by some after the 2000 election as little more than a Republican hatchetman. Since the December 2006 release of *The Iraq Study Group Report*, which was highly critical of the current Bush administration's policy in Iraq, Baker has begun once more to be perceived as a pragmatic internationalist willing to achieve peace in the Middle East through negotiations with nations in the region, whether they are friendly or antagonistic toward the United States. While warning that "there is no magic formula that will solve the problems of Iraq," as quoted by a writer for the Agence France-Presse (December 6, 2006), Baker recommended that the U.S. open talks with Iran and Syria—two nations suspected of stirring up sectarian violence in Iraq as well as supplying and arming fighters there. "You don't just talk to your friends, and it's not a sign of weakness to talk to somebody," Baker said in an interview broadcast on MSNBC in October 2006, as quoted by the Agence France-Presse reporter. "It's not necessarily appeasement, provided you do it in the right way and you just don't roll over and give something, that you're hard-nosed and tough about it."

James Addison Baker 3d was born in Houston on April 28, 1930, the son of a well-to-do attorney nicknamed "the Warden" by his children. A strict disciplinarian, James A. Baker Jr. was known to throw a bucketful of ice water on his children if they were not awake by seven o'clock in the morning. As the younger James Baker explained to Tony Kornheiser for the *Washington Post* (January 18, 1981), at an early age he was "made conscious of the fact that I sort of had a heritage to live up to." His great-grandfather was a founder of Baker & Botts, one of Houston's first legal offices, and his grandfather, "the Captain," built it into the largest and probably the most prestigious law firm in the city through his connections in banking, real estate, and brokerage as well as his own investments. The Bonners, Baker's mother's family, made their fortune in the oil business. Like his father, Jim Baker, as he prefers to be known, attended the Hill School, a college prep school in Pottstown, Pennsylvania, then enrolled at Princeton University. Although he was a classics major, he wrote his senior thesis on the British Labour Party from 1945 to 1952. After receiving his B.A. degree from Princeton, in 1952, he spent two years on active duty in the United States Marine Corps. Having learned to shoot when he was a child, he became an expert marksman and was a member of the pistol and rifle team at Camp Lejeune, North Carolina. At his father's insistence, Baker returned to his home state upon completion of his military service to study law at the University of Texas at Austin.

Prevented by a company rule against nepotism from joining the family business, Baker went to work for Andrews, Kurth, Campbell & Jones, another high-powered corporate law firm in Houston, immediately after earning his J.D. degree, in 1957. "It was one of the best things that ever happened to me," he said years later, as quoted in *Newsweek* (September 6, 1976). "I always would have wondered if I would have made it on my own." He began his career in trial law, quickly growing disenchanted with the work and taking up business law instead. Within a decade he was made a partner at the firm. Baker found that he had a knack for making money in other ways, as well. In addition to making profitable investments, he succeeded as the head of a real-estate firm and the co-founder of both a brokerage house and a company that serviced oil wells; he and others sold the latter business for a substantial sum.

Although he was nominally a Democrat, Baker was by his own account "totally apolitical" during those years—in part because, as has been widely reported, his family saw politics as a corrupt profession. Meanwhile, his wife, the former Mary McHenry, was an active member of the Republican Party in Texas, who most notably contributed to the congressional campaigns of George Herbert Walker Bush. It was not until 1970, following the death of his wife that February from breast cancer, that Baker became actively involved in politics. In that year Bush, a longtime friend who had recently announced his candidacy for the U.S. Senate, asked Baker to run his Harris County, Texas, campaign. In interviews Baker has expressed his belief that Bush made the request in order to help him come to terms with his bereavement, to "give me something to do," as he once put it. Bush lost the race to Lloyd Bentsen, but largely because of Baker's organizational ability, he easily carried Harris County, which includes Houston, taking 61 percent of the votes cast. As a result of that experience, Baker switched parties to become, in his words, "absolutely, totally, pure Republican."

In 1972 Baker ran the campaigns in 14 Texas counties for the victorious Republican national ticket, headed by the incumbent president, Richard M. Nixon. A few months later he was named state Republican finance chairman. Reportedly on the recommendation of Bush, in 1975 he was offered a post as under secretary of commerce in Gerald R. Ford's administration. The following year, President Ford persuaded him to relinquish that position to become chief delegate hunter for the Ford campaign at the 1976 Republican National Convention, held in Kansas City, Missouri. Contrary to the predictions of many old-line political professionals, the personable and energetic Texan rounded up the final 200 or so delegate votes that pushed Ford over the top and won him his party's presidential nomination on the first ballot. Just a week after the convention, on August 25, 1976, Baker succeeded Rogers C. B. Morton as chairman of the President Ford Committee. He was the third man to head the campaign in five months. At the time of Baker's appointment, Ford was trailing Jimmy Carter, the Democratic standard-bearer, by some 30 points in most public opinion polls. Insisting that "people have been selling us and this President short for months," Baker devised a rather unorthodox game plan. According to Kandy Stroud, a political correspondent and the author of the book *How Jimmy Won* (1977), an analysis of Carter's 1976 presidential campaign, Baker advised Ford to emphasize his "presidential" image by spending most of his time at the White House until the last few weeks of the campaign. For the closing days of the campaign, he recommended an all-out personal appeal by the president, accompanied by a media blitz. The unorthodox strategy worked so well that Ford made up almost the entire 30-point deficit, but it was not quite enough. The incumbent president lost the national election on November 2, 1976 to Carter by just over 1 percent of the total vote. Despite his candidate's loss Baker earned a reputation as a campaign tactician of uncommon ability. As Stroud wrote, "Not until the bitter end, when James Baker took over, was there the slightest semblance of order or direction in the Ford campaign."

After the election Baker returned to his law practice in Texas, but, as he told Tony Kornheiser, "it didn't hold the same fascination for me anymore." In 1978 he announced his candidacy for the office of state attorney general. Despite the help of such high-powered Republicans as George H. W. Bush, Gerald Ford, Jack Kemp, John B. Connally Jr., and Ronald Reagan, who stumped the state in his behalf, and a campaign chest of over $1.5 million, he was beaten in that contest, his one and only bid for elective office to date, by a conservative Democrat. Nevertheless, he managed to garner about 46 percent of the vote, the highest total ever for a Republican running below the first line on a statewide ticket in what was then an overwhelmingly Democratic Texas.

The following year Baker agreed to manage George H. W. Bush's campaign for the Republican presidential nomination. To the astonishment of most veteran campaign watchers, Baker guided Bush, who was generally considered to be the underdog in the crowded Republican field, to a stunning political upset in the Iowa caucuses. Because they were the first political event of the year, the caucuses attracted heavy press coverage. Bush's victory, and the accompanying media splash, made him the front-runner going into the snowbelt primaries and aided him in winning six straight primaries. In the New Hampshire primary campaign, however, Bush made a costly mistake when he stubbornly refused to allow other candidates to participate in a televised debate that had originally been scheduled to include only Bush and his most serious challenger for the nomination, Ronald Reagan. A few months later, just before the crucial California primary, Baker persuaded Bush to withdraw from the race. He later admitted that Bush's taking the vice-presidential spot on the Republican ticket was "in [his] mind always as a fallback."

The timing and grace of the withdrawal decision undoubtedly made it easier for hardcore conservatives to accept Bush—a comparatively moderate Republican—as Reagan's running mate at the Republican National Convention. At Bush's suggestion Baker joined the Reagan campaign team as a senior adviser. Responsible for drawing up the budget for the final weeks of the campaign, he successfully argued in favor of cutting salaries and other personnel costs and putting that money into media advertising. He was also involved in the negotiations for the television debates with President Carter and with John B. Anderson, the Independent candidate. Against the advice of Edwin Meese 3d, Reagan's longtime associate, Baker pressed for a showdown debate with Carter. "I knew Reagan wipes people out in debates . . . ," he explained to Tony Kornheiser. "I knew that there were people on the fence about Reagan, people who'd heard he was a bomb-thrower"—that is, a trigger-happy political extremist. "The only way to overcome that impression was to get him on TV. . . . I knew Reagan would show better than Carter. Reagan never loses a debate." Baker was one of several aides who helped coach Reagan for the final television confrontation with Carter. In the opinion of many political analysts, that debate clinched the election for Reagan.

Ten days after Ronald Reagan's election to the presidency, on November 14, 1980, Baker was named White House chief of staff. His main duty in that post was to supervise the activities of nearly 1,300 White House employees; he also served as a trusted senior adviser to President Reagan, particularly in the area of legislative affairs. Baker's appointment surprised Washington insiders, many of whom had predicted that the new president would choose Ed Meese, the chief of staff during Reagan's tenure as governor of California. Moreover, Baker was considerably more moderate politically than the other members of Reagan's inner White House circle. In addition to managing the White House personnel office, he oversaw the operations of the legislative-affairs, public-liaison, press and communications, political-affairs, and speechwriting offices. Baker had further responsibilities as a member of the National Security Council and as a senior foreign-policy adviser. "It's a managerial job," he explained to Louise Sweeney for the *Christian Science Monitor* (December 30, 1980). "I think you've got to be able to make that train run efficiently, or the President will not appear to have it all together. You've got to be low key and low visibility because your own role is that of an honest broker. . . . I have to refrain from . . . suggesting policy options to the President." "You see," he went on, "I have to make sure that he gets all sides of every question, and that everybody who should have a chance to contribute to that decision has a chance."

In Washington circles Baker, presidential counselor Ed Meese, and Michael Deaver, the deputy chief of staff, quickly became known as the "Big Three" or the "Troika" of the Reagan administration. The extent of the authority exercised by those three men was perhaps first revealed to the public on March 30, 1981, when the president was wounded in an assassination attempt. In the harrowing hours following the shooting, they made almost all of the crucial decisions. For example, once they knew that President Reagan's life was not in immediate danger and that the international situation was stable, the three decided it was not necessary to invoke the 25th Amendment, which would have transferred power to Vice President Bush. During his 12-day hospital stay, Reagan relied heavily on his daily meetings with Baker, Meese, and Deaver for briefings and for help in decision-making.

During Reagan's first few months in office, Baker concentrated on securing congressional passage of Reagan's controversial supply-side tax and budget package. A firm believer that supply creates its own demand, Reagan advocated an economic policy of lower taxes and increased production, as opposed to the classical economic model that attempts to stimulate demand by first improving economic conditions. According to Secretary of the Treasury Donald T. Regan, as quoted in *People* (August 31, 1981), "Baker never left his desk, but he told the President when to play the good guy, when to play the bad guy, when to call a Senator or a Congressman" who might be wavering in his or her support for the president's plans. Representative Jack Kemp, the co-author of the Kemp-Roth bill, a comprehensive federal tax-cut proposal, added, "With all due respect to the President and Secretary Regan, it was Baker who got the budget and tax package passed."

Although he had long contended that "you can't be an honest broker and push policy," Baker nonetheless worked closely with Meese and other advisers on policy formulation and legislative strategy. (During his time as Reagan's chief of staff, Baker was nicknamed the "Velvet Hammer" for his ability to beat political opponents without making enemies.) In planning sessions he argued against the creation of a so-called "super Cabinet" in which some department secretaries would have had to report to others. Fearing a "power play" by Secretary of State Alexander M. Haig Jr., Baker successfully urged that Vice President Bush be named to head the National Security Council's crisis-management committee. He also helped smooth over the objections of right-to-life groups to President Reagan's nomination of Sandra Day O'Connor as the first female associate justice of the United States Supreme Court. In addition, in 1982 and 1983 Baker helped to secure a deal with the Democratic-controlled Congress on Social Security reform, which created the first-ever trust fund guaranteeing benefits for future senior citizens. Reagan signed the 1983 law accelerating an increase in the payroll-tax rate, adding employees to the Social Security system, and slowly increasing the age for receiving full retirement benefits—measures that, in the face of predictions that Social Security benefits would soon disappear, ensured their continuation for the next 20 years. (As of early 2007, however, many experts were forecasting a shortfall in the Social Security program, as the "baby boom" generation begins to retire.)

Though the Baker-supported tax-cut package did not initially produce results sufficient to lift the country out of recession, by November 1984 the American public was feeling secure enough in the nation's economic outlook to give Reagan a landslide victory over former vice president Walter Mondale, his Democratic challenger, in that year's presidential election. As for Baker himself, the successes of Reagan's first term—as well as his skillful management of Reagan's reelection campaign—had brought him virtually unchallenged authority in the White House.

In February 1985 Baker and Don Regan switched jobs, with the former becoming secretary of the treasury and the latter chief of staff. When he took over the Department of the Treasury, Baker had very little experience in the realm of tax and finance, apart from having helped to steer Reagan's economic stimulus and tax-cut package through Congress. In order to achieve Reagan's goals at the Treasury Department, Baker brought with him from the White House Richard Darman, who would serve as his economic adviser while Baker negotiated compromises with Congress.

During Baker's first year as treasury secretary, the greatest challenge he faced was to push through Congress an overhaul of the tax system. Defying predictions, his efforts led to the Tax Reform Act of 1986, which simplified the income-tax code, expanded the tax base, and eliminated a number of tax shelters. Today, the passage of that legislation is considered to be the last domestic success of Reagan's presidency. Though tax reform is now considered one of Baker's major achievements as head of the Treasury Department, his initial successes came in the international arena, when he negotiated an agreement that drove down the dollar's value for the sake of increasing trade and introduced a program to aid indebted nations in the developing world. At the halfway mark of Baker's term as treasury secretary, Lenny Glynn wrote for the *Globe and Mail Report on Business Magazine* (November 1986), "There is ample reason to argue that . . . Baker has already made more of a mark on the U.S. dollar—and world finance generally—than any U.S. treasury secretary since flamboyant fellow Texan John Connally orchestrated the last gasp of the gold standard in 1971–73." In addition to his work as secretary of the treasury, Baker was also assigned to serve as chair of the President's Economic Policy Council.

Baker left the Treasury Department in 1988 to manage George H. W. Bush's campaign for the presidency that year. After helping to fend off attacks from the right wing of the Republican Party, which criticized Bush's positions on such hot-button social issues as abortion and flag burning, Baker secured Bush's overwhelming, come-from-behind victory against the Democratic challenger, Governor Michael S. Dukakis of Massachusetts, in the general election. The 1988 presidential campaign is generally remembered as one of the most brutal of recent times. As head of Bush's campaign team, Baker was criticized for his use of mudslinging tactics, in particular a number of attack ads focusing on Dukakis's character and his actions as governor.

Shortly after Bush took office, in January 1989, he named his old friend to the post of secretary of state, a position Baker had long desired. As the nation's chief diplomat, Baker soon found himself challenged by a shift in global politics. Foreign policy during the Reagan administration had been directed at confronting communism—both its existing form, in the Soviet Union, and its possible emergence in other areas of the world, such as Latin America. Reagan's doctrine had mandated that the United States negotiate with the Soviets only from a position of strength, achieved through a massive buildup of conventional and nuclear arms. By his second term, Reagan had become more willing to sign accords with the Soviets to control the proliferation of nuclear weapons. In 1988 the Soviet Union officially declared that it would no longer intervene in the affairs of its satellite nations in Eastern Europe. A year later Soviet troops withdrew from Afghanistan, where they had been waging a war of aggression since 1979.

Though it was not common knowledge at the time, communism in the Soviet Union and Eastern Europe was in its death throes when George Bush became president. Battered by a poor economy, an overstretched military, and poor infrastructure, the Soviet Union faced the first public recognition of its weakening grip on power on November 9, 1989, when masses of East Berliners, cut off from the rest of the city since the early 1960s by the Berlin Wall, were allowed by East German and Soviet authorities to cross the border and take part in a jubilant celebration with their brethren in the West. The wall was destroyed over the next several weeks by a euphoric German public who longed for reunification, which was officially declared on October 3, 1990. Baker, in his position as secretary of state, was the key negotiator in the reunification process.

Meanwhile, knowing that little was to be gained by further confrontation with the West, the Soviet premier, Mikhail Gorbachev, had met President Bush in Malta in December 1989 to declare a formal end to the Cold War. Shortly thereafter, the Warsaw Pact nations of Eastern Europe, as well as Soviet republics including Lithuania, began declaring their independence from the Soviet Union, as their citizens called for elections. In the Soviet Union itself the Communist regime was collapsing, despite hardliners' resistance to Gorbachev's reforms. A 1991 coup attempt against Gorbachev failed, leading the way for Boris Yeltsin and others to advocate the dissolution of the Soviet Union. In December 1991 the Soviet Union was voted out of existence by its own legislature, and its 15 republics became independent nations. Yeltsin subsequently became president of a newly democratic Russia.

One of the major challenges Baker faced during that remarkable period was helping to secure the former Soviet Union's nuclear weapons, which had been stationed throughout its 15 republics and in parts of Eastern Europe. In early December 1991, following a Ukrainian vote that supported the nation's full independence from Russia, Baker traveled to the capital, Kiev, to discuss the control of nuclear weapons in Ukraine. As other former Soviet states became independent, the Bush administration expressed concern that those states could threaten one another—or other nations—with the nuclear weapons on their soil. In order to guard against such a threat, Baker and other White House officials negotiated with their Russian counterparts the Strategic Arms Reduction Treaty (START) of 1991 and the Nunn-Lugar Cooperative Threat Reduction of 1992, which reduced the number of nuclear weapons and brought the remainder under the control of the Russian government. During the negotiations Baker played a key role in ensuring that all former Soviet republics were free of nuclear weapons. He also helped to provide aid packages to the former Soviet republics, as they made the transition to democratic government.

The other major foreign-policy crisis faced by the Bush administration erupted on August 2, 1990, when Iraq's then-president, Saddam Hussein, sent 120,000 troops to invade neighboring Kuwait, whose forces quickly capitulated. Declaring Kuwait to be a reclaimed province of Iraq, Hussein now personally controlled one-fifth of the world's oil reserves. Some speculated that Hussein would keep supplying oil and reap even greater profits than before, others that he would cut back the flow of oil and make up the difference in increased prices. There were fears among world leaders that Hussein would press on to Saudi Arabia or other oil-producing countries—perhaps in an attempt to unite all Arab countries under his rule—and initiate a final confrontation with Israel.

The Bush administration asked the United Nations to enforce economic sanctions against Hussein's regime, demanding a worldwide boycott of Iraqi oil. Well known for his pragmatic approach, Baker was an early and strong advocate of imposing sanctions on Iraq, hoping that economic pressure alone would force Hussein to cede control of Kuwait. The U.N. implemented the sanctions, which failed to persuade Hussein to recall his troops from Kuwait. After negotiating with other world leaders, Bush and Baker then proceeded to amass a large coalition of United Nations forces in the region—led mainly by the U.S. and composed primarily of U.S. troops—to demand Iraq's withdrawal from Kuwait. Iraq failed to comply with the January 15, 1991 deadline; the next day, coalition forces commenced air attacks on Iraq, followed by an invading ground force of about half a million troops five weeks later. Four days after that, Iraq agreed to a ceasefire and to the terms of disarmament stipulated by the U.N.

Baker spent the latter half of his time as secretary of state working on a wide variety of issues. In addition to hammering out nuclear-weapons treaties with Russia, he attempted to enact a peace agreement between the Israelis and the Palestinians. He also increased trade with China, at the same time pressing that Communist regime to ease its suppression of human rights and limit its missile sales. Chinese officials only grudgingly gave him a promise to curtail missile sales and to allow dissidents to leave the country. The country's human rights record remains a source of tension between China and the U.S.

In 1992 President Bush encountered serious challenges to his reelection from the Democrat Bill Clinton, who was then the governor of Arkansas, and H. Ross Perot, the maverick billionaire businessman who had launched a strong third-party candidacy. Saddled with a sluggish economy and sagging poll numbers, Bush asked Baker in the summer of 1992 to come back to the White House as his chief of staff and campaign strategist. Leaving the State Department was difficult for Baker, who loved working there. "I hated to leave that job," Baker told John Spong for *Texas Monthly* (December 2003). "The only time I can ever remember losing my composure was when I said good-bye to the people at State. It was an emotional moment." Baker took charge of Bush's reelection campaign in August 1992, shortly after the Republican National Convention was held in Houston. His efforts failed: the voting public, apparently weary of the president's focus on foreign affairs at a time when the country was in an economic downturn, elected Clinton—who won with a minority of the popular vote (43 percent) but a majority of votes in the Electoral College. (Perot drew 19 percent of the popular vote, most of it, analysts generally agree, coming from citizens who would otherwise have voted for Bush.)

With the failure of Bush's reelection bid, Baker found himself out of Washington politics for the first time in 12 years—and, at age 62, out of a job. He did not remain unemployed for long. He became a senior partner at his family's firm, Baker & Botts, while devoting much of his time to the establishment, in 1993, of the James A. Baker III Institute for Public Policy, which he continues to serve as honorary chairman. According to its Web site, the Baker Institute "is strictly non-partisan and dedicated to the highest standards of intellectual excellence and integrity with the goal of helping bridge the gap between the theory and practice of public policy by drawing together experts from academia, government, the media, business, and non-governmental organizations. By so doing, the institute will broaden the professional perspective and personal understanding of all those involved in the study, formulation, execution, and criticism of public policy." The institute publishes policy papers, sponsors research fellowships, and organizes gatherings of eminent public officials to discuss government policy concerning such diverse topics as energy consumption, space exploration, global climate change, Latin America, and the current crisis in Iraq. A variety of world leaders have spoken at the behest of the Baker Institute, including Russian president Vladimir Putin and former South African president Nelson Mandela.

In addition to his work with the institute, Baker served as a consultant for the energy giant Enron, mainly writing papers on the political situations in nations where Enron conducted business. He left Enron in 1994, long before the company's name became synonymous in the public mind with corporate irresponsibility. Somewhat more controversially, the former secretary of state also worked for the Carlyle Group, a Washington, D.C.–based private equity firm that facilitates the purchases of companies, among other activities. Widely reported to be, in effect, the 11th-largest defense contractor in the United States, the Carlyle Group has a client base that extends to nations including Saudi Arabia and has had a number of former politicians, including George H. W. Bush and former British prime minister John Major, on its payroll; the Carlyle Group has drawn criticism for its mingling of political, business, and national-defense interests. Baker has dismissed such criticism, while stressing in interviews that his Carlyle Group work has mainly consisted of giving speeches on world politics.

In 1997 Baker was named as the personal envoy of U.N. secretary-general Kofi Annan to Western Sahara, where it was hoped that he could hammer out a peace accord between the Moroccan government and the Polisario Front, which sought Western Sahara's independence from Morocco. Unable to make headway in the negotiations, Baker resigned from the position in 2004, leaving behind a plan that has been endorsed by the United Nations Security Council.

Baker's return to partisan politics came about shortly after the November 7, 2000 presidential election, when he received a call from the Republican candidate, Texas governor George W. Bush, the oldest son of the former president. The younger Bush had run against Vice President Al Gore; the election hinged on a recount of votes in Florida, where the initial count gave Bush the victory by only a few hundred votes. Bush asked Baker to take charge of the Republican team helping to monitor the recount, while Gore tapped former secretary of state Warren Christopher to handle matters on the Democratic side by contesting the results of the election in the Florida courts. Baker countered through his team of 100 lawyers with a motion to stop the recounts altogether and allow the original count to stand. He also devised the strategy of taking the recount fight all the way to the United States Supreme Court, where he felt that the Bush team would get a fairer hearing than in the mostly Democratic-appointed state courts. The Supreme Court put an end to the recounts, giving Bush the presidency. Baker, meanwhile, saw his nonpartisan image tarnished. Following the recount fight, he returned to private life. In the hope of preventing another episode of the kind that had occurred in Florida, he agreed to co-chair, with former president Jimmy Carter, a commission to recommend changes in the voting process in national elections.

In early 2006 George W. Bush called on Baker again, to help him with a seemingly insurmountable problem—the Iraq war. (The original justification for the war was to rid Iraq of so-called weapons of mass destruction; no such weapons were found there.) Though the initial phase of the war—beginning with the invasion by U.S.-led coalition forces on March 20, 2003 and culminating in the capture of Saddam Hussein—was thought to be successful, the period of U.S. occupation has been marked by increasing violence between Sunni and Shiite factions, as each Muslim group vies for power in Iraq. As the growing insurgency against Iraq's fledgling democratic government threatened throughout 2005 and early 2006 to destabilize the country, Congressman Frank Wolf, a Republican from Virginia, proposed that a 10-person bipartisan commission be established to study the situation and suggest military and political options. With matters in Iraq worsening, President Bush saw his approval rating plummet, taking with it the fortunes of the Republican Party, which had majorities in both houses of Congress. In the midterm elections of November 2006, voters gave the Democratic Party majorities in both houses for the first time since 1994.

Earlier, when Congress approved funds to establish the Iraq Study Group, in March 2006, two men were asked to co-chair it: Baker and former congressman Lee Hamilton, a Democrat. (Baker had worked with the second Bush administration in 2003, serving as the president's envoy on the issue of Iraqi debt.) With the other eight members of their bipartisan commission, Baker and Hamilton worked from March through early December 2006, interviewing both U.S. and Iraqi officials, visiting Iraq to get a better understanding of the insurgency, and contacting world leaders with a vested interest in Iraq. When they completed their work, they unanimously approved 79 recommendations to be presented to the president and Congress. After the release of their 100-page report, on December 6, Baker publicly urged that the administration embrace it in its entirety. "I hope," he said at the time, as quoted by Michael Duffy and Mike Allen in *Time* (December 18, 2006), "we don't treat this like a fruit salad and say, 'I like this, but I don't like that.'"

Eschewing the ideal of democracy that the Bush administration had called the only true measure of victory in Iraq, the Iraq Study Group characterized the situation there as "grave and deteriorating" and presented a pragmatic approach that favored stability for the country above all else. Among the Baker-Hamilton commission's recommendations were a withdrawal of U.S. forces from combat operations by the first quarter of 2008; an increase in the number of embedded U.S. trainers in the Iraqi army and police forces; an aggressive new diplomatic push to solve the Israeli-Palestinian issue, which would include direct negotiations with Iran and Syria; and a timetable for accomplishments by the Iraqi government, complete with penalties for noncompliance. The commission's highly anticipated report got a mixed reception. Opponents of the war felt that the report did not go far enough in its recommendations for withdrawal, while advocates of the war argued that the recommendations to engage Syria and Iran—two nations long suspected of helping to stir up sectarian violence in Iraq—were misguided. Baker's hope that the Bush administration would adopt all of the report's recommendations appears to have been dashed: after studying the Baker-Hamilton commission's report and consulting with other advisers, the president called in January 2007 for the deployment of more than 20,000 additional U.S. troops in Iraq.

After the death of his first wife, Mary (McHenry) Baker, whom he had wed in 1953, Baker married Susan Garrett Winston, one of Mary's best friends and the daughter of a Texas rancher, on August 6, 1973. He has four sons—James IV, Stewart, John, and Douglas—by his first wife, and three stepchildren from Susan Baker's first marriage, which ended in divorce. The Bakers' youngest child, Mary Bonner Baker, was born in 1977. The recipient of the 1992 Presidential Medal of Freedom, bestowed on him by the first President Bush, Baker is the author of two books: *The Politics of Diplomacy* (1995), a reflection on his time as secretary of state, and *"Work Hard, Study . . . And Keep Out of Politics!"* (2006), a memoir.

Banks, Tyra

Dec. 4, 1973– Model; actress; television host

Address: c/o Studio Fan Mail, 1122 S. Robertson Blvd., #15, Los Angeles, CA 90035

Scott Gries/Getty Images

For the model, actress, and TV-show host Tyra Banks, being "fierce"—the word on which Banks has put her personal stamp, one that she uses to mean strong, bold, and confident—is the most valuable trait a woman can have. Banks, who has gone from a middle-class upbringing in Los Angeles, California, to supermodel status, to a new role as a burgeoning television tycoon, has often had to be fierce, as she defines it, to succeed in her field. As a rising model in an industry often biased toward white women, Banks had to fight to get on the runway. Her 1991 Paris debut instantly garnered her offers for 25 runway shows, an unprecedented number for a new model; even with that success, Banks continued to struggle with the undercurrent of discrimination in the fashion world, being offered lower pay than her white counterparts and facing fewer modeling opportunities. "I'm used to hearing the word 'no' because people say that to me all the time," she told Aldore Collier for *Ebony* (May 2004). "When people say 'no' or that I should stay away from certain things, I take it as 'Oh, okay you're telling me to stay away from that. I'm going after it." Realizing that her pursuit of runway modeling would limit her options, Banks sought work in print ads, signing exclusive contracts with Cover Girl Cosmetics and Victoria's Secret, and in 1997 she became the first African-American to pose solo on the cover of the celebrated annual *Sports Illus-*

trated swimsuit issue. In 2003 Banks, who had always had ambitions beyond modeling, expanded into television as the host of the show *America's Next Top Model* (*ANTM*), which recently began its ninth 10- to 14-episode season. "The minute you meet her, you understand why she's a supermodel," Ken Mok, an *ANTM* producer, said about Banks to Marc Peyser and Allison Samuels for *Newsweek* (March 15, 2004). "She has such a big-picture sense about herself. If she was a doctor, she'd be chief of surgery at Cedars." The show's tremendous success, especially among the highly coveted 18-to-34-year-old female viewership, led to the creation of Banks's own daytime talk show, in 2005. Though it has met with mixed critical reviews, *The Tyra Banks Show* has been a hit with the same group of young women who faithfully watch Banks doling out judgments on *ANTM* every week. Banks's entry into the arena of prominent media figures has led her to be compared, inevitably, to the phenomenally successful African-American media personality Oprah Winfrey—comparisons that Banks says are premature but that she hopes to make appropriate. "I want to be successful across the board," Banks told Peyser and Samuels. "I want an empire like Oprah's. I may do it with a little more cleavage, but I plan to get there."

Tyra Lynne Banks was born on December 4, 1973 in Los Angeles to Carolyn London, a medical photographer for the Jet Propulsion Lab at the National Aeronautics and Space Administration (NASA), and Donald Banks, a computer consultant. After her parents divorced, when she was six years old, Tyra and her older brother, Devin, lived with their mother; the family remained on good terms. Growing up in Inglewood, California, Banks originally considered becoming a veterinarian; she was also interested in media. "I used to watch commercials on television and be like 'Mama, the punch line wasn't right,'" she recalled to Alisa Gumbs for *Black Enterprise* (September 2006). "I would rewrite the commercials, and she would encourage me. So it started with me wanting to be in advertising. And then it just developed into film and television." When Banks enrolled at Immaculate Heart High School, a Catholic girls' school, she had already reached her statuesque height of five feet 11 inches. At all of 110 pounds, she was often the target of jokes, some comparing her to Ethiopian famine victims, and she was frequently called names such as "lightbulb head" because of her large forehead. Not surprisingly, Banks had no plans to base a career on her looks—until one of her best friends suggested that she pursue modeling. With a portfolio shot by her mother, Banks began going to interviews at Los Angeles modeling agencies, which consistently turned her down. "The market for black models was not good," London told Tom Gliatto and Bryan Alexander for *People* (April 11, 1994). "They would say, 'We have this many black girls already.'" After receiving many rejections, Banks decided to give up on modeling and enrolled at Loyola Marymount University, in Los Angeles, to study film.

Two weeks before her classes were to start, a French modeling scout spotted Banks walking down the street and immediately offered her a spot in the upcoming haute couture shows in Paris, France, where she enjoyed immediate success. *People* magazine (May 9, 1994), in a profile of Banks for its 1994 "50 Most Beautiful People" issue, noted that in Paris Banks's "sensual lope and sleek, space-age frame gave her instant catwalk charisma." After appearing in Paris, Banks was booked for 25 fashion shows—a feat no first-time model, black or white, had ever achieved. She reflected on her struggle to break into the business to Margena A. Christian for *Jet* (May 26, 2003): "There's a lot of people who will tell you no. A lot of people who will tell you that you're too this and too that. I had people tell me that I'm 'too Black, not Black enough, my lips are too big, forehead too big, hair too this,' just so many things," she said. "Finally one agency said yes. All you need is for one person to say yes."

Even with that success, the modeling community in the U.S. and abroad had yet to fully embrace Banks. As a relatively curvaceous—if slender—black woman in an industry of stick-straight white models, Banks had to contend with both her perceived physical deficiencies and a culture of underlying discrimination against nonwhite models, which led to fewer jobs and lower pay. Comparisons in the press between Banks and Naomi Campbell, the other prominent black model at the time, led to an intense rivalry between the two women. Campbell, who was long-established in the industry, reportedly refused to model in the same Chanel show as Banks, forcing out the less experienced model. The tension between the two eventually led Banks to leave their shared modeling agency, Elite Modeling Agency, for IMG. "No model should have to endure what I went through at 17," Banks told Deborah Gregory for *Essence* (February 1995). "It's very sad that the fashion business and press can't accept that there can be more than one reigning Black supermodel at a time."

In 1991 Banks formed Tygirl Inc. to manage her growing career. Two years later she signed an exclusive deal with Cover Girl Cosmetics, making her only the third black model to be offered a long-term contract with that company. That year she also began expanding beyond modeling with appearances on the sitcom *The Fresh Prince of Bel-Air* as Jackie Ames, the love interest of Will Smith's character. Though she was interested in pursuing acting further, she left the show after only seven episodes, concerned that she would become typecast as a beautiful but superficial woman. She also turned down a role as a woman who has a one-night stand with Tom Cruise's character in the suspense blockbuster *The Firm*, because she did not want to portray a purely ornamental character. By that point in her career, Banks had begun appearing on magazine covers as well as at fashion shows. One such cover—a 1993 shot for *Essence*—caught the eye of the film director John Singleton, who became interested in casting her in his upcoming movie *Higher Learning.* While she received some praise for her portrayal of Deja, a track star who meets a tragic end, Banks continued to concentrate on modeling.

Banks had long been advised to stick to runway modeling, with agents telling her that her forehead was too large for the close scrutiny her face would receive in print ads. Banks, however, had a different vision for her career. One day, tired of dieting to maintain the preferred look of the runway model, she saw the supermodel Cindy Crawford hosting a television program and felt inspired to take charge of her own career. "I knew I wanted to be in control like her," Banks recalled to Collier. "There's never been a Black model with that kind of mass appeal, and I wanted to be like that." Banks informed her agent that she wanted to move away from haute couture and toward the more mainstream—and more lucrative—print ads. In 1996 she became the first black model to pose for the cover of *GQ* and also the first to do so for the cover of the *Sports Illustrated* swimsuit issue, appearing on the latter alongside the white model Valeria Mazza. The following year she made history again, when she appeared on the swimsuit issue by herself, becoming the first black model to pose solo for the cover in the famed issue's then-31-year run. Victoria's Secret put Banks on the cover of its 1997 swimsuit catalog, subsequently signing her to a long-term contract that included both print and television ads. Still, Banks had greater aspirations. "I was the girl that on every commercial was talking to everybody: the director, the grips, even the line producer. I tried to educate myself as much as possible when I was on set," she recalled to Gumbs. In another triumph for minority models, in 1997 she was also named supermodel of the year at the Michael Awards, the fashion industry's annual awards ceremony. With Vanessa Thomas Bush, she wrote *Tyra's Beauty Inside & Out* (1998), a book on maintaining beauty and self-esteem. In 2000 she appeared with Lindsay Lohan in the Disney made-for-television movie *Life-Size* and had roles in the films *Coyote Ugly* and *Love & Basketball.* In 2002 she co-starred in the horror film *Halloween: Resurrection.* During those years she also appeared in several television shows, including *New York Undercover*, *The Hughleys*, and *Felicity.*

Banks came into greater prominence with her creation of *America's Next Top Model*, which debuted in 2003 with Banks as host. "I was in my kitchen in my underwear looking out the window, and just saw the words 'America's Top Model' in my head," she recalled to Peyser and Samuels. "I wanted to do a show where people were striving for a goal, winning something that you've worked hard for." Each season of the show begins with 10 or so contestants, who compete over the course of the season for a modeling contract and the title of America's Next Top Model. On each installment, one contestant is eliminated. UPN's president, Dawn Ostroff, approved the program only hours after Banks presented her idea: to show the public that it takes more than just good looks to make it in the modeling industry. "There are pretty faces everywhere. . . . Supermodels are the ones that have personality . . . ," Banks told Christian. "I think you have to have a combination of accessibility where everyone in America can feel like they know you. You need a certain sense of beauty, a beauty that's not too intimidating where it doesn't scare people. You need a personality that's fun. You should be a person who can speak well and represent products. . . . Our winner is a true model because she passed all the tests."

America's Next Top Model, which finished its seventh season as the number-one show on its network (now called the CW), revolves around Banks, whose company, Bankable Productions, owns a 25 percent stake in the show. "The aspiring models view her both as the bearer of a magic ticket out of poverty, obscurity, stripping, or waitressing and as a comforting, maternal, Oprah-like figure," Nancy Franklin wrote for the *New Yorker* (March 14, 2005). "Even while she is pondering which chick will be thrown out of the nest each week, Banks dispenses plentiful hugs to her charges, at one point getting down on a bathroom floor to console a distressed girl."

Banks's colleagues on the set of *ANTM* have agreed that, as Banks has put it, there is a "nighttime Tyra" and a "daytime Tyra." The former, a caricature of the diva-like behavior that viewers expect from a supermodel, is on display on *ANTM.* The latter, according to Banks and her colleagues, is the true, unpretentious Banks, who appears at all other times. "Daytime Tyra" found an outlet in 2005, when Banks signed on to host her own daytime talk show in addition to *ANTM.* She had been offered a chance to host a talk show a few years earlier, after she had impressed network executives with a two-year position as a youth correspondent on *Oprah*, but she had turned it down. Having gotten a little older, though, she felt she had reached the right point in her life to create the kind of show she wanted. "Because I've been hurt and I've been stupid and I've stayed in a destructive relationship for way too long, now I feel I can talk to people about their problems," she told Celeste Fremon for *Good Housekeeping* (October 2005). Banks envisioned her program as being different from other talk shows, explaining to Andy Serwer for *Fortune* (February 20, 2006), "It's not really a talk show. It's a woman's guide to life. It's topical, connected to the news, but we do fashion and fun stuff. It's like different pages or sections in a women's magazine. They're unique, but they all fit together under one cover." *The Tyra Banks Show* debuted on September 12, 2005. Dick Robertson, the president of Warner Brothers Domestic Television Distribution, explained to Kimberly Speight for the *Hollywood Reporter* (September 30, 2004) why the company was so eager for the distribution rights to the show:

"Tyra is a very impressive person; she's obviously more than a model," he said. "It's her appearances on *Oprah* that we looked at and said, 'If there's ever a future Oprah, she could be the one.'"

Deciding to leave modeling while she was still successful in the industry, Banks officially retired from the runway in December 2005, after her last Victoria's Secret show, and focused her energy on her television shows. One of her first moves was to hire an interview coach, to help improve her hosting skills. "For the first season of the talk show, I would scream high-pitched and do a lot of stupid things," she said to Collier. "Or, I'd interview someone and they'd say something poignant, but I wouldn't hear because I was so focused on my next question. So I learned to listen and have it be a conversation." Still, many critics continued to pan the show, calling it a way for Banks to work through her own psychological issues while turning her name into a brand. "An *Oprah* for a younger crowd, the talk show ostensibly focuses on 'the dreams, hopes and challenges of today's young women,'" Alyson Ward wrote for the *Fort Worth (Texas) Star-Telegram* (March 8, 2006). "But you know what it really focuses on? The dreams, hopes and challenges of Tyra Banks." For one show, Banks brought on a doctor who gave her an on-camera sonogram, to prove that her much-discussed breasts had not been surgically enhanced. On another, Banks confronted a porn star using the name Tyra Banxxx. On still another, she invited her former rival, Naomi Campbell, to talk about their past adversarial relationship. The popular success of the show—and particularly of those installments—rests on Banks's persona. In everything she does, Banks says, she strives to be "fierce"; for many critics, however, that trait is not enough to warrant comparisons to the heavy hitters of daytime TV. "She may be fierce, but unfortunately Tyra isn't as smart or as dynamic or as quick or as sensible as Oprah, and she's not as insightful or as instructive or as commanding a presence as Dr. Phil," Heather Havrilesky wrote for *Salon.com* (October 2, 2005). "In the end, when she's interviewing a young woman about cheating or asking another woman how she feels about commitment, it just sounds vapid and rambling and you feel like you're overhearing two teenage girls gossiping aimlessly on the bus." Nonetheless, *The Tyra Banks Show* has been a hit, especially with the highly-sought-after 18-to-34-year-old female viewers. Currently in its third season, the show has been renewed through 2009. Banks told Juan Morales for *Redbook* (April 2006) that she is working hard to take some of the advice that she doles out so readily on *ANTM* and on her talk show. "I have goals and ambitions, and I'm a perfectionist. I look at my talk show ratings and think, 'This is good, but we can do better.' I'm always pushing myself. But I'm learning to pull back," she said. "I always tell my models [on *ANTM*] that perfect is boring. Sometimes I have to remind myself of that—that it's okay if there are flaws here and there. I used to stay up all night if something didn't go right on my talk show. Now, I'm like, 'You know what? We're a new show, and we're going to get there.'"

Banks recently moved to New York, where *The Tyra Banks Show* is now filmed. Her company, Bankable Productions, has five television shows in development, as well as a film that Banks will both act in and produce. Banks has formed her own licensing firm, which is looking to branch into the lingerie market. She is also working on a fashion-related Internet site. In 1992 she established the Tyra Banks Scholarship at the private Los Angeles high school that she attended. In 1999 she founded TZone, a Los Angeles–based summer camp focusing on building confidence in teenage girls. She hopes to establish more camps like it around the country.

Barber, Patricia

1956– Jazz singer, songwriter, and pianist

Address: c/o Spire Artist Management, 5438
Boyd Ave., Oakland, CA 94618

Being a jazz musician "is such a difficult lifestyle—the late nights, the smoke, the insecurity, the lack of health insurance—and I wanted to be a nice middle-class girl," the jazz pianist and singer Patricia Barber told the music critic Terry Teachout during an interview for the *New York Times* (June 23, 2002), in recalling her undergraduate years, in the mid-1970s. "My father was a musician, and he died an alcoholic, and my mother was afraid that something bad would happen to me, too. I was going to go to law school, medical school, anything other than music, and finally I called my mother during my senior year in college and said: 'Mom, I'm going to be a jazz musician. I can't help it.' And she cried. . . . She was just afraid. And so was I. It's only been very, very recently that I haven't almost hated what I was doing." One night, during a performance, Barber continued, "I made myself look out at those wonderful people who'd come to

Pierre-Franck Colombier/AFP/Getty Images

Patricia Barber

hear me, and I thought: 'My God, they're paying $20 a ticket. What could they possibly be paying for? Why are they coming? There must be a reason.' And all at once I felt able to embrace the fact that this is who I am, this is where I am."

"Nobody else today is doing what Barber does," Bob Young wrote for the *Boston Herald* (February 20, 1999). "Her smart, often oblique lyrics are delivered with a clean-lined, sensual vocalizing and unique arrangements that twist and turn in unexpected directions like the best jazz always does." Described as one of the most skilled, inventive, literate, and droll songwriters, vocalists, and pianists in present-day jazz, Barber has given upwards of 1,000 performances since the early 1980s, many of them at two clubs in Chicago, Illinois: the Gold Star Sardine Bar, where she appeared from 1984 to 1992, and the Green Mill, beginning in 1994. Most of the nine albums she has recorded since 1989 offer a mixture of jazz standards, pop covers, and original songs, some with music set to works written by others (among them such poets or writers as Paul Verlaine, e. e. cummings, Maya Angelou, and Virginia Woolf), and some whose music and lyrics she composed herself. Her most recent album, *Mythologies*, created with the support of a 2003 Guggenheim fellowship—the only one ever to be awarded to a songwriter—is a song cycle inspired by characters from Greek myth described in *The Metamorphoses*, by the Roman poet Ovid (43 B.C.–17 A.D.). "The artistic heights to which Barber aspires in *Mythologies* may make this release more endearing to serious listeners than to the vast commercial audience, which has made icons of far lesser talents, such as Norah Jones, Diana Krall and Jane Monheit," the veteran jazz critic Howard Reich wrote for the *Chicago Tribune* (August 13, 2006). "While these artists have triumphed commercially by reviving role models of the distant past—particularly the seductive, purring chanteuse of the 1940s and '50s—Barber has ventured into fresher territory. To her, the female singer-pianist is not necessarily an object of nostalgia and romance but a contemporary thinker with intellectual firepower to burn."

"In an age when pipsqueak voices and easy-listening sensibilities routinely draw critical praise and commercial success, Barber has emerged as the anti-diva: a singer uninterested in assuming the usual romantic poses, a songwriter unwilling to pen cloyingly sweet love songs, a pianist who actually has something distinctive to say at the keyboard," Reich declared in the *Chicago Sun-Times* (September 13, 2004). Barber's voice has been described as having "the confidential purr of a bass flute" (by Terry Teachout); as having an "alluring liquidity" (by Reich); as "deep" and "winsome" (by the jazz journalist R.J. DeLuke, in AllAboutJazz.com, March 1, 2004); as "instantly appealing and often downright sexy" (by the music journalist and broadcaster George Graham, on his Web site, 2002); as "coolly understated" (by Bill Beuttler, in the *Boston Globe*, October 1, 2004); and as "a low-vibrato alto on perpetual rhythm and timbre alert" (by Margo Jefferson, in the *New York Times*, October 16, 2000). Barber's lyrics in her 2002 album, *Verse*, struck Graham as "some of the most absorbing I have heard on record in a long time." Barber, he continued, "writes in part from experience, often metaphorically, and takes on some familiar subjects by casting an entirely new light on them. But most impressive is her sheer power of language. She puts words and phrases into songs the likes of which have rarely been heard, and at a more poetic level than some of the best folkies. She is also not without a sense of dry wit." According to Mike Joyce, writing for the *Washington Post* (February 12, 1999), some of Barber's lyrics "bring to mind Joni Mitchell's gift for metaphor and imagery, while others reflect a decidedly sardonic view of contemporary life." "People need music now," Barber said to Michael Friedman during an interview for AllAboutJazz.com (November 1998). "They need music that speaks to their souls, not just their heads. . . . They need music that grabs them where they didn't know they needed to be grabbed. . . . They need art desperately. Jazz could give them what they need."

Patricia Barber was born in 1956 in Illinois and spent her early years in a suburb of Chicago. A sister, Ann, died of cancer in 1999. (Barber wrote "Love, Put on Your Faces," based on a poem by e. e. cummings, in honor of Ann; backed by the Choral Thunder Vocal Choir, the song is on her album *Modern Cool*.) Barber's mother was an amateur blues singer. Her father, Floyd "Shin" Barber, was an alto saxophonist who occasionally played with Glenn Miller's band, among others, and also led a

Chicago-area ensemble. Unable to support his family adequately as a musician, he became a pharmacist. He started to teach Patricia piano when she was five and continued to instruct her until his death, when she was nine. After her mother became widowed, she settled with her daughters elsewhere in the Midwest (in Iowa or Nebraska, according to various sources). During Barber's adolescence, in the late 1960s, as she recalled to DeLuke, she had no interest in the Beatles, the Rolling Stones, or other groups popular at that time. "I was listening to what I guess you call the classic American songsters. Frank Sinatra. I wasn't really into the really hip people, like Sarah Vaughn, until high school. And Miles Davis." Barber played several instruments in her high-school band and had a singing part in a student musical. She attended the University of Iowa, where she majored in both classical piano and psychology. During her college years, she told DeLuke, she sang with a local band, solely to earn some pocket money. She earned a B.A. degree in 1977. Nearly two decades later, in 1996, armed with a scholarship, she earned a master's degree in music from Northwestern University, in Evanston, Illinois.

Earlier, in 1979, having resolved to pursue jazz as a profession, Barber had moved to Chicago and begun performing in clubs on the city's jazz circuit. In considering where to start building her career, she had ruled out New York and Los Angeles, because in those cities, as she explained to Lloyd Sachs for the *Los Angeles Times* (August 15, 1999), "you start second-guessing yourself too soon. You ask yourself, am I hip enough to be here? Is this what's gonna get me attention? In Chicago, you don't have that. The music develops in rather an unfettered way." For the next five years or so, Barber entertained whenever she could in Chicago clubs. At times she faced tough audiences. "There were real bad jobs like one club in a neighborhood so bad the owner had to walk me out through the bar each night," she told Steven Pratt for the *Chicago Tribune* (November 9, 1988). "One time a drunk broke a beer bottle and started climbing right over the piano threatening to rape me." She also locked horns with some club owners. "They wanted me to smile at the male customers and talk to them between sets," she told Sachs for the *Chicago Sun-Times* (June 4, 1995). "I wanted to read books instead." Nevertheless, as she recalled to DeLuke, her experiences during that period left her with "some of my best memories. All of the musicians helped me. Sometimes I would need a certain lesson from a certain pianist and I would call and have a lesson or two, or they'd help me on a gig; tell me what to study, what to listen to. Tell me what I was bad at."

In 1984, at the suggestion of the longtime jazz critic and broadcaster Neil Tesser, Barber auditioned successfully for a five-night-a-week, semipermanent gig at the Gold Star Sardine Bar, a tiny, very popular Chicago cabaret that was usually packed with patrons (hence the name "Sardine") and, on weekends, often had long lines of people outside awaiting entrance. At the beginning of what turned into an eight-year association with Gold Star (which closed in 1997), the club's owner, Bill Allen, paid her $300 a week; according to Sachs (June 4, 1995), "what began as little more than a tax writeoff" for him "became a national attraction." "I always have had this ability to draw crowds," Barber told Sachs. "Some people say that's because of charisma, but I can't see that. I mean, the way the trio is set up, I play with my back to the audience most of the time. I think it has to do with my sincerity. People know I'm not faking anything."

In 1989 Barber released her first album, *Split*, which she produced and released on her own on what she dubbed the Floyd Records label. A mix of jazz standards and Barber originals, it was described on the Web site allmusic.com as offering "a dramatic cabaret vocal style and complex harmonic post-bop passages—a template that longtime fans will recognize." Barber's second album, *A Distortion of Love* (1992), was released on the PolyGram label. Because PolyGram's parent company was in financial difficulties at the time, the record was not promoted, and it "quickly sank into oblivion," according to Sachs (June 4, 1995). Soon afterward Barber received an offer to record an album on which her piano playing would be processed through a computer. "I was so desperate for a little financial security, I accepted," she told Sachs. "But I woke up the next morning feeling so depressed, I called back and turned them down. There was no way I could have made that album and lived with myself." For months afterward Barber continued to suffer bouts of depression, and she stopped performing. She resumed entertaining publicly at the urging of Dave Jemilo, the owner of the Green Mill, a jazz club in Uptown Chicago and the site of the Uptown Poetry Slam. Since then, except when on the road, Barber has performed there with the other members of what is now the Patricia Barber Quartet once or twice a week. Currently, the other members of her ensemble are the bassist Michael Arnopol, with whom she has worked virtually from the start of her career; the guitarist Neal Alger; and the drummer Eric Montzka. Others with whom she has collaborated, in the studio and/or in concert, include the drummers Mark Walker, Adam Cruz, Adam Nussbaum, and Joey Baron; the percussionist Ruben P. Alvarez; the guitarists Wolfgang Muthspiel, John McLean, and Charlie Hunter; the bassist Marc Johnson; and the trumpeter Dave Douglas.

Barber began writing songs, she told Bill Beuttler, "out of desperation. I was singing six nights a week at the Gold Star Sardine Bar, and I was just tired of the repertoire. And I wanted music that spoke to contemporary events and new feelings and this and that, so I had to give it a shot. And it turned out I had a facility for it." *Café Blue* (1994), which Barber recorded for the independent Premonition label, contains such original compositions as "Too Rich for My Blood," "Yellow Car III," "Mourning Grace" (based on a poem by Maya Angelou), and "Wood Is a Pleasant Thing to Think About" (whose title she took from an essay by Virginia Woolf). Also on the album are such jazz standards as Miles Davis's "Nardis" and songs including "The Thrill Is Gone," written by Roy Hawkins and Rick Darnell and popularized by B. B. King, and "Inch Worm," by Frank Loesser—her rendition being "the only sexy version of this song ever recorded," in the opinion of the jazz critic Matt Cibula in PopMatters.com (December 2, 2004). *Café Blue* attracted a great deal of attention from critics, some of whom hailed it as one of the best jazz albums of the year, and it significantly boosted Barber's drawing power in big cities in the U.S. and Canada.

Michael Friedman, the founder of Premonition, aggressively promoted Barber's next album, *Modern Cool* (1998), and it sold uncommonly well for a work of its kind. Of its 12 tracks, all but three are original songs. In 1999 Blue Note Records, which had bought Premonition the previous year, released *Companion*, a compilation of unusual renditions of popular material that Barber recorded live at the Green Mill. Her next disk, *Nightclub* (2000), is comprised entirely of jazz standards. Earlier, she had refused requests from major labels to record such a collection, she told Martin Johnson for *Newsday* (October 13, 2002), "because I had some feeling that I could create an individual sound in doing those songs. And I didn't want to get stuck doing standards record after standards record; I knew that if you did a standards record and it was successful, that would happen." Thanks to the enthusiastic reception that greeted her last several albums, though, she felt "I'd established myself as an idiosyncratic artist, and I could go ahead and do standards, which is a huge part of our repertoire. Also, it was for my mother; she wanted to hear those songs. . . . Also, I knew I would be doing *Verse*, and I wanted to draw a line to the past before I drew a line to the future."

With the exception of "Dansons la Gigue," whose lyrics, sung in French, are from a poem by Paul Verlaine, every track on *Verse* (2002) is an original Barber song. Steve Greenlee, writing for the *Boston Globe* (September 20, 2002), called the album "among the smartest records of jazz vocals—and lyrics—ever produced." Mark Ruffin, who hosts a jazz radio show with Neil Tesser, was similarly impressed; in a review for Amazon.com, he wrote, "With Dave Douglas dancing his trumpet around her witty and literate tales, these 10 scholarly vignettes are reminiscent of the way the great Cole Porter educated his listeners while thoroughly twisting the English language in an irresistibly entertaining way. 'I Could Eat Your Words' is about philosophy, cooking, and falling in love with your college professor. In it [Barber] somehow can 'suck the salt from erudition, drink remorse like a cabernet, sweeten with equivocation' and still swing. Many singers would still be stuck on 'erudition' while Barber—all sly, darkly slick, and witty—continues to compose from a high artistic perch. Mentioning David Hockney, Edward Hopper, and Goya in the text of 'If I Were Blue,' and Baudelaire in 'You've Gotta Go Home,' ain't no easy trick."

Barber recorded *Live: A Fortnight in France* (2004) with Neal Alger, Michael Arnopol, and Eric Montzka during a two-week tour of the French cities La Rochelle, Metz, and Paris; its tracks include five original songs and five covers. In a critique for the *Iowa Alumni Magazine* (December 2004, online), Michael Tracy wrote, "Barber's presence as a witty songwriter and lyrical singer come to the forefront on this live album. But what may be more impressive is her prowess on the ivory keys. She struts her stuff with show-stopping performances. She's not afraid of taking chances, either, bravely transforming the classic Beatles' 'Norwegian Wood' from a two-minute ballad originally played on acoustic guitars into a sleek seven-minute jazz number full of tempo changes, piano and electric guitar solos, and driving percussion. It's a measure of her skill and artistry that Barber successfully turns this 'Fab Four' hit into her own."

Supported by a Guggenheim fellowship, Barber devoted more than a year to reading and other research that culminated in the creation of *Mythologies* (2006). The project was inspired by Ovid's *Metamorphoses*, an anthology of Greek and Roman myths retold in verse, and by a stage play, based on the same work, by the Chicago theater director Mary Zimmerman, which was mounted at the Lookingglass Theatre, in Chicago, in 1998. The album's tracks are "The Moon"; "Morpheus"; "Pygmalion"; "Hunger"; "Icarus (for Nina Simone)"; "Orpheus/Sonnet"; "Persephone"; "Narcissus"; "Whiteworld/Oedipus"; "Phaethon"; and "The Hours." The descriptions of the tracks that she wrote for the "Discs" portion of her Web site reveal some of the impulses, emotions, and interests that led to her choices of subjects. Barber wrote, for example, that "The Hours"—in Ovid's work, two goddesses who simply observe humanity—"is an homage to human courage in the face of Death. I read the writing of Primo Levi, an Auschwitz survivor, to try to understand what it feels like knowing death is coming soon. I also consulted my doctor, who took me through the University of Chicago hospitals and talked to me about life and death. . . . 'The Hours' . . . is about time, life and death. But it's also about life as a performance, or more accurately, a performer, writing about our life as a performance." In a representative assessment of *Mythologies* for the *Boston Globe* (August 15, 2006), the music critic and culture reporter Siddhartha Mitter called the album "undeniably heady" but "also genuinely liberal in its interpretations of the stories and its overall musical sensibility, making it not just one of the year's most enjoyable releases but also one of the most thought-provoking." Barber's lyrics, he added, "are as beautiful and complex as you'll find in jazz today."

Barber, who suffered from stage fright for many years, usually performs barefoot. She is over six feet tall. "Off stage, Ms. Barber is . . . precisely spoken, slightly shy and instantly likeable . . . ," Terry Teachout wrote, "far more a down-to-earth jazz musician than the angst-ridden egghead some of her fans take her to be." In the fall of 2007, as the winner of a Townsend resident fellowship from the University of California at Berkeley, Barber will spend a month at the school, sharing her expertise with students and faculty members. Openly gay, she has lived since the late 1990s with the musicologist and music historian Martha Feldman, who teaches at the University of Chicago. She maintains a home in Chicago and owns a farm in Michigan.

Barsamian, David

[bar-SAHM-yahn]

June 14, 1945– Founder, director, and host of the program Alternative Radio*; writer*

Address: Alternative Radio, *P.O. Box 551, Boulder, CO 80306*

"The U.S. is not lacking in people with a diversity of opinion, but the mainstream media have a golden Rolodex that they go to time and time again. And most of these authorities are people who haven't had an original idea in fifty years," David Barsamian, the founder, longtime director, and host of *Alternative Radio*, told Michael Roberts for *Denver (Colorado) Westword* (August 17, 2000). Barsamian's career in radio began in 1978, when he became the host of an international-music program on the Boulder, Colorado, station KGNU. With the addition of remarks and interviews about public affairs, his program metamorphosed during the next eight years into the all-talk *Alternative Radio*, an hour-long, weekly program that "provides information, analyses and views that are frequently ignored or distorted in other media," according to its Web site. With few exceptions, Barsamian has confined his guests to intellectual writers and social activists whose political views are left of center. His award-winning series, which has no corporate sponsors, is currently carried by more than 125 stations in the United States, Canada, Europe, South Africa, and Australia as well as on short-wave radio and the Internet. Barsamian told Dale McGarrigle for the *Bangor (Maine) Daily News* (July 22, 2004) that *Alternative Radio* succeeds "because of the deplorable job that corporate media and public broadcasting have done" in providing "alternative views" to mainstream news sources. "There's a huge amount of interest in independent analysis," he told McGarrigle, and while public radio programs could offer it, he maintained, they rarely do, because the directors of those programs are "timid, skittish, and won't air anything that will rock the boat."

Barsamian has interviewed hundreds of public figures on *Alternative Radio*, some at least half a dozen times. They include Ralph Nader, the 1996 and 2000 Green Party presidential candidate, who has founded many advocacy groups, among them the Center for the Study of Responsive Law, the Center for Auto Safety, and the Project for Corporate Responsibility, and whose writings include the highly influential 1965 book *Unsafe at Any Speed: The Designed-In Dangers of the American Automobile*; Eqbal Ahmad, a professor of international relations and Middle Eastern studies, who served as a managing editor of the quarterly *Race and Class*; Ben Bagdikian, a journalist and educator, whose books include *In the Midst of Plenty: The Poor in America* and *The Media Monopoly*; Angela Davis, a former member of the Communist and Black Panther Parties, a founder of the organization Critical Resistance, which opposes the "prison-industrial complex," and a professor in the History of Consciousness Department at the University of California at Santa Cruz; Michael Parenti, a political analyst, whose books include *The Terrorism Trap: 9/11 and Beyond*, *Superpatriotism*, and *The Culture Struggle*; Tariq Ali, an antiwar activist, novelist, historian, filmmaker, and member of the editorial committee of the British publication *New Left Review*; Arundhati Roy, a Booker Prize–winning novelist who now devotes herself to fighting neo-imperialism, globalization, the testing of nuclear weapons, and the building of massive dams in densely populated parts of India; and Edward Said, a professor of English, postcolonial theorist, champion of Palestinian rights, and author of *Orientalism* and *Covering Islam: How the Media and the Experts Determine How We See the Rest of the World*. Barsamian's most frequent guests have been Howard Zinn, a historian, social critic, and political scientist and the author of *A People's History of the United States*, who has been on *Alternative Radio* four dozen times, and Noam Chomsky, a prolific author and linguistic philosopher, who ushered in a revolution in the study of language and has long been a fierce critic of U.S. foreign policy; he has joined Barsamian on the air nearly 200 times. Transcriptions of Barsamian's conversations with Ahmad, Ali, Said, Roy, Zinn, and Chomsky, conducted on *Alternative Radio* and elsewhere, appear in a dozen books. Among Barsamian's other books is *The Decline and Fall of Public Broadcasting* (2001). In a review of *The Checkbook and the Cruise Missile: Conversations with Arundhati Roy* for the South African newspaper the *Sunday Times* (January 9, 2005), Loren Anthony wrote, "Sometimes—it's not too often—the interviewer threatens to outshine the interviewee. Barsamian asks those kind of questions. He offers staggering insights of his own. This is sharp, fast-paced stuff."

Zinn has characterized Barsamian as the "Studs Terkel of our generation," a reference to a renowned Chicago-based radio host, historian, and writer whose interview program aired for 45 years, beginning in 1952. The Institute for Alternative Journalism listed Barsamian among the "Top Ten Media Heroes" of 1994. He received the Upton Sinclair Freedom of Expression Award from the American Civil Liberties Union in 2003 and the Rocky Mountain Center's Peace and Justice Award in 2006. Also in 2006 the Lannan Foundation awarded him its Cultural Freedom Fellowship.

David Barsamian was born on June 14, 1945 in New York City. His parents, who were born into Armenian peasant families on the Anatolian Peninsula in what is now Turkey, fled their ancestral homes during the Armenian Genocide of 1915–17, eventually immigrating to New York in 1921. Nearly all of the relatives of Barsamian's parents were killed during the ethnic violence in their native land. Barsamian's parents had been young at the time, as well as uneducated, and they had not fully understood the reasons for their families' evictions from their respective hometowns when they arrived in New York. As Barsamian became more knowledgeable about the experiences of his family, he was profoundly affected by the history of violence in their pasts. "It's influenced me in terms of being very skeptical and doubting, particularly of authority," Barsamian explained to *Mediatribe* (February 7, 1995, on-line). After graduating from high school in New York City, in about 1963, Barsamian attended San Francisco State University, in California, for one year; he then dropped out, because, as he told Michael Roberts for the *Denver Westword* (August 17, 2000), "I was so bored out of my mind." He spent the next five years abroad. For three of those years, he lived in India, where he studied music and learned to play the sitar. His experiences during that period were "very radicalizing," as he put it in a conversation with Shandra Jordan for the Fort Collins, Colorado, *Rocky Mountain Collegian* (October 25, 2001). Barsamian returned to New York City in 1970, and for the next eight years he worked odd jobs, giving sitar lessons, teaching English to immigrants, and, for a while, working in the government of India's tourist office. In 1978 he moved to Boulder, where his sister was living.

Though he had never worked in the radio industry, Barsamian successfully pitched an international-music program to executives of KGNU, a community radio station in Boulder, and earned a one-hour timeslot. His show debuted in 1978. After Iranian student militants seized the American Embassy in Tehran, Iran, in November 1979, and took American staff members hostage, Barsamian began to inject comments about current events between songs. "There was an enormous amount of distortion and misinformation about Muslims, Islam and the Middle East" in the U.S. media at that time, as Barsamian recalled to Roberts. "I started to introduce political information trying to counter the kind of carpet-bombing of propaganda that was feeding Islamophobia in the country." Feedback from listeners revealed that they found his comments interesting, so he broadened the scope of his show to include interviews with political thinkers and social activists.

In 1986 Barsamian renamed his program *Alternative Radio* and filled it almost entirely with interviews. In a conversation with Colin Wright for the *Washington Free Press* (February/March 1995, on-line), he said that he focused on such topics as "the media themselves, which I believe to be a major source of disturbance and propaganda in the political and social culture. Also, the environment, Native American issues, human rights, and those kinds of things." He soon discovered that progressive or radical thinkers who were eager to discuss such subjects on the air rarely hesitated to submit to interviews in his studio. Meanwhile, it had become increasingly apparent to him that many radio listeners outside his broadcast area felt dissatisfied with conventional news sources but had no access to alternatives. To reach those people, in 1986 he began disseminating his program via satellite, which he had found, to his surprise, to be inexpensive. Barsamian was promoted to news director of KGNU in 1987; he left that position in 1991 to concentrate on *Alternative Radio,* which had become one of KGNU's most popular shows. Marty Durlin, KGNU's station manager, told Roberts in 2000, "If someone had told me, 'I'm going to make a living out of recording dissident intellectuals and putting them on the air uninterrupted,' I would have said, 'Right—good luck.' I'm amazed that there's that big of a market out there for this. But David has found it." She continued, "*Alternative Radio* really flies in the face of all the research that the marketers and focus groups in Washington have done. They talk about how people have such a short attention span that you have to measure audiences in increments of 15 minutes. What David does couldn't be more opposite of that, but he's got an awful lot of people out there, of all ages, who really appreciate what he's doing." *Alternative Radio* is available for broadcast by other stations free of charge; it is supported entirely by sales of Barsamian's books and recordings and transcripts of individual shows and the fees he receives at some of his talks in the U.S. and abroad. For a while Barsamian sold cassette recordings of his shows for $1 apiece; currently, such recordings are available on CDs as well as cassettes for $15 each and for download in mp3 format from his Web site, alternativeradio.org. Printed transcripts cost $9.

Many public radio stations do not carry *Alternative Radio* because programmers object to the bias of the show, which they argue runs contrary to the preference of their listeners for multiple points of view. Barsamian has contended that it is the programmers themselves, rather than their listeners, who do not agree with the political stance of *Alternative Radio*. He argues further that by refusing to offer *Alternative Radio*, such stations fail to honor the intentions of the Public Broadcasting Act of 1967, which states that public radio and television, which would be supported in part by federal funds, should "address the needs of unserved and underserved audiences." The legislation was inspired by a report, "Public Television: A Program for Action," prepared by a commission created by the Carnegie Corp. of New York, a charitable foundation, and made public in early 1967. "One of the things [*Alternative Radio*] is about that makes some public-radio stations very uncomfortable is that it's dedicated to the founding principles of public broadcasting," as embodied in the Carnegie Commission's report, as Barsamian told Roberts. "The report said public radio was intended to serve 'as a forum for debate' and to provide 'a voice for groups that may otherwise be unheard.' That may not be the mission of a lot of public radio anymore, but it's still ours." According to Barsamian and others, public radio stations have succumbed to the demands of corporate underwriters, who pressure them to gear programming to mainstream audiences. In his book *The Decline and Fall of Public Broadcasting*, Barsamian reminded readers of the goals of public programming as described by the 1967 legislation. Barsamian blames the "fall" of public broadcasting on insufficient federal funding and viewer donations, which has driven public radio and television "into the outstretched arms of corporate advertisers," as he told Ron Simon for the *Television Quarterly* (Spring 2002). In the book Barsamian pointed out that programs hosted by such politically conservative pundits as William F. Buckley Jr., Ben Wattenberg, and John McLaughlin received public broadcast air time, as do such probusiness programs as *Wall $treet Week*, whereas the Public Broadcasting Service rejected the airing of such documentaries as *Out at Work*, about homosexuals in the workplace, and the Academy Award–winning *Defending Our Lives*, about the prevalence of domestic violence in the U.S., which featured four women who were behind bars for killing the men who had battered them. Similarly, representatives of public-interest organizations and other citizens' groups are generally absent from public TV and radio. Barsamian also argued that corporate underwriting undercuts the ability of public broadcasting to present objective accounts of current events. As an example, he cited the case of Archer Daniels Midland (ADM), one of the world's largest processors of grain, whose top executives were indicted in 1995 for alleged price fixing (and were subsequently found guilty); no mention of their indictment was made on PBS's popular program *NewsHour with Jim Lehrer*, whose underwriters included ADM. "It was a major business story—they could not have missed it," Barsamian told Jeff Wright for the *Register-Guard* (May 2, 2002), an Oregon newspaper.

Barsamian has also charged that National Public Radio (NPR) programs such as *All Things Considered* and *Morning Edition* are different from commercial radio shows only in their "level of civility," as he put it to Colin Wright. "They are bastions of politeness, but they're still not giving people perspectives from A to Z." Barsamian told Dale McGarrigle that community radio stations such as KGNU represent "one of the islands of audio independence in a sea of corporate control." Referring to the war in Iraq launched by the U.S. in 2003, he said, "It's important, especially in a time of war. We need to have a clear explanation from the media of why these wars are necessary. When the evidence was completely distorted, as a result of government lying being repeated by corporate media, community radio is the oxygen of democracy, where listeners can turn for independently verified information." Approximately 200 of the 800 NPR stations in the U.S. do not broadcast *Alternative*

Radio. Barsamian told Colin Wright that he believed that those 200 stations find the ideas expressed on *Alternative Radio* "very threatening to the existing arrangements of power and privilege in this country, which, more and more, these stations have come to reflect." Barsamian himself has been criticized for providing a platform for many supporters of Palestinian rights but virtually never inviting sympathizers of the Israeli point of view as guests. In answer to such criticism, he has said that the U.S. media overwhelmingly favor Israel in covering events in the Middle East and downplay the plight of the Palestinians, and that he is simply trying to redress that imbalance.

While maintaining his responsibilities regarding *Alternative Radio,* Barsamian has also been very active in pursuing longer discussions with some of his subjects. Transcripts of his interviews with Howard Zinn appear in *The Future of History* (1999) and *Original Zinn: Conversations on History and Politics* (2006); with Noam Chomsky, in *Chronicles of Dissent* (1992), *The Prosperous Few and the Restless Many* (1993), *Secrets, Lies, and Democracy* (1994), *Keeping the Rabble in Line* (1994), *Class Warfare* (1996), *The Common Good* (1998), *Propaganda and the Public Mind* (2001), and *Imperial Ambitions: Conversations on the Post-9/11 World* (2005); with Ali Tariq, in *Speaking of Empire and Resistance*; with Arundhati Roy, in *The Checkbook and the Cruise Missile* (2004); with Edward Said, in *The Pen and the Sword* (1994) and *Culture and Resistance* (2003); and with Eqbal Ahmad, in *Confronting Empire* (2000) and *Terrorism: Theirs and Ours* (2001). Barsamian's 2004 volume *Louder Than Bombs: Interviews from the* Progressive *Magazine* includes discussions he held between 1997 and 2004 with Vandana Shiva, Kurt Vonnegut, Angela Davis, Edwidge Dandicat, Amartya Sen, Kevin Phillips, Taylor Branch, and others. A reviewer of *Louder than Bombs* for Powells.com wrote that Barsamian "converses with some of the best minds of our time, and skillfully weaves their analyses and personal insights into a digest of the world's most pressing issues." Barsamian's book *Targeting Iran,* published in 2007, contains transcripts of interviews with Chomsky; Ervand Abrahamian, the author of *Iran Between Two Revolutions*; Shirin Ebadi, the Iranian lawyer and human rights activist who won the Nobel Peace Prize in 2003; and Nahid Mozaffari, who edited *Strange Times, My Dear: The PEN Anthology of Contemporary Iranian Literature. What We Say Goes: Conversations on U.S. Power in a Changing World,* also published in 2007, is another collection of interviews that Barsamian conducted with Chomsky. Among the topics discussed are the ongoing wars in Iraq and Afghanistan, the Israeli-Palestinian conflict, and the 2006 U.S. midterm elections.

Barsamian's busy speaking schedule includes events in theaters and elsewhere that are held as benefits (and at which his books and CDs are offered for sale). In his January 2007 appearances, his beneficiaries included the Colorado Coalition for the Prevention of Nuclear War and the Tucson, Arizona, radio station KXCI. His articles and interviews appear regularly in *Z Magazine,* the *Progressive,* and the *Nation.* Barsamian lives in Boulder. Readily available sources do not indicate whether he is or has ever been married.

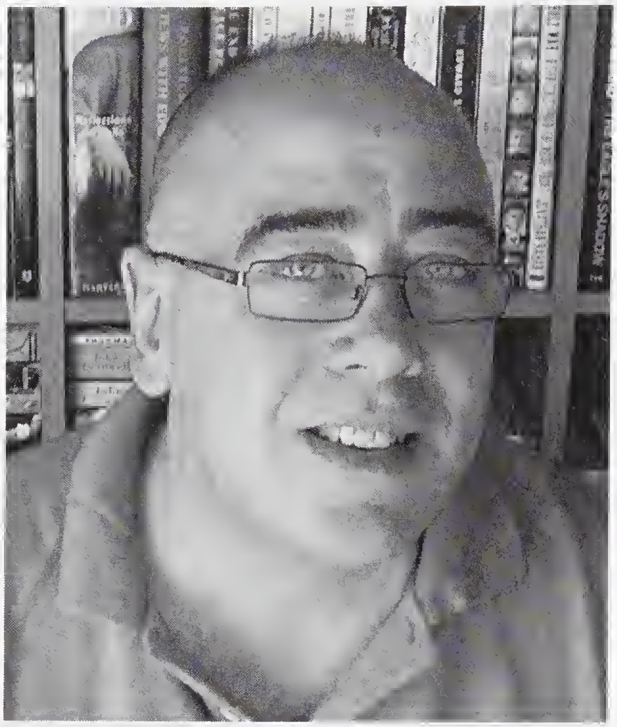
Bawer, Bruce

(BOW-er)

Oct. 31, 1956– Writer; critic

Address: c/o Talbot Fortune Agency, 540 Boston
Post Rd., PMB 266, Mamaroneck, NY 10543

The social and political commentator Bruce Bawer is known for setting off alarm bells with his writing. In *A Place at the Table: The Gay Individual in American Society* (1993), Bawer, who is gay, argued that homosexuals would never earn their place "at the table"—that is, be treated as equals under American law—until more militant gays allowed themselves to be assimilated into American society rather than emphasizing their differences from it. In his 1997 book, *Stealing Jesus: How Fundamentalism Betrays Christianity,* he expressed



Courtesy of Bruce Bawer

Bruce Bawer

the belief that fundamentalist Christians were gaining undue control of many aspects of American life, including political decision-making. And in his most recent—and even more controversial—book, *While Europe Slept: How Radical Islam Is Destroying the West from Within* (2006), Bawer pointed to what he saw as the dire effects on Europe of its unassimilated Islamic communities, whose values, he argued, conflict with those of their adopted countries. In addition to his 11 books of literary, social, and political criticism, Bawer has contributed essays, reviews, and travel pieces to a number of publications, including the *New Republic*, the *Nation*, *Newsweek*, the *Wall Street Journal*, and the *New York Times*. He remains best known for his thought-provoking and category-defying views on politics. "Over the years, I've seen just about every possible label from across the political spectrum attached to my name," he wrote for his Web site. "In fact I've always considered myself a centrist or a classical liberal and I've always been a registered Democrat, though for a time in the 1980s I usually didn't protest when others labeled me a 'neoconservative.'" The ambiguities in his personal political philosophies often perplex both his readership and the media, with the latter pegging him as a diehard liberal one moment and a devout conservative the next. The threads running through Bawer's work are a willingness to voice an unpopular—and, at times, never-before-stated—opinion and his refusal to hew to any party line. "In any case I've never sought to serve any ideological establishment in my writings, only to express my own sense of things—which includes reserving the right to criticize undemocratic tendencies on both the right and the left," he wrote for his Web site. "From time to time this apparent want of ideological purity has caused confusion or even indignation among readers who expect one to fit into a neat right-or-left dichotomy. So be it."

Theodore Bruce Bawer was born on October 31, 1956 in New York City to Theodore Bawer, a physician, and Nell Carol Thomas. He grew up in the borough of Manhattan, attending Public School 49, Junior High School 119, and Newton High School. After graduating from high school, Bawer enrolled at the State University of New York (SUNY) at Stony Brook, on Long Island, where he earned his bachelor's, master's, and Ph.D. degrees in English. He subsequently taught classes at SUNY in literature and composition. Other positions he held in the years immediately after he obtained his doctorate included literary editor for *Arrival* magazine, writing tutor for honors students at Adelphi University, on Long Island, and board member of the National Book Critics Circle (NBCC), whose publication, the *NBCC Journal*, he edited.

In 1983 Bawer began to contribute literary criticism to the *New Criterion*, which is now known as a politically conservative magazine but was devoted while he was there to literature and the arts. He also contributed to *American Spectator*, a Washington, D.C.–based political monthly magazine, as a movie critic. His first full-length work, *The Middle Generation: The Lives and Poetry of Delmore Schwartz, Randall Jarrell, John Berryman, and Robert Lowell* (1986), a revised version of his dissertation, was awarded *Choice* magazine's 1987 Outstanding Academic Book Award and chosen as the American Library Association's Academic Book of the Year; it was also a finalist in the NBCC's Reviewer's Citation category. He followed that success with a collection of arts criticism, *Diminishing Fictions: Essays on the Modern American Novel and Its Critics* (1988). *Coast to Coast* (1992), Bawer's first foray into poetry, was named the year's best first book of poems by the *Dictionary of Literary Biography Yearbook*. Also in the early 1990s, Bawer published two volumes of previously collected pieces—*The Screenplay's the Thing: Movie Criticism, 1986-1990* (1992), comprising reviews from the *American Spectator*, and *The Aspect of Eternity: Essays*, a collection of 15 of his pieces from the *New Criterion*. The essays in the latter book examine the work of a number of modern novelists, with frequent and often harsh criticism of those Bawer judged to be guilty of anti-Americanism or other faults. Whether or not reviewers of the collection agreed with his opinions, they largely admired his presentation. "Bawer states his positions bravely. He has read these novelists with care and, usually, with discernment, and he writes about them lucidly and elegantly," Michelle Harris wrote for the *Los Angeles Times* (August 9, 1993).

With *A Place at the Table: The Gay Individual in American Society*, Bawer established himself as a social and political critic. Adopting a phrase of President Bill Clinton's, Bawer argued for the mainstreaming of homosexuality—for creating "a place at the table" for the homosexual man or woman. "My point throughout this book," he wrote, as quoted by Jonathan Yardley in the *Washington Post* (November 7, 1993), "is not that homosexuals deserve preferential treatment of any kind because they belong to a victim group, but rather that gay individuals do not deserve to have their lives, careers and committed relationships treated differently from those of heterosexuals simply because they are gay." Controversially, however, he asserted that the lack of equal rights for gays was due in part to some homosexuals' own unwillingness to assimilate into heterosexual America. "Don't ask for a medal; don't feel sorry for yourself," he wrote. "Being gay is an inconvenience; so are a lot of things; get on with it; if others have a problem with it, that's their problem." In particular, Bawer argued that what he described as the promiscuous behavior of gay men was undermining efforts to earn equal rights for the gay and lesbian community. "Above all, don't use your homosexuality or their contempt for it as an excuse to lower your moral standards," he advised. "The important thing is to behave in such a way as to keep your own respect and that of people whose respect means something." Throughout *A Place at the Table*, Bawer attempted to prove that political conservatism and homosexuality are not incompatible but, in fact, complementary. If conservatives did not alienate the homosexual population by mixing religious dogma with political beliefs, Bawer argued, there would be no inherent reason for gays to be more drawn to liberalism than conservatism, especially considering true conservatism's emphasis on privacy. "The sensible—and truly conservative—way of dealing with the fact of homosexuality would be to arrange society in such a way that homosexuals can grow into well-integrated and productive members of it as easily as their heterosexual counterparts," Bawer wrote.

The book's message, with its assignations of blame and responsibility, provoked widespread discussion, especially within the gay community. "Bruce Bawer's *A Place at the Table* now appears to be the first important work in the evaluation of gay culture by gay men," David Bergman wrote for the *Harvard Gay & Lesbian Review* (January 31, 1998), five years after the book's publication. Many reviewers pointed out what they saw as flaws in Bawer's argument but nonetheless applauded him for his sophisticated writing and his willingness to tackle a potentially uncomfortable issue. "To be sure *A Place at the Table* is imperfect," Jonathan Yardley wrote. "Bawer has a regrettable penchant for sweeping generalizations, he expresses a surprisingly rancorous view of conventional heterosexual marriage, and at times his pleas for acceptance and mutual understanding carry an angry edge." But Yardley also praised the quality of the prose and the motivation behind the book: "His own writing invariably is lucid, measured, witty and authoritative; he seems to take more pleasure in giving praise than damnation, but he does both with style and verve."

For two years following the book's publication, Bawer continued to focus primarily on the theme of homosexuality in America. In his much-discussed essay "Notes on Stonewall," published in the *New Republic* on June 13, 1994, Bawer presented a condensed version of his thesis from *A Place at the Table*. The title referred to the 1969 Stonewall riots, a series of violent conflicts between the New York City police and a large number of homosexual and transgendered people following a police raid of a gay bar in Greenwich Village. The riots represented a turning point in the gay rights movement, with an unprecedented display of unified force on the part of homosexuals. In the essay Bawer argued that such dramatic displays were no longer necessary in the fight for full acceptance of homosexuals in American society, and that those strategies—and the homophobic knee-jerk reaction to them—were relics of the past. "It seems to me," Bawer wrote, "that both sides of the gay rights struggle are trapped in what may well be characterized as a politics of nostalgia." Rather than the aggressive behavior of the Stonewall riots, Bawer advised patience and moderation, placing the burden of responsibility on the shoulders of homosexuals to demonstrate their acceptability. "Getting America to accept homosexuality will first be a matter of education. The job is not to shout at straight Americans, 'We're here, we're queer, get used to it,'" Bawer wrote. "The job is to do the hard, painstaking work of getting straight Americans used to it. This isn't dramatic work; nor is it work that provides a quick emotional release. Rather, it requires discipline, commitment, responsibility." Even more controversially, Bawer suggested that many gay men were reluctant to adopt a moderate approach because they were so accustomed to their marginalized position in society that they did not want to change it. "What these reactions signify to me is a powerful tendency among some homosexuals to recoil reflexively from the vision of an America where gays live as full and open members of society, with all the rights, responsibilities and opportunities of heterosexuals," Bawer wrote.

After *Prophets and Professors: Essays on the Lives and Works of Modern Poets* (1995), which discusses what he viewed as the commercialization and concurrent decline of modern poetry, Bawer returned the next year to the theme of gay conservatism as the editor of *Beyond Queer: Challenging the Gay Left Orthodoxy*. The book contained nine essays by Bawer himself, as well as 30 essays by 16 other contributors (straight and gay), including the *New Republic* editor Andrew Sullivan, the *Chicago Tribune* columnist Stephen H. Chapman, the novelist John Weir, and the Washington, D.C., attorney John W. Berresford. In the book, whose title is meant to criticize homosexuals' reclamation of the pejorative term "queer," Bawer again expressed his frustration with contemporary equivalents of the Stonewall riots—acts that, he argued, make big statements but have little practical value. He and many of the other contributors were "impatient with the queer left's abiding fascination with aimless utopianism," he wrote, as quoted by Jameson Currier in the *Washington Post* (June 9, 1996). "We're impatient with the models of activism that involve playing at revolution instead of focusing on the serious work of reform." As usual, critics found some of the essays' positions untenable (and this time, in a book not written solely by Bawer, they found some of the prose mediocre) but applauded the book nonetheless for the authors' willingness to take potentially unpopular stands. "Though it seems improbable to agree with every opinion put forth in *Beyond Queer* (and a few are down-right whiney), most of the writing is thought-provoking," Currier wrote. That year, Bawer also co-authored *House and Home* with the Republican congressman Steve Gunderson and Gunderson's partner, Rob Morris; the book follows Gunderson's career as a gay politician and his relationship with Morris in a time of an increasingly political—and particularly religious—debate over sexual preference.

In 1997 Bawer directly tackled the subject of religion with *Stealing Jesus: How Fundamentalism Betrays Christianity*. Bawer is himself a regular churchgoer (he belongs to the Episcopalian church, a denomination of Christianity that has been comparatively welcoming to homosexuals), and the book is not an attack on Christianity as a whole. Rather, he divided Christians into two camps, "legalistic" and "nonlegalistic." The legalistic Christians—primarily evangelicals and fundamentalists—emphasize the exact wording in the Bible; nonlegalistic Christians emphasize the general philosophy behind Jesus's teachings, particularly focusing on love and acceptance. Bawer argued that the legalistic Christians have begun to hijack not only American Christianity but also America itself—from its politics to its culture. The book, which Chris Bull described for the *Washington Post* (December 21, 1997) as "an earnest and at times eloquent entreaty" for a return to nonlegalistic Christianity, went into multiple printings. Still, while reviews praised Bawer's thorough analysis of the current American religious climate, many argued that Bawer was spouting the very same kind of demagogy against which he was preaching. "Like other critics of the religious right . . . Bawer undermines his noble cause by resorting to a form of religious bigotry and political stereotyping," Bull wrote, noting that while Bawer was careful early on to distinguish among different sects within the religious right, he abandoned that discernment later in the book, making all of the religious right—fundamentalists, evangelicals, and others—into the same enemy. "By lumping religious conservatives into an anti-intellectual monolith, Bawer makes it easier to dismiss the movement's gains but harder to understand the deep-seated economic and social uncertainties that animate it," Bull wrote.

Disillusioned with the lack of tolerance he saw in America—as well as with the country's levels of education and commitment to social safeguards, which he found to be low for a Western nation—Bawer moved from New York to Amsterdam, the Netherlands, with his longtime partner, Chris Davenport, in 1998. Finding the Netherlands to be superior in many ways to the U.S. but not the social utopia they had envisioned, the next year Bawer and Davenport moved to Oslo, Norway, where they registered officially as partners. Bawer began translating books from Norwegian to English and writing travel pieces on the Netherlands and Scandinavia. At the same time, he grew interested in the European political climate. Following the September 11, 2001 terrorist attacks on the U.S. and the 2005 bombings in London, England, Bawer noticed a shift in societal attitudes toward Muslims in both his Norwegian neighborhood and in Europe as a whole. Muslims were immigrating to European countries in greater and greater numbers, he said, frequently segregating themselves within cities and creating a drain on their new countries' social resources while giving little in return. Meanwhile, Europeans were becoming more and more reluctant to tighten immigration policies, or to say anything at all about the problem of Muslim immigration, out of what Bawer called a misguided sense of political correctness. One of the examples Bawer frequently cited was the expulsion of the Dutch politician Pim Fortuyn, the author of *Against the Islamicization of Our Culture*, from his own party for his hardline stance against Islam; Fortuyn was later assassinated by a Dutchman who disagreed with his views. In 2004 the Dutch film director Theo van Gogh, whose most recent film had criticized Muslims' treatment of women, was killed by a member of a radical Muslim network. In the days following van Gogh's killing, Bawer traveled to the Netherlands, writing a piece for the *New York Times* (November 14, 2004) that expressed his concern that van Gogh's murder would elicit the same overly politically correct reaction that Fortuyn's had. Bawer reflected on the divide between the native Dutch and Muslim populations in the Netherlands. "Instead of addressing this issue, Dutch officials (like their counterparts across the continent) churned out rhetoric about multicultural diversity and mutual respect," Bawer wrote. "By tolerating Muslim intolerance of Western society, was the Netherlands setting itself on a path toward cataclysmic social confrontation?"

In Bawer's view, not only the Netherlands but all of Europe was headed toward such disaster—a position on which he elaborated in 2006, with *While Europe Slept: How Radical Islam Is Destroying the West from Within*. Bawer asserted that Europe is at a "Weimar moment," a point at which it has to decide whether it will capitulate to Islamic fundamentalists or resist their growing power over European society and politics. Criticizing Europe's "self-destructive passivity, its softness towards tyranny, its reflexive inclination to appease," Bawer cited data in seeking to demonstrate the drain on European countries' resources caused by Muslims: 70 percent of the inmates in French prisons, he pointed out, are Muslim; four out of five residents of the main women's shelter in Oslo are non-Norwegian Muslim women seeking protection from male family members; in Denmark, Muslims make up 5 percent of the population but receive 40 percent of its welfare payments. Bawer argued that unlike the U.S., which places a heavy emphasis on assimilating its immigrants, Europe has allowed its immigrant populations—especially Islamic immigrants—to exist separate from the rest of society and maintain practices and belief systems that clash with the greater ideology of their adopted countries. While giving particular attention to the hatred of homosexuality ingrained in fundamentalist Islamic beliefs, he also cited the poor treatment of women, with examples including forced marriage, polygamy, and marital rape. The communities Bawer discussed in his book are those that tourists rarely visit and journalists do not often write about, leaving the vast majority of the American public ignorant of how severe the situation really is, Carlin Romano wrote for the *Philadelphia Inquirer* (February 20, 2006). Romano called *While Europe Slept* a "must-read book," saying that it "raises profound challenges to standard ideas of democracy, authority, and free expression." He added, "Accept his analysis or not, Bawer and his details startle."

The book, currently in its eighth printing, has provoked strong reactions. Bawer "has an acute eye for how such fragile societies fall prey to unscrupulous extremists and opportunistic, welfare-addicted outsiders," Clive Davis wrote for the *Washington Times* (March 26, 2006). "He also provides a fine overview of the way elite opinion across the continent has lapsed into a default mode of blaming the evils of American-style capitalism for almost every social ill on the planet." Some criticized Bawer for making generalizations based on data gathered almost entirely in Norway and the Netherlands; others, including Mark Steyn, writing for the *Jerusalem Post* (April 9, 2006), complained about the book's "overwrought" prose. For the most part, though, detractors disagreed with the general message of the book. When Eliot Weinberger, a onetime finalist for the National Book Critics Circle Award, announced *While Europe Slept* as a nominee in the NBCC's criticism category, he accused Bawer of engaging in "racism as criticism." The NBCC board president, John Freeman, also commented on the organization's blog on the nomination, writing, "I have never been more embarrassed by a choice than I have been with Bruce Bawer's *While Europe Slept*. Its hyperventilated rhetoric tips from actual critique into Islamophobia." Responding to Weinberger's comments in the January 29, 2007 entry of his blog, Bawer pointed out that Islamic fundamentalists—the group he opposed—were not a race in and of themselves. "It's easy—and, in some circles, highly effective—to fling the 'R' word instead of trying to respond to irrefutable facts and arguments," he wrote. "One of the most disgraceful developments of our time is that many Western authors and intellectuals who pride themselves on being liberals have effectively aligned themselves with an outrageously illiberal movement that rejects equal rights for women, that believes gays and Jews should be executed, that supports the coldblooded murder of one's own children in the name of honor, etc., etc. These authors and intellectuals respond to every criticism of that chilling fundamentalist code—however cogent and correct the criticism may be—by hurling the 'R' word." He concluded, "I will not be cowed by such disgraceful, duplicitous rhetoric. Civilized, tolerant, pluralist values are at stake—values that affect freedom-loving individuals of all races."

Bawer lives in Oslo with his partner, Chris Davenport.

Beck, Kent

Mar. 31, 1961– Computer programmer

Address: Three Rivers Institute, P.O. Box 128,
Merlin, OR 97532

Kent Beck is famous among computer programmers for spearheading the creation of the Extreme Programming (XP) process for software development—a method, as Lesley Stones wrote for the South African *Business Day* (July 7, 2005), that "turns upside down the usual image of uncommunicative geeks beavering away in cubicles awash with coffee and junk food." Beck's XP system, which he described to Lee Copeland for *Computerworld* (December 3, 2001) as a "lightweight methodology," differs radically from conventional systems, which often begin with a list of requirements given by a client or manager to programmers, who then design, code, and test the software. With that traditional process, sometimes called the waterfall

Kent Beck

method, the gulf between what the client envisions and what the developer produces can be quite large, and testing software only after the bulk of the code has been written can create a wealth of errors. Julie Pitta, writing for *Forbes* (July 9, 2001), pointed out some of the waterfall method's shortcomings: "Typically, chunks of code written by individual programmers are glued together and then handed off to testers, who look for bugs. But finding all the bugs in a large program is brain-curdling work. Worse, even great code can accidentally become irrelevant: Once an independent team clinches a deal to develop code, the programmers have little contact with the final customers." Danny O'Brien, writing for the *Irish Times* (November 29, 2002), noted that some estimates suggest that only 10 to 40 percent of the software that companies develop for internal use actually runs successfully, adding: "In the 1960s, this ongoing statistical disaster was ascribed to programming's lack of rigour compared to other, more mature technical skills, like engineering. But as layer after layer of sadistic rules have been created for creating programs, carefully documenting requirements, and meticulously plotting every detail of the schedule before it happens, the delays have merely got longer, and the failures more spectacular."

Beck formalized XP during the mid-1990s, when he and Ron Jeffries, one of his collaborators, consulted on a major software project for the Chrysler Corp. Since then XP has been used at such companies as Ford, IBM, Symantec, and GlaxoSmithKline and has led many small- to medium-size companies to revise their software-development processes. The tenets of XP are, Copeland wrote, to "keep the code simple, review it frequently, test early and often, and work a 40-hour week." Not tied to any particular technology or programming language and unrelated to the popular Microsoft Windows XP operating system that followed it, XP attempts to bring a company's business and technical teams together by stressing four core values: communication, simplicity, feedback, and courage. With XP, Beck told Stones, "the people who really matter to the development come together, so people on the team are not just programmers, but a wide mix of people who will use the software, managers, testers, analysts and graphic artists. It's a challenge because it requires interpersonal skills—which developers aren't known for having." Part of what makes XP unusual is Beck's attention to the social and spatial arrangements of the workplace. One of the fundamental aspects of XP, and one of the most controversial among programmers, is the idea of pair programming—coders working side by side on the same computer, sharing a single keyboard. Beck, in introducing XP, maintained that pair programming leads to higher-quality code that requires less time to test and debug, and that it helps to make the code less opaque to the programmers who later need to maintain the software. Paired programming flows naturally out of Beck's conviction that, as he wrote in response to a questionnaire from the computer magazine *EXE* (March 1, 2000), "who you work with is more important than what you work on." Developers following the XP process are also expected to code in close proximity to one another, preferably in open rooms. Recounting an experience he had while consulting with a company in Chicago, Illinois, Beck told Malcolm Gladwell for the *New Yorker* (September 5, 2005) that his advice was largely restricted to urging the development team to work in the same space. "They hired me for my technical expertise," Beck told Gladwell. "And I told them to rearrange the office furniture, and that was the most valuable thing I could offer them."

An experienced programmer and independent consultant, Beck has written extensively on XP and other subjects related to programming. He has also been instrumental in developing a number of software-development tools, including the JUnit testing framework, which he created with a fellow programmer, Erich Gamma, and which has become perhaps the world's most widely used testing framework for the programming language Java. Beck is a pioneer of test-driven development, a method that inverts the prevailing approach to writing code. Instead of developing a program to accomplish a given task and then testing it afterward, a programmer following the test-driven development method first writes a test for a specific task and then writes the code to match the test. Beck's radical prescription for creating better code has provoked strong criticism from many programmers, who often argue that Beck's intensely collaborative model slows the development process and that many details of the XP process make it impracticable for large-scale projects. "XP is not for everybody," Beck admitted to Linda Tischler for *Fast Company* (October 2001). "It's like programming naked. You are exposed. But if you work together, you have twice as many ideas, and you get fewer defects."

Kent Lynden Beck was born on March 31, 1961 in San Jose, California, to Doug and Bernadette Beck. Beck's father was an electrical engineer who worked on some of the building blocks of computer hardware, including discrete components for individual circuits and integrated circuits, and Beck began programming at the age of 12—evidence of the extent of his access to technology at that time, unusual even in the Silicon Valley area, where he was raised. In his correspondence with ESE, Beck described the first computer he ever used as an "85-pound Philco desktop calculator" that displayed its output using a cold-cathode device called a nixie tube. ("The demise of nixie tubes," Beck added, tongue-in-cheek, "was the first step in the tragedy that is modern technology.") A devoted guitar and banjo player from an early age, Beck told *Current Biography* that he "was always interested in music" and that, while in college at the University of Oregon, in Eugene, he "alternated majors every year between computer science and music (classical guitar)." Beck earned his B.S. and M.S. degrees in computer science from Oregon. The thesis for his master's degree, which he received in 1987, was titled "A Relational Database Interface Scheme."

Before earning his master's, Beck had begun working at the company Tektronix, based in Beaverton, Oregon. There, he met Ward Cunningham, who became an important collaborator, in part because of their shared interest in object-oriented programming. (A method for coding that breaks larger programs into discrete units, termed objects, each of which possesses a narrow function and a degree of independence and interchangeability, object-oriented programming is distinct from earlier styles of programming—which treated code as a series of linear procedures, each of which might serve multiple functions.) Beck and Cunningham were also among the early advocates of applying to software development so-called pattern languages—an approach to formalizing decision-making in architecture and urban design first advanced by the Austrian-born architect Christopher Alexander. In September 1987 they co-authored the paper "Using Pattern Languages for Object-Oriented Programs," which they delivered at the second annual OOPSLA (Object-Oriented Programming, Systems, Languages, and Applications) conference in Orlando, Florida. By the time of that conference, Beck had already left Tektronix for Apple Computer, based in Cupertino, California. After working to develop applications for Apple's then-revolutionary Macintosh computer system, Beck moved to another Silicon Valley company, the minisupercomputer maker MasPar, before becoming a private consultant and the founder of First Class Software, which distributed some of the software he created, including the programming utilities Profile V and Object Explorer, both of which draw on Beck's years of experience in programming in the language Smalltalk.

In the late 1980s and early 1990s, Beck and Cunningham became known in object-oriented programming circles for their advocacy of a programming technique called Class, Responsibility, and Collaboration (CRC) cards. Cunningham first suggested CRC cards as a way of recording key information about some of the objects in a planned program while also controlling the scope of that information, since it had to fit on the front of a single index card. CRC cards have since become widely used as a brainstorming and organizational tool, but Beck and Cunningham also saw them as a way of explaining to novices how object-oriented programming works and of freeing up the development process. "The cards are being used as props to aid the telling of a story of computation," Beck and Cunningham wrote in a paper delivered at the 1989 OOPSLA conference and available on the Web site of Cunningham's consulting company, Cunningham & Cunningham Inc. "The cards allow its telling without recourse to programming language syntax or idiom." In the paper Beck and Cunningham drew attention to the success of CRC cards, particularly in groups, and remarked on "the value of physically moving the cards around. When learners pick up an object they seem to more readily identify with it, and are prepared to deal with the remainder of the design from its perspective. It is the value of this physical interaction that has led us to resist a computerization of the cards."

The idea of individual parts of a program as stories, and the emphasis on groups and physical presence in the development process, became key parts of XP, which Beck began to develop in detail in 1996, when he started consulting on a project for the Chrysler Corp. Known as the Chrysler Comprehensive Compensation System (C3), the project sought to replace a variety of older software with a single payroll application that could successfully write paychecks for all of the company's employees—a formidable task given Chrysler's roster of nearly 90,000 workers and the wide variety of taxes, deductions, and payment plans that had to be factored into the amounts of the checks. "They had a crying business need; it had to work," Beck told Scott Plamondon for IBM's on-line DeveloperWorks (June 17, 2003). Despite about a year's development work, the project was in disarray when Beck arrived, prompting him to tell the company's chief information officer at that time, Sue Unger, as Beck explained to Plamondon, "that [Unger] had three options: keep going, which no one wanted; cancel the project and fire everyone; or give everyone a week off and start over. She picked option 'c' and said 'but you're in charge.'" ("I said, 'You don't understand. I'm a consultant. I don't do in charge,'" Beck told Sam Williams for a May 29, 2002 article in the on-line magazine *Salon*. "She said, 'You don't understand, I'm Sue Unger. You're in charge.'") When the employees returned from their week off, Beck interviewed each of them and began developing a plan for managing the project. "I told the first guy that we'll divide the project into three-week intervals called, say, *iterations*," Beck told Plamondon. "In each iteration we'll implement a few new features called *stories*. We'll write down all the stories we need, slot them into the iterations, then do it. I told the next guy [I interviewed] that we have these three-week iterations divided into stories. For each story we'll write these . . . *acceptance tests* to demonstrate that the stories meet the customer's expectations. With each person I interviewed I added a little more. By the end of the day, I'd interviewed 20 people and had laid out Extreme Programming's basics."

Beck told Danny O'Brien that the biggest problem he attempted to solve through XP was "the difficulty of measuring the intermediate states of a project." Beck's idea to break projects down into stories became known as the "planning game." Under that model the number of stories can be adjusted as the deadline allows. Each story is written on a story card and has an estimated time of completion. Programmers enjoy using stories, O'Brien explained, "because they're never stuck with an unrealistic deadline. Everything is broken down into simple chunks that need just a few days to code and test. And a test for every task is written by the paired programmers before they code it up." Writing tests before coding, rather than after, is another of Beck's innovations. It allows clients to see the progress being made prior to the project's completion and, if necessary, to adjust features of the programming. With XP, clients are even included on the working teams. Before he came on board at Chrysler, Beck told Plamondon, the team working on C3 "treated the requirements as a fixed set of tasks. The tasks would grow over time, like a mirage. At some point the project recedes as fast as it progresses. Instead, we made the project's scope visible with stories with costs and a fixed budget." The first release of Beck's version of the C3 system came out roughly on time, but subsequent releases failed to match that early success, and the program wrote checks for only about 10,000 employees; still, that in itself was considered a substantial achievement. (In 1998 Chrysler merged with the European automaker Daimler-Benz to create DaimlerChrysler, and two years later the C3 project was terminated altogether.)

Beck gave his methodology the name Extreme Programming while still at Chrysler, taking his inspiration from extreme sports. "I wanted my teams to have that same sense of fearlessness in the face of challenge," Beck told Sam Williams. "People who are serious about extreme sports are prepared," Beck explained to Alan Goldstein for the *Dallas Morning News* (March 20, 2003). "They have the best possible equipment. If they're going whitewater rafting, they carefully map the bottom. They don't just go, 'Oh cool, nobody's done this before,' and jump in a raft." In 2000 Beck published his first book on the topic, *Extreme Programming Explained: Embrace Change*, and after that acolytes for XP emerged from all over the world, particularly in Europe and Japan. (Published in late 1999 but carrying a copyright for the following year, *Extreme Programming Explained* is sometimes listed as *eXtreme Programming eXplained*.) In 2000 Beck collaborated with Martin Fowler on a more technical guide to XP, *Planning Extreme Programming*, and that same year the first international conference on XP was held in Cagliari, on the Italian island of Sardinia; conferences on XP have been held in every subsequent year thus far. In 2000 Beck also founded The Three Rivers Institute, in Merlin, Oregon, to study the interaction of business and technology and to promote XP. The following year Beck joined more than a dozen other influential programmers in signing a "Manifesto for Agile Software Development." Now seen as the larger movement of which XP is a part, agile programming is described in the manifesto, reproduced on Agilemanifesto.org, as valuing: "Individuals and interactions over processes and tools / Working software over comprehensive documentation / Customer collaboration over contract negotiation / Responding to change over following a plan."

If fans of XP "cropped up like kudzu," as Lee Copeland wrote, the book also "sparked a maelstrom of debate among programmers and project managers who either love or love to hate [Beck's] ideas." XP goes against the habits of many in the field by stipulating that programmers not work more than 40 hours per week, and it promotes greater communication between programmers and company managers, while at the same time deemphasizing the process of documenting, within the code itself, what individual parts of a program are intended to do. Beck also advocates leaving programs open to change by any member of the development team. That gives everyone the power to correct an error, but it also leaves projects more vulnerable than some companies would like. Perhaps the greatest point of resistance to XP concerns pair programming, a method that Beck has said grew out of his experiences with Cunningham. "I'm a poor programmer, compared to Ward," Beck told O'Brien. "But we worked out a way that that didn't matter." While sharing one computer and taking turns using the keyboard worked for Beck and Cunningham, many other programmers have found it awkward. "Programmers consider themselves masters and artists," Jim Duggan, now a vice president at the consulting firm Gartner Inc., told Copeland. "And if you have two artists at the same palette, they're going to fight over the brush."

In addition to his books about XP and other texts, Beck has written *Smalltalk Best Practice Patterns* (1996), *Kent Beck's Guide to Better Smalltalk: A Sorted Collection* (1999), *Test-Driven Development: By Example* (2003), *JUnit Pocket Guide* (2004), and *Implementation Patterns* (2006).

Beck lives on a 20-acre property near Merlin, Oregon, with his wife, Cynthia Andres, a psychologist who is also Beck's co-author for the second edition (2004) of *Extreme Programming Explained.* They have five children: Bethany, Lincoln, Lindsey, Forrest, and Joelle.

Beck enjoys a worldwide demand for his services as a consultant, telling *Current Biography* that at present he is "on contract with companies in Canada, Europe, and Asia"; he is also continuing to work on JUnit. Asked by *EXE* whether the best software developers are born or made, Beck responded, "Made, clearly. If you're a techno-whiz, you have to learn the people stuff the hard way. If you're a people person, you have to work hard on technical skills. If you're like me, you have to climb both mountains at once."

Bergeron, Tom

(BER-jer-on)

May 6, 1955– Television host

Address: c/o IMG, 1640 S. Sepulveda Blvd., Suite 222, Los Angeles, CA 90025

"I'm responsible for what I am and what I want to be," the television personality Tom Bergeron told Keith Nelson and J. P. Smith during an interview for the *Exeter High School* student newspaper (October 1981, on-line), shortly before he landed his first job on TV. "I'm not trying to live by another's standards." Known for his quick wit and affability, Bergeron began his career as a local radio deejay in Massachusetts in 1972, when he was still in high school. A trained mime, he became a fixture in Boston-area radio and television during the 1980s, then gained national exposure as the co-host of the daily television show *Breakfast Time* for five years beginning in 1993. His improvisational skills were particularly valuable on *Breakfast Time* which was almost entirely unscripted. (The show was renamed *Fox After Breakfast* after it moved from the FX channel to the Fox network, in 1996.) Bergeron, Dean Johnson wrote for the *Boston Herald* (February 2, 1997), was "unafraid to sacrifice himself or make himself look bad for the overall success of a particular show. Not many TV hosts take that road these days." In 1998 Bergeron served briefly as an anchor on the ABC show *Good Morning America.* "I came away from that experience sort of reaffirming that my own comfort zone is in entertainment and less in news," he told Lesley Creegan for CNN (December 22, 2000, on-line). Bergeron hosted the third incarnation of the game show *Hollywood Squares* from 1998 until its demise, in 2004. In 2000 he shared (with Bob Barker, the host of *The Price Is Right*) the Daytime Emmy Award for outstanding game-show host. Since 2001 Bergeron has hosted *America's Funniest Home Videos*, which has run longer than any other prime-time entertainment program in ABC's history. Since 2005 he has co-hosted *Dancing with the Stars*, another of ABC's most popular programs. As he told Creegan, Bergeron regards himself as "somebody who treats what he does as a job that's fun, that he enjoys, but that doesn't define him."

Tom Bergeron was born on May 6, 1955 to Kay and Ray Bergeron. He and his sister, Maureen, grew up in Haverhill, Massachusetts, a town of 60,000 on the New Hampshire border. At Haverhill High School, Bergeron was elected president of the student council and editor of the student newspaper. One of his teachers moonlighted as a newsman for WHAV and set up an interview for him at the radio station, in nearby Methuen. Bergeron was hired immediately and, at 17, became the youngest deejay in the state. His other extracurricular activities included contributing editorial cartoons to the *Haverhill Gazette* and other local newspapers. After his high-school graduation, Bergeron opted to continue his career in radio rather than attend college. "I didn't see the use of going to college to learn about how to get a job in broadcasting when I already had a job in broadcasting," Bergeron explained to Nelson and Smith. "I regret not going, from a social standpoint, but I think it was a careerwise move." He took courses in theater arts at night at Northern Essex Community College, which has campuses in and around Haverhill.

In the mid-1970s Bergeron moved to New York City to pursue a career on the stage, on the strength of a nightclub show he had created, which incorporated mime and a monologue. He soon returned to New England. Next, he trained under the famous mime Tony Montanaro at the Celebration Barn Theatre, in South Paris, Maine. (In 2004 Bergeron participated in a tribute concert for Montanaro that was filmed for the documentary *Tony Montanaro, The Miracle of Inspiration*, made by James "Huey" Coleman, Leland Faulkner, and Richard Serls.)

In 1980 Bergeron returned to radio work, as the host/deejay of a comedy, talk, and music program that aired between 7:00 p.m. and midnight on WHEB in Portsmouth, New Hampshire. He considered his role on *The Tom Bergeron Show*, as it was named, to be that of a performer; on it, he cultivated his sardonic yet affable style of humor and on occasion placed phone calls to people around the world whom he thought his audience would find interesting. Bergeron has said that the most difficult part of being a deejay, for him, was having to maintain at all times the impression that he was enjoying himself; when he was not, he relied on his acting skills to cover up his feelings. *The Tom Bergeron Show* became very popular; according to a biography of Bergeron on the Web site of the lecture bureau Speakers-Network, it led to a tripling of WHEB's listenership. During that time Bergeron, along with his fellow deejay Bill McDermond, campaigned publicly for jobs on the popular NBC television show *Saturday Night Live*. Fans of Bergeron and McDermond made phone calls, produced buttons, and wrote letters urging NBC to hire them, all to no avail.

During one vacation from his radio job, Bergeron wrote, directed, hosted, and starred in *For One Night Only, All Week Long*, a four-day variety-show marathon mounted at Theatre by the Sea, a small venue in Portsmouth. His performance, in which he mimed, sang, and acted in serious and comic skits, drew positive responses from critics and the public. It helped him get a job in television, in 1982, as the host of the local PBS quiz show *Granite State Games*, in which New Hampshire high-school students competed in such areas of expertise as math, science, and social studies. Later, Bergeron joined WBZ-TV, in Boston, Massachusetts, as an "on-air personality." He first hosted broadcasts of *Lottery Live*, drawings for the Massachusetts state lottery. He then served as host of the Emmy Award–winning, magazine-style children's program *Super Kids*; the multi–award-winning series *Rap Around*, in which adolescents and teens talked about their problems and issues that affected them; and the news program *4 Today*. He continued to host *The Tom Bergeron Show* on the radio until 1987, when he began a six-year stint as the host of a widely viewed morning talk show, *People Are Talking*, on WBZ-TV. By that time he had become a well-known figure on Boston-area television. "Glib without being smarmy, smoothly ranging from substance to fluff and back to substance again, Bergeron emerged as one of the easiest-to-take TV personalities Boston has ever had," Don Aucoin wrote for the *Boston Globe* (September 14, 1998). In 1990, in addition to his television duties, Bergeron returned to radio to host Boston's top-rated morning show on WBZ-AM.

Three years later, turning his back on radio permanently, Bergeron won a co-host's position on the morning show *Breakfast Time*. Aired on the upstart cable channel FX, the show brought Bergeron his first national exposure. Set in a fancy, 6,500-square-foot Manhattan apartment, *Breakfast Time* offered an informal variation on the standard morning-TV format. Along with his co-host, Laurie Hibberd, and a cast of regulars, including Bob, a large puppet (voiced by Al Rosenberg), Bergeron entertained guests at the apartment; everyone would walk from room to room and then sit down for breakfast, conversing as they ate. A crew with handheld cameras followed the action, which was unscripted. "It was designed to be a live, flexible environment and—given that it had an entertainment base—I loved it. It was like breathing pure oxygen . . . ," Bergeron told Lesley Creegan. Listing famous entertainers who appeared on *Breakfast Time*, he said, "One show, Gladys Knight was my co-host. Garth Brooks was there, and Martin Sheen, Emilio Estevez and Beau Bridges were all just hanging around chatting." In effect, he continued, viewers became "Peeping Toms at this incredible party." He added, "For someone like myself, it wasn't like work." "People in the business really took to the show," Bergeron told Nancy Imperiale Wellons for the *Orlando (Florida) Sentinel* (March 16, 2000). "We were doing something different, with a lot of improvising. What made it exciting for me was you didn't know what was going to happen. You had to trust you had enough resources to make it work, or roll with whatever went wrong." The "energetic" Bergeron, as Peter M. Nichols described him for the *New York Times* (September 8, 1996), proved to be a capable facilitator, and in early 1996 the show, renamed *Fox After Breakfast*, moved to the Fox network, with a far larger potential audience. Fox decision-makers cut the show from two hours to one and dropped some of its stock characters, and without them the show lost some of its liveliness and quirkiness. It was also pitted against tough competition, notably the morning staple *Live with Regis and Kathy Lee*. Contrary to the hopes of *Breakfast's* producers, its increased exposure did not bring better ratings. In mid-1997, after several attempts to streamline *Fox After Breakfast* failed to increase its audience, Bergeron was fired. (The show was soon canceled.)

In 1998 ABC hired Bergeron as a fill-in anchor for Charlie Gibson on *Good Morning America*. Gibson had announced that he planned to leave the show that year, and many speculated that Bergeron would be named to replace him. Instead, the position went to Kevin Newman, an ABC news correspondent who had also hosted ABC's series *World News Now*. "Clearly, without a journalism background, I was regarded, justifiably to some extent, as an outsider," Bergeron told Creegan. Not long afterward King World Productions, which had acquired the rights to *Hollywood Squares*, tapped him to be the host of a new version of that classic game show, which had had two runs between 1966 and 1981. Based on tic-tac-toe, *Hollywood Squares* was designed as a quiz involving questions presented to nine celebrities (each of whom faced the audience from a tic-tac-toe square); the celebrities offered answers to contestants, who had to determine if the answers were true or false. Bergeron had established himself as a reliable improviser who could joust skillfully with laugh-grabbing celebrities, but he was hesitant to host a game show in which his main function would be to keep the repartee from flagging rather than to jump into the fray with the guests himself. He decided to accept the job when he learned that Whoopi Goldberg had signed on to co-produce the show and participate in it as the "center square." Bergeron had met Goldberg when she appeared as a guest on *Fox After Breakfast*. "The two of us kind of hit it off," Bergeron recalled to Mel Bracht for the *Daily Oklahoman* (March 19, 2000). "We were like a couple of bad kids in daycare."

The new *Hollywood Squares* debuted in September 1998, and thanks to "the chemistry of the people involved," as Bergeron put it to Creegan, and the many laughs they generated, it was a solid success; for some years it usually placed among the top 15 nationally syndicated shows. "We can't forget that the contestants are the representatives of the viewers at home," Bergeron told Creegan, "and if we make it too much of a yuk-fest at the expense of the contestants, that turns off the viewer." *Hollywood Squares* gave Bergeron his widest exposure up to that time; he won an Emmy Award for his work on the show and received nominations on two other occasions. Twice a month in Los Angeles, California, up to 10 installments of the show were taped during a few days, a schedule that enabled Bergeron to spend more time with his wife and children and to pursue other projects in and outside television. He wrote a novel (it was never published), appeared as himself on a 1998 episode of the CBS sitcom *The Nanny*, and guest-hosted CBS's *The Early Show* the next year. The last installment of *Hollywood Squares* aired in September 2004.

Earlier, in 2001, Bergeron had signed on as the temporary host of the long-running comedy show *America's Funniest Home Videos*, which had been added to the network's prime-time lineup. The series, which premiered in 1989, offers clips of videos made by ordinary people, many of them showing pratfalls, results of practical jokes, or the clownish behavior of children or pets. After the departure of its original host, Bob Saget, in 1997, the popularity of the program had declined. *America's Funniest Home Videos* provided Bergeron with a showcase for his gifts for dry humor and adlibbing. With his help the show's ratings began to improve, and later in 2001 Bergeron was hired as the full-time host. In one recurring bit that he introduced, "Tom's Home Movies," images of his head were superimposed on those of people in the videos. "I'm very privileged to have become a part of this classic, this institution," Bergeron told Ray Richmond for the *Hollywood Reporter* (November 5, 2003). "It's great because, as a dad, I have a particular appreciation for videos where it looks like parents have surrendered all parental responsibility: You know, like the kid in the backyard, being dragged by the self-propelled mower all over the grass and into the woods, as you hear mom on-camera laughing hysterically. You wonder at what point maternal instinct kicks in, and the mother finally says, 'You know, maybe we should save Skippy from the forest.' I now get to be the guy who introduces that video—and that's pretty special. It's like I get to oversee a video buffet, where people can go several times an hour and be guaranteed a good laugh. How many places on TV can you go where that's still true?" He told Dan Snierson for *Entertainment Weekly* (May 17, 2007), "When you're looking at nuclear Armageddon and global warming, a good crotch hit is like a cool breeze on a hot summer day." With the exception of *The Simpsons* on Fox, no current prime-time network comedy series has aired longer than *America's Funniest Home Videos*. The program attracted an average of nine million viewers a week in 2006. As of mid-October 2007, Bergeron was still hosting the show.

Concurrently, in 2005, Bergeron was recruited to co-host *Dancing with the Stars*, an American version of the BBC series *Strictly Come Dancing*. The program, which debuted on ABC in June of that year, features dance competitions, in which the contestants are couples, each made up of one celebrity and a professional dancer; the "stars" have included the model Kelly Monaco, the actor and singer Drew Lachey, the singer Joey Fatone of the band 'N Sync, the former football player Emmitt Smith, the boxing champion Laila Ali, and the speed skater Apolo Ohno. One of ABC's top shows, *Dancing with the Stars* has drawn Nielsen ratings of as high as three and never lower than 18.

In 2002 Bergeron made his TV debut as a dramatic actor on *Star Trek: Enterprise*, as the Alien Trader D'Marr. (He returned to that show for one episode in 2005, in the role of a Coridan ambassador.) He co-hosted the 49th Miss America beauty pageant in 2003. In 2006 he hosted the New England Emmy Awards, and the next year he hosted the Academy of Television Arts & Sciences Foundation's 28th Annual College Television Awards, which honored student achievement. He has appeared as a guest on TV programs including *The View, Larry King Live, Entertainment Tonight,* and *The Nanny*. In 2007 he was inducted into the newly founded Massachusetts Broadcasters Hall of Fame.

A longtime volunteer for the March of Dimes, Bergeron served as the 2007 national WalkAmerica spokesperson. In 2005 and 2006 he co-hosted the Jerry Lewis Muscular Dystrophy Association Telethon, and since May 2007 he has been a national vice president of that organization. Bergeron and his wife, Lois, a former TV producer, have homes in Old Greenwich, Connecticut, and Lee, New Hampshire. The couple have two teenage daughters, Jessica and Samantha. "There were a lot of years when I was up at 3:30 a.m. and never saw them until briefly in the afternoon and I was in bed before they were," he recalled to Lesley Creegan. "I was sort of this shadowy presence. Lois got them a game one year called 'Don't Wake Up Daddy.'" He also said to Creegan, "I'm never happier than when I'm at our house in New Hampshire, sitting on the back deck with a cup of coffee, reading the paper. It's all about being with my family and living my life."

"What you see on TV is what you get if you speak to me," the journalist and television-news anchor Wolf Blitzer said to Jim Bisco for *UB Today* (Winter 2004, on-line), the alumni magazine of the State University of New York at Buffalo. "I don't put an air on, and I try not to talk down to the viewers. . . . I'm going to give them the news and do it in a way that I try to make as understandable and as easy for the viewers as I possibly can." Blitzer currently appears on the news channel CNN as the anchor of two programs: *The Situation Room*, which airs for three hours every weekday, and *Late Edition with Wolf Blitzer*, which airs for two hours every Sunday night. For two years after he joined CNN, in 1990, Blitzer reported from the Pentagon on U.S. military affairs. During the round-the-clock, live television coverage of the Persian Gulf War of 1991, which followed the invasion of Kuwait by Iraqi troops, Blitzer's face became one of the most recognizable among those of front-line reporters. The events in Kuwait "changed my life from an unknown journalist and made me known because of CNN's reach," Blitzer told an interviewer for Journalismjobs.com (March 2000). "It almost made me a household name." His coverage of the September 11, 2001 terrorist attacks earned him and other CNN journalists an Edward R. Murrow Award. From 1992 to 1999, during Bill Clinton's presidency, Blitzer served as CNN's White House correspondent. Later, he covered the American presidential races of 2000 and 2004 and the destruction caused in Southeast Asia by a tsunami in 2004 and in the Gulf States of the southern U.S. by Hurricane Katrina in 2005; for his work on the tsunami and hurricane disasters, he and his CNN team won an Alfred I. DuPont Award and a George Foster Peabody Award, respectively. Since 2003 Blitzer has traveled to the Middle East several times to report on the war in Iraq; for a few days in 2005, he accompanied American ground troops there. Over the years he has interviewed dozens of major political figures, including many heads of state.

Blitzer began his career in print journalism. For 18 months beginning in 1972, he served as the Reuters News Agency's correspondent in Israel. For the next 16 years or so, he was based in Washington, D.C., and wrote news analyses and reports for the *Jerusalem Post.* He has written two books, the first about his experiences as an American Jew reporting on Israel and the second about Jonathan Jay Pollard, an American Jew who is serving a life sentence in the U.S. for supplying American military secrets to Israel; the latter book also concerns U.S.-Israel relations and what the Pollard case revealed about them. Blitzer has been criticized for allowing a bias toward Israel to color his reporting and also for being "a reliable weather vane for conventional wisdom," as Eric Alterman put it in the *Nation* (February 6, 2006). But he is widely respected for his determination to be accurate and precise. When Patricia Sheridan, a reporter for the Pittsburgh, Pennsylvania, *Post-Gazette* (October 3, 2005, on-line), asked him, "How would you change news coverage if you could?," he answered, "The facts: who, when, where and why. You tell the people the stories the best you know. If there is something you don't know, you be up front and make that clear. You always give the aggrieved party the chance to respond before you publish or go to air. That's just my kind of old-fashioned news values." Blitzer's recent honors include the 2003 Daniel Pearl Award, from the Chicago Press Veterans Association, and the 2004 Journalist Pillar of Justice Award, from the Respect for Law Alliance.

The son of David Blitzer, a home builder, and the former Cesia Zylberfuden, a homemaker, Wolf Blitzer was born on March 22, 1948 in Augsburg, in what was then West Germany. His parents were both natives of Poland who had survived the Holocaust. When Wolf was a year old, the Blitzers immigrated to the United States and settled in Buffalo, New York. Blitzer's given name—a frequent source of humor in his professional life—was that of his maternal grandfather. Raised in a traditional Jewish home, he learned about international political affairs, particularly regarding Israel, starting at an early age. He made his first visit to the Jewish state in 1961, after his bar mitzvah.

Blitzer graduated from Kenmore West Senior High School, in Buffalo, in 1966, and then enrolled at the State University of New York at Buffalo (SUNY-Buffalo). The Vietnam War was raging, and the campus, as Blitzer told Jim Bisco, was "very politically charged." As an undergraduate Blitzer joined the Alpha Epsilon Pi fraternity and majored in American history. In one class, Blitzer told Bisco, he learned about "the whole notion of revisionist history—that there's a conventional wisdom of what happened, and then a group of historians will come out and start revising that history and come up with a totally different explanation for what happened and back it up with original research and sources." In the summer of 1968, Blitzer took courses at the Hebrew University of Jerusalem, where his interest in world affairs intensified. He earned a B.A. degree in history from SUNY-Buffalo in 1970. As an invited speaker at the college in 2003, Blitzer said that the school had "helped shape me, it developed a curiosity," as quoted by Sue Wuetcher in the *University of Buffalo Reporter* (October 9, 2003).

Blitzer next enrolled at the Johns Hopkins University School of Advanced International Studies, in Baltimore, Maryland, where he earned an M.A. degree in international relations in 1972. He then "fell into" journalism, as he put it to Bisco, taking an 18-month assignment as a junior reporter at the Tel Aviv bureau of the Reuters News Agency. "I didn't have any college experience in journalism," he told an interviewer for Journalismjobs.com. "I never took a course. . . . It was a challenge learning to type. I self-taught myself how to touch type. I was blessed with some excellent senior journalists who trained me patiently and taught me the basic skills of being a reporter." At the same time, Blitzer wrestled with doubts about his long-term prospects in journalism, while enduring ruthless, ritualistic needling by the bureau's British journalists. "They berated me, they taunted me, they cajoled me . . . ," Blitzer recalled to Betsy Rothstein for the *Hill* (September 7, 2005). "It was a hazing experience. It was almost like joining a fraternity."

In 1973, after completing his Reuters internship, Blitzer returned to the U.S. and got married. He worked briefly as the editor of the *Near East Report*, a publication of the American Israeli Public Affairs Committee (AIPAC), a pro-Israel lobby. Later in 1973 he began working as the Washington, D.C., correspondent for the *Jerusalem Post*, an English-language daily widely read by members of the Israeli government and foreign service as well as by many Jewish Americans. Blitzer quickly gained a reputation as a fair-minded reporter with a good grasp of Israeli politics, and in time he was given the title of Washington bureau chief. His analyses for the *Post* were reprinted in some three dozen other newspapers in the U.S. and abroad, among them the *Atlanta (Georgia) Jewish Times* and its sister paper in Baltimore; the *London (England) Jewish Chronicle*; and several Israeli newspapers. (In the Israeli papers he published under the byline Ze'ev Barak, "Ze'ev" meaning "wolf" and "Barak" meaning "lightning" in Hebrew, as "Blitzer" does in German.) During his 16 years with the *Jerusalem Post*, he covered such events as the trip by the German chancellor Willy Brandt to

Israel, in 1973—the first visit by a German head of state to Israel; the first Israeli-Egyptian peace conference, in 1977, which culminated in the signing of the Camp David peace agreement, signed by President Anwar Sadat of Egypt and Prime Minister Menachem Begin of Israel, and witnessed by the U.S. president, Jimmy Carter, in 1978; and the withdrawal of the Syrian and Palestine Liberation Organization's military forces from Beirut, Lebanon, in 1982, which ended a conflict involving Israel as well.

Periodically, Blitzer was accused of pro-Israeli bias in his reporting for the *Jerusalem Post.* "I'm an American Jew who writes for an Israeli newspaper," he said to Anne E. Rumsey for the *National Journal* (April 25, 1987). "I'm not an Israeli, but I speak Hebrew. Since I do sort of have one foot in each camp a little bit, I am in a unique position to try to interpret Israel to the American Jewish community, and the American Jewish community to Israel." In his book *Between Washington and Jerusalem: A Reporter's Notebook* (1985), Blitzer talked about the difficulties inherent in his position. In addition to delineating the economic, political, and military ties between the U.S. and Israel, the book devoted many pages to "analyzing the psychological reactions [of Israel] to hypothetical expectations [set by the U.S.]," as J. Robert Moskin wrote in a review for the *Washington Post Book World* (December 29, 1985). Peter Grose, in the *New York Times Book Review* (March 9, 1986), described *Between Washington and Jerusalem* as a "rich lode of source material, considering [Blitzer's] intimacy with Washington, his sensitivity in posing the right questions and his faithful recording of the answers. . . . This is not a book for ideologues or for those who may question the wisdom of an American-Israeli alliance. . . . But for those who always suspect an ineluctable conspiracy between the United States and Israel, this book shows how things really happen."

Blitzer's second book, *Territory of Lies: The Exclusive Story of Jonathan Jay Pollard, The American Who Spied on His Country for Israel and How He Was Betrayed* (1989), was inspired by the criminal behavior and fate of Pollard, an American Jew and passionate Zionist, who, in the early 1980s, as an analyst for the U.S. Office of Naval Intelligence, had smuggled top-secret U.S. military documents to the Israeli government. When his clandestine activities were discovered by U.S. counterintelligence officials, he fled to the Israeli Embassy in Washington, D.C., for safety, but Israeli officials, who had denied involvement in Pollard's illegal actions, turned him over to U.S. authorities. In 1986 Pollard pleaded guilty to spying and was sentenced to life in prison. According to Steven Luxenberg in the *Washington Post* (May 21, 1989), the discovery by the U.S. of Pollard's transactions "triggered one of the most significant crises in more than 40 years of U.S.-Israel relations." Blitzer, who had two exclusive interviews with Pollard during Pollard's sentencing trial, began his research for the book with the goal of determining whether Pollard was, as he wrote in his book, "the destructive, dangerous spy" portrayed by U.S. officials or "simply an over-bright young man who led a rich fantasy life that centered on his becoming a superhero of the country that he idolized"—Israel. In addition to giving an account of Pollard's detection and arrest and his motivations, Blitzer focused on the implications of Israel's purported (though adamantly denied) involvement in espionage against the U.S., a longtime ally. "In espionage, you hardly ever know what's really going on . . . you sometimes find that a light at the end of the tunnel leads only to a tunnel at the end of the light," he wrote. Blitzer's views clashed with those of some factions in the American Jewish community. "[Blitzer] believes the Israeli government did Pollard a wrong when they didn't get him out of the country. He looked like an apologist for Pollard," one prominent Jewish political activist complained to Anne Rumsey. In a critique for the *New York Review of Books* (October 26, 1989), the investigative journalist Robert I. Friedman, who in the *Nation* had often criticized Israeli policies as contrary to the principles of ethical humanism, described Blitzer's book as "often fascinating, sometimes apologetic"; he later wrote, also for the *New York Review of Books* (February 1, 1990), that the book was "a slick piece of damage control that would make [Blitzer's] former employers at AIPAC (not to mention Israel's Defense Ministry) proud." Praise for *Territory of Lies* came from Gary Thatcher, writing for the *Christian Science Monitor* (May 17, 1989), who called it "thorough and authoritative," and from Walter Laqueur, who, in the *New Republic* (June 5, 1989), described it as "exceedingly well researched, but also well written and eminently fair." "Blitzer is at his best in the more dramatic parts of his narrative, particularly his reconstruction of Pollard's detection and arrest . . . ," Luxenberg wrote. "But the most compelling part of the book is Blitzer's struggle to make sense out of Pollard's complicated personality."

While on the staff of the *Jerusalem Post*, Blitzer occasionally appeared on such television news programs as *Nightline* and *The MacNeil/Lehrer Report* (renamed *The MacNeil/Lehrer NewsHour* in 1983). By the end of the 1980s, he felt ready to leave print journalism, in part, as he told Scott Williams for the Associated Press (February 4, 1991), because "I could see that I was writing the same old stories with different names." According to the *Atlanta Jewish Times* (July 16, 1999, on-line), the sale of the *Jerusalem Post* to a new owner, and its adoption of a more right-of-center political slant, also pushed him to make a change. In 1990 Blitzer joined the Cable News Network (CNN) as the military-affairs correspondent at the Pentagon. "I thought the Pentagon was going to be a quiet little beat," he recalled to Williams. "I really thought it was going to be two or three times a week that I'd get on the air." Iraq's invasion of Kuwait in August 1990 and the subsequent U.S.-led attack on Iraqi troops transformed Blitzer's job dramatically. Calling Iraq's aggressive action "bad for Kuwait and good for my career," Blitzer told the *Atlanta Jewish Times* interviewer, "Here was a story that I knew a lot about, covering the Middle East for so many years. Here was a story that the whole world was watching, that I could use sources that I had used for many years." The war in the Persian Gulf was the first to be covered live and nonstop on television—in particular, by CNN. Blitzer, who reported from the field as many as a dozen times a day, became an instant star and helped to make CNN the top-rated news channel. "When you are in the right place at the right time and you do something about it, and you do it right, you get lucky," Blitzer told the *Atlanta Jewish Times* interviewer. For their coverage of the Gulf War, Blitzer and other CNN reporters shared a Golden CableACE Award, given by the National Academy of Cable Programming. In August 1991 Blitzer became one of the first Western journalists invited to report from Moscow, Russia, on the inside workings of the KGB—the acronym of the security, secret police, and intelligence agency of the USSR (Union of Soviet Socialist Republics); the following December he returned to Moscow to cover the Soviet Union's dissolution.

For seven years beginning with the election of Bill Clinton as president, in November 1992, Blitzer served as CNN's senior White House correspondent. He earned the Best in Business Award in 1994 from the *American Journalism Review* for his coverage of the first two years of the Clinton administration and an Emmy Award in 1996 for his reporting on the bombing by American terrorists of the Alfred P. Murrah Federal Building in Oklahoma City, Oklahoma, which left 168 people dead. He also reported on the sex scandal involving President Clinton and a onetime White House intern, Monica Lewinsky, which led to President Clinton's impeachment and trial by the U.S. Senate on charges of perjury and obstruction of justice. The impeachment proceedings and subsequent trial, in early 1999, and the media's coverage of them disgusted Blitzer. "Here was a criminal investigation of the president and a trial in the Senate, and the impeachment process in the House. So we had to cover it, but it seemed like such a terrible waste that we had to go through. Specifically, it drained a lot of attention away from where our focus should have been," he told the *Atlanta Jewish Times* interviewer, citing as one example the bombing of Kosovo and other parts of the former Yugoslavia by NATO (North Atlantic Treaty Organization) forces, after the massacre of ethnic Albanians by Serbians with the encouragement of the Yugoslav president, Slobodan Milosevic.

Earlier, in 1998, Blitzer began to host his own political talk show, *Late Edition with Wolf Blitzer*, broadcast on CNN on Sunday nights; according to the CNN Web site, the program airs in 200 countries. He co-anchored *The World Today* from 1999 to 2000, when he debuted as the sole anchor of CNN's *Wolf Blitzer Reports*. In 2005 that program was replaced with *The Situation Room*, which Blitzer continues to host. "*The Situation Room* is a buzzing hive of news activity that the viewer can just leave on in the late afternoon," Jon Klein, CNN's president, told Linda Moss for *Multichannel News* (June 13, 2005). "It focuses all of the newsgathering, reporting and analytical capabilities of CNN." Blitzer thus appears on air 17 hours every week. His job, he told Paul Bedard for *U.S. News & World Report* (August 7, 2006, on-line), is "very physical and demanding." "You've got to be in good shape," he noted. Toward that end, he tries to sleep seven hours each night, exercises on a treadmill every morning for an hour when he is not away from home, and makes sure that he drinks plenty of water and eats healthful meals. According to Bedard, the ratings his shows have earned are "much better" than those of the programs that used to air in their time slots. And despite his long hours, Bedard wrote, "he's still got time to phone and E-mail his family and pals during commercials and attend baseball and basketball games." "You try to have a balanced life," Blitzer told him, "and make sure you're not just obsessed with one part of it."

In addition to those already mentioned, Blitzer's honors include the International Platform Association's Lowell Thomas Broadcast Journalism Award, for contributions in his field (1999); the Anti-Defamation League's Hubert H. Humphrey First Amendment Freedoms Prize (2000); the American Veteran Awards' Ernie Pyle Journalism Award, for excellence in military reporting (2002); and four honorary doctorates.

Blitzer and his wife, the former Lynn Greenfield, have one daughter, Elana. The couple live in Bethesda, Maryland. As of September 2005, when Betsy Rothstein wrote about him, his wife was a professional shopper at the Chevy Chase, Maryland, branch of Saks Fifth Avenue, and his daughter was the assistant beauty editor at *Self* magazine in New York City. Blitzer's recreational interests include playing tennis.

Blum, William

(bloom)

Mar. 6, 1933– Writer; political dissident

Address: 5100 Connecticut Ave., N.W., #707,
Washington, DC 20008

"If I were the president, I could stop terrorist attacks against the United States in a few days. Permanently," William Blum, a writer, public speaker, and outspoken political dissident, asserted in a speech given in Boulder, Colorado, on October 21, 2002, as transcribed on the Third World Traveler Web site. "I would first apologize—very publicly and very sincerely—to all the widows and orphans, the tortured and impoverished, and all the many millions of other victims of American imperialism. Then I would announce that America's global interventions have come to an end and inform Israel that it is no longer the 51st state of the union but—believe it or not—a foreign country. I would then reduce the military budget by at least 90% and use the savings to pay reparations to our victims and repair the damage from our bombings. There would be enough money. Do you know what one year's military budget is equal to? One year. It's equal to more than $20,000 per hour for every hour since Jesus Christ was born. That's what I'd do on my first three days in the White House. On the fourth day, I'd be assassinated." Blum was largely ignored by the mainstream media until January 2006, when Osama bin Laden, the leader of the terrorist organization Al Qaeda, suggested in an audiotape that it would be "useful" for Americans to read Blum's book *Rogue State: A Guide to the World's Only Superpower* (2000; updated in 2005), in which Blum argued that while he totally opposes the murderous actions of terrorist groups, they can be explained as responses to what he views as the imperialistic, amoral foreign policy of the current U.S. government—and those of its predecessors going back several decades. "The attacks are not going to end until we stop bombing innocent people and devastating villages and grand old cities," Blum said in another speech, on October 22, 2002, as partially transcribed for the Australian journal *On Line Opinion* (March 17, 2003). "And they are not going to end until we stop supporting gross violators of human rights who oppress their people."

Bin Laden's reference to Blum became the subject of news reports in the U.S., which led to an immediate increase in sales of *Rogue State*. It also spurred some people to send Blum e-mail messages in which they accused him of "giving aid and comfort to the enemy," as he told an interviewer for the C-SPAN TV program *Washington Journal* (January 28, 2006, on-line). Blum continued, "I'll give you my answer, which I give to them. My answer is on the one hand, I have nothing but intense dislike for religious fundamentalism and the kinds of societies spawned by such fundamentalism, like the Taliban in Afghanistan. That should be clear. I have total distaste for them. On the other hand, I'm a member of a movement, which has the high ambition of slowing down, if not stopping, the American empire and hoping to cease its continuation of very hostile actions all over the world . . . that's been going on for a long, long time. And we're committed to slowing that down. And to do that, we have to have access to the mass media, which we normally don't. I mean I certainly don't. And so because of what happened"—that is, bin Laden's mention of his book—"I've had much more access to the mass media than I ever imagined I would. And for that reason, I'm glad it happened."

Rogue State and Blum's other books have been translated, all told, into more than a dozen languages, among them Arabic. In those volumes as well as in the many articles he has written, mainly for alternative publications and for the *Anti-Empire Report*, his free monthly on-line newsletter, Blum has attempted to dispel the widely held notion that the U.S. government is a benign guardian of freedom at home and abroad. In often-quoted lines from *Rogue State*, he wrote, "From 1945 to the end of the century, the United States attempted to overthrow more than 40 foreign governments"—50 by 2007, he currently maintains—"and to crush more than 30 populist-nationalist movements struggling against intolerable regimes. . . . In the process, the U.S. caused the end of life for several million people, and condemned many millions more to a life of agony and despair." In his October 22, 2002 speech, made five months before the U.S. invaded Iraq, Blum said, "U.S. foreign policy has no moral factor built into its DNA. It's not easy for most Americans to accept this. They see our leaders on TV and their photos in the press, they see them smiling or laughing, telling jokes; see them with their families, hear them speak of God and love, of peace and law, of democracy and freedom, of human rights and justice and even baseball. . . . How can they be called immoral? . . . But our leaders are perhaps not so much immoral as they are amoral. It's not that they take pleasure in causing so much death and suffering. It's that they just don't care [as] long as the death and suffering advance the agenda of the Empire, as long as the right people and the right corporations gain wealth and power and privilege and prestige, as long as the death and suffering aren't happening to them or people close to them. They just don't care about it happening to other people, including the American soldiers whom they throw into wars." He also said, "Our leaders have been telling us one story after another about why Iraq is a threat, a nuclear threat, a terrorist state, tied to al Qa'ida—only to have each story amount to nothing. They told us for a long time that Iraq must agree to having the weapons inspectors back in, and when it agreed to this they said 'No, no, that isn't good enough.' And now that the inspectors can't find any prohibited weapons, is that good news for our peace-loving government leaders? Of course not. They hate it. Does this sudden urgency of fighting a war in the absence of a fight make sense? It does, I suggest, only if you understand that this is not about Saddam Hussein but about ambitious U.S. leaders with Iraq and its oil in their sights, needing a pretext to satisfy gullible people. Oil would not be the only reason for taking over Iraq. The country would be opened up for globalisation and the multinationals would march in and privatise everything in sight, not to mention the further benefit of disabling Israel's arch enemy." He concluded his speech with what he called "two laws of politics, courtesy of the Watergate scandal of the 70s": "No matter how paranoid you are, what the government is actually doing is worse than you imagine," and "Don't believe anything until it's been officially denied."

The son of Jewish immigrants from Poland—Isadore Blum, a factory worker, and the former Ruth Katz—William Henry Blum was born on March 6, 1933 in the New York City borough of Brooklyn. He graduated from Erasmus Hall High School, a Brooklyn public school, and then enrolled at City College (now part of the City University of New York), where he studied accounting. He earned a B.B.A. (bachelor of business administration) in 1955. For the next five years, he held jobs in accounting in New York City. In 1960 he joined IBM, for which he worked until 1964 as a systems analyst and programmer. For the next three years, Blum held that title as an employee of the U.S. State Department, in Washington, D.C. In a profile of him for *Salon.com* (January 21, 2006), Michael Scherer wrote that Blum was "an avowed anti-Communist" when he began working for the federal government; indeed, by Blum's own account, he hoped to become a Foreign Service officer. His opposition to the U.S. involvement in the Vietnam War led him to abandon that goal and to quit his job at the State Department, in 1967. During that period he organized and participated in demonstrations against the war.

In 1967, with other opponents of the war, Blum founded the *Washington Free Press*, based in Washington, D.C. (An unrelated bimonthly with the same name has been published in Seattle, Washington, since 1993.) The *Washington Free Press* was among the first alternative or underground newspapers in the nation's capital in modern times. Blum, who served as its editor until sometime in 1969, has said that others on the paper's staff rejected what they termed "intellectualism"; they "thought that editing was bourgeois," he told Scherer, and as a consequence, sloppy writing marked many of their articles. Also in 1969 Blum and a dissident friend of his, Sal Ferrera, found out, by tracing the license-plate numbers and letters on cars on a road next to the CIA's headquarters, the names and addresses of many CIA employees. They published that information in the alternative weekly *Quicksilver Times*.

Blum spent the first six years of the next decade as a freelance journalist in the U.S., South America, and Europe. In the early 1970s he lived in Chile, where in 1970 Salvador Allende, identified as a Marxist or Socialist, had won the presidency in a democratically held election. Fearful of the spread of communism in South America, the U.S. government launched an economic blockade against Chile, leading to mounting tensions within the country and increasing polarization of political factions on the left and right. Exacerbating those problems, as Blum and others suspected at the time and as later became publicly known, were undercover activities carried out by the CIA with the aim of destabilizing the country. On September 11, 1973 a CIA-supported coup led by members of the Chilean armed forces took place, resulting that day in Allende's death. A military junta led by the Chilean army general Augusto Pinochet took over the government, which became a brutal dictatorship and remained so for the next 17 years. Those events in Chile increased Blum's awareness of the reach of the CIA. For a while starting in about 1974, Blum worked in London, England, with Philip Agee, a former CIA officer, who, in his book *Inside the Company: CIA Diary* (1975), exposed some of the CIA's clandestine attempts to overthrow the legitimate governments of several Latin American countries. In the book Agee revealed that Sal Ferrera was a CIA informant who focused on demonstrations held at colleges.

From 1976 to 1980 Blum worked at the radio station KPFA in Berkeley, California, as business manager and news writer. He next served, in 1981 and 1982, as general manager and writer at the *Daily Californian*, an independent newspaper published at the University of California at Berkeley.

He then returned to freelance writing. His first book, *The CIA: A Forgotten History: U.S. Global Interventions Since World War II*, was published in 1986. In a review of the book for *Choice* (May 1987), R. H. Immerman wrote, "Using an impressive but indiscriminate array of materials, Blum chronicles [American intervention abroad], beginning with China in 1945 and ending with present-day Nicaragua. His case studies are superficial and simplistic, but should not be dismissed; taken together . . . they constitute a damning indictment." Julian Symons, the *Times Literary Supplement* (January 30, 1987) reviewer, wrote that the book contained "a relentless listing of the Agency's overt and covert interventions in the affairs of other countries"; he also complained that Blum was "given to rhetoric that does not help what is sometimes a well-presented argument." Several updated and expanded editions of *The CIA: A Forgotten History* have been published, with the title *Killing Hope: U.S. Military and CIA Interventions Since World War II.* In the late 1980s Blum collaborated with the filmmaker Oliver Stone on a screenplay for a documentary based on *The CIA: A Forgotten History.* The project never came to fruition. Blum later wrote several other screenplays, none of which has yet been made into a movie.

On the January 28, 2006 installment of *Washington Journal*, Blum referred to his book *Rogue State: A Guide to the World's Only Superpower* as a "mini-encyclopedia of the many kinds of unhumanitarian policies of U.S. foreign policy." "What Blum has done is to analyse American foreign policy since the end of the Second World War as if the U.S. were any other nation state," Will Self wrote in a review of the book for *New Statesman* (January 14, 2002). "Hence the title *Rogue State*, because if the actions of the U.S. government are assessed by any of the standards it brings to bear in its employment of the term, then the U.S. itself is revealed as the biggest rogue of them all." Self also noted, "We find in these pages, meticulously detailed and annotated, all the instances of assassination, covert and overt destabilization, election-rigging, sponsorship of terrorism, secret surveillance, brainwashing and provocation that the U.S. has employed to further its burgeoning corporate empire (otherwise known as the 'new world order')." Donald K. Gutierrez, in a critique for the *Bloomsbury Review* that was posted on *North Coast Xpress* (Fall 2001, on-line), wrote, "*Rogue State* is a guide indeed to ample and convincing evidence that the United States, citadel of global democratic idealism, has for over fifty years been—and remains—the most terrifying military force in the world to many nations."

Blum's book *West-Bloc Dissident: A Cold War Memoir*, which is both historical-political journalism and autobiography, was published in 2002. Along with accounts of public events, such as the October 21, 1967 March on the Pentagon, its contents range from anecdotes about the many well-known people Blum has met, among them the activist Jerry Rubin, the writer Norman Mailer, and the poet Allen Ginsberg, to reminiscences about his romantic involvements and the many occasions on which he felt disillusioned and heartsick about the course of modern history. In reviews for Amazon.com, readers described *West-Bloc Dissident* as a down-to-earth, jargon-free, and witty book by a "courageous idealist" who "cares very much about his world and the people in it," in the words of two of them.

Freeing the World to Death: Essays on the American Empire (2004), Blum's most recent book, is a collection of two dozen original or previously published essays. They bear such titles as "Myth and Denial in the War on Terrorism"; "Peru: Their Terrorists, Our Freedom Fighters"; "Before There Were Terrorists, There Were Communists and the Wonderful World of Anti-Communism"; "Cuban Political Prisoners in the United States"; "The Myth of America's 'Booming Economy'"; and "The Election Circus." In one essay, "Needless Slaughter, Useful Terror: Atomic Diplomacy," which originally appeared in 1995, Blum argued that the dropping of atom bombs on the Japanese cities of Hiroshima and Nagasaki in August 1945 was without justification. He cited published evidence—including, for example, a section of Dwight D. Eisenhower's memoir *The White House Years: Mandate for Change, 1953-1956* (1963)—that during World War II, Japan had indicated its willingness to surrender to the United States on several occasions beginning in 1943, and that, in Blum's words, "by 1945, Japan's entire military and industrial machine was grinding to a halt as the resources needed to wage war were all but eradicated. . . . When, in the spring of 1945, the island nation's lifeline to oil was severed, the war was over except for the fighting." Nevertheless, he wrote, the United States dropped the bombs, because U.S. leaders wanted to scare the leaders of the Soviet Union. "In the State Department there developed a tendency to think of the bomb as a diplomatic weapon," the U.S. secretary of war at that time, Henry L. Stimson, wrote, as reported by Blum. And in the book *Meeting at Potsdam* (1975), the historian Charles L. Mee Jr. wrote, as quoted by Blum, that the bombings' psychological effect on Joseph Stalin, the head of the Soviet Union, "was twofold. The Americans had not only used a doomsday machine; they had used it when, as Stalin knew, it was not militarily necessary. It was this last chilling fact that doubtless made the greatest impression on the Russians."

In another essay in *Freeing the World to Death*, "Conversations (Sort of) with Americans," Blum answered questions typical of those that he has received in e-mail messages or on radio interview programs from people who disagree with his views. To the question "Are you glad that Saddam Hussein is out of power?" he responded, "No. Tell me, if you went into surgery to correct a knee problem and the surgeon mistakenly amputated your entire leg, what would you think if someone then asked you: Are you glad that you no longer have a knee problem? Of course you wouldn't be glad. The cost to you would not be worth it. It's the same with the Iraqi people, the cost of the bombing, invasion, occupation, and daily violence and humiliation has been a terrible price to pay for the removal of Hussein, whom many Iraqis actually supported anyhow." To the question "Don't you realize that the wars you criticize give you the freedom to say all the crap that comes out of your mouth?" he responded, "Oh that's just a conservative cliché. Our wars are not fought for any American's freedom. There's been no threat to our freedom of speech from abroad, only at home, like the Red Scare, McCarthyism, Cointelpro [an FBI program aimed at investigating and disrupting dissident organizations], and the Patriot Act." To the question "Do you regard yourself as patriotic?," he responded, "Well, I guess you're speaking of some kind of blind patriotism, but even if you have a more balanced view of it, what you're thinking about me would still be correct. I'm not patriotic. In fact, I don't want to be patriotic. I'd go so far as to say that I'm patriotically challenged. Many people on the left, now as in the 1960s, do not want to concede the issue of patriotism to the conservatives. The left insists that they are the real patriots because of demanding that the United States lives up to its professed principles. That's all well and good, but I'm not one of those leftists. I don't think that patriotism is one of the more noble sides of mankind. George Bernard Shaw wrote that patriotism is the conviction that your country is superior to all others because you were born in it."

Blum supported the presidential candidacies of the social activist Ralph Nader in 1996, 2000, and 2004. He is separated from his wife, Adelheid Zöfel, a professional translator. The couple, who married in 1979, have one son, Alexander. Known as Bill among his friends and associates, Blum lives in Washington, D.C. He devotes a substantial amount of time to responding to the many e-mail messages that he receives daily. In 1999 he received an Excellence in Journalism Award from Project Censored, an organization that promotes independent journalism.

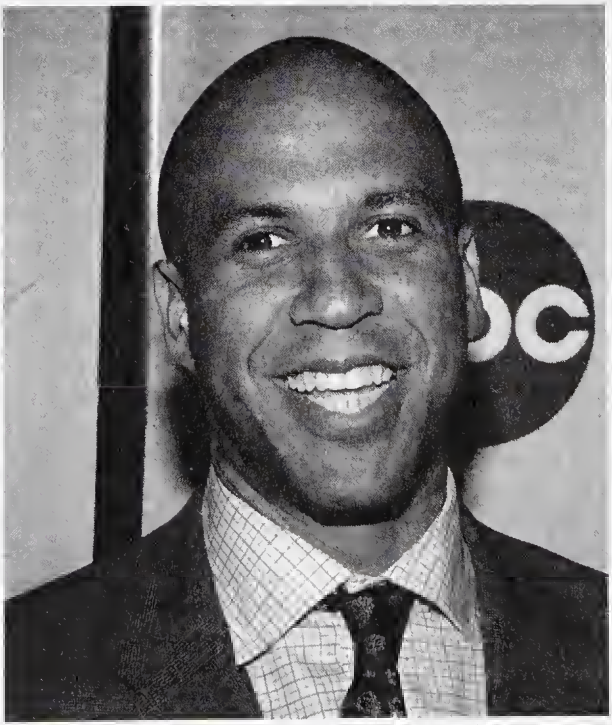
Booker, Cory

Apr. 27, 1969– Mayor of Newark (Democrat)

Address: Newark City Hall, 920 Broad St.,
Newark, NJ 07102



Paul Hawthorne/Getty Images

The contentious and nationally watched 2002 mayoral campaign in Newark, New Jersey, pitted the wily, 66-year-old four-term incumbent, Sharpe James, against Cory Booker, a Rhodes scholar, lawyer, community activist, and one-term city councilman representing the city's Central Ward. The challenger, who was then in his early 30s, cast himself as a reform-minded candidate who would take the necessary steps to reduce gang violence and other crime, improve the city's failing schools, and root out cronyism and corruption in city government. The acrimonious campaign (captured in the Academy Award–nominated documentary *Street Fight*) ended with Booker narrowly defeated at the polls but still determined to head Newark's government someday. Toward that end, he redoubled his efforts to forge relationships with union officials, the police, and others who had not supported him in his attempt to unseat James. In 2006, having broadened his support base, he won the election for mayor, this time in a race with a challenger far less formidable than Sharpe (who had decided against running for a sixth term). On July 1, 2006 Booker was sworn in as Newark's first new mayor since 1986. While he is a Democrat, many argue that his politics defy classification. According to Ellis Cose, writing for *Newsweek* (May 13, 2002), he has come to represent "a post-racial man for an increasingly diverse Newark who believes in multiracial, multiethnic coalitions and nondoctrinaire thought." In April 2006 *U.S. News & World Report* included Booker in its profiles of America's best leaders. "[People] can't believe he's for real," Shmuley Boteach, a rabbi and friend of Booker's, said to Damien Cave and Josh Benson for the *New York Times* (May 4, 2006). "But it's rare that a man of the level of sincerity and authenticity of Cory Booker comes into politics and, God willing, as he goes through the process, those incredible qualities will remain."

The younger of the two sons of Cary Booker Sr. and Carolyn Booker, Cory Anthony Booker was born on April 27, 1969 in Washington, D.C. His older brother, Cary, is a professor of education at Rutgers University at Newark and an associate dean in charge of the New Jersey Educational Opportunity Fund on that campus. Booker's parents were among the first African-Americans to hold executive positions with IBM, his father as a salesperson and his mother as a personnel director. Around the time of his birth, his mother and father bid on a house in Harrington Park, New Jersey, an affluent neighborhood, roughly 20 miles northeast of Newark, that was then made up entirely of white families. A real-estate agent spurned the Bookers' offer, telling the couple, falsely, that the house had already been sold. The Bookers, sensing discrimination, contacted the New Jersey Fair Housing Commission. On the family's behalf the organization sent a white couple to make an offer on the house, which was promptly accepted. With the realtor's discriminatory behavior exposed, the Bookers were soon allowed to purchase the house, where they raised their sons. Cary and Carolyn Booker were also actively involved in the civil rights movement of the 1960s and 1970s, often taking their children along to rallies. Mayor Booker has recalled listening to, even memorizing, his father's recordings of speeches by the civil rights leader Martin Luther King Jr. Booker has often said that he was inspired by the story of his parents' actions and, in general, by the previous generation's fight to end racial discrimination. He said to David Segal for the *Washington Post* (July 3, 2006), "I feel like I was born on second base. My parents, they weren't even born in the dugout. They couldn't afford tickets to the stadium. They gave me everything I could dream of, raised me in one of the country's wealthiest suburbs, rooted me in the culture of this country, black culture. I would have betrayed all of the opportunities I've had if I didn't give something back." He told Susan Headden for *U.S. News & World Report* (April 24, 2006), "The stories I would hear from my parents were often of the ugliest pictures of America, but my parents raised me to believe that I had to be a part of this unfolding story, and that the best way to do that was to be a part of the struggle."

By all reports, as a youth Booker was extremely well-behaved, bright, and even-tempered. Those close to him predicted a political career for him. He attended Northern Valley Regional High School, where he and his brother were among a small number of black students. In high school he played football, becoming a high-school All-American and winning Player of the Year honors; he also became class president in his senior year. By that time, by virtue of his gregariousness, those who knew him well at Northern Valley took to calling him "the Mayor." "He was the kind of guy who slowed you down when you hung around him because he'd say 'hi' to everyone," Chris Magarro, a friend of Booker's since grammar school, said to David Segal. "The kids, the teachers, the janitors. Everyone."

Booker received a full scholarship to play football (tight end) at Stanford University, in California. He maintained high grades and played a key role in student government. In his free time he volunteered at a crisis-counseling hotline serving the disadvantaged neighborhood of East Palo Alto, near the campus. While working there during his senior year, he took a phone call from a person threatening to jump off a building. "I remember having this profound conversation on the side of the ledge about why he shouldn't jump, and it was almost like a gift to me," Booker said to Susan Headden. "I'll never forget the power I felt when he touched hands for me to pull him over. And at that moment, I realized, 'What am I doing? I don't want to be a football player. I want to get back to the business of making connections with people through my work.'"

Booker earned a bachelor's degree in political science from Stanford in 1991 and a master's degree in sociology from the school in 1992. He then won a prestigious Rhodes scholarship to attend Oxford University, in England, where he earned a degree in modern history, with honors, in 1994. While there, to the consternation of many, Booker—a Baptist—joined the l'Chaim Society, a Jewish student group. He explained to Headden that he became "more Christian" by learning about other religions, adding, "You see the divine core in all these religions, you see the beauty and the power and the possibilities, then you yourself gain a deeper reverence for God." He has also said that his interest in the l'Chaim Society stemmed from its emphasis on serving others. After he befriended Rabbi Shmuley Boteach, its founder, Booker was instrumental in organizing, in the group's name, some of the most popular events on campus. Booker later became the group's president, which led to an increase in the number of non-Jewish students who joined the organization. As Headdon reported, one member of the l'Chaim Society said that Booker had made him a better Jew. According to the *New York Times* (April 24, 2002), when a faction of the group's leaders demanded Booker's dismissal, the British press caught wind of the controversy and covered it extensively; both Booker and Rabbi Boteach were later forced to leave the organization. After he returned to the U.S., Booker attended Yale University Law School, in New Haven, Connecticut, graduating in 1997. While in law school Booker volunteered in a local Big Brother program, ran a student legal clinic, and was a founding member of the Yale Chai society.

It was in 1995, while in law school, that Booker began his association with Newark, a scene of urban blight where he hoped to make positive contributions to the community; he had relatives in Newark and connections to some of the city's churches. He began by serving as a volunteer with children and working as a legal adviser for an association of low-income tenants. "At the time I had a very negative view of politics and politicians," he said to Cave and Benson. "So I was going to be the great sort of social activist—a person that makes politicians move toward social justice." To get to know the tenants he was representing, Booker rented an apartment in a dilapidated housing project called Brick Towers. He organized a letter-writing campaign among the tenants, then took their management company to court over the substandard conditions of the dwellings. Meanwhile, he served as a staff attorney for the Urban Justice Center and as a coordinator of the Newark Youth Project. In 1998, at age 29, Booker—at the urging of the tenants—ran successfully for a seat on Newark's Municipal Council, becoming the youngest person ever elected to that body. He defeated George Branch, a 16-year incumbent and well-entrenched member of Newark's political machine. In the following year, in a protest against dangerous conditions in Newark's poor neighborhoods—symbolized by open-air drug dealing outside an apartment complex where a violent crime had recently occurred—and against the city government's seeming unwillingness to address the problem, Booker staged a 10-day hunger strike. During the strike he lived in a tent in front of the complex, where dozens of people soon joined him. "It transformed my life," Booker said to Segal.

For much of the 19th century, Newark stood as one of the U.S.'s most vibrant industrial centers. Among other industries, manufacturing, shipping, and insurance businesses flourished there, and some of the country's most prominent inventors and businesspersons called the city home. In the 1920s the bustling city's population had reached nearly 415,000. To accommodate that growth, one of the country's first subway lines opened there in 1935. The city's decline was due to a number of factors. As a result of the Housing Act of 1934, the Federal Housing Administration "redlined" virtually all of the city's land—that is, it divided neighborhoods according to their residents' races and socioeconomic status; the intention was to improve housing for poor residents, but the effect was to segregate the city, with poor and/or minority citizens able to obtain mortgages only in certain areas while, in other areas, mortgage loans were not available. It became easier to secure mortgages in the suburbs than in the city, thereby leading to a "white migration" out of Newark. The building of several major highways that intersected the city, including the New Jersey Turnpike and Interstate 280, enabled middle-class people to live in the suburbs and commute to the city for work. People fled Newark in droves: according to Kit R. Roane, writing for *U.S. News & World Report* (May 13, 2002), from 1950 to 1990 Newark's population fell from nearly 439,000 to about 275,000. At the same time, lower-wage jobs became more prevalent in Newark. By 1966 Newark had a black majority, but its political institutions and economic power remained white-controlled. On the night of July 12, 1967, during a time of pervasive poverty, high unemployment, instances of police brutality, and a feeling of disenfranchisement among the city's black population, John Smith, a black cab driver, was arrested and beaten by police who had accused him of tailgating a police car. Rumors spread that the police had killed Smith, setting off six days of riots, looting, and violence in Newark that led to 26 deaths and more than 1,000 injuries. The National Guard was brought into Newark, and reports about the unrest were broadcast on national television. As Kit R. Roane put it, "Newark came to symbolize America's worst nightmare of urban decay."

In the 1990s, under the administration of Sharpe James—who had come to prominence during the civil rights movement and become the city's mayor in 1986—Newark's social indicators steadily declined. The city lost 20 percent of its tax base and collected only 83 percent of the taxes it was owed. Its infant-mortality rate and unemployment rate climbed at one point to twice the state averages; 80 percent of the city's public-school students qualified for free or reduced-cost lunch programs; and Newark's murder rate skyrocketed, to three times those of the nearby urban centers of Paterson and Jersey City. In the mid-1990s New Jersey's state government took control of the city's underachieving schools. According to the *New Republic* (June 3, 2002), a poll taken in 1999 ranked Newark "the worst place in the United States to raise a child." In 1997 James's chief of staff was convicted of bribery; also that year, the city's police chief was found guilty of embezzlement. James's defenders, claiming that the city was undergoing a "renaissance," pointed to such achievements as the completion, in 1997, of the sprawling New Jersey Performing Arts Center, in the heart of downtown, and to the construction of a new minor-league baseball stadium.

Such were the conditions in Newark when, in 2002, Booker announced his mayoral candidacy. Having raised some $3 million in contributions, Booker campaigned aggressively on a platform of change that included strengthening the police force, requiring the state to channel more money to the city's schools, and making job training available to ex-convicts. James, meanwhile, attempted to cast Booker as an interloper, someone not "black enough" to lead Newark's mostly African-

American population. The incumbent enjoyed the support of such popular Democrats as then–U.S. senator Jon Corzine, the Reverend Al Sharpton, and the Reverend Jesse Jackson. Directly or indirectly, James accused Booker, at various stages of the extremely negative campaign, of being everything from a closeted homosexual to an instrument of Jews, Republicans, and the Ku Klux Klan. (Booker spoke favorably during the campaign of school vouchers, a stance that is supported most often by Republicans.) Arianna Huffington, writing for *Salon.com* (April 30, 2002), noted that the mayoral race had "become a case study in the nationwide clash pitting reformers vs. the establishment, the afflicted vs. the comfortable, the politics of ideas vs. the politics of dirty tricks." James edged out Booker by a margin of 3,494 of the roughly 53,000 votes cast in the nonpartisan election, held on May 14, 2002. After the election Booker turned down a job offer from CNBC to host a talk show as well as an opportunity to work in New Jersey's state government.

In his 2005 documentary *Street Fight*, Marshall Curry captured events connected with the hostile 2002 election between Booker and James. *Street Fight*, which was nominated in 2006 for an Academy Award in the documentary-feature category, examined a campaign that the film critic David Denby, writing for the *New Yorker* (March 6, 2006), called "a testing ground for the political weight of 'blackness.'" In the film, which covers the month leading up to the election and ends after voting day, Curry, a Booker supporter, encounters aggression on the part of some of James's supporters. After describing a scene in which Curry is treated aggressively by Newark police, Denby wrote, "In the middle of the fracas, [Curry] holds the camera at his waist and keeps it running, as angry faces loom over him. James's people, in their dealing with the filmmaker, reveal a good deal about their customary way of doing business."

Following his defeat by James, Booker remained active—and visible—in Newark. He co-founded a law firm, located in downtown Newark, that specialized in bankruptcy cases, municipal law, and tenants'-rights issues. He also started Newark Now, a not-for-profit organization whose mission is "to equip and empower Newark residents with the tools and resources needed to transform their communities through neighborhood-based associations and tenant organizations," according to its Web site. Booker also took time to respond to his critics, particularly those who had charged that he was "not black enough" to be Newark's mayor. In an article for *Esquire* (December 2002), he wrote: "Each time I ran for office, as soon as I announced my candidacy, I was loudly reviled by my opponents as the white candidate, not black enough, the tool of the Jews or a pawn of white society trying to take over Newark. Jesse Jackson, whom I have greatly admired, came to town and called me a 'wolf in sheep's clothing.' Leaders who ascended to office during times of great racial strife, who themselves overcame great racial obstacles, now used a racial bludgeon to protect themselves from (in both cases) their first real electoral challenge. Moreover, they sought to appeal to a narrow essentialism that is an affront to the very racial expansiveness and diversity their generation fought to obtain. My generation and the increasingly diverse black experiences we know owe a terrific debt to the previous generation's historic struggles. But many in the political establishment in Newark labeled us as pawns of others, as disloyal to their struggles for black advancement, or worse, as coopted traitors. Well, as much as the epithets enraged my civil-rights-activist parents, they can call me what they will. I know who I am. I know what has to be done."

To appeal to a greater number of voters in Newark as he prepared for his next mayoral run, Booker worked to make himself appear less of an outsider. His daily appointments included meetings with union heads and other political insiders. He also hired a media-consulting firm that had recently helped elect Jon S. Corzine to the governorship of New Jersey, and he even chose as an adviser a former Sharpe James employee. Booker was gambling that he could broaden his support among Newark's powerful political establishment without alienating his original supporters. Joseph Marbach, chairman of the Political Science Department at Seton Hall University, said to Terry Golway for the *New York Times* (September 26, 2004), "If you want to have a significant impact, you have to operate within the established rules. It looks like Cory Booker has figured that out. You have to be pragmatic. Last time, he had the support of many intellectuals, but on the ground, the people who vote were blue-collar union workers and churchgoers." For his part, Booker said to Golway, "What we're trying to do is create a transition in governance in Newark. We're not using terms like 'clean house' or worse. The goal is not to beat Sharpe James or punish his supporters. The goal is to create a strong, vibrant city."

In April 2003 Booker received a political boost when supporters of Newark's state-appointed school superintendent, Marion Bolden, won election to the local school advisory board, defeating incumbents who were political allies of James. Golway described that development as indicating a change in voters' attitudes and as a sign that James "would be vulnerable if he tried for a sixth term." In what was perhaps a related development, on March 27, 2006 James announced that he would not run again for mayor. (James said at the time that he preferred to concentrate on defending his seat in the New Jersey State Senate, which he held simultaneously.) On May 9 Booker defeated Ronald L. Rice Sr., Newark's deputy mayor under James from 2002 to 2006—whom he had outspent by a substantial margin—to win election as mayor, taking 72 percent of the vote. Six of Booker's supporters were elected to the City Council, promising the incoming mayor a secure grasp on the city government. In the days leading up to his swearing-in ceremony, state and local investigators uncovered a plot, coordinated by incarcerated members of a Newark street gang, to assassinate Booker. As a result of the discovery, Booker has been placed under 24-hour protection by the Newark Police Department. The threat is believed to be a reaction to Booker's hardline stance against violence and other gang activity.

Since he took office, on July 1, 2006, Booker has moved swiftly to make changes in Newark's government. He announced the hiring of Bo Kemp, the co-founder and former executive vice president of the publishing company Vanguarde Media, as the city's business administrator, and promoted Anthony Campos, previously the city's deputy police chief, to the position of acting police chief. He also delivered an ambitious 100-day plan to address the issues of public safety, economic empowerment, programs to support families, children, and seniors, and government reform. The plan includes the creation of the Department of Child and Family Well-Being, which will bring a number of already existing agencies under one umbrella; the creation of a new post whose occupant will focus exclusively on helping ex-convicts to train for and find jobs; and a refurbishment of the city's police department, which will include a more visible street-level police force and the renovation of several precincts. In addition, Booker announced that land owned by the city would no longer be sold at a discounted rate to the politically influential, a practice of the James administration that had long been a target of criticism from Booker. In announcing the bold reforms, Booker said that he wants Newark to represent "America's leading urban city in safety, prosperity, and the nurturing of family life," as quoted by the *Philadelphia Inquirer* (July 11, 2006). He added, "We all as Newarkers have to start thinking of ourselves in these larger terms. . . . It's time for this city to get up again and lead our nation at a time when there is darkness in America." Putting Newark on fiscally sound footing is also a major goal of his administration.

While Booker initially opposed the construction of a $210-million sports arena in Newark, he changed his mind in October 2006, after the proposed facility's main tenant, the New Jersey Devils of the National Hockey League, agreed to hire a greater number of minority-owned vendors and help fund projects throughout the city. The team also agreed to give the city a nearby lot, which it had originally intended to use for retail development.

In July 2007 statistics were released showing that during the first half of the year, Newark had experienced a 20 percent drop in crime since the same period in 2006. Looking specifically at a 30 percent decline in shootings, Booker attributed the favorable data to new police tactics, including efforts to fight drug trafficking, loitering, and prostitution. The study also showed that there were 48 murders committed in the first half of the year, down from 51 in 2006. "It's not satisfactory yet, but we are making progress," Booker said, according to David Porter of the Associated Press (July 6, 2007).

Some observers have maintained, however, that the city is not making enough progress—an argument that gained strength in the wake of the execution-style slayings of three college students on August 4, 2007. Less than two weeks after the killings, which took place in a Newark schoolyard, Booker announced the launch of a new crime-fighting initiative, in which more video cameras would be installed throughout the city. The cameras were to be equipped with sensors that alert police whenever shots have been fired. "In case I haven't said it plainly enough, this leadership is asking for help from the community," Booker said, according to Brad Parks and Jeffrey C. Mays, writing for the Newark *Star-Ledger* (August 15, 2007).

Booker's critics have charged that he is merely attempting to use Newark as a springboard to higher political office. Booker, who takes great offense at that suggestion, said to David Segal, "It frustrates me because it's as though this challenge isn't important." Booker has indicated that inner-city Newark, and U.S. inner cities in general, represent "the greatest challenge facing this country." He said, "If you think about it, besides some rural areas, inner cities are the last great challenge to this country, to be what [the country] says it is." The mayorship of a U.S. city, Booker said in an interview with Lawrence Aaron for the Bergen County, New Jersey, *Record* (June 25, 2006), represents "the most powerful position in the country for dealing with America's unfinished business." Elaborating on that idea, he said that crime and urban decay are problems "for a mayor—to manage change, to make an impact. This is the most enviable position to be in if that's your goal and your dream."

Booker, who stands six feet three inches tall, has often been described as handsome and telegenic; he is known for his "perpetual smile and gregarious earnestness"—attributes that initially gave residents of Newark the impression that he "seemed too polished to be sincere," according to Damien Cave and Josh Benson. Booker, they added, "seemed almost like a caricature of a politician." A vegetarian, Booker exercises and meditates regularly and does not drink alcohol. He is a fan of science fiction, *Star Trek* in particular. Booker, who is single, has maintained his residence on the top floor at Brick Towers. He is a member of the Executive Committee of Yale Law School; the Columbia University Teachers' College board of trustees; and the boards of the Black Alliance for Educational Options, the North Star Academy, Integrity Inc., and the International Longevity Center. *Esquire* listed him among the 40 "Best and Brightest" in 2002; in 2005, *New Jersey Monthly* named him among the state's "Top 40 Under 40," and *Black Enterprise* hailed him as one of "America's Most Powerful Players Under 40."

Borowitz, Andy

Jan. 4, 1958– Comedy writer

Address: c/o Hyperion Books, 77 W. 66th St.,
11th Fl., New York, NY 10023

Andy Borowitz is an entertainment-industry jack-of-all-trades. He has been a television writer, a film producer, an actor, an author, a fake-news journalist, and a stand-up comedian, and his career path has taken him from the presidency of the legendary humor magazine the *Harvard Lampoon* to recognition in Hollywood and New York. His first major professional success was the creation of the television series *The Fresh Prince of Bel-Air*, starring Will Smith (who was then known primarily as a young rap star). Borowitz has also established himself as a major presence on the Internet and radio: he currently writes fake-news articles five days a week for his satirical on-line publication, the *Borowitz Report*, and is a regular guest on National Public Radio's *Weekend Edition*. Additionally, he writes humorous pieces for the *New Yorker* and other print publications. "Safe to say I'm the only person who has both written for the *New Yorker* and created a sitcom for a rapper," he told Lynn Harris for MediaBistro.com (June 13, 2003).

Andrew S. Borowitz was born on January 4, 1958 in Shaker Heights, a leafy suburb of Cleveland, Ohio. In an interview with CreativeParents.com, Borowitz said, "I'm told I was funny as a kid. Although I'm the first professional comedian in my family, my Dad has always been very funny, and my Mom has her moments, too. It was a funny dinner table with a lot of jokes flying back and forth. Plus, my Dad often took me to a movie theater . . . that showed old movies, where I first saw the Marx Brothers, W.C. Fields, etc. It was a valuable education." As a child Borowitz was fond of books by the author Beverly Cleary. "I think the books you read and love as a child always stay with you," he told Claire Zulkey for the Web site Zulkey.com. "I loved *Henry and Ribsy* [by Cleary], in part I suppose because it was about a boy and his dog and I never had a dog. . . . Conversely, the books you hated as a kid you will always hate. I know people will kill me for saying this, but I never saw the appeal of Dr. Seuss. I despised *Hop on Pop*—I found the similarity of the rhyming words in it maddeningly confusing. It probably made it harder for me to learn how to read. I'm still playing catch-up today." As Borowitz grew older, he began to admire the humorous prose of Mark Twain and Woody Allen. He began making his own amateur films at the age of 13. When he was 17 the Cleveland Museum of Art hired him as a filmmaking instructor. (His early films were lost during a cross-country move.)

Borowitz graduated from Shaker Heights High School before enrolling at Harvard University, in Cambridge, Massachusetts. While at Harvard he performed stand-up comedy and wrote for the Hasty Pudding Theatricals, a student-run theater group founded in 1795. (The group's shows are noted for their use of male actors in drag.) Borowitz, who studied with the playwright William Alfred and wrote his senior thesis on Restoration comedy, was also president of the hugely influential *Harvard Lampoon*, which has counted among its writers such luminaries as William Randolph Hearst, George Santayana, Robert Benchley, John Updike, George Plimpton, and Conan O'Brien (also a former president of the publication), as well as many of the writers and producers for the TV series *The Simpsons, The Office, Futurama, Saturday Night Live, Seinfeld,* and *Late Night with David Letterman.*

The *Lampoon* has a longstanding tradition of pulling practical jokes on the staff of the mainstream campus newspaper, the *Crimson*. In an interview with *Current Biography*, Borowitz said, "We did really mature things, like stealing furniture from their building. But we also did *Crimson* parodies—complete issues of the *Crimson* that we published on days that they didn't. We published one that we sent out to all of the incoming Harvard freshmen one summer. The Harvard administration wasn't too happy with me." (The *Lampoon*'s parodies of the *Crimson* frequently featured irreverent humor and obscene language.)

Borowitz worked during two summer breaks at a law firm, which helped to convince him that he did not want to become an attorney. After graduating from Harvard magna cum laude, in 1980, he moved to Los Angeles, California, to work for Bud Yorkin, a TV producer, who had been impressed by a stand-up comedy performance of Borowitz's in Cambridge. Yorkin was a producing partner of the famed entertainment-industry figure Norman Lear, and Borowitz's first job found him working on a spin-off of Lear's innovative series *All in the Family*, which featured the now-iconic character Archie Bunker (played by Carroll O'Connor), a loud-mouthed bigot who lived in a working-class neighborhood in Queens, New York. Unlike the original show, the spin-off, called *Archie Bunker's Place*, proved unpopular with audiences and critics, and the experience of working with O'Connor—by many accounts a hard-to-please, stubbornly opinionated man—was harrowing for Borowitz.

From 1982 to 1983 Borowitz wrote for *Square Pegs*, a short-lived TV series about a group of misfit teens, starring Sarah Jessica Parker. During the 1983–84 season he wrote for the popular show *The Facts of Life*, which chronicled the adventures of a diverse group of girls at a boarding school called Langley. "That was the worst year of my professional life," he told Harris. "I may have been the worst writer in the history of that show. . . . The same company [responsible for *Square Pegs*] said, 'Come apply your hip, edgy sensibility to *The Facts of Life*.' I mean, I was 24 and I listened to [the punk-rock band] The Clash and they thought I could spice up the girls at Langley with my 'sensibility.' But it turned out I was a dismal failure. . . . They never wanted to use my jokes." For Annabelle Gurwitch's book *Fired!: Tales of the Canned, Canceled, Downsized and Dismissed* (2006), Borowitz described being fired from *The Facts of Life* after being told that he just didn't "get" one of the main characters, Tootie, a mischievous wisecracker (and seemingly one of Langley's few black students). Borowitz appeared in Gurwitch's 2007 documentary film, *Fired!*

Throughout the 1980s Borowitz wrote for a variety of television and film projects, including the TV series *Day by Day* and *Easy Street*. In 1990 he and his then-wife, Susan, co-created *The Fresh Prince of Bel-Air*, a show about the exploits of a young fish out of water, Will (played by Will Smith), who is sent from the tough streets of West Philadelphia to live in luxury and safety with his uncle's well-to-do family in California. Borowitz had gained inspiration for the show after a visit to the home of the black music producer Quincy Jones, who told him about his children's privileged upbringing and consequent feelings of entitlement. Borowitz earned an NAACP Image Award for co-creating the series, which was a critical and commercial hit. Borowitz is credited as either writer or executive consultant on several episodes of the series, which launched Smith's successful acting career. *The Fresh Prince of Bel-Air* aired for six seasons on NBC and continues to be shown in syndication in more than 100 nations.

Despite the popularity of *Fresh Prince*, Borowitz was relieved to leave the world of TV sitcoms. He told CreativeParents.com, "What often passes for collaboration in TV is really just a kind of crushing group-think process, not altogether different from focus groups in advertising." In 1998 he co-produced the well-received film *Pleasantville*, starring Reese Witherspoon, Tobey Maguire, William H. Macy, Joan Allen, and Jeff Daniels. The movie, like *The Fresh Prince of Bel-Air*, has a fish-out-of-water scenario; it follows two siblings who are magically sucked into their TV set after squabbling over a mysterious remote control and find themselves trapped in an old-fashioned TV show similar to *Leave It to Beaver* or *Father Knows Best*. *Pleasantville* was nominated for three Academy Awards, in the categories of art direction and set decoration, costume design, and original dramatic score.

After *Pleasantville* Borowitz turned his attention to writing satirical commentary for print publications and for his *Borowitz Report*. Borowitz explained the genesis of the *Borowitz Report* to Allen Voivod for the Bitter Cup Weblog: "I had started writing fake news when I was an editor of the *Harvard Lampoon* in college. When I started going online (shockingly late, in 1997 or so) I started writing fake news stories and sending them to friends. I started the [*Borowitz Report*] site in 2001 just to make it easier to send the stories out. I was really just doing it for me and my friends." One of his most-forwarded pieces is an article headlined "Osama Bin Laden's Wives 'Really Pissed' at Him, Sources Say," in which "Debbie Bin Laden," purportedly one of the Saudi terrorist's four wives, complains, "The world knows how evil Osama is. . . . What they don't know is how cheap he is." She continues, "The day the allied bombers knocked out all of the power plants in Kandahar was the happiest day in Osama's life, because he knew it would bring down our electric bill. [He told the Taliban to ban all movies] just so he wouldn't have to take us to any." Another popular *Borowitz Report* piece, about the possible Republican presidential candidates for 2008, has the men "engaged in a battle royal, with each candidate staking his claim to the title of the whitest white male in the G.O.P. race." Borowitz told Zulkey, "The great (or terrible) thing about *The Borowitz Report* is that through some insanity of my own I've committed myself to writing it five days a week. No one pays me to do it, but thousands of readers get pissed at me (and tell me) if I miss a day. . . . What this means is that even if I feel [terrible] I have to power my way through writing a 250 word column. 250 words doesn't sound like much but if you're feeling down or lonely that day, it's still a pain."

Meanwhile, Borowitz had also written several books. In 2000 he published *The Trillionaire Next Door: The Greedy Investor's Guide to Day Trading*, a parody of get-rich-quick books. In tongue-in-cheek fashion, he dedicated the book to Oprah Winfrey, expressing the hope that she would endorse his book on her TV talk show. In 2003 he published *Who Moved My Soap?: The CEO's Guide to Surviving in Prison*, a parody of such business books as Spencer Johnson's *Who Moved My Cheese?* (1998). Borowitz told Harris, "As a satirist, I am always looking for fair game. And CEOs have had so much fun at our expense, now it's time for us to have fun at theirs. . . . Whenever I wrote about Tyco or Enron I got a tremendous response from readers who'd say, 'Go get 'em!' When you have millions of people who have lost their jobs or their life savings because of these guys . . . the reason the book is priced at a low $9.95 is because if you were a shareholder that may be all you have left." Dishonest executives have long been a favorite target for Borowitz: in an August 8, 2002 *CNN American Morning* interview, for example, he told the anchor Paula Zahn, "I was quite offended . . . because I read in the *Wall Street Journal* that [disgraced Tyco CEO] L. Dennis Kozlowski had a $6,000 shower curtain. And I think a CEO should be able to make do with a $3,000 shower curtain."

In 2004 Borowitz published *Governor Arnold: A Photodiary of His First 100 Days in Office*, a volume of photos of the actor-turned-politician Arnold Schwarzenegger, with humorous captions. That year he also published a collection of his columns from the Web, *The Borowitz Report: The Big Book of Shockers*. In 2006 *The Republican Playbook*, purported to be a secret guide to political strategy stolen from the Republican Party, was published. Borowitz claimed that President Richard Nixon had "commissioned" the first edition back in 1972. The book counseled Republican strategists to use such tactics as disseminating doctored photos of Supreme Court justices—with the justices replaced by such left-wing celebrities as Michael Moore and Barbra Streisand—in order to spread panic. Borowitz told Jane Borden for *Time Out New York* (October 5, 2006, on-line), "I've been doing fake journalism for five years, so I thought fake investigative journalism would be a good career move."

Borowitz has never confined his barbs to one political party. During an August 29, 2003 appearance on *CNN American Morning*, for example, he discussed the massive blackout that had recently struck the Northeast and Upper Midwest, telling the anchor Soledad O'Brian, "I think we can expect the Democrats and Republicans to roll up their sleeves and start blaming each other for the blackout." Still, he is sometimes accused of being biased against Republicans and conservatives. When asked about such a tendency during an October 6, 2004 live chat posted on MSNBC.com, he replied, "It may seem that way, but only because they're in power at the moment. If [John] Kerry gets elected [in 2004], my liberal readers will be in for a shock, because I'm going to be ridiculing him then. My only agenda is to make fun of the guy who's running the show." He elaborated, "I try to stay away from making fun of the little guy. To me, it's the wealthy, powerful and famous who are the only worthy targets for satire. If you make fun of ordinary people, that's not satire, that's just picking on someone. Fortunately, there's no shortage of Paris Hiltons, Bushes, Kerrys, etc.—it's what the Pentagon calls a target-rich environment."

In 2006 Borowitz joined the Rock Bottom Remainders, a rock band made up of best-selling authors. Among the other members are Dave Barry, Ridley Pearson, Stephen King, Amy Tan, Barbara Kingsolver, Mitch Albom, and Scott Turow. Borowitz told *Current Biography*, "My signature song is 'I'm Not Your Steppin' Stone' by the Monkees, which I do as an angry punkish rant."

Borowitz has taught screenwriting and humor writing in the U.S. and Europe and is currently on the guest faculty of the Maurits Binger Film Institute, in Amsterdam, the Netherlands. He often hosts the Moth, a storytelling event based in New York City. Borowitz told *Current Biography*, "I met a woman at a party (I think it was 1999) who had worked with the Moth and thought I might be a good storyteller. . . . I now host about half their shows. So much art and entertainment is packaged and polished now—it's great to get back to something as simple and primal as standing up and telling a story from memory. The fact that things can and do go wrong is one of the valuable things about it, because so many of the imperfections in other forms of entertainment these days are sanded down or eliminated."

In 2001 Borowitz was a finalist for the James Thurber Prize for American Humor (given by the Thurber House, a nonprofit literary center in Columbus, Ohio, Thurber's hometown), and the following year he was inducted into the Friars Club of New York, an elite society of comedians and celebrities founded in 1904. In 2004 the National Press Club awarded him its first-ever prize for humor, the Angele Gingras Humor Award (named for a press-club member who wrote humorous pieces for magazines and newspapers).

In 2004 Borowitz turned briefly to acting, landing small roles in Woody Allen's *Melinda and Melinda*, which starred Will Ferrell, and in *Marie and Bruce*, which starred Julianne Moore and Matthew Broderick and was co-written by the noted playwright, screenwriter, and actor Wallace Shawn. Borowitz told CreativeParents.com, "I don't have much of a desire to be taken 'seriously' in a conventional sense of that word. I'll never play Hamlet, for example. . . . The most serious reaction I ever aspire to is a good strong belly-laugh. Then I know I've made my point."

Borowitz has two children: Max and Alexandra. He currently lives in Tribeca, a neighborhood in downtown New York City.

Brown, Troy

July 2, 1971– Football player

Address: c/o Premier Sports Management, 1401
Ocean Ave., Suite 302, Santa Monica, CA 90401

"Oh, man, he is some football player," Bill Belichick, the head coach of the New England Patriots, said to Josh Elliott for *Sports Illustrated* (February 13, 2002) about the veteran Troy Brown. "He returns kicks, blocks on running plays. . . . You just love to have guys like that on your team. He puts the team first. That's really a great example he sets for our younger players because he's so team oriented. A lot of things have come his way because of hard work and determination." At five feet 10 inches and 196 pounds, the multifaceted Brown, a wide receiver who has also served the Patriots as a punt returner and defensive back, has overcome others' misgivings about his size and speed to build a storied 14-year career in the National Football League (NFL). "It's been a constant battle for me," Brown told Ron Borges for the *Boston Globe* (August 29, 2005). "I never have felt like I had a job my whole career. It's always like I've got to prove it to them." Criticism over Brown's athleticism has fueled his determination to succeed, which in turn has earned him championships at both the high-school and collegiate levels, three coveted Super Bowl titles with the Patriots, and the unbounded respect of coaches, teammates, and rivals. "He's incredible," Tom Brady, a quarterback for the Patriots, told Jim Donaldson for the *Providence* (*Rhode Island*) *Journal* (October 4, 2006). "He's just the ultimate football player."

An eighth-round draft pick of the Patriots in 1993, Brown saw limited play during his first years in the NFL, as a punt-return specialist on special teams. Slowly and methodically developing his reputation for both versatility and reliability, Brown emerged in 2000 as the mainstay of the Patriots' offense, under the leadership of Belichick. From 2000 to 2002 Brown flourished as the Patriots' primary wide receiver, making 281 receptions for 3,033 yards. (His 101 receptions in 2001 set a franchise mark for most catches in a single season.) Still a feared punt returner on special teams, Brown further expanded his repertoire when he began playing cornerback for the injury-plagued Patriots at the start of the 2004 season. With his solid and consistent play on both sides of the line of scrimmage, Brown served as the cornerstone for a Patriots franchise that went on to capture Super Bowl titles in 2001, 2003, and 2004. "Troy is a player for the ages," the former Patriots receiver and kicker Gino Cappelletti told John Tomase for the *Boston Herald* (November 22, 2006). "He could have played in any era." "There are some players that are really smart intellectually, but football doesn't come that easily to them. Then there are other guys who maybe wouldn't do that well on some type of test, but they really understand concepts," Belichick noted to Michael Parente for the *Pawtucket (Rhode Island) Times* (October 12, 2006, on-line). "[Brown] does all of those. He's smart. He's instinctive. . . . He can play offense or defense. He's tough. He's strong for his size. He's quick. He has good playing speed. He can do a lot of things." Brown ranks first on the Patriots' all-time receptions list, with 557 catches, and holds the team's all-time yardage mark for return specialists, with 4,386 total combined yards. In November 2004 he achieved the rare feat of recording a reception and an interception in the same game, a first in franchise history. When asked by Donaldson whether he considers himself an offensive- or defensive-minded player, Brown responded, "I think of myself as a football player."

Troy Fitzgerald Brown was born on July 2, 1971 in Barnwell, South Carolina, the second of the three children of Richardean Brown, a single mother, who worked for a manufacturer of outdoor appliances. He saw his father on rare occasions as a child. Brown grew up in the small farm town of nearby Blackville, where there were "lots of cotton, corn, peanuts, and soybeans," as he told Sandy Wells for the *Charleston (West Virginia) Gazette* (July 10, 2006). "I'm not far removed from picking cotton. My grandma picked cotton. My momma and my uncles picked cotton. I didn't have to go through that." Instead, Brown helped the family financially by picking watermelons, cantaloupes, and cucumbers and loading them onto trucks. "If I could go out there at that age and bear that heat that long and the fumes from the trucks and load three 18-wheelers in a day, it just hardens you," Brown said to Elliott. "There ain't too much I don't think I can do." At the age of seven, Brown joined a peewee-league football team as an undersized running back. "I knew he was going to be something . . . ," Richardean Brown told Thomas Grant Jr. for tandd.com (February 1, 2004, on-line), published by the Orangeburg, South Carolina, *Times and Democrat*. "It was just something about him. The little kid on the field." She added, "He would never sit on the sidelines and do a lot of talking. He was always very observant. . . . He would be standing off to himself just watching everything that the coach did and everything the other players did." Brown continued to excel in football as a member of the Hawks at Blackville-Hilda High School, playing as wide receiver, running back, defensive back, and kick returner. In 1988 Brown earned all-state honors for his achievements on the football field, where he made 44 receptions for 706 yards and scored 11 touchdowns on offense, made 55 tackles and four interceptions on defense, and returned four punts for touchdowns as a punt returner on special teams. The Hawks went on to amass a 14–1 record and the state Class A championship. Meanwhile, Brown also lettered in track.

Despite his standout career in high school, Brown initially received little interest from major college-football programs, due mainly to his relatively small stature. At five feet nine inches, Brown had been dismissed as an undersized wide receiver of only average speed. With no formal offers from Division I-A schools (Division I-A represents the highest level of competition in the National Collegiate Athletic Association, or NCAA), Brown enrolled for two years at the little-known Lees-McCrae Junior College, in Banner Elk, North Carolina, and worked summers to pay for his education. Matters changed when he caught the attention of Chris Scelfo, then the assistant football coach at the Division I-AA Marshall University, in West Virginia, who visited Lees-McCrae to scout another athlete and discovered Brown by chance. Scelfo told Elliot, "We weren't in need of a receiver. Troy was . . . 175 pounds at the time. He wasn't the fastest guy on the team, but he had an air about him." On Scelfo's recommendation, Brown transferred to Marshall, in 1991, and starred as both wide receiver and kick returner, emerging as "the most dangerous scoring threat in all of I-AA football," according to Joann C. Elmer, writing for the South Carolina *State Journal* (September 24, 2004). As a junior Brown boasted promising numbers at several positions: 38 receptions for 822 yards as a receiver; a 14.8 yards-per-return average as a punt returner, which placed him second nationally; and a stellar 39 yards-per-return average as a kickoff returner. That season Marshall reached the championship game, which they lost to Youngstown State. In 1992 Brown capped his two-year stint at Marshall in impressive fashion, finishing the season with 101 catches for 1,654 yards and 16 touchdowns and earning All-American and National Player of the Year honors. On the strength of Brown's play, Marshall steamrolled through the Southern Conference en route to a rematch against Youngstown State, this time beating their rivals to capture the I-AA championship. Brown finished his college career as the NCAA's career leader in kickoff return average (29.69 yards per return). He also tied the NCAA record for most touchdowns on kick returns (four) in a single season and had a career average of one touchdown for every eight times he made contact with the ball. Brown graduated from Marshall in 1993 with a degree in sports management.

At the time of the 1993 NFL draft, doubts about Brown's athleticism resurfaced. Echoing past criticism, professional scouts deemed Brown too slow and small to succeed as an NFL wide receiver. As a result Brown went undrafted until the eight round, when the New England Patriots, led by then–head coach Bill Parcells, made him the 198th overall selection. "If you watched the tape of him, you'd be like our special teams coaches, just drooling," Parcells said to Dick Cerasuolo for the Worcester, Massachusetts, *Telegram & Gazette* (April 27, 1993). "He led the nation in returns two years ago. He's a return man with 109 catches. Donnan [the head coach at Marshall] told me this is a guy I'd better keep an eye on." Brown did not find his transition to the professional ranks to be particularly difficult, explaining to Sandy Wells that at Marshall "I had done everything—special teams, returning kicks, kickoffs, blocking kicks, field goals. A lot of guys don't make it because they're used to being the man in school, then they go to a league where guys have to be able to do different things to save space on the team." During rookie mini-camps Brown showcased his all-around skills, impressing another rookie, Drew Bledsoe, the Patriots' future star quarterback, who said of Brown to Elliott, "He was amazing, making play after play. I thought to myself, How did this guy last until the eighth round?"

In his first full season in the NFL, Brown played on special teams as a kick- and punt-return specialist, averaging 9.0 yards per return; in a few instances he played reserve receiver, averaging 11.0 yards per carry. Brown told Jeff D'Alessio for the

Charleston (*West Virginia*) *Daily Mail* (March 11, 1994), "Special teams is my meal ticket, like any late-round draft pick. The more you can do on special teams, the better the chance you have of sticking around." "He's got a place in this league," Ray Perkins, then the team offensive coordinator, said to D'Alessio. "It's just a matter of us finding where that place is." While Brown's rookie campaign was successful, his second season, beginning in 1994, got off to a shaky start. In a preseason game against the Green Bay Packers, Brown committed a costly turnover by fumbling a punt return, leading to a Packers' victory; days later he was unceremoniously released from the team. "It wasn't just that one play . . . ," Parcells explained to a writer for the *Telegram & Gazette* (August 29, 1994). "He just didn't do enough in the preseason." Brown blamed his sluggish start on "that fatal mistake of going home after that first year and acting like a star and hitting every party in town . . . ," as he told Wells. "Funny how getting cut humbles you." Brown returned home to Huntington, West Virginia, for the first part of the season, working at a local boys' club and maintaining his fitness through private workouts. At midseason Brown rejoined the Patriots to replace a struggling punt returner who had been released from the team; he finished the season with a team-high 24 punt returns. In 1995 Brown secured a permanent spot on the Patriots' roster with a solid performance in the preseason, which impressed the demanding Parcells. "He fought his way every day. He didn't miss anything. Every time we gave him the ball in the preseason, he had an opportunity and he took advantage of it," Parcells told Jim Greenidge for the *Boston Globe* (August 28, 1995). "I'm trying to make the best of my chances," Brown said to Greenidge for the *Globe* (October 7, 1995). "I just want to go down and make some plays that will help our team win."

Brown played in every game during the 1995 season, making noticeable strides toward becoming the versatile playmaker the Patriots had envisioned when they drafted him. Among other highlights that season, Brown scored his first career touchdown off a 75-yard kickoff return in a game against the New York Jets. He finished the year with career highs in kickoff returns (31), kickoff returns yardage (672), receptions (14), and receiving yards (159). In 1996 Brown established himself as a mainstay on special teams, handling 29 kickoff returns for a career-high average of 21.9 yards per return. As wide receiver he caught 21 passes for 222 yards and made one of the more acrobatic catches of the year in the Patriots' season-ending game against their division rivals, the New York Giants. During the team's final drive in the fourth quarter, Brown, while lying on the ground, extended his arms to snag a 13-yard pass from Drew Bledsoe, which led to the Patriots' 23–22 victory, securing the American Football Conference (AFC) East title. "I try to make up for [my lack of speed] by using . . . my hands," Brown told Greenidge (October 7, 1995). "I try not to let it stop me from going out and making plays." In Super Bowl XXXI the Patriots were defeated by the Green Bay Packers, 35–21. Due to a hernia injury, Brown remained inactive for the entire game. "That was extremely difficult to watch," Brown said to Barry Wilner for the Associated Press (January 30, 2002). "It was a Super Bowl, man. At one point, I probably would've preferred to be at home than on the sideline." (After New England's loss, Parcells resigned to become the head coach and general manager of the New York Jets. He was succeeded by Pete Carroll.)

In 1997, his fifth season, Brown replaced the injured starter Terry Glenn at wide receiver and performed impressively, posting a career-best 41 catches for 607 yards (an average of 14.8 yards per catch) and six touchdowns. He also led all receivers on the team in games in which he received for 100 or more yards. Over the next few seasons, Brown shuttled between special teams, his mainstay, and wide receiver, emerging as one of the Patriots' more versatile backs. In 2000, after Carroll was fired, Bill Belichick became the Patriots' head coach; widely admired around the NFL for his strategic prowess and sharp eye for talent, Belichick made Brown one of the focal points of the Patriots' offense, using him as both starting wide receiver and primary punt returner on special teams. With Belichick's vote of confidence, Brown flourished during a three-year span, from 2000 to 2002, capitalizing on his deceptive strength and keen on-the-field instincts to become one of the NFL's most accomplished receivers. "[Brown is] a crafty guy who knows what defenses want to do against him," Ashley Ambrose, a former cornerback for the Atlanta Falcons, told writers for *Sports Illustrated* (December 24–31, 2001). "People think receivers need to be big and fast, but look at Troy—that's just not true. He's always been tough to cover one-on-one." Similarly, Brent Alexander, a onetime free safety for the Pittsburgh Steelers, explained to Dan Pompei for the *Sporting News* (February 4, 2002) that "unless you've lined up against [Brown], you wouldn't know how strong he is. He really plays with power for his size. . . . You can't always see it on film." Brown's offensive statistics confirmed those statements. In the 2001 season, for example, Brown achieved career-best marks at wide receiver with a team-record 101 receptions (for 1,199 yards), and as punt returner he led the NFL with an average of 14.2 yards per return. "I always believed in myself, that I could be a playmaker if I just got the chance," Brown said to Elliott. "I've always been thought of as too small or too slow, but I knew that stuff didn't matter so much if you wanted it bad enough."

In the 2001 postseason Brown played an integral role in the Patriots' drive toward their third Super Bowl appearance in team history. Against the Pittsburgh Steelers in the AFC Championship game, Brown returned a 55-yard punt return for the game's first touchdown; in another play he scooped the ball following a blocked field-goal attempt by the Steelers and made a lateral pass to his teammate Antwan Harris, who scored. The game, which the Patriots won, 24–17, had shown Brown at his best. "Mr. Reliable," Brown's teammate Ty Law said of Brown to Skip Wood for *USA Today* (December 11, 2001). "When it comes down to crunch time, you can count on him. You know he's going to be there." The Patriots advanced to face the St. Louis Rams, the NFC champions, in Super Bowl XXXVI, "a game we weren't supposed to win," Brown said to Wells. With Tom Brady at quarterback and a cadre of veteran playmakers led by Brown, the Patriots offset the Rams' potent offense in part through cohesiveness. "When we came out for the game, we chose not to be announced individually," Brown told Wells. "We weren't going to play as individuals; we wanted to come out as a team." For his part Brown netted six catches for 89 yards, including a pivotal 23-yard reception during the game's final drive to set up the kicker Adam Vinatieri's field goal, which brought the Patriots a 20–17 victory and their first Super Bowl title. "Without Troy Brown, I don't know what our record would be this year, but we certainly would not be standing where we are right now," Bledsoe said to Pompei. "I would say he's by far the most valuable player on our team." "Maybe [Brown has] been this good the whole time," Charlie Weis, then the Patriots' offensive coordinator, said to Barry Wilner for the Associated Press Worldstream (January 30, 2002),"and it just took a long time for us to figure it out." Brown capped his breakout season with his first appearance in the Pro Bowl.

With a record of 9–7 in 2002, the Patriots fell short of winning the division title. In the wake of their second Super Bowl title (a 32–29 victory over the Carolina Panthers in Super Bowl XXXVIII), which capped their 2003 season, the Patriots began the 2004 campaign with a view toward capturing a third championship and building an image as a modern NFL dynasty. With injuries early in the season decimating the team's defensive roster, Belichick tabbed Brown during the preseason to take on double duties as wide receiver and defensive back. "Everyone else thought it was a joke," Brown said of his assignment to Tom Pedulla for *USA Today* (December 20, 2004). "But when I do something, I do it as well as I can." That November Brown made his defensive debut against the St. Louis Rams, known for its squad of talented wide receivers, and performed impressively, with three solo tackles. As the season progressed Brown's play at cornerback increased while his offensive role diminished; in fact, he finished the season with the same number of tackles (17) as receptions, along with three interceptions. "After 12 years, you don't think of yourself as being able to go over and play defense," he told Jennifer Toland for the *Telegram & Gazette* (January 15, 2005). "But they asked me to do something, and I said I would give it a shot and give it my best effort. It's just another example of not being afraid to take chances and seeing what you have. I wouldn't have known I could have done it if I hadn't tried." "You can't exaggerate the difficulty of what Troy has done," the former NFL quarterback Joe Theismann, an analyst for ESPN, told Paul Attner for the *Sporting News* (February 11, 2005). "As a slot corner[back], it is really hard. You are on an island, the receiver is in the middle of the field, and you don't have the sideline to help you. To do this at his age, and with the specific skill set it takes, he is just a phenomenal athlete."

In the 2005 season, while the Patriots amassed a record of 10–6, Brown made 39 receptions for 466 yards; the team claimed the AFC East title before losing in the second round of the play-offs to the Denver Broncos. In an August 2006 exhibition game against the New York Giants, Brown added quarterback to his list of on-the-field accomplishments. During the 2006 regular season, his 14th in the NFL, Brown continued to impress with his stellar play on both offense and defense. In one highlight early in the season, he helped shut down the Green Bay Packers' offense by limiting their star receiver Donald Driver to just two catches (Driver averaged seven per game). Brown's fellow cornerback Chad Scott credited his defensive instincts to his experience on offense. "Troy understands—being the type of good receiver he is—what receivers are trying to do," Scott said to John Tomase. "He understands leverage. He knows what they're thinking. He knows where they're trying to go." During the Patriots' divisional play-off game against the San Diego Chargers, with the Patriots down 21–13 in the waning moments of the fourth quarter, Brown stripped the Chargers' safety Marlon McCree's interception of an errant pass by Tom Brady, preserving a Patriots possession and leading to a game-tying score. "That play . . . was the best play I've ever seen," Brady told Reiss for the *Boston Globe* (January 20, 2007). "It saved our season." Though the Patriots' season came to an end with a loss to the Indianapolis Colts, 38–34, in the AFC Championship game, Brown finished the 2006 campaign having achieved another career milestone. With season-ending totals of 43 catches for 384 yards at wide receiver (in addition to his duties at cornerback), Brown became the Patriots' all-time receiving leader, with 557 for his career, breaking Stanley Morgan's total of 534 catches, set in 1989. Though there had been talk of Brown's retiring after the 2006 season, in July 2007 he signed a one-year contract with the Patriots. At the beginning of the season, he was placed on the team's reserve/physically-unable-to-perform list, as he had undergone knee surgery in the off-season; it was expected that he would be sidelined for the season's first six weeks.

Brown is married to Kim Courts Brown. The couple have two sons, Sir'mon and SaanJay, and make their home in Huntington, West Virginia, where Brown is active in the community—serving as a youth tee-ball and soccer coach and as host of an annual football camp for children. In March 2006 Brown launched the first Troy Brown Fantasy

Football Camp, a fund-raiser for Marshall University's Child Development Academy.

Brunson, Doyle

Aug. 10, 1933– Poker player; writer

Address: c/o Cardoza Publishing, P.O. Box 1500,
Cooper Station, New York, NY 10276

"Doyle Brunson is a poker revolutionary in too many ways to count, but his decision to put all of his knowledge into print nearly 30 years ago changed the face of poker forever," Chuck Blount declared in the *San Antonio (Texas) Express-News* (May 25, 2006). Blount was referring to Brunson's book *How I Made $1,000,000 Playing Poker*, later retitled *Super System: A Course in Power Poker*. Considered a players' bible, the book appeared in 1978, the year after Brunson won the World Series of Poker (WSOP) for the second year in a row. Altogether, he has won 10 championships (in various types of poker) at the WSOP, a feat matched by only one other player (Johnny Chan) and surpassed by only one (Phil Hellmuth Jr.). "If you consider the creation of the World Series of Poker in 1970 as the beginning of modern-day poker, then Brunson is the game's equivalent of Babe Ruth, Michael Jordan and Jack Nicklaus rolled into one," Marc Schwarz wrote for the Bergen County, New Jersey, *Record* (December 25, 2005), referring to legends of baseball, basketball, and golf, respectively. Nicknamed "Texas Dolly," Brunson has been a dominant player in professional poker since the late 1950s, when he participated in illegal games throughout Texas. In *Super System* and his other books, he has not only offered poker neophytes insights into how professionals win but has stressed the importance of honor, trust, and responsibility at the poker table. As one of the first respected voices in the game to do so, he has come to personify the notion that gambling can be a respectable profession. Brunson has his own Web site, DoylesRoom.com, and although he prefers cash games—that is, games in which the winners take home unlimited sums of money—he has appeared in many celebrity poker tournaments in the U.S. and overseas. "He's the godfather of the game," the professional player Phil Gordon told Jeff Wilson for the *Fort Worth (Texas) Star-Telegram* (June 13, 2004). "He's certainly in the top 10 that have ever played the game, and he's probably in the top three of people who have made a real difference in the game and brought it from the back rooms of Texas to mainstream television." Brunson is associated most frequently with Texas Hold 'Em, one of the hundreds of poker variants and currently the most popular one in the U.S. Now 74, he remains active at poker events and often defeats opponents decades younger than he is. He told Marc Schwarz that because of age, "I've lost 10 percent of my game, but fortunately I was 20 percent ahead to start with."

The second of three children, Doyle Brunson was born on August 10, 1933 in Longworth, a tiny town in Texas. He reportedly got his nickname, Texas Dolly, as an adult, when Jimmy "the Greek" Snyder, a Las Vegas bookmaker, mispronounced "Doyle" during an announcement for a poker game. He and his siblings grew up in a four-room house with an outhouse in the backyard. His father worked for the Planters Gin Co., which produced cottonseed oil; he held a second job as the manager of a local gymnasium, whose facilities young Brunson used often. Brunson's parents were Baptists, and the family attended church regularly. Brunson began his education in a one-room school in Longworth. After he entered the regional high school in Sweetwater, Texas, he would run the 10 miles or so to and from school with two friends of his. "I knew the only way to leave Longworth and go to college was on an athletic scholarship," he told Nolan Dalla for the Web site Pokerpages.com (June 17, 2003). Brunson and his friends became the stars of Sweetwater High's basketball team, and Brunson became a standout in track. During his senior year he won the mile race at the Texas Interscholastic Track Meet with a time of 4:38—faster than any other high schooler in the state that year. When he graduated Brunson was ranked as the top high-school miler and among the five best high-school basketball players in Texas. He then enrolled at Hardin-Simmons University, in Abilene, Texas, a Baptist-affiliated university 40 miles from Longworth, one of the dozens of colleges that had offered him scholarships. During his junior year at Hardin-Simmons, Brunson was voted the Border Conference's Most Valuable Player in track and basketball. By then he had trimmed his mile time to 4:18, and *Dell Basketball Magazine* had ranked him among the nation's top 10 college basketball players. He began to attract interest from professional basketball teams, notably the Minneapolis Lakers (now the Los Angeles Lakers), and considered trying out for the U.S. National Track Team.

Brunson had been introduced to poker while in high school, playing Five-Card Draw. In college, although playing poker for money was illegal in Texas then, he played on Saturday nights. "I got caught once or twice and was disciplined for gambling . . . but since I was one of the basketball stars nothing much came of it," Brunson recalled in an essay posted on DoylesRoom.com. During the summer following his junior year, Brunson got a job at the U.S. Gypsum plant in Longworth. One day, while he was unloading sheetrock from a truck, a 2,000-pound stack of the material fell on his leg, breaking it badly. Unable to run or play basketball while the leg healed (a process that took nearly two years and left him with a permanent limp), Brunson spent his free time playing poker at his college and others, in part as a way to exercise his extreme competitiveness. He learned many of the hundreds of variations of poker, enabling him to compete in whatever games he happened upon, and he often won. In his senior year, with his leg in a cast, he feared that a career in sports might no longer be possible for him, and he became more studious. After he completed college, in 1954, he entered a one-year master's-degree program in administrative education at Hardin-Simmons. During that period he also began to play poker more seriously. After he earned his master's degree, Brunson sought work at schools. The salary for the highest-paying job he was offered, that of high-school basketball coach, was $4,800 a year—an amount he considered far too low. (In 1954–55 the average salary for teachers in the U.S. was $3,950.) Instead, Brunson took a job as a salesman for the Burroughs Corp., selling bookkeeping equipment. While on the road one day, he spent the afternoon in a back-room poker game with a potential customer. In only three hours he pocketed as much money as he earned at Burroughs in a month. He promptly quit his job to play poker full-time.

Brunson began his professional career in poker on Exchange Street in Fort Worth, Texas, a part of the city notorious for "shootings, muggings, robberies, and just about every kind of violence imaginable," as he described it in *Super System*. In addition to the danger of arrest, poker players had to grapple with cheaters and gamblers who balked at paying what they owed. People with partners seemed to be somewhat less vulnerable to trouble, so Brunson traveled with another man. In the lawless and perilous atmosphere that prevailed, Brunson has said, he gained the ability to concentrate under any circumstances. In time he developed friendships with two like-minded gamblers—Brian "Sailor" Roberts and Thomas "Amarillo Slim" Preston. When his original partner gave up road games, Brunson teamed up with Roberts and Preston. For nearly six years, the three traveled together, playing for ever-higher stakes; they shared not only hotel rooms but their money, so that the successes of one would make up for the losses of the others. Away from games, they talked endlessly about strategies, odds, and the psychology of poker. As their reputation as tough professionals grew, the trio began to get invited to private games at clubs, environments in which they felt safe and where their opponents often included wealthy oilmen and cattlemen who wanted to match wits with professional gamblers. After a trip to Las Vegas, Nevada, during which they lost all their money, Brunson, Roberts, and Preston went their separate ways.

Brunson returned to the poker circuit in Texas and also began gambling on sports events. In 1962, a few months after he had gotten married, doctors discovered a malignant tumor in Brunson's neck. Brunson underwent surgery and was told that he had less than six months to live. But after a second operation, the cancer disappeared completely. "I returned to the poker circuit with a zest and appreciation for life I never had before," Brunson recalled in *Super System*. He won in his next 54 sessions, a feat that he has never matched. One result of that remarkable winning streak was that he stopped getting invited to games. Unable to maintain his livelihood in Texas, in 1973 Brunson moved with his family to Las Vegas, known as the nation's gambling center.

Las Vegas was the home of Binion's Horseshoe (known since 2005 as Binion's Gambling Hall and Hotel), a casino where the World Series of Poker was held annually from 1970 through 2004. The first series included a half-dozen poker variants, and the winner was elected by all the players at the end of the events. In 1971 the tournament was changed to one winner-takes-all No-Limit Texas Hold 'Em series. In later years other events were added. Thanks to the WSOP and tournaments of its kind, Texas Hold 'Em is now the most popular form of poker in the U.S., and the matches are third in popularity among televised sports nationwide, after pro football and NASCAR races. In Texas Hold 'Em, each player receives two cards dealt face-down (the "hole cards"). After a round of betting, the dealer turns over three "community cards" (so-called because the players share those cards)—the stage of the game called "the flop." Another round of betting ensues, followed by the dealing of a fourth community card, or "turn card"; the turning of the fifth and final community card, or "the river," is preceded and followed by a round of betting. The winner is the player who holds the best five cards—using any combination of community and hole cards.

Already well-known in gambling circles, Brunson became a national celebrity in poker circles through the World Series of Poker. In 1976 he bested 22 players to win the main event and a pot of $220,000; he also earned $80,250 by winning the deuce-to-seven draw game. At the 1977 WSOP, Brunson won the seven-card-stud split event (and $62,500) and the main event, defeating 34 challengers and taking home $340,000. He is one of only four players who have won the main event more than once. Improbably, Brunson won in 1976 and 1977 with a full house consisting of three 10s and two deuces, now known in poker circles as the "Doyle Brunson." Throughout the 1980s he entered multiple events at the WSOP. In 1980 he placed second in both the main event and the deuce-to-seven draw tournament. In 1982 he placed fourth in the main event and third in the ace-to-five draw. The following year he placed third in the main event, and in 1986 he placed fourth in the Omaha pot-limit event. ("Limit" refers to the amount of the bets permitted in a particular game, both in opening the game and in raising the ante during the game. Common forms are called no limit, pot limit, fixed limit, and spread limit.) Brunson's only other top finishes in the main event came in 1997, when he came in 16th, and in 2004, when he ended in the 53d position. Brunson has won 10 gold-and-gem–studded bracelets, awarded for a first-place finish in any event. He won his most recent bracelet in 2005, in a short-handed no-limit Texas Hold 'Em game. (In short-handed games, six players sit at each table, rather than the usual nine or 10.)

In 1978, on the heels of his two WSOP main-event titles, Brunson self-published *How I Made $1,000,000 Playing Poker*. Written "as told to" Allan Goldberg, it contains chapters by Brunson; Bobby Baldwin, the 1978 WSOP champion; and four men considered to be top poker theorists: David "Chip" Reese, Mike Caro, David Sklansky, and Joey Hawthorne. Other poker experts whom Brunson had approached as potential contributors to the book balked at the idea of exposing their "secrets." In his own chapters, in addition to describing the mechanics of poker variants and suggesting what to do in specific situations, Brunson discussed money management, opponents to avoid, and ways of finding the right game for one's particular style of play. He also wrote that being very aggressive and taking advantage of weaker players are keys to success. "You will be playing mostly against unskilled gamblers," he wrote. "Their minds are not particularly sharp and often they haven't lived life very successfully. They're financially troubled or psychologically battered. . . . You might as well know the truth, sad as it is—they've come to escape the pain." He revealed that some of his fiercest battles had been with players whom he liked and respected, in games in which all involved did whatever they could—within the rules—to win.

For nearly a quarter-century, *Super System* was sold only in casinos and card rooms and priced at $100. In 2005 the New York City firm Cardoza made available a new, less expensive edition of the book, as well as *Doyle Brunson's Super System 2*, which contains chapters by such poker luminaries as Crandall Addington, Lyle Berman, Johnny Chan, Steve Lipscomb, Daniel Negreano, and Steve Zolotow as well as Brunson, Baldwin, and Caro. Earlier, in 1984, Brunson had published the book *According to Doyle*, a collection of articles that he had written for the newspapers *Gambling Times* and *Poker Player*. Mainly stories or reminiscences, each article "has a message for poker players using one or more examples from Brunson's past," Nick Christenson wrote for jetcafe.org (February 7, 2002). Christenson recommended the book for any player who "wants to get inside the mind of a poker champion." Among Brunson's other books are *Poker Wisdom of a Champion* (2003); *Online Poker: Your Guide to Playing Online Poker Safely & Winning Money!* (2005); and *My 50 Most Memorable Hands* (2007).

Brunson has often played in the biggest cash games in the world—contests in which the stakes climb into millions of dollars—as well as in tournaments. He has participated in many events in the World Poker Tour (WPT), which was launched in 2002 and is hosted by the Travel Channel. In 2004 he won the WPT's Legends of Poker event, at the Bicycle Casino, in Los Angeles, California, and earned $1.2 million. He was among the first players to be honored on the WPT's Walk of Fame, on the sidewalk outside the Commerce Casino in Los Angeles. According to the WPT's Web site, the Walk of Fame recognizes "the men and women who have played the game at its highest level; contributed to its evolution and popularity; celebrated poker in film, television, and literature; and are making the game appealing for a new generation of poker fan."

Brunson told Joe Drape for the *New York Times* (July 10, 2005) that the best poker players "have absolutely no regard for money. You have to look at it as action and the money as units. What you're trying to do is win as many units as possible." Brunson lives in California with his wife, Louise. He has two daughters, Pam and Cheryl, and a son, Todd, who in 2005 won the Omaha high-low split event at the WSOP. A third daughter, Doyla, died of heart disease at age 18 in 1980.

Burns, Ursula M.

Sep. 20, 1958– President of the Xerox Corp.

Address: Xerox Corp., 800 Long Ridge Rd.,
Stamford, CT 06904

"My perspective comes in part from being a New York black lady, in part from being an engineer. I know I'm smart and have opinions that are worth hearing," Ursula M. Burns, the president of the Xerox Corp., told Claudia H. Deutsch for the *New York Times* (June 1, 2003). Her self-confidence and determination enabled Burns to lift herself out of the impoverished conditions of her upbringing, enter an Ivy League graduate program, and eventually become a top executive at a multibillion-dollar corporation. Placed on *Black Enterprise*'s list of the most powerful African-Americans in the U.S. corporate world in both 2005 and 2006, Burns is now the highest-ranking black executive at Xerox, a firm founded in 1906 in Rochester, New York, as the Haloid Co. Burns's ascension to power at Xerox began with a summer internship after she completed college. She has earned a reputation for financial wizardry, which was cemented when she helped save Xerox from bankruptcy. The corporate business consultant David A. Nadler, referring to the corporation's chief executive officer (CEO), told Deutsch, "When you think about who will follow Anne Mulcahy, you can't not consider Ursula Burns. . . . Even in her 30's, she was a smart, unconventional thinker who'd embrace new ideas even while older executives at the table were rejecting them."

Ursula M. Burns was born on September 20, 1958. She was the second of her mother's three children, who had two different fathers, neither of whom participated in the children's upbringing. Burns and her siblings grew up in a public housing project on Delancey Street in New York City. "There were lots of Jewish immigrants, fewer Hispanics and African-Americans, but the common denominator and great equalizer was poverty," Burns told Deutsch. Her mother, Olga, ironed laundry and set up a daycare facility in their home, doing "whatever the hell she needed to keep us all going," as Burns told Betsy Morris for *Fortune* (January 24, 2006, on-line). Despite the meagerness of her mother's income, Burns and her siblings attended Catholic schools. Her mother, Burns told Deutsch, "felt it was the only way to get us good educations, and keep us safe." Burns excelled at math. She was accepted into a few Ivy League colleges but chose instead to attend the Polytechnic Institute (now Polytechnic University) in Brooklyn, New York. She qualified for the New York State Higher Education Opportunity Program, which offers disadvantaged students scholarships and tutoring to help them succeed in college. The director of the program at Polytechnic, Connie Costa, recognized Burns's potential and encouraged her to become a tutor.

Burns graduated from Polytechnic in 1980 with a B.S. degree in mechanical engineering, a subject that she embraced because she believed it would lead to a high-paying job. She then pursued a graduate degree at Columbia University, in New York City. During the summer she served as an intern at Xerox, a company that attracted her "because of its respected reputation for research and engineering," as she told the *EFY Times* (September 5, 2007, on-line). She impressed her supervisors enough to get work there as an independent consultant when her internship ended; she became a full-time Xerox employee shortly thereafter. While still new to the company, Burns caught the attention of a Xerox executive, Wayland R. Hicks, when she argued with him at a staff meeting. Their dispute involved a question posed by another participant in the meeting—in what Burns considered an accusatory tone—about the company's commitment to diversity; the question suggested that Xerox was hiring unqualified people for the sake of filling quotas. When Hicks responded in a manner that Burns thought was "overly diplomatic," as a reporter for Womenworking.com (June 2003) put it, Burns "basically told him that he was wrong," as she recalled to that reporter. Hicks was impressed with the way Burns had conducted herself and took her under his wing.

In the meantime, in 1981, Burns had obtained an M.S. degree from Columbia, having received financial help through a Xerox initiative created to encourage minorities to take graduate courses in mechanical engineering. That year she also began dating a Xerox scientist, Lloyd F. Bean, who was 20 years her senior. She and Bean married in 1988.

During the 1980s and early 1990s, Burns was repeatedly promoted at Xerox as a product developer and manager. In 1990 she became the executive assistant to Xerox's executive vice president of marketing and customer operations; the following year she became the executive assistant to Paul A. Allaire, who was then the CEO and chairman. Thereafter, she was given steadily increasing responsibilities. In 1995 she was made the vice president and general manager of Xerox's work-group copier-business unit, a position that, among other duties, put her in charge of marketing a copier machine designed to keep possible damage to library books at a minimum when people photocopied from them. Two years later she was named the vice president and general manager of the departmental business unit. In that position she oversaw the development and construction of large workgroup digital copiers and light lens copiers as well as their sales and service.

In 1999 Burns became Xerox's vice president of worldwide manufacturing and also joined the company's board of directors. The following year she was named senior vice president of corporate services, with responsibility for manufacturing and supply-chain operations—"just in time to play a big role in helping Mulcahy keep Xerox from going off a cliff," as Morris wrote. Beset by financial woes and losing out to competitors—Canon and Ricoh—the company nearly went bankrupt in 2000 and 2001. During that period, while Mulcahy traveled frequently in attempts to reassure stockholders and meet with corporate clients, Burns managed activities behind the scenes. To cite one important area, she negotiated with representatives of the Rochester unit of the Union of Needletrades, Industrial and Textile Employees (UNITE), which represents Xerox's manufacturing workers. After those talks Burns was able to hire an outside contractor, Flextronics International, to manufacture Xerox products, and the company began to downsize its manufacturing staff, a move that reportedly led to a $2 billion cut in costs over the next few years.

In December 2002, while she was helping Xerox move toward financial health, Burns was appointed president of the company's business-group operations. She thus became responsible for "global research, engineering, marketing and manufacturing of Xerox technology and supplies," according to the Associated Press Financial Wire (April 3, 2007). Burns's style and methods earned her the respect of many Xerox stockholders and executives. Her detractors included Gary Bonadonna, director of the Rochester branch of UNITE, who told Deutsch, "It's hard sometimes to persuade her that the right thing to do is not always apparent from the financials." James J. Miller, president of the Xerox Office group, accused her of micromanaging, telling Deutsch that Burns "sometimes asks for signature authority over things I think should be my decision."

By the middle of 2003, after having laid off 25,000 workers, Xerox was no longer in financial trouble. "Ten percent of that was Anne, 90 percent was me," Burns told Deutsch. "Essentially, I'm the Ms. Inside for the operational side of the business." Xerox began to produce copiers without the expensive accessories that had previously been standard and thus lured back customers who had not wanted such accessories and had turned to Xerox's competitors to avoid paying for them. "Being a strong player here [in the office market] is critical for Xerox," Burns told Barnaby J. Feder for the *New York Times* (May 1, 2003). "Stabilizing our operations has made it possible to participate more broadly in this market. Now customers can buy only what they need."

Xerox next set out to increase its share of the color-printing market, specifically the digital market, investing in research to enhance its product line. Competitors viewed the move with skepticism. Sam Yoshida, a Canon USA executive, for example, as paraphrased by Nanette Byrnes in *BusinessWeek* (December 13, 2004), said that "Canon can leverage its color research across a variety of digital products, including cameras, video, and copiers. That gives the company more bang for its research buck." Burns discounted such concerns, arguing, as paraphrased by Byrnes, that "color innovations hatched originally for one machine migrate up and down Xerox's 30-product color line." Burns's optimism proved to be well founded. In 2005 and 2006 Xerox released 19 color products—among the most important of which was the Phaser solid ink printers and the iGen3, a digital printer that can be used for producing books, catalogs, and flyers—and increased its revenues from color-copier sales by 14 percent. Such sales accounted for 34 percent of the company's revenue by the end of 2006; by the second quarter of 2007, the figure had climbed to 40.3 percent.

In April 2007 Burns was promoted to president of Xerox, making her Mulcahy's second-in-command. That same month she was elected to the company's board of directors. Mulcahy, according to the *New York Beacon* (April 12, 2007), said that Xerox's recent progress "happened on Ursula's watch as she drove a technology strategy that launched more than 100 products in the last three years. At the same time, Ursula led activities that strengthened Xerox's business model so we're more efficient, competitive and profitable. This organizational change is a logical next step for our company and for Ursula. She brings deep knowledge and experience to the president role, where she'll work closely with me and our leadership team to accelerate our growth in color, services and new business markets." For her part, Burns said that she had remained with the company "because of the people and to be part of a values-based culture with a passion for innovation and a deep commitment to customers. . . . I have tremendous pride in this company." Burns retained the responsibilities of her previous position and took over the company's information-management organization; its corporate-strategy, human-resources, and marketing operations; and its global accounts. She kept her office in Rochester, New York, and set up another one at the company's headquarters, in Stamford, Connecticut.

Burns's honors include the Athena Award of the Women's Council of the Rochester Business Alliance for her professional accomplishments and community service. She sits on a number of boards of directors, among them those of American Express; Boston Scientific, a manufacturer of medical devices; the Center on Addiction and Substance Abuse (CASA); the University of Rochester; For Inspiration and Recognition of Science and Technology (FIRST), a nonprofit organization founded by the inventor Dean Kamen to inspire students to pursue engineering and technology studies; and the National Association of Manufacturers. In October 2007 *Fortune* magazine placed Burns 11th on its list of most-powerful women in business. (Mulcahy was second.) Burns ranked 27th the previous year.

Burns lives in Rochester with her husband, who is now retired, and their teenage children, Malcolm and Melissa. She strives to maintain a full life outside the office, keeping her weekends free for her family, tackling home-related tasks only after her children have gone to bed, running for 35 minutes a day, and employing the services of a personal trainer twice a week.

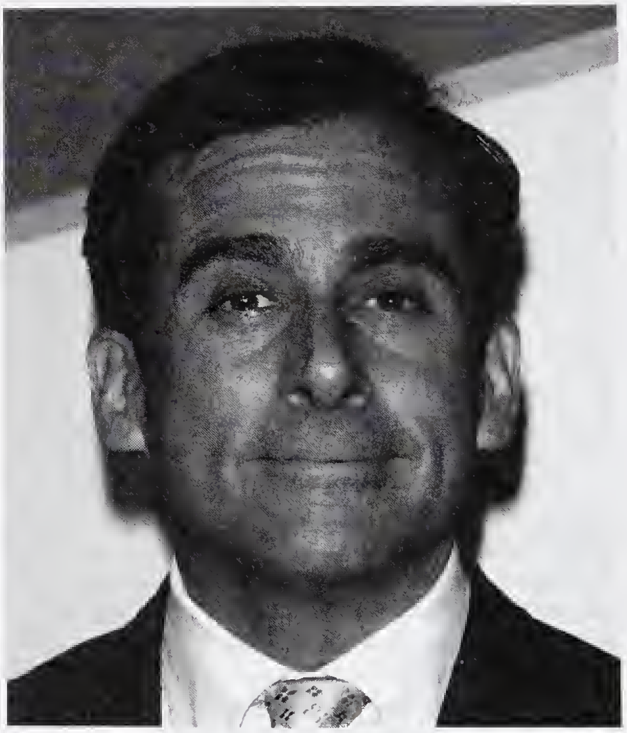
Carell, Steve

Aug. 16, 1962– Comic actor

Address: NBC Entertainment, 30 Rockefeller Plaza, New York, NY 10112

With a hit television show, a starring role in one of the biggest blockbuster movie comedies of 2005, and a critically acclaimed independent film in 2006, Steve Carell has become—in the words of Josh Wolk, writing for *Entertainment Weekly* (February 24, 2006)—"the go-to comedy property of Hollywood." Early in his career, despite a promising start with the storied Second City troupe, the actor struggled to find his niche in the industry, suffering through a number of failed projects before winning a spot as a faux news correspondent on *The Daily Show* in 1999. In 2003 Carell got his first break in feature films, with a memorable role in *Bruce Almighty*, which he followed with supporting parts in *Sleepover* and *Anchorman: The Legend of Ron Burgundy* the following year. In 2005 Carell scored his first starring film role, in *The 40 Year Old Virgin*, as well as the lead role, that of a clueless middle manager, in *The Office*—NBC's remake of the British television series. By the end of 2005 Carell had ascended to Hollywood stardom, been pronounced the Funniest Man in America on the cover of *Time* magazine, and hosted the 2005-06 season premiere of *Saturday Night Live*. *Entertainment Weekly* named Carell the number-two entertainer of 2005 (second only to the cast of the TV series *Lost*), and Carell, along with his frequent co-star, Will Ferrell, presented an award and performed at the 2006 Academy Awards ceremony. Later that year he earned praise for his role in the movie *Little Miss Sunshine*. The writer and director Peter Hedges, who cast Carell in the film *Dan in Real Life* (2007), told Wolk that Carell is "the rare actor who can make you laugh and break your heart, sometimes within seconds."



Evan Agostini/Getty Images

Steven John Carell was born on August 16, 1962 in Concord, Massachusetts, into an Italian-American family. He gave his first acting performance at age six, in a school Thanksgiving play called *The Roar of the Greasepaint, the Smell of the Turkey*, in which he played a Native American canoeist. He was educated at the private, all-boys Fenn School and at the Middlesex School, in Concord, before attending Newton South High School, in Newton, Massachusetts. There, he wrote for the school newspaper and acted in several musicals. He enrolled in, and graduated from, Denison University, in Granville, Ohio, and briefly considered attending law school before moving to Chicago, Illinois, in 1985 to pursue a career in acting.

For several years Carell struggled to find steady employment. He received a small role in John Hughes's comedic film *Curly Sue*, which was released in 1991, and landed a few parts in television commercials. Carell got his first break in 1990, when he earned a spot in Second City—the improvisational school and troupe, based in Chicago, that had launched the careers of many television and film stars, including John Belushi, Bill Murray, Dan Aykroyd, Shelley Long, and Chris Farley. After cutting his teeth with satellite groups for several months, Carell appeared on Second City's main stage in May 1991 for a production of *Winner Takes Oil*. For the next five years, he performed with Second City and taught improvisation classes for the company. While many of his colleagues viewed Second City as a step along the acting career path (the reputation of the group drew television and film-talent scouts to performances), Carell found that his work with the troupe was enough in itself to satisfy him. "I already felt like I'd made it, just being at Second City . . . ," he explained to Nathan Rabin for the *A.V. Club* (August 23, 2005, on-line). "When I was there, I thought, 'If I could just do Second City and do a couple of television commercials . . .' Man I was set. There was nothing in my mind better than that." Most of his work with Second City was comedic, which Carell—who has said that he does not consider himself a particularly funny person—explains as a product of his environment at Second City. "Comedy just sort of was a byproduct of what I was hired to do," Carell told Rabin. "I never had the preconceived notion, 'I will be a comedic actor.' I just thought, 'I'll go into acting and see what kind of work I can get.'"

In 1995 Carell married Nancy Walls, whom he had met while she was a student in an improvisational class he was teaching at Second City. The following year, Walls, a talented comedian in her own right, joined the cast of *Saturday Night Live*, and the couple moved to New York City, where that show was recorded. Looking for work in New York, Carell auditioned for a new sketch-comedy series, the *Dana Carvey Show*, and was hired as a writer and performer for the program, which aired on ABC in the spring of 1996. Along with Carvey and Carell, the show also featured, among others, Robert Smigel and Stephen Colbert, both of whom had worked with Carell at Second City. Sabotaged partly by its family-oriented time slot, the show was unable to sustain a consistent audience and was pulled after only eight weeks, a development that "floored me," Carell told Josh Wolk. "How could it not work? It was too funny for people not to watch it." One installment that Carell sees as having contributed to the show's demise had Carvey performing an impression of President Bill Clinton, who in the sketch describes himself as a nurturing president while breast-feeding a litter of golden retriever puppies. "People were so outraged," Carell explained to Rabin. "That was pre–Monica Lewinsky [with whom Clinton had an extramarital affair], that was before his public fall from grace, so people were so offended that we would be poking fun at the President that way. A year or two later, it would've been no problem, but at the time, it was perceived to be in extremely bad taste." After the cancellation of the *Dana Carvey Show*, Carell and his wife moved to Los Angeles, California, where for three years he braved audition after audition. "I was just trying to keep my head above water and get what I could get," Carell told Rabin. During that period he earned a role in a very short-lived 1997 sitcom, *Over the Top*, which starred Tim Curry and Annie Potts, and a few uncredited roles in unsuccessful films.

Carell's luck changed in 1999, when he landed a role on *The Daily Show*, a fake-news program that airs on Comedy Central. At the time the program was in a transitional period, following the arrival of a new host, Jon Stewart, and the producers were looking for new talent. Stephen Colbert, who had been appearing on the show since 1997, suggested Carell, who was hired to play a field correspondent for the show; Carell also appeared in a recurring role as Produce Pete, and with Colbert he took part in an ongoing point-counterpoint sketch called *Even Stephven*. Carell received positive reviews for his work on *The Daily Show* and became known for his deadpan on-air demeanor. He told a reporter for *Daily Variety* (April 21, 2005) that he thought of the correspondent he portrayed as "a guy who used to be a national news reporter and had been demoted to this Podunk local show and had kind of a chip on his shoulder. Clearly out of his league in national news and probably local news, too." Carell's first assignment on the program was to interview a real-life Elvis Presley impersonator who also managed a snake-venom research facility. "There's very little you could do to prepare to be a correspondent on *The Daily Show*," Carell explained to Rabin, "because it's not being a journalist, it's not being an actor. It involves elements of both those things, but they're not required necessarily as job experience." Carell told Rabin that he sometimes feared that the show had a "self-satisfied quality," as if "we're the smart ones and we're so much smarter and better than the people we're interviewing"—who did not always understand the humorous nature of the show—"and I didn't like that." To address that problem, when he interviewed subjects he tried to ask idiotic questions, to make it clear to viewers that the interviewer, and not just his subjects, was supposed to be part of the joke. Carell's favorite sketches were those in which "no one looked like an idiot other than me," as he explained to *Daily Variety.*

During the 2000 presidential election season, *The Daily Show,* for the first time, joined members of the press corps to cover the campaigns. By asking often impertinent questions that ranged from awkward to abusive, *The Daily Show* correspondents hoped to reveal the candidates' senses of humor. Carell particularly enjoyed spending time with the U.S. senator and presidential candidate John S. McCain of Arizona, who seemed to Carell to be genuinely interested in the theme of the show rather than in proving that he himself was funny. "I think people want to see this human side of the candidates," Carell remarked at the time to Edward Stubenrauch for the Ohio University *Post,* as quoted by University Wire (March 8, 2000). "Today . . . people are a lot more interested in sense of humor and character. They like to see that these people are human beings and people they can identify with." Performing on *The Daily Show* gave Carell national exposure and vital experience. He has said that the culture of the program, which allowed him and other contributors the freedom to fail, enabled them to attempt riskier gags and improved his ability as a performer.

Carell left *The Daily Show* in 2002 to take a recurring role in the sitcom *Watching Ellie,* starring Julia Louis-Dreyfus. Carell starred as the title character's passive-aggressive ex-boyfriend on that short-livid series. Following its cancellation, he received his largest screen role up to that time, as Evan Baxter in the comedy *Bruce Almighty* (2003), starring Jim Carrey. Carell received rave reviews for his brief but memorable portrayal of Carrey's on-screen nemesis, a smirking newscaster. In 2004 Carell starred in two films that opened on the same day, July 9. In *Anchorman: The Legend of Ron Burgundy,* he played Brick Tamland, a mentally handicapped weatherman, opposite Will Ferrell in the title role. The film was successful, grossing over $90 million worldwide. While some critics thought that Carell's performance upstaged Ferrell's, a reviewer for the New Orleans *Times-Picayune* (July 9, 2004) found "the running gag about Carell's character's mental retardation" to be "borderline offensive." *Sleepover,* a family comedy in which Carell played a child-hating security guard, was decidedly less successful than *Anchorman,* pulling in about $10 million in limited distribution. On the strength of his performance in *Anchorman,* Carell quickly earned more film opportunities. He had supporting roles opposite Ferrell in two other films: *Melinda and Melinda,* directed by Woody Allen, and *Bewitched,* a 2005 homage to the popular 1960s sitcom of the same name. In *Bewitched* Carell took the role of Uncle Arthur, played in the TV series by Paul Lynde. Carell was drawn to the film because he enjoyed working with Ferrell and was a fan of the film's director, Nora Ephron. *Bewitched,* while universally panned by critics, was successful at the box office. Though Carell's role was not a major one, he thought that the project was "kind of silly and fun to do," as he told Rabin.

While he was filming *Anchorman,* Carell's brand of humor impressed one of the film's producers, Judd Apatow. "I was constantly amazed how funny Steve was on the set of *Anchorman* and wanted to create an opportunity where he was the lead," Apatow explained to Borys Kit for the *Hollywood Reporter* (October 20, 2004). Carell pitched Apatow a story idea that was loosely based on a sketch that he had performed with Second City. The premise involved a group of men sharing risqué stories; in the group was "one guy who just couldn't keep up," Carell told Devin Gordon for *Newsweek* (August 15, 2005). "It becomes quickly apparent that he's never done *any* of the things he's talking about." Apatow liked the idea and hired Carell to co-write and star in the film *The 40 Year Old Virgin.* In portraying the title character, Andy Stitzer, Carell strived to avoid one-dimensionality as well as clichés about middle-age loners. "We didn't want to make the guy a creep, or someone who's emotionally damaged, or some crazy ubernerd. He's just a normal guy who missed out on some opportunities, and we didn't want to retread the cliché of who a virgin might be. We actually did a lot of reading about case studies of middle-aged virginity, and the people we read about were not unlike the character. They were just normal people functioning in our society who for one reason or another gave up. And it's not because they didn't want to, or weren't capable of it, they had just given up on the whole notion," Carell told Nathan Rabin. In the film Stitzer's co-workers try to arrange a date for him, and through a series of misadventures, he becomes romantically involved with a single mother (played by Catherine Keener) with her own sexual idiosyncrasies. In *Entertainment Weekly* (August 17, 2005, on-line), Owen Gleiberman called the film "buoyantly clever and amusing, a comedy of horny embarrassment that has the inspiration to present a middle-aged virgin's dilemma as a projection of all our romantic anxieties." Gleiberman applauded Carell's efforts as a leading man as well, remarking: "Andy may be a light caricature of a clueless, repressed loser . . . but Carell plays him in the funniest and most surprising way possible: as a credible human being." The film became a summer blockbuster, opening at number one in the United States, Canada, England, and 10 other countries and eventually grossing over $170 million worldwide. The American Film Institute chose *The 40 Year Old Virgin* as one of the top 10 movies of 2005, and the Broadcast Film Critics Association named the film best comedy of that year.

The success of *The 40 Year Old Virgin* brought Carell a reputation as one of Hollywood's brightest new film-comedy stars. It had the added effect of drawing viewers to his concurrent work on television, where, in the spring of 2005, he had debuted in the starring role in NBC's remake of the BBC comedy series *The Office*. He plays Michael Scott, a manager in a paper company, whose delusions of competence and coolness lead him to make wince-inducing decisions and attempts at humor. The BBC program had been very popular in England and had developed a cult following in the United States during its run on BBC America, which made Carell fear that the NBC project would suffer by comparison. Indeed, the show was not an instant hit in the U.S., as uninitiated viewers had a difficult time adjusting to the style and humor of the series, which does not use a laugh track and is marked by uneasy silences between characters. Critics, by contrast, were enthusiastic about the series from the outset. Joel Stein, writing for *Time* (March 13, 2005), described Michael Scott as a "confident, articulate buffoon who has no idea he's messing things up" and found that Carell played the part brilliantly: "With his serious, *Father Knows Best* demeanor, Carell maintains self-assurance in the face of obvious failure; he's a pompous but lovable loser." Carell joked to Stein that he did not have to do much research for the character, as Michael reflected elements of the actor himself. "I myself am a lovable loser. So it's an easy transition," he said. "I'm more loser than lovable, but I bring lovable to the screen." Greg Daniels, the executive producer of *The Office*, said to Stein that Carell brought unusual nuance to his character: "A lot of people play dumb people. But Steve has a way of playing intelligent, articulate people who make foolish choices. People who on the face of it seem smart but once you look deeper have no clue. Which is cool for comedy that's more subtle." Carell won a Golden Globe Award for best performance by an actor in a television series (musical or comedy) from the Hollywood Foreign Press in 2006.

With the critical and popular success of *The Office* and *The 40 Year Old Virgin*, Carell emerged rather suddenly as a major Hollywood draw, and NBC found it necessary to grant him a flexible shooting schedule, so that he could continue to act in films while remaining on the program. Carell's celebrity has led many to speculate that he will not remain on a television show for long. Carell has refuted that notion, telling Wolk, "This sort of [show] only happens once in an actor's life. I'm proud of it and lucky to be working with the people I am." In 2006 Carell lent his voice to the Dreamworks animated production *Over the Hedge* and starred as Frank Hoover, a suicidal Proust scholar, in the independent dark comedy *Little Miss Sunshine*. David Edelstein, in his review of the latter film for *New York* (August 7, 2006, on-line), remarked that Carell offered a "superb interior performance."

In 2007 Carell starred in the sequel to *Bruce Almighty*. In *Evan Almighty* he reprised his broadcast-journalist character—this time in the title role, opposite Morgan Freeman and Lauren Graham. Later that year Carell appeared as the title character in *Dan in Real Life*. In 2008 he is slated to play Maxwell Smart in *Get Smart* and provide the voice for the mayor of Whoville in *Horton Hears a Who*. Although he has said that his current schedule sometimes tires him, he has refused to complain about his workload, telling Wolk, "You hope and dream for so long that you'll actually become employed, and when you do, the last thing you want to do is whine about it."

Carell currently lives in Los Angeles with his wife, Nancy Walls. The couple have two children: Elisabeth, born in May 2001, and John, born in June 2004. Carell is a longtime member of a Burbank, California, amateur hockey league. "Because my wife . . . was on *Saturday Night Live*," Carell said to Nathan Rabin, "and she's very smart and funny, people sometimes ask whether our home life is a continuous laugh riot, and it couldn't be further from that. We enjoy each other, we make each other laugh, but it's not George Burns and Gracie Allen banter constantly. It's changing diapers and chasing kids and . . . you know. We're very normal."

Carter, Majora

Oct. 27, 1966– Environmental activist; founder of Sustainable South Bronx

Address: Sustainable South Bronx, 890 Garrison Ave., Fourth Fl., Bronx, NY 10474

The activist Majora Carter was born and raised and now works in the South Bronx, an environmentally challenged area of one of New York City's boroughs. Guy Trebay described that region for the *Village Voice* (January 25, 2000): "When the wind clocks south from the waste recovery facility, it carries a stink that, as a friend once put it, could gag a maggot. Compacted sludge from a nearby city sewage treatment plant is fired here at high temperatures to form fertilizer pellets. Compared to the smell this process generates, the adjacent sewage plant seems almost perfumed. . . . It doesn't take much to dismiss this desolate place out of hand."

MacArthur Foundation, courtesy of Sustainable South Bronx

Majora Carter

The founder of the activist group Sustainable South Bronx (SSBX), Carter is devoted, according to the organization's Web site, to issues of "land-use, energy, transportation, water and waste policy, and education in order to advance the environmental and economic rebirth of the South Bronx," and she hopes "to inspire solutions in areas like it across the nation and around the world." All her work, Carter told Amanda Griscom Little for *Grist* (September 28, 2006, on-line), "is an effort to help people in the South Bronx understand that we're not this awful, awful, monstrous place, but we're people like everybody else, and we can feel pride in our neighborhood."

The youngest of 10 children, Majora Carter was born on October 27, 1966 to parents whose formal education ended with elementary school. Carter's mother and father had moved to the Hunts Point section of the South Bronx in the 1940s, when it was a mostly white, working-class enclave. They had been among the first African-Americans to buy a home there. By the time Carter was born, most of the neighborhood's Caucasian residents had moved to the suburbs, and the area had become a predominantly black and Latino ghetto, characterized by high rates of unemployment and violent crime. In the 1970s a rash of arson solidified Carter's resolve to escape the neighborhood. She told Krista Tippett for the American Public Media radio program *Speaking of Faith* (January 11, 2007) that she grew up "when the South Bronx in and of itself was burning. . . . Lots of landlords were torching their buildings in order to collect insurance money, and if you had, you know, any kind of intellectual acumen, then . . . your duty to yourself was to leave an area like the South Bronx as soon as you could." One of her earliest memories is of watching the buildings on either side of her family's building burn down. She told Tippett, "I was about seven or eight. . . . And then at the end of [that same] summer my brother was killed, you know, as a result of a drug war. And I just remember thinking, 'I've got to get out of here.'"

Carter excelled at Primary School 48 and Intermediate School 74 and was accepted into the fiercely competitive Bronx High School of Science, one of the top public high schools in New York City. She graduated in 1984 and then attended Wesleyan University, in Middletown, Connecticut, where she earned a bachelor's degree in film studies in 1988. She then moved back to New York City, choosing to live in the borough of Brooklyn. She had married and divorced by the time she entered the highly selective master-of-fine-arts program at New York University; in 1997 she earned an M.F.A. degree in creative writing.

Graduate school proved expensive, so Carter moved back to her parents' home in the South Bronx in order to save money. She returned to find a neighborhood polluted by the effluents from sewage-treatment plants and the exhaust gases of diesel trucks traveling to and from the nearby Hunts Point Cooperative Market—where nearly all the city's produce and much of its meat arrives before being transported to businesses in the city. The neighborhood, which also contained numerous construction- and demolition-waste yards, was among the poorest in the country. Carter told Steve Inskeep for the National Public Radio program *Morning Edition* (September 20, 2005), "The South Bronx was the poster child for urban blight for many, many years, and I hated it. . . . But coming back, it was also one of the best things in the world that happened to me because I actually got very politicized, you know, in terms of understanding . . . burdens that the community was dealing with."

Carter initially became involved in arts-based community projects. "One of the projects I ran was called Street Trees, which exhibited artists' interpretations of the lack of street trees in the neighborhood—sculptures made, you know, from scrap metal and found objects," she told Little. Her priorities changed when she learned of city officials' plan to send 35,000 tons of residential refuse each week to transfer stations in the South Bronx, from which it would then be shipped to distant landfills. "One day I heard about the mayor's plan to privatize waste handling in the city," she recalled to Little. "They were going to shut down the Staten Island landfill without any environmental review and divert the waste handling to our neighborhood. I thought, 'Wait, we already handle 40 percent of the city's commercial waste, and that would bring in another 40 percent of the city's municipal waste.' As I researched, I began to realize that if we're not actively meeting the environmental needs of our community, then all the art in the world isn't gonna help." She began to knock on doors to educate her neighbors about the plan; she also spoke at local community meetings and formulated an alternative proposal that would divide the trash more equally among New York City's boroughs. After a groundswell of grassroots pressure from the community, the mayor's plan was scrapped.

In 1997 Carter became an associate director of the Point Community Development Corp., a nonprofit organization devoted to improving social, economic, and environmental conditions in the South Bronx. One of her first successes was in securing funding so that the Hunts Point Cooperative Market could install electrical truck bays that allowed parked vehicles to avoid idling their engines, thus reducing the diesel fumes in the surrounding area. While working at the development corporation, Carter met a city parks official who offered her $10,000 in seed money for a Bronx River restoration project. Because access to the river in the South Bronx was blocked by massive industrial plants, Carter could not immediately conceive of a use for the money. Then, "while jogging with my dog one morning, she pulled me into what I thought was an illegal garbage dump," she wrote for the SSBX Web site. "There were weeds, piles of garbage, tires, and other stuff that I won't mention here. But she kept dragging me through all this and lo and behold at the end of this lot, was the river. It was beautiful in the early morning light, it was inspiring; and I knew that this forgotten little street end, abandoned like the dog that brought me there, was worth saving. I knew it would grow to become the proud beginnings of the community-led waterfront revitalization of Hunts Point. And just like my new dog [a former stray that had grown into a healthy, 80-pound animal], it was an idea that got bigger than I had imagined."

Carter used the seed money to turn the area into a small park. (In later years she helped raise $3.2 million to enhance the park, which was completed in 2006.) Her lobbying led to the allocation of $30 million in city, state, and federal aid to build additional parks, connect bicycle paths, and restore wetlands and wildlife habitats along the river. In 2001 the New York *Daily News* named Carter one of "50 New Yorkers to Watch." She considered a run for the City Council but instead started Sustainable South Bronx, with the mission of achieving what has been termed "environmental justice" by improving social, economic, and environmental conditions in the South Bronx. In 2003, to name one initiative, SSBX launched the Bronx Environmental Stewardship Training Program, to prepare local residents for "green-collar" jobs in environmental fields. The group is also working to demolish the Sheridan Expressway, a short stretch of road that, according to the SSBX Web site, has "contributed to the blight, disinvestment and public health problems plaguing the South Bronx." (Carter has explained to journalists that although the South Bronx has a low rate of car ownership, the area's asthma rates are many times the national average, in part because of the heavy commercial traffic.)

Carter initiated the installation of New York City's first so-called green- and cool-roof, on the roof above SSBX's offices in the American Banknote Building. Unveiled in September 2005, the roof has a reflective surface, which does not absorb heat, and an abundance of greenery, which soaks up most of the rain that falls on it. Normally, rain drains into the city's sewers, many of which cannot accommodate all of the rainfall. Carter has since set up a company, SmartRoof, to install and maintain green roofs in and around the city.

In February 2006 Carter caused a minor stir at the Technology Entertainment Design (TED) conference, in California, when, during a speech, she recounted how she had tried to talk to former vice president Al Gore earlier in the day about grassroots efforts to combat global warming. Gore had disregarded her, simply suggesting that she send him a grant proposal. "I wasn't asking him for money," she explained. "I was making him an offer." After the public rebuke Gore acknowledged Carter's work and asked her to join the board of his Alliance for Climate Protection. To date, she has not done so.

On November 20, 2006 Mayor Michael Bloomberg of New York City unveiled a master plan for the South Bronx Greenway, designed jointly by Sustainable South Bronx, the Point Community Development Corp., and the New York City Economic Development Corp. It included plans for the creation of 1.5 miles of new waterfront green space, 8.5 miles of streets with foliage and wide pedestrian walking spaces, and nearly 12 acres of new open space on the waterfront. The South Bronx Greenway plan was the culmination of nearly a decade of lobbying by Carter and her fellow activists. In April 2007 *The Green*, a weekly, three-hour lineup of environmental-education programs, premiered on the Sundance Channel. Carter co-hosts *The Green* with the journalist Simran Sethi.

Currently, Carter is engaged in a battle with the New York City officials over the proposed placement of a 2,000-inmate jail at Oak Point in the South Bronx. The 25-acre site, which lies between the East River and a major railway line, is "ideally suited for the kind of clean-tech industry that our economy is falling behind in—the kind that can clean up the way we handle waste, adding value and employment prospects at the same time," Carter told *Current Biography*.

Carter has been honored many times for her activism. In 1999 the U.S. Environmental Protection Agency gave her its Environmental Quality Award for her service to the community, and in 2004 she won the Women with Organic Style Award from *Organic Style* magazine. In September 2005 Carter attracted international attention after the John D. and Catherine T. MacArthur Foundation awarded her its "genius grant," a stipend of $500,000 paid in five annual installments. In 2006 she won the Earth Day Environmental Advocates' Award from the Natural Resources Defense Council, a nonprofit environmental-rights organization. In December

2006 *Newsweek* named Carter, who had been a featured panelist at the Clinton Global Initiative (CGI) summit that year, a person to watch in 2007. Shortly thereafter New York University awarded her its Dr. Martin Luther King Jr. Humanitarian Award, and she also received the New York State Women of Excellence Award from Lieutenant Governor David Patterson. Later in 2007 she was named one of the 50 most influential women in the city by the *New York Post*, appeared on *Ebony*'s "Power 150" list, and was deemed a member of the "New Power Generation" by *Vibe*. In June 2007 Carter was named to New York's Renewable Energy Task Force, a group charged with identifying "ways of expanding the state's use of renewable energy and alternative fuels," according to the States News Service (June 24, 2007). The task force was expected to complete its first report in December 2007.

"There's this big fear that environmental justice is fiscally irresponsible, that communities like ours need all kinds of money and assistance," Carter told Little. "The irony is that our public-health problems—our rampant asthma and other environmental illnesses—do need such resources. Our sustainability strategy, on the contrary, does not. Our organization is beginning to prove that we can implement our strategy in a pretty darn economically and fiscally responsible way. Things like parks and green roofs and decent zoning policies and green-collar jobs and public transportation don't cost a huge amount, but can make a tremendous difference that has long-term economic advantages both locally and nationally."

Carter lives in the Hunts Points section of the South Bronx with her second husband, James Chase, a communications specialist. The two were married in October 2006, in the park on the Bronx River that she helped to develop.

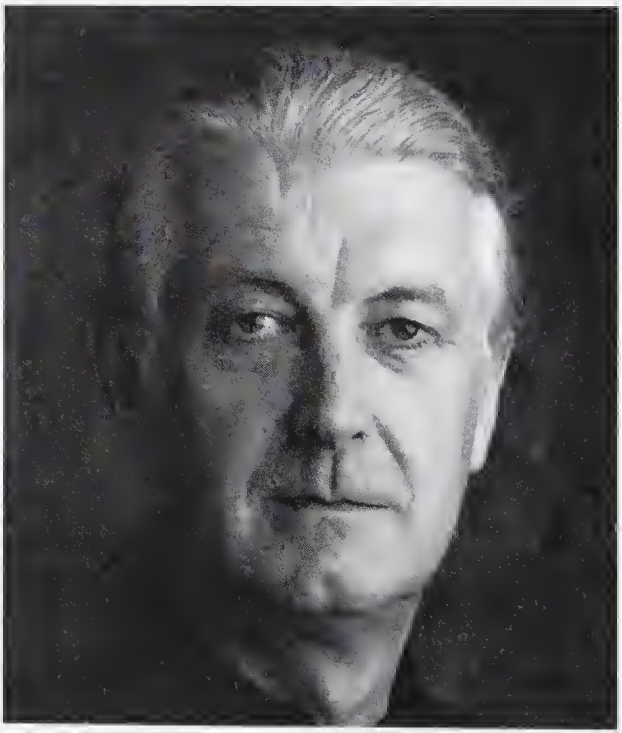
Carter, Matthew

Oct. 1, 1937– Typographer

Address: Carter & Cone Type Inc., 2155
Massachusetts Ave., Cambridge, MA 02140



Steve Marsel Studio, courtesy of Carter & Cone Type Inc.

The typographer Matthew Carter is an artist, but his work rarely appears in the traditional venues of museums and galleries. Rather, the two dozen typefaces he has designed—among them ITC Galliard, Bell Centennial, Helvetica Compressed, Skia, Verdana, Georgia, Cochin, Big Caslon, Bitstream Charter, and Snell Roundhand script—are almost everywhere in the printed materials of everyday life and on computer screens. The British-born Carter "commands a wider audience for his work than most artists ever dream of," Johanna Drucker wrote in an essay about Carter's creations, as quoted by John D. Berry for creativepro.com (November 4, 2002). "Open a book catalog from any major publisher and you will see ITC Galliard. Browse a newsstand and some version of Miller News will pop into view. Go online and you'll find Verdana everywhere on the Web. Use a reference book. Find a telephone number. Buy a ticket for an event. Read an announcement in a digital source. Carter's work pervades the media through which the messages you receive are being conveyed." Carter has designed type for some of the most prominent magazines and newspapers in the world, including the *New York Times*, the *Washington Post*, the *Philadelphia Inquirer*, the London *Guardian*, *Time*, *Newsweek*, *Sports Illustrated*, *U.S. News & World Report*, *Wired*, and *National Geographic*. He also created the on-screen font for Microsoft and the font used in AT&T phone books.

Since the mid-1950s, when he began his professional life, Carter has witnessed the technological evolution of his craft—one that now increasingly relies on computers, after hundreds of years during which metal type was set by hand and then by machines so noisy that their operation was considered an ideal job for the deaf. "I'm lucky because I must be the last generation of people who could have made type all the ways type could have been made," he told Quendrith Johnson for the *Boston Business Journal* (March 19, 1990). "We're in the throes of the greatest technical revolution that has ever overtaken us. Through most of type's history you would have been born and died with the same technology." With those advances in technology has come an increased interest in typography. A half-century ago only a few fonts existed; today there are more than 40,000. "I used to hate social gatherings and such," Carter told Johnson. "When you say you're a type designer people would say, 'I thought they were all dead.' The level of awareness of types and typography has grown enormously." Called "the king of contemporary type design" by Alice Rawsthorn in the *New York Times* (February 26, 2006), Carter encourages members of the public to trust their instincts regarding fonts and to use type as a functional art form. "Type is a way in which people can express their personality or point of view or taste, even in humdrum office communications," Carter told Jon Pepper for *Lotus* (September 1989). "Choice of type isn't much different from choice of clothing or choice of food."

Matthew Carter was born on October 1, 1937 in London, England, to Harry Graham Carter and Ella Mary (Garratt) Carter. He has a younger brother. His father, who earned the title Officer of the British Empire (OBE), was a distinguished typographer, book designer, linguist, and printing historian; he created the font Cyrillic Baskerville and, while stationed in what was then Palestine during World War II, a Hebrew typeface. He was the author of several books, including *A View of Early Typography Up to About 1600* (1969) and *A History of the Oxford University Press* (1975), and is the subject of *Harry Carter, Typographer* (2005), by Martyn Thomas and others. Matthew Carter's mother studied architecture but never completed the qualifications necessary to become a certified architect; instead, she worked as a draftsman. After the Germans began to bomb London, in 1940, a year after the outbreak of the war, the Carters bought a house in Croydon, about nine miles south of central London. The family later had to evacuate Croydon, leaving most of their possessions behind. In one of Matthew Carter's earliest memories, his mother cut letters of the alphabet out of linoleum to teach him how to read; the letters, he has recalled, were in the font Gill Sans. (Eric Gill was a renowned early-20th-century British type designer; "sans" refers to the absence of serifs, the small, nonstructural appendages on letters, such as the horizontal lines at the tops and bottoms of the verticals in the font used in *Current Biography.*) When Carter was seven he began attending a boarding school, where his interests in art and jazz made him feel like an outsider. Carter recalled to Alec Wilkinson for the *New Yorker* (December 5, 2005) that his housemaster, assuming that he would never become fit for a high-status job in, for example, the law or finance, repeatedly told him, "Carter, you'll never be a gentleman."

In 1955, when Carter was 17, he won acceptance to Oxford University, in England. Many college freshmen in England at that time had already served in the armed forces. Carter could not enter the military, because he had asthma, and thus he was younger than most college-bound students. For that reason, Oxford officials advised him to take a year off before beginning his undergraduate studies. His father arranged an internship for him at Johan Enschede & Zonen Printing Works, an esteemed printing company in Haarlem, in the Netherlands. Though most printing houses had switched to mechanically produced type in the late 19th century, Enschede still employed a manual technique, called punch cutting, that was hundreds of years old. "There was a very tactile aspect to the whole thing," Carter recalled to Christopher Cox for the *Boston Herald* (June 15, 1999). "I enjoyed getting my hands dirty." Carter's talents lay not in his dexterity but in his artistic imagination. "Although I couldn't write particularly well . . . ," he told Margaret Re in an interview published in *Typographically Speaking*, quoted by Wilkinson, "I could see in my mind's eye what I wanted the letter to look like, and I could perfectly understand the sequence of the pen strokes that went into making the letter. I just couldn't make the pen do it." After apprenticing under P. H. Raedisch at Enschede for a year, Carter decided not to enroll at Oxford but to pursue a career in type design full-time.

In 1956 Carter returned to England and, while living with his parents, painted signs and lettered other items. The next year he moved to an aunt's residence in London and found work with a group of progressive designers who were trying to modernize the look of type styles used in England. In 1959, while still freelancing, he became the subject of a cover article in the *New Mechanick Exercises*, a journal about typography and printing. "*Mirabile dictu*" ("wonderful to relate"), the article stated, as quoted by Wilkinson, "a new and extremely promising hand-punchcutter has lately emerged and set up business as an engraver of steel punches, lettering artist and typographical designer. His name is Matthew Carter." Around that time a friend of his father's took Carter to lunch and asked him if there was anything he wanted; Carter answered that he wanted to go to New York. The family friend gave Carter £300, and in April 1960 Carter arrived in New York. The city—and its design culture—was a revelation for Carter. "I was made abruptly and forcefully to realize that I knew nothing," he told Wilkinson. "The cowardly part of me could have gone back to England and pretended I hadn't seen all of this design. Or I could decide, 'Wake up, Matthew, you've been living in a fool's paradise. You crossed the Atlantic and found something that knocked you sideways, now it's your move.'" Unable to find a job in New York, Carter went back to England, where in 1963 he began working as a typographical adviser for Crosfield Electronics, the British manufacturer of Photon/Lumitype, a phototypesetting machine. While at Crosfield, Carter designed a few fonts, including one for a new terminal at Heathrow Airport, which serves London. “That was not wasted time, but I didn’t really produce any work in that first decade that stood the test of time,” he said to Simon Esterson for *Creative Review* (April 6, 2005). “There was a big gap before I could get myself in a place where I could do some work.”

In 1965 Carter got a job with Mergenthaler Linotype, in the New York City borough of Brooklyn. The Linotype machine, invented by Ottmar Mergenthaler in 1886, set type mechanically, doing away with the laborious method of setting each letter in a line of type by hand. Within his first year there, Carter designed the font Auriga; the following year, he designed Snell Roundhand, one of the first fonts to connect letters written in cursive script. During the next five years, Carter designed Helvetica Compressed, Olympian, ITC Charter, and Greek and Korean typefaces, among others. In 1971 Carter moved back to London to work for the British division of Mergenthaler Linotype. During his 10 years there, he designed the fonts Balliard and Shelley script and fonts for characters used in printed Hebrew, Greek, and Devangari (a script used for a number of Indian languages, including Hindi and Sanskrit). In 1974 Carter received a commission from AT&T to create a new font for the company’s telephone books. The assignment was very specific: AT&T (then known as the Southeastern Bell Corp.) wanted the smallest possible type that could be printed legibly on the low-grade paper used for the books. That limitation did not trouble Carter. “I like to work in a situation that has some constraints,” he told Cox. “If you put a big blank canvas in front of me on a Monday morning and say, ‘Make an amazing design,’ it would be blank come Friday. I wouldn’t know where to start.” Carter completed the design of Bell Centennial in 1978. He had increased the phone directories’ readability by making the typeface for addresses slim and the face for names and numbers wide and heavy—that is, boldface—enhancing the contrast while saving space and the corresponding printing costs. From 1980 to 1981 Carter was a consultant for the Printer Planning Division of IBM. For four years beginning in 1980, he also served in Great Britain as the typographical adviser to Her Majesty’s Stationery Office, whose activities include the printing of legislation. In 1982, also in Britain, the Royal Society for the Encouragement of Arts, Manufactures & Commerce (RSA) named him a Royal Designer for Industry, a designation that, according to the RSA’s Web site, recognizes “people who have achieved sustained excellence in aesthetic and efficient design for industry.”

In addition to becoming known for his emphasis on functionality, Carter made a name for himself with his ability to modernize historic fonts, making them look both classic and contemporary. An example is ITC Galliard (ITC is the acronym of the New York–based International Typeface Corp., which issued the new typeface). After working sporadically on it since the 1960s, Carter completed the design of ITC Galliard in 1978. Based on a typeface created in the 16th century by the French punchcutter and printer Robert Granjon, the font became popular almost immediately and is considered a great achievement not only in typography but in design in general.

In 1981, with three of his Linotype co-workers—Cherie Cone, Mike Parker, and Rob Friedman—Carter founded Bitstream Inc., in Cambridge, Massachusetts. The first digital-type company, Bitstream offered fonts appropriate for computers and laser printers, whose requirements differ from those of Linotype or phototypesetting machines. The advent of the computer led to an unprecedented evolution in type design, because it enabled typographers to create fonts electronically rather than through the painstaking hand-carving that had characterized the art for so long. “I’m sometimes a bit nostalgic about the time when it was a tiny club, when you had to go through painful initiations in order to be a type designer,” Carter told Esterson, “but on balance, I’m glad the whole thing got blown wide open by the computer. . . . If I had my choice of period in which to have worked in this business I would choose exactly the one that I happen to have lucked into, precisely because of all these changes. I’m endlessly glad to have survived into the digital era because I regard that as the best technology we’ve ever had. There are some drawbacks, there have been some losses, but for me, it’s just a dream.” Acting as the vice president and director responsible for design standards at Bitstream, Carter designed many of the company’s most popular fonts, including Bitstream Charter in 1987. Other fonts produced at Bitstream during Carter’s decade with the firm include Swiss 721, Arrus BT, Oz Handicraft BT, Gothic 821, and Iowan Old Style BT.

As Bitstream expanded into other areas of software development, Carter wanted to focus his energy on design. To that end, he and Cherie Cone left the company in 1991 and founded Carter & Cone Type Inc. Based in Cambridge, Massachusetts, Carter & Cone became the exclusive studio for Carter’s designs. The fonts Carter has created while at Carter & Cone are considered some of his most beautiful and innovative: Elephant (1992, renamed Big Figgins in 1998); Mantinia (1993); and Big Calson and Skia (1994), the latter of which was a commission for Apple Computer Inc. In 1995 he created Walker, for the Walker Art Center in Minneapolis, Minnesota, and Sophia, for the Museum of Fine Arts in Boston, Massachusetts, whose design was influenced by the lettering on a Roman chalice in the museum’s collection. In 1994 Carter began work on a commission from Microsoft for an onscreen font that would be of the utmost readability. “That whole episode with Microsoft is something that I very much enjoyed and was interested in, because it did have constraints, and a lot of difficulties," Carter told Esterson. The resulting font, Verdana, has been widely praised for its legibility at both large sizes (at which many other fonts get jagged edges or become blurred) and small (at which letters such as the lowercase "i" and "l" may become indistinguishable). Microsoft released Verdana in 1996 with its software and also offered free downloads of the font from its Web site, encouraging its wide distribution. In the same year, also for Microsoft, Carter completed the design of Georgia, a font considered Verdana's equal in on-screen readability. Verdana has become one of the most widely used fonts on the Internet, and Microsoft has said it will keep both Verdana and Georgia available without charge.

Carter wrote the introduction for *Type Graphics: The Power of Type in Graphic Design* (2001), by Margaret E. Richardson. The following year his work was the subject of an exhibit at the University of Maryland, called Typographically Speaking: The Art of Matthew Carter. The exhibit, which later traveled to universities around the country, included dozens of drawings, sketches, and printed examples documenting Carter's creation of various fonts. The show's catalog was published as a book with the same title in 2003. Reviewing it for *Library Journal* (October 15, 2003), Phil Hamlett called the volume "handsome." "Essential for those interested in typography, the book also contains rewards for a general public coming into a wider appreciation of type and typesetting by virtue of the proliferation of desktop publishing," he wrote. Also in 2003 the Museum of Modern Art in New York, commonly called MoMA, asked Carter to "refresh" the typeface—Franklin Gothic No. 2—used for its logo and all its printed matter, including its name on coffee mugs. "That opportunity to really study these letterforms and capture them as faithfully as I could was sort of an education to me," Carter told Andrew Blum for the *New York Times* (September 21, 2003). Museum executives, Blum wrote, "spent eight months scrutinizing every tiny step in the process" through which Carter made extremely subtle changes. "You would have to look rather closely" to see them, Blum reported. "Extremely closely. In fact, someone could set the old logo and the new logo side by side and stare for some time before detecting even the slightest distinction." He added, "The folks who led the exhaustive makeover process couldn't be more pleased." In 2004 Carter redesigned a family of typefaces for Yale University; with names including Yale Administrative Roman and Italic, Yale Design Roman and Italic, Yale Small Capitals, and Yale Web Small Capitals, the fonts are used for everything from school catalogs and annual reports to signs that must be visible from a distance.

Carter is a member of the Alliance Graphique Internationale and chairman of the type designers' committee of AtypI (Association Typographique Internationale). He has received the Frederic W. Goudy Award in Typography from the Rochester Institute of Technology for outstanding contribution to the printing industry; the Middleton Award from the American Center for Design; the Chrysler Award for Innovation in Design; the Vadim Award from the Moscow Academy of Graphic Design; and medals from the AIGA (originally, the American Institute of Graphic Arts) and the Type Directors Club. Carter has been a senior critic on Yale University's Graphic Design faculty since 1976. He has received honorary doctor of fine arts degrees from the Art Institute of Boston and the Minneapolis College of Art and Design.

When Andrew Blum visited him in 2003, Carter's home was a third-floor walk-up apartment in Cambridge, Massachusetts. Carter lives with the artist Arlene Chung.

Cat Power

Jan. 21, 1972– Singer; songwriter

Address: Matador Records, 625 Broadway, 12th Fl., New York, NY 10012

Over the last dozen years, Chan Marshall, better known as Cat Power, has built a reputation for writing and performing songs whose melancholy is enhanced by what has been called the "yearning" quality of her rough-edged voice. "A lot of people think my music is sad. It's not sad, it's triumphant. I'm triumphant," she said to Cynthia Joyce for *Salon.com* (September 30, 2006). "If people can be open enough with themselves to be creative and let things like that come out, you know, allow themselves to feel things enough to be that honest with themselves I feel that's really positive. Even though that might sound sad." Cat Power is nearly as well known for her eccentric onstage style as for her music, with shows that often involve as much self-criticism and ill temper as performance—and that seem to have only added to her mystique and the size of her following. She is "one of those rare enigmas in the entertainment industry. She hates to perform," Benjamin Law wrote for the Queensland, Australia, *Courier Mail* (August 16, 2003). "Worse still, when she does perform she's prone to dissect her own performance even before she's left the stage." Cat Power has charmed critics and ordinary music fans alike with songs that combine elements of rock, folk, punk, soul, and blues. Her albums include *Dear Sir* (1995), *Myra Lee* (1996),

Cat Power

Moon Pix (1999), *You Are Free* (2003), and *The Greatest* (2006), which received the coveted Shortlist Music Prize. Her album *Jukebox* was due for release in early 2008.

Cat Power was born Charlyn "Chan" (pronounced "Shawn") Marie Marshall on January 21, 1972 in Atlanta, Georgia, to Charlie and Myra Lee Marshall. Because her father was an itinerant blue pianist, Marshall led a peripatetic existence, never staying in one place long enough to form long-term friendships. During Marshall's childhood her parents divorced, and both remarried, forcing Marshall and her sister to move constantly to and from the homes of their mother (a self-described hippie) and grandmother; little of the songwriter's early life was spent with her biological father. Her stepfather's job also kept the family on the move, with the result that Marshall attended 10 different schools, in cities that included Memphis, Tennessee, and Greensboro, North Carolina. Marshall's family had a history of alcohol abuse and psychological problems, and she herself began drinking at an early age.

As a girl Marshall listened to the music in her stepfather's collection, which included records by Creedence Clearwater Revival, the Rolling Stones, and Otis Redding (her favorite singer). She wrote her first song, "Windows," when she was in fourth grade. On that occasion, as she explained to an interviewer for *Spin* (November 22, 2006, on-line), "I felt like I had a secret, like I had made a life for myself." (She noted to the *Spin* interviewer that the song is "very similar" to one of her later compositions, "Norma Jean.") As she became passionate about music, she started listening to the songs of the legendary singer-songwriters Bob Dylan (who became her favorite songwriter), the southern rockers Lynyrd Skynyrd and the Allman Brothers, the soul diva Aretha Franklin, and the pop / jazz singer Roberta Flack. At 16 she became estranged from her mother and went to Atlanta to live with her father, with whom she also had a strained relationship. Her father did not allow her to touch his baby grand piano, but whenever he left the house, she would use the opportunity to teach herself to play. During that time she also bought her first guitar, a 1950s-era Silvertone, but left it untouched in the corner of her room for two years before attempting to play it.

Marshall dropped out of high school during her senior year, in the late 1980s, and moved out of her father's house. (The two are no longer on speaking terms.) She went to live with friends who were part of Atlanta's underground music scene, similar in many respects to Seattle's grunge / indie rock movement of the same period. An early mentor introduced her to such seminal underground bands as Rocket from the Tombs and to modernist literature, including James Joyce's novel *Ulysses*. After forming bonds with other musicians through a number of impromptu basement jam sessions, Marshall became the lead singer of a group that included the local musicians Glen Thrasher and Mark Moore. On the day of their first show, Marshall, who was working as a cashier at a pizzeria, received a last-minute call from Moore, who needed a name for their band. Staring at the long line of customers before her, Marshall saw an elderly man wearing a cap emblazoned with the words "Cat Diesel Power," and she yelled "Cat Power" into the telephone before hanging up.

As Marshall was attempting to launch her music career, her friends succumbed to the effects of drug use. "I was working as a waitress in Atlanta when my boyfriend passed away and I completely lost my mind. Then my best friend died of AIDS. Everyone I loved in Atlanta was on heroin," she recalled to Will Hodgkinson for the London *Guardian* (May 23, 2003). In 1992, to escape that environment, Marshall—all but penniless—moved with Thrasher to the East Village section of New York City.

The two shared a room in a cheap apartment and found gigs in the Lower East Side clubs ABC No Rio and Brownies, among other venues. Marshall continued to support herself through waitressing and working numerous odd jobs, which included organizing the apartment of a woman who had obsessive-compulsive disorder and unloading trucks in the meat-packing district for $25 per day. She and Thrasher performed as Cat Power for six months before Thrasher quit the act and went back to Atlanta. Thinking that the act had come to its end, Marshall was surprised when an art-punk group called God Is My Co-Pilot booked her to play solo as its opening act at the legendary punk mecca CBGB's. It was at that point that Marshall took "Cat Power" as her stage name. Several days later she was asked to be an opening act for her fellow fledgling indie rocker Liz Phair. Her performance impressed Sonic Youth's drummer, Steve Shelley, and Tim Foljahn of Two Dollar Guitar, who agreed to back her in the studio, helping Marshall to record her first two albums, *Dear Sir* (1995) and *Myra Lee* (1996) in a single day. The two albums (the latter named for her mother) were noted for Marshall's unpredictable, stream-of-consciousness lyrics. Heather Phares, reviewing *Myra Lee* for the All Music Guide (on-line), wrote that Marshall's "yearning voice lends extra emotion to her songs" and that the album's "raw, overheard sound" gave it "a sonic honesty" that paralleled the raspy-voiced singer's writing. In the mid-1990s Marshall developed a strong underground following for her exciting, sometimes bizarre live shows.

On the strength of the acclaim her first two albums had received, Marshall signed with the Matador label in 1996. That year she released *What Would the Community Think*, a departure from her first two albums, offering a personal approach to songwriting in place of the detachment that marked *Dear Sir* and *Myra Lee*. The album's opening track, "In This Hole," which tells the tale of poverty-stricken, star-crossed lovers, includes the lyrics, "One absence of truth / One horrible thing you saw / What you truly wanted to become / And who you thought I was / Who you thought I was / In this hole we have fixed / We get further and further / Further from the world / We must do / We must do." The album also highlights Marshall's strengths as a soul singer, particularly in the songs "They Tell Me" and "Taking People."

During the three-month tour—co-headlined by the alternative rock band Guv'ner—that she undertook in support of her album, Marshall became notorious for her onstage behavior. Alternately contrite and belligerent, she would apologize repeatedly to the audience for mistakes, make startlingly abrupt transitions between songs, perform with her back to the audience, or simply walk out in the middle of a set. Much of that behavior was attributed to drunkenness. Instead of driving fans away, Marshall's erratic behavior added to her cult status, and critics embraced her as a tragic heroine. Ben Ratliff, reviewing a Cat Power show for the *New York Times* (January 5, 1999) a couple of years later, wrote, "Gone was the idea of exultation, or of showing what one can do; in its place was outrageously passive-aggressive behavior and nonmusicianship. The show was a meaningful comment on current indie-rock esthetics: Ms. Marshall makes music that's the equivalent of a lifeless handshake, but she has enough artistic credibility to sell out the medium-size hall." After the tour Marshall took a hiatus from the music world, working as a babysitter in Portland, Oregon, and spending time in Prosperity, South Carolina, with her boyfriend at the time, Bill Callahan, of the music group Smog. It was there that she wrote the material for her fourth studio album, *Moon Pix*.

The story behind the inspiration for that album has been the subject of much rumor. In an interview with Matt Dorman for *Comes with a Smile* magazine (Winter 1998/1999), Marshall recalled that in South Carolina, "I had a dream that somebody was telling me to come into the field—'cause I live behind a field—basically to die, or something. I realised that I didn't want to die so I woke up and didn't meet the voice in the field and then I went and wrote this record. And then two close friends of mine died the next day." Soon afterward Marshall persuaded Matador to fly her to Melbourne, Australia, with Callahan (who was already heading there), to record *Moon Pix* at Sing Sing Studios with the Dirty Three members Jim White (on drums) and Mick Turner (on guitar). "On *Moon Pix* I had no idea what I was doing," Marshall explained to Brian Garrity for *Billboard* (March 11, 2000). "I didn't know what I wanted when I walked into that studio. . . . Everything was just impulsive and just making stuff up." While Marshall considered the record unfocused and spontaneous, critics hailed it as being her most accomplished to date. Ryan Schreiber, in a review posted on the Pitchfork Media Web site (November 1, 1998), wrote, "Her sound is like Liz Phair on Valium mixed with the lonesome, desert highway tone of Modest Mouse. It's pretty, clever, and terribly depressing—all of which are common traits in any classic statement-making album." Standout songs on the album include "Cross Bones Style," inspired by Madonna's "Lucky Star"; "American Flag," which used the drum loop from the Beastie Boys' "Paul Revere"; and the melancholy "Say." One critic remarked that a line from the last-named song, "If you're looking for something easy, you might as well give it up," summed up the nature of the album.

In November 1999, following the *Moon Pix* tour, Marshall entered the studio to make her next album. She chose to record the covers of other artists' songs that she had been playing during live shows. (Marshall has explained that she often feels more comfortable playing others' songs than performing her own, much like an actress who, ill at ease in her own skin, prefers to portray a character.) *The Covers Record* (2000), which featured Marshall's versions of songs by the likes of the Rolling Stones, Bob Dylan, the Velvet Underground, Moby Grape, and Lou Reed, received widespread critical acclaim.

After three years of touring the world, Marshall returned to the U.S. to record original material for *You Are Free* (2003). Perhaps her most celebrated album to date, the diverse *You Are Free* juxtaposed Marshall's quiet solo work with traditional rock and included work by the guest musicians Dave Grohl (of Nirvana and Foo Fighters), Eddie Veder (of Pearl Jam), and Warren Ellis (of Dirty Three). On songs such as "I Don't Blame You," the singer reflected on her own flaws, with lyrics that include, "Last time I saw you, you were on stage / Your hair was wild, your eyes were red / And you were in a rage / You were swinging your guitar around / Cause they wanted to hear that sound / But you didn't want to play / And I don't blame you." In the song "Free," she attempted to separate music from the trappings of being a rock-and-roll celebrity, with lines such as, "Don't be in love with the autograph / Just be in love when you love that song on and on." In the bleak "Names," Marshall sang about child abuse and lost loved ones. With *You Are Free*, Cat Power gained mainstream success, including a high-profile appearance on *The Late Show with David Letterman* and moderate exposure on MTV2's weekly music show *Subterranean*.

Such success did not prevent Marshall from entering a period of depression. Due in large part to her breakup with her long-term boyfriend, she began drinking heavily. Her musical output in the months that followed was limited to the 2004 release of a DVD / CD package, called *Speaking for Trees*. The DVD portion, filmed by Mark Borthwick, featured a nearly two-hour, static shot of Marshall singing and playing electric guitar in the countryside; the CD contained only a single, 18-minute song, "Willie Deadwilder." *Speaking for Trees* received mixed reviews. In early 2005 Marshall started touring again, winning new fans with sold-out solo shows despite—or because of—her instability.

At Ardent Studios in Memphis, Tennessee, backed by musicians who included former members of Al Green's band, Teenie and Flick Hodges, Marshall recorded her seventh studio album, *The Greatest*, in the summer of 2005. Two weeks prior to the album's January 2006 release, Marshall had a nervous breakdown and was committed to Mount Sinai Medical Center in Miami, Florida, for psychiatric treatment. *The Greatest* received glowing reviews; centering on the theme of love and featuring brass and string sections on a number of songs, the album is considered her most uplifting to date. Christian Hoard wrote in a review for *Rolling Stone* (February 9, 2006), "*The Greatest* works up subtly atmospheric, sweet-and-sour country folk, propelled by a voice that sounds weathered by bad love and two packs a day—but determined to make autumnal beauty out of her bad memories." Notable songs included the record's title track, a ballad about a boy who dreams of becoming a boxer, and the closing song, "Love and Communication," which mixes lyrical poetry with ominous guitar grooves and string arrangements.

Currently sober, Marshall has written her next album of original material, *Sun*, which was due for release in the spring of 2008. Before that, she planned to release *Jukebox*; the highly anticipated follow-up to her 2000 covers album, it was to feature renditions of songs by James Brown, Billie Holiday, and Bob Dylan, among others, and an original piece, "Song for Bobby." Marshall supports numerous charitable groups, among them the Bereaved Israeli and Palestinian Parents' Circle and PETA (People for the Ethical Treatment of Animals). She has also shown an interest in acting, having recently had a part in the director Wong Kar Wai's *My Blueberry Nights*, which stars Rachel Weisz and Jude Law and debuted at the 2007 Cannes Film Festival.

Chen, Steve; Hurley, Chad; and Karim, Jawed

Co-founders of YouTube

Chen, Steve
1978(?)– Information-technology executive; entrepreneur

Hurley, Chad
1977(?)– Information-technology executive; entrepreneur

Karim, Jawed
1979– Entrepreneur; computer scientist

Address: YouTube Inc., 1000 Cherry Ave., 2d Floor, San Bruno, CA 94066

YouTube, the Internet video-sharing application that has become one of the fastest-growing Web sites ever, was started in 2005 by three former co-workers—Jawed Karim, Steve Chen, and Chad Hurley—who were frustrated by their inability to share their home videos over the Internet. Less than two years after its creation, YouTube had become one of the most popular Web sites on the Internet: according to the Web-traffic monitor Alexa Internet, YouTube, as of late 2006, was the seventh-most-trafficked site on-line. It commands a 46 percent market share of all visits to video Web sites in the U.S., and *PC World* magazine named it the ninth-best product of 2005. When the Internet giant Google bought YouTube at the end of 2006 for $1.65 billion in stock, the three founders—who, in what has become a dot-com cliché, literally started the company in one of their garages—made millions of dollars and became Internet celebrities, virtually overnight.

YouTube is considered to be the quintessential example of the movement known as "Web 2.0"—a term often used to describe a new generation of In-

YouTube co-founders Chad Hurley (left) and Steve Chen

ternet-based computer services that emphasize collaboration and sharing among users. YouTube, like the social networking site MySpace, is an enabler; the content for the site is supplied by the users, rather than those who run the site. By putting the programming in the hands of the audience, YouTube has become "the TV station you always dreamed of," according to a reporter for *BusinessWeek* (April 10, 2006, on-line): "YouTube offers mainstream shows from the current season, clips from TV's earliest days, and homemade movies from around the world. You watch what you want when you want, whether it's highlights from Los Angeles Laker Kobe Bryant's 81-point outburst in January or a 1968 clip of Johnny Cash performing 'Ring of Fire.'" Though analysts initially speculated that YouTube might be the new Napster—a highly successful file-sharing service that was shut down by court order for its inability to prevent users from exchanging copyrighted material—such traditional content providers as record labels and television networks have begun to realize that YouTube, rather than competing with them, can be used as a tool to attract new customers. "We want to be a destination that promotes the entertainment offered by these guys . . . ," Hurley told the reporter for *BusinessWeek*, referring to networks, record labels, and content providers. "We started this to solve a personal problem. Now we're creating a new way to reach audiences in an era where the traditional TV time slot doesn't exist anymore." Explaining why the editors of *Time* (online) chose YouTube as the best invention of 2006, Lev Grossman wrote, "YouTube created a new way for millions of people to entertain, educate, shock, rock and grok one another on a scale we've never seen before."

Jawed Karim was born in East Germany in 1979. His family moved to West Germany soon after Karim's birth, and then to St. Paul, Minnesota, in 1992. His father, Naimul, is originally from Bangladesh and works as a researcher at 3M; his mother, Christine, who is German, is a professor of biochemistry at the University of Minnesota at Minneapolis–St. Paul. Karim developed an interest in science and technology at an early age: his parents had trouble finding child care and often brought him to their labs, providing him with beakers and other lab equipment to keep him occupied. When Karim was 10 years old, his father bought him a used Commodore computer, and the precocious child quickly learned to write software code. While a student at St. Paul's Central High School, Karim created an e-mail system for the teachers, and during his senior year, he was hired by his mother's lab to create a Web site for it. While working on the site, he became interested in some of the research problems that his mother and her colleagues were studying, and he was inspired to map the atomic structure of a protein that was crucial to their work. He did so by creating a complex computational process that is now a standard in the field. After graduating from high school, in 1997, he enrolled at the University of Illinois at Urbana-Champaign to study computer science. He selected that school because it was the alma mater of Marc Andreessen, the co-founder of Netscape Communications Corp., the Internet company that popularized an early Web browser. In 2000, during his junior year in college, Karim dropped out and accepted a position at the Palo Alto, California, Internet company PayPal—which was then a fledgling payments-processing company and is now the world's largest on-line payment service.

Steven Chen was born in August 1978 (some sources say 1979) in Taiwan. His family moved to the U.S. in 1986, and he was raised in the northwest Chicago suburb of Prospect Heights. Chen, who was interested in math and science from an early age, attended John Hersey High School, in nearby Arlington Heights, for his freshman year. He then transferred to the prestigious Illinois Mathematics and Science Academy, in Aurora, where he learned about computer programming, for his sophomore and junior years. He returned to Hersey for his senior year. John Novak, Chen's tennis coach and calculus teacher at Hersey, told Shamus Toomey for the *Chicago Sun-Times* (October 12, 2006, on-line) that Chen "was a pretty solid 'B' student. He didn't do anything to really stand head and shoulders above everybody else." Chen enrolled in the same computer-science program as Karim at the University of Illinois at Urbana-Champaign; Chen, too, left the program before graduating to join PayPal.

The second of Donald and JoAnn Hurley's three children, Chad Hurley was born in about 1977 and grew up in suburban Philadelphia, Pennsylvania. He has an older sister, Heather, and a younger brother, Brent, who was hired by YouTube in 2006. Hurley got his entrepreneurial start when, as a five-year-old, he attempted to sell his paintings from his front yard. After graduating from Twin Valley High School, in Elverson, Pennsylvania, Hurley attended Indiana University of Pennsylvania (IUP), studying both print and Web design. Hurley earned a bachelor's degree from IUP in 1999. He submitted his resumé to PayPal after reading an article about the company in *Wired* magazine. During his interview with PayPal managers, he impressed his questioners by designing a T-shirt for the company on the spot. While with the company, he designed its first user interface and company logo.

Karim, Hurley, and Chen earned millions when the Internet shopping portal eBay bought PayPal for $1.5 billion in 2002. Like many of their colleagues, Hurley and Karim left PayPal shortly afterward; Chen stayed on until early 2005 to help the company launch its operations in China. Between 2002 and 2005 Hurley worked as an independent consultant in the Silicon Valley region of California, and Karim completed his bachelor's degree in computer science by taking courses on-line and at Santa Clara University, in California. Although the three were no longer working together, they stayed in touch and saw each other at PayPal reunions. (PayPal alumni are a famously close-knit group, and many have worked on projects together after leaving the company. They are sometimes called the "PayPal mafia.") By 2005 Hurley, Chen, and Karim had begun talking about forming their own Internet start-up. They often met for late-night brainstorming sessions at one another's homes or at 24-hour diners.

Inspiration struck the three following a party at Chen's San Francisco, California, home. Several people at the party, including Hurley, Chen, and Karim, had recorded digital videos during the event. The three friends discovered a mutual frustration in their inability to share those clips over the Internet. The files were too large to be e-mailed, and posting them on Web sites was a tedious process that often required users to install or update software. The three friends quickly realized that many people were likely facing the same problems. YouTube was developed over the course of the next few months in the garage of Hurley's Menlo Park, California, home. The team designed the site so that visitors can upload video to the YouTube server in a variety of video formats, including QuickTime, WMV, or AVI. Once uploaded, a visitor's file is then automatically converted into the FLV format, which is played using Adobe Flash Player software. Most Internet browsers come with a Flash plug-in already installed; it is standard in the top three browsers—Microsoft Internet Explorer, the open-source browser Firefox, and Apple's Safari—which, according to the HitsLink Web site, have a combined market share of 98 percent. Consequently, the vast majority of visitors to YouTube do not need to download new software or update their current software in order to view the available clips.

The domain name YouTube.com was activated in February 2005. Karim uploaded the first video—an 18-second clip of himself standing in front of the elephant pen at a California zoo—to the YouTube site on April 23, 2005. By that point the founders had agreed that Karim would not accept a formal title or salary from the company, remaining only a consultant while he pursued his master's degree in computer science at Stanford University, in Palo Alto. He remained one of the company's largest individual shareholders, though he retained fewer shares than Chen and Hurley. Hurley became the chief executive officer, and Chen became the chief technical officer. The two divided their tasks according to their abilities and interests, with Hurley concentrating on the user interface of the site and Chen coordinating the architecture and the technical aspects of their company. As CEO, Hurley, who was more familiar with technology and design than with the rudiments of running a company, had to acquire general business skills on the job.

In an effort to expand the capabilities of the Web site, the founders searched for investors and ultimately turned to Roelof Botha, a former chief financial officer at PayPal, who had become a partner at Sequoia Capital—a venture-capital firm that had previously scored dot-com success with Google, Yahoo!, and PayPal. Botha negotiated Sequoia's initial offering of $3.5 million, adding $8 million in April 2006. The funds were used to enhance product development and expand the Web site's sales and marketing efforts. Within a year of its inception, YouTube became one of the most trafficked Web sites on the Internet; by late 2006 YouTube was drawing nearly 100 million viewers each day.

Though many YouTube visitors post home videos or other original content on the site, others post such pirated materials as clips from their favorite sporting events or television shows. YouTube's terms of use explicitly state that users should not post copyrighted material without permission, but its administrators do not review each post, and remove copyrighted material only when the owners complain. In February 2006 NBC asked YouTube to remove from its site a two-and-a-half-minute segment called *Lazy Sunday: The Chronicles of Narnia*, which featured a rap by *Saturday Night Live* cast members Chris Parnell and Andy Samberg, from its site. The clip originally aired on the network on December 17, 2005 and later created considerable buzz on-line, particularly on YouTube, which hosted multiple copies of the segment, with one version prompting more than five million downloads. *Lazy Sunday* was also available on the show's official site, but, according to Anne Broache for *CNET News* (February 17, 2006, on-line), "its embedded video player appears to work only with Windows."

Ironically, NBC's demand that YouTube remove *Lazy Sunday*, as well as the network's coverage of segments from the 2006 Olympic Games, won even greater publicity for the Web site. In June 2006 the network, recognizing the marketing potential of allowing portions of its programs to air on-line, took the unusual step of creating a strategic partnership with YouTube; NBC agreed to promote the Web site on some of its shows and bought ad space and uploaded promotional videos for its programming. YouTube has since reached agreements with other content providers, including the National Hockey League and such recording labels as Sony BMG, Warner Music Group, and EMI. CBS executives also came around, after YouTube's posting of a CBS News story about an autistic teenager who made six three-point shots in a high-school basketball game generated enough buzz on-line to win the youth a visit from President George W. Bush and a contract to create a film based on his life. "You've got to find the fine line between the great promotion YouTube gives a network, and protecting our rights," Sean McManus, the president of CBS News and Sports, was quoted as saying by a reporter for *TelevisionWeek* (July 16, 2006, online). "Our inclination now is, the more exposure we get from clips like that, the better it is for CBS News and the CBS television network, so in retrospect we probably should have embraced the exposure, and embraced the attention it was bringing CBS, instead of being parochial and saying 'let's pull it down.'"

YouTube has made several changes to its structure to help combat the existence of pirated material on the site. Clips are now limited to 10 minutes to prevent users from uploading entire episodes of shows. (That regulation is commonly circumvented by splitting longer pieces into several 10-minute clips.) The YouTube team is also working to develop software that will prevent users from reposting videos that were previously removed from the site. Still, some content providers argue that YouTube has not done enough to restrict copyrighted material and is, in fact, using such content to attract visitors.

At the end of 2006, Google bought YouTube for a reported $1.65 billion in stock. That news came as a surprise to both industry insiders and users of the site—some of whom have disparagingly referred to the collaboration as GooTube. While some business analysts questioned Google's decision to spend so much on a company that had yet to turn a profit, others viewed the purchase as a strong move for Google. According to Andrew Ross Sorkin, writing for the *New York Times* (October 10, 2006), Benjamin Schachter, a UBS analyst, wrote in a note to investors, "The price tag of about $1.6 billion is difficult to justify on a spreadsheet and may be somewhat of a throwback to the days of paying for eyeballs and page views, but this is a strategic bet that Google would be placing for a long-term objective: to be the technology and distribution partner for content owners and publishers." A conservative estimate lists YouTube's regular users at 50 million, which puts Google's purchase price at around $33 per user.

Some YouTube users criticized Chen and Hurley for selling out just months after Hurley announced that he had no intention of ending YouTube's independence. For their part, Chen and Hurley believed that the deal, which allowed them to retain control over the company, would be beneficial to YouTube's future. "We quickly realized that with Google's resources, we would have access to more resources and talents to drive towards our goal faster without needing to make sacrifices on product decisions," Chen explained to Toomey. "There's a long list of product ideas that we've had swimming in all our heads but we simply didn't have the resources to execute them." Reportedly, Chen and Hurley, who together owned an estimated 40 to 45 percent of the company, each received Google stock worth several hundred million dollars. Karim received less, though still a significant amount of money.

In October 2007, after being sued by a number of media companies (including the industry giant Viacom, which was seeking $1 billion in damages), YouTube unveiled its "Video Identification" content-filtering tool. The technology, intended to stop users from uploading copyrighted material, compares posted videos to samples contained in a database. When pirated material is found, the copyright holder will have the choice of removing the content or profiting from ads placed alongside the videos. "We're delighted that Google appears to be stepping up to its responsibility and ending the practice of profiting from infringement," Mike Fricklas, Viacom's general counsel, said, according to Eric Auchard, a Reuters (October 15, 2007) reporter. Attorneys for Google said the company was doing more than it was legally required to do to stop the spread of copyrighted materials, adding that the new filter had nothing to do with the lawsuits.

Hurley invested in the satirical film *Thank You for Smoking* (2006), which was produced by Room 9 Entertainment, a company founded by another member of the "PayPal mafia," David Sacks, the company's former chief operations officer. Karim—who, despite his success, reportedly lives in a student-residence hall at Stanford—has expressed an interest in becoming a university professor, but he has not ruled out developing another Web site.

In May 2007 *Time* magazine placed Chen and Hurley on its list of the 100 most influential people on the planet. The next month Chen and Hurley announced that YouTube would debut in seven new languages: Japanese, Polish, Dutch, French, Spanish, Portuguese, and Italian. In July YouTube become involved in the 2008 presidential race, as the Web site, in conjunction with CNN, hosted a debate in which the Democratic candidates answered questions submitted by users in video form. A similar debate for Republican presidential hopefuls was scheduled to take place in November 2007.

Chung, Kyung-Wha

Mar. 26, 1948– Violinist

Address: c/o International Creative Management (ICM), 40 W. 57th St., New York, NY 10019

The Korean-born violinist Kyung-Wha Chung was among the first classical musicians from Asia to gain prominence in Europe and North America. In 1960, at age 12, Chung left her native land to study with the highly influential and respected violin teacher Ivan Galamian at the Juilliard School, in New York City. Seven years later she shared the first prize in the Leventritt International Competition—one of the world's most prestigious contests for violinists—with Pinchas Zukerman. In 1970 her career received a tremendous boost, when, substituting on a few days' notice for another up-and-comer, Itzhak Perlman, she performed the Tchaikovsky Violin Concerto with the London Symphony Orchestra under André Previn, in England. Thanks to the rave review written by a London *Financial Times* critic, she immediately received invitations to appear as a soloist three more times with the same orchestra and, soon afterward, with many other distinguished groups. She has since performed with virtually every major orchestra and conductor, as well as in duos with such pianists as Radu Lupu and Krystian Zimerman and with chamber groups, among them the Chung Trio, whose other members are her brother Myung-Whun Chung, a pianist and conductor, and her sister Myung-Wha Chung, a cellist. She has made recordings for London Records, EMI, Decca, Angel, RCA, and Deutsche Grammophon. In addition to 18th- and 19th-century standards, Chung's repertoire includes extremely difficult 20th-century violin concertos that many accomplished musicians never attempt to tackle, among them those by Edward Elgar, Alban Berg, Béla Bartók, and William Walton. Chung played at the concert held at Royal Festival Hall, in London, England, to mark the 80th birthday of Walton, in 1982, and she has performed at the Salzberg, Vienna, and Edinburgh music festivals.

Chung's playing has often been described as unique. It has also been characterized as, by turns, passionate, fiery, tempestuous, and intensely exciting and also precisely articulated, sweet, smooth, and aristocratic. Chung told Mary Campbell for the Associated Press (February 14, 1999), "In every stage appearance I try to give a performance out of that moment, of utter conviction. It's unbelievably exhausting. The public can share and witness it." In an article for the London *Times* (May 5, 1990), Richard Morrison wrote that Chung "has always had an extraordinary ability to startle the ear with unexpected tonal colourings, to move from a burning brightness of timbre to dark intimacy in the course of a single bar, and"—referring to the renowned British classical actor John Gielgud—"to use a highly-developed bow control to articulate a passage with the subtlety of Gielgud reading a Shakespeare sonnet." "One strives for certain phrases or colours for years," Chung told Morrison. "You know inside your mind what you want, but it doesn't come. I can work for hours to get a precise colouring on just one note."

As a Juilliard student and for years afterward, Chung heeded Ivan Galamian's command, repeated countless times, to remain single and devote herself entirely to her career. A few years after Galamian's death, in 1981, she married; after the arrival of the second of her two sons, she reduced her concert schedule from approximately 120 appearances annually (an average of three per week during the nine-month concert season) to about 60, so as to have more time at home with her children. By her own account, motherhood has enriched not only her life as a whole but her playing as well. "This is exactly how . . . I'd like [my life] to be. I am living . . . my dream of what . . . I always wanted to be," she told the flutist Eugenia Zukerman during an interview for the CBS television program *Sunday Morning* (June 2, 1991).

Kyung-Wha Chung was born on March 26, 1948 in Seoul, South Korea, the fourth of the seven children of Chun Chai Chung, a Seoul police officer, who later became a restaurateur with his wife, Won Sook Chung. (Some sources list the name of Chung's mother as Yi-Suk Chung; a few mention an eighth child, who died in infancy.) *Time* (November 18, 1974, on-line) reported that Chun Chai Chung also managed a mushroom plantation after immigrating to the U.S. According to Anna S. Roh, writing for *koreana.or.kr* (Spring 2004), Chung's mother wrote her autobiography, which is largely about her children and became a best-seller in Korea. During the Korean War (1950–53), much of Seoul was destroyed, and the Chung family fled to the southern harbor city of Pusan. (Chung's father found temporary refuge in Japan. According to one source, the whole family eventually returned to Seoul.) Accounts of Chung's childhood differ slightly in terms of chronology and in other ways. From an early age Chung and her siblings were exposed to classical music, most of which was composed by Europeans. "Both my parents were music lovers," she told a writer for Asiaweek.com (1995). "Music was part of our education, and there was always music-making at home." Chung's younger brother, Myung-Whun Chung, told Howard Reich for the *Chicago Tribune* (November 27, 1988), "Western music . . . is an art form that's learnable—it's simply a language. One is not born with a talent for Western music or Eastern music. One is born with a sensitivity for music in general, and then it's a question of what you do with it." Kyung-Wha Chung began singing when she was two years old and performed in several singing contests as a child. At age five or so, like each of the Chung children in turn, she began to take piano lessons; later, she, like them, was encouraged to experiment with other instruments as well. She and her siblings showed remarkable ability and tenacity as budding musicians. "I think Oriental children have the drive to excel very early—they work with tremendous discipline," Chung told Reich. "Maybe it's because Korean society is still based on teaching and philosophies of [the Chinese sage] Confucius, which stress the beauty of living up to the expectations of your elders and your society." When a family friend (or relative, according to some sources) gave the Chungs a quarter-size violin, Kyung-Wha, who was then about six, immediately felt drawn to the instrument and its tones, which she has likened to those of the human voice. "I could make any kind of melody I wanted. . . . On the piano, my little fingers couldn't get around at all," she told Catherine Reese Newton for the *Salt Lake (Utah) Tribune* (April 27, 2003). She also told Newton, "My love of the instrument and love of music continue to grow." Within weeks, Chung had begun to play pieces by ear. "I had burning ambition. As a child I wanted to conquer the world, to become the biggest star in the whole world. You live in your dream; reality wasn't something I wanted to accept," she told Mary Campbell.

Chung has credited her parents with consistently supporting her musical goals and helping her to persevere through early setbacks, such as failure to advance past the preliminary round of a violin competition when she was eight. She won other contests in South Korea, however, and attracted much attention there. In 1961 she and her older sister Myung-So, a flutist, gained admission to the Juilliard School, with scholarships. (The next year the rest of the Chung family settled in Seattle, Washington, where Chung's parents operated a Korean restaurant at the 1962 World's Fair.) Kyung-Wha also took classes in a public school, where, as she recalled to Leslie Rubinstein for the *New York Times Magazine* (November 23, 1980), "I was afraid to speak English because I am a perfectionist, so for three years I barely spoke." At Juilliard she was shocked to discover how skillful and talented many of her fellow students were, and how large their repertoires were compared with hers. Her violin teacher there, Ivan Galamian, was extremely demanding; as Chung told Rubinstein, he "drove" her, and she "feared him like people feared God." "His biggest worry was that I would have a boyfriend, be distracted. He would tell me in the lesson, 'You won't marry?' I'd say, 'Oh, of course not, Mr. G." (Even years later, when Chung was performing extensively, Galamian told her repeatedly, "You are not a girl. You are my boy-girl," according to Barbara L. Sand, writing for the January 1, 1999 edition of the *American Record Guide*.)

Chung also pushed herself relentlessly, believing that she "had this obligation to my parents, my country, my six brothers and sisters, and always felt pressured and afraid of disappointing them," as she recalled to Rubinstein. In 1967 Chung participated in the Leventritt violin competition, held at Carnegie Hall, in New York City. Both she and the Israeli-born Pinchas Zukerman impressed the Leventritt jurors equally, and after trying in vain to decide which violinist deserved the top honor, the jury awarded the gold medal to both of them. During the next two years, Chung performed with the New York Philharmonic, the Chicago Symphony Orchestra, and other orchestras in the U.S. and Europe.

In her first New York City recital (a benefit concert for the Professional Children's School, in New York), Chung performed works for violin and piano (Jean-Marie Leclair's Sonata no. 3, Brahms's Sonata in D minor, Arnold Schoenberg's Fantaisie Opus 47, and Saint-Saëns's Introduction and Rondo Capriccioso) with her brother Myung-Whun, and Anton Arensky's Trio in D minor, with Myung-Whun and her sister Myung-Wha. After describing Chung and her siblings as "truly remarkable," Allen Hughes wrote in a review for the *New York Times* (February 25, 1970) that as the violinist played, "it seemed that she was probably incapable of producing an unattractive tone on the instrument. And she did not appear to be playing extra carefully, or gingerly, to keep the sound agreeable."

One day in the spring of 1970, Chung was asked to play Tchaikovsky's Violin Concerto in D major with the London Symphony Orchestra, under the baton of André Previn, at the Royal Festival Hall, in London; she was to replace the Israeli virtuoso Itzhak Perlman, who had suddenly become unable to fulfill his commitment to perform with the orchestra in a concert scheduled for a few days hence. "Sometimes one person's mischance becomes another person's chance. For a young player, replacing another artist can be the first stepping stone to a career," Chung observed to Edith Eisler for a 1990s interview posted on Amazon.com. "At first everything seemed to be against me," she recalled to Eisler: "I had stepped in at the last moment, and there was so much confusion that I hardly had any rehearsal, but as a result the musicians were all the more concentrated at the performance. The communication with the audience was very strong, so the event was a wonderful experience." A critic for the London *Financial Times*, as quoted by Mary Campbell, praised "the expressive force of [Chung's] performance: sweet, silken phrasing, soft and tender in the slow movement; beautiful playing, immeasurably mature." Recalling the review to Eisler, Chung called it "one of the best . . . I have ever received in my life. It was really quite embarrassing—[the critic] simply said I was better than everybody else, mentioning a lot of names." Soon after that concert, Chung got more than two dozen invitations to perform with major orchestras. During that period she also received instruction from the famous violinist Joseph Szigeti, and, following his advice, she began to visit art museums and galleries and to read great works of literature. Those activities, she has said, deepened her understanding of music and enriched her musical sensibilities.

Also in 1970, after illness prevented the singer Renata Tebaldi from attending a recording session for London Records, the company invited Chung to come to its studios to record both the Tchaikovsky and the Sibelius Violin Concertos; afterward, Chung signed a contract with the label. In 1972 the South Korean government awarded her the Order of Civil Merit, the nation's highest civilian honor. "Until she became a world-class violinist, it was only remotely possible for a Korean to achieve that kind of success," the conductor Kyung Soo Won told an interviewer for *Asiaweek.com* (1995). "It was like a dream in the clouds. But she showed it was possible."

Throughout the 1970s and the first half of the 1980s, Chung made about 120 appearances every year. She also continued to perform with Myung-Whun and Myung-Wha, as a member of the Chung Trio. According to the writer for *Time*, "Myung-Whun is intense, Kyung-Wha is fiery, and Myung-Wha pacific. . . . When family frictions do arise, the Chungs may find their strongest bond in their individual ability to make shafts of sound seem more vivid than anything else in life." In a critique of a Chung Trio performance at the Academy of Music in Philadelphia, Pennsylvania, Hubert Saal wrote for *Newsweek* (November 29, 1976), "Their teamwork and instrumental balance were razor-sharp, yet there was no sacrifice of individual voices, of the effervescent Kyung-Wha, the smoldering Myung-Wha, the deliberate Myung-Whun. To hear the Chungs make music together is to hear an ensemble whose members have played together all their lives." The Chungs have recorded trios by Beethoven, Dvořák, Tchaikovsky, and Shostakovich, as well as Beethoven's Triple Concerto, the last with the Philharmonia Orchestra of London, for the Deutsche Grammophon label.

In 1978 Chung took a six-month sabbatical from performing, to think about her life. "It's [a] very, very difficult thing to do, which I didn't realize," she told Eugenia Zukerman in 1991. "I just wanted . . . to just face—Where am I going?" When she began concertizing again, she was still "determined to be single," as she told Thor Eckert Jr. She would tell members of her family, as she recalled to Eckert, "Look, I've thought about marriage. I realized it's not possible, because I'm committed to my profession, and it would be unfair for me to have a family, because I won't do them justice." She added, "I suppose that was because a right person didn't come along." In 1984 Chung married a British businessman; over the next few years, she became the mother of two sons and cut her touring schedule by half. "I'm faced with, actually, what [a] normal human being faces: life," she told Eugenia Zukerman. "It isn't just something I read about or I sort of see from [the] side. I'm . . . actually living it." Chung told Frank Magiera for the Worcester, Massachusetts, *Telegram & Gazette* (January 17, 2000), "When you become a mother, you're an entirely different person. I have really nothing to do with what I used to be. My musical outlook grows and is nurtured by my surroundings. Now my family is the most important thing for me." She told Barbara L. Sand in 1999, "The whole hysterical issue of 'Where do I stand in my career? Am I going to get this date or that date?' no longer exists. I am just making music."

In the late 1980s Chung and her husband, who had been living in England, established a second home, in New York City. In 1988 Chung signed an exclusive contract with EMI Classics, to record a new series of albums and re-record earlier pieces produced for London Records. "Recordings are so personal for me," she told Marc Shulgold for the *Rocky Mountain News* (January 25, 1998). "Nothing is ever permanent in an interpretation—but that's not the case with a record. You have to leave something of your soul on that compact disc. The problem is, your soul is not perfect, so a recording never will be." Chung's rendering of Béla Bartók's Violin Concerto no. 2, recorded with the City of Birmingham Symphony Orchestra under Simon Rattle (on a disc that also contained Bartók's first and second Rhapsodies), won the 1988 Gramophone Award (often dubbed the Oscars of the classical-music world) for best concerto recording. She won a second Gramophone Award, 10 years later, for best chamber-music recording, for an album made with Krystian Zimerman, of violin and piano sonatas by Ottorino Respighi and Richard Strauss. Others among her albums include recordings of the Mendelssohn and Tchaikovsky Violin Concertos, with the Montreal Symphony Orchestra under Charles Dutoit (1990); Dvořák's Violin Concerto and Romance in F minor, with Riccardo Muti and the Philadelphia Orchestra (1990); Bartók and Berg's Violin Concertos, with the Chicago Symphony Orchestra under Georg Solti (1990); Beethoven's Violin Concerto and Bruch's Violin Concerto no. 1, with the Concertgebouw Orchestra Amsterdam under Klaus Tennstedt (1992); concertos by Prokofiev and Stravinsky, with the London Symphony Orchestra under André Previn (1998); *Souvenirs*, solo violin pieces by Bach, Debussy, Dvořák, and Jacques Ibert (1999); Vivaldi's *The Four Seasons*, with the St. Luke's Chamber Ensemble (2001); and *Con Amore: Violin Encores* (2006), which offers pieces by Chopin, Brahms, Debussy, Elgar, Wieniawski, Fritz Kreisler, and Eduard Poldini. Chung played several pieces for the album *Essential Violin* (2003). In 1999 the Decca Music Group reissued Chung's earlier recordings of Bruch's Violin Concerto no. 1 and Mendelssohn's Violin Concerto, as part of its Legends recording series.

In recent years Chung has performed with the Munich Philharmonic, the Helsinki Philharmonic, the Vienna Philharmonic, the Toronto Symphony Orchestra, the Philadelphia Orchestra, and the Boston Symphony Orchestra, among others. She plays an instrument produced in 1734 by the Guarneri family, famous for the extraordinary quality of their violins. Although she has spent relatively little time in South Korea in the past 46 years, Chung has told interviewers that she still regards herself as wholly Korean. She and her husband are the parents of two sons, Frederick and Eugene. The couple live in New York City and also maintain a home in southern England, where Chung enjoys gardening.

Cohen, Richard

Feb. 6, 1941– Columnist

Address: Washington Post, *1150 15th St., N.W., Washington, DC 20071*

As a *Washington Post* reporter for eight years beginning in 1968, and as a columnist at the paper since 1976, Richard Cohen has written about every presidential race in the United States since the Republican Richard Nixon ran against the Democrat Hubert H. Humphrey, and he has offered his opinions on a multitude of other topics and events thousands of times. Now 66, Cohen was born at the start of the third term of President Franklin D. Roosevelt, during World War II, and he has identified himself as a member of the generation that "went from radio to television, from party-line phones to poolside portables and from typewriters to computers," as he wrote in his October 7, 1990 *Washington Post* column. Currently published twice weekly and syndicated worldwide, Cohen's columns are generally viewed as having a liberal slant, but they are not amenable to rigid pigeonholing. In them he has expressed his thoughts on matters ranging from the mundane—whether or how much to tip an unsatisfactory waiter, for example—to life-and-death issues of national or interna-

Richard Cohen

tional import, among them the current war in Iraq and the ever-present armed or verbal hostilities between Jews and Arabs in the Middle East; occasionally, his pieces have thrust him into the center of contentious debate. Cohen's investigative reporting earned him awards from Sigma Delta Chi (the Society of Professional Journalists) and the Washington-Baltimore Newspaper Guild, and he was a finalist for the Pulitzer Prize three times, in 1987, 1989, and 1990, for his "eloquent" and "clear and controlled" commentary on social, political, and other national issues.

Richard Martin Cohen and his twin sister were born to Harry Louis Cohen and Pearl (Rosenberg) Cohen, a Jewish couple, on February 6, 1941 in New York City. His father, who was orphaned as a youngster, and his mother, who immigrated to the U.S. from Poland at age seven, both endured prolonged hunger and other hurtful circumstances in childhood. As Cohen wrote for the *Washington Post* (December 24, 2002), his father "marveled at the term 'job satisfaction.' To him, to his generation, it was satisfaction enough just to have a job." His mother as well as his father worked outside the home while he was growing up. Beginning in elementary school, Cohen often felt anxiety and even terror in his classes. In the *Washington Post Magazine* (November 15, 1987), he wrote, "When I was a student, I believed in the conspiracy theory of parenthood. I thought all parents had gotten together to lie about school, to say it was the best time of their lives. . . . What were these people talking about?"

After he graduated from Far Rockaway High School, in the New York City borough of Queens, Cohen entered Hunter College, in Manhattan, and later transferred to New York University. He attended classes at night and worked during the day; for that reason he was several years older than the average college senior when, in 1967, he earned a B.S. degree. He then enrolled in the graduate program in journalism at Columbia University, also in New York City, where he received an M.S. degree in 1968. Meanwhile, he had joined the staff of the *New York Herald Tribune* as a copy aide and then worked as a reporter for United Press International. After he left Columbia he completed military service (the universal draft was then in effect) at facilities within the continental U.S.

In 1968 Cohen moved to Washington, D.C., and began working for the *Washington Post* as a general-assignment reporter. Initially, he covered local politics, police activity, and other news of possible interest to residents of the nation's capital. Next, he was promoted to chief Maryland correspondent. With his fellow reporter Jules Witcover, he broke the story of the criminal investigation into the activities of Vice President Spiro T. Agnew when Agnew had served as governor of Maryland. In 1973 Agnew, who served under President Richard M. Nixon, resigned and pleaded no contest to criminal charges of money laundering and tax evasion. Cohen and Witcover wrote about Agnew's career and downfall in their book, *A Heartbeat Away: The Investigation and Resignation of Spiro T. Agnew* (1974). The book earned plaudits from reviewers on both the left and the right sides of the political spectrum. Writing for the *New Republic* (April 27, 1974) three months before Nixon's resignation, Ernest Gruening, a former Democratic U.S. senator from Alaska, described *A Heartbeat Away* as "a complete account of the single greatest political scandal in American history: the first time a Vice President was forced from office for malfeasance. It should be required reading for the many who, noting the parallels in the performance of the two men elected to the first and second highest offices in the land, anticipate a possible similar denouement in the case of the higher official on whom judgment has not been as yet officially and legally pronounced." In an assessment for the *National Review* (May 24, 1974), the conservative commentator Robert D. Novak wrote, "The story is as readable and engrossing as the best detective fiction."

In 1976 Cohen became a *Washington Post* columnist. His opinion pieces, which appeared on the first page of the Metro section three times a week, soon attracted a large readership. In a one-month period in May–June 1978, Cohen published articles with titles including "Walking Amid History at Arlington Cemetery"; "Kennedy: Alternative for All Seasons," about Larry O'Brien, a former chairman of the Democratic National Committee; "The Realities of Death: A Funeral for Pet Fish"; "The Issue at Skokie: It's a Matter of Law," about the controversy surrounding a planned march of Nazis in Skokie, Illinois; "The Puzzle of People Who Hate Homosexuals"; "The Voices She Heard Were Not in Courtroom," about the sentencing of the murderer David Berkowitz, known as the Son of Sam, and others like him, who hear imaginary but compelling voices telling them what they must do; "Childhood Memories of the Rosenberg Case," about the execution of Julius and Ethel Rosenberg in 1953 on charges of spying for the Soviet Union; and "For the Divorced Woman, [Life Is] Not Like the Movies."

In 1981 the *Post* made Cohen a member of the *Washington Post* Writers Group, whose columns or articles for that newspaper are syndicated around the world. In 1984 Cohen's column was moved to the *Post*'s op-ed page, where, in the following year, it offered his views on such subjects as President Ronald Reagan's visit to a cemetery in Bitburg, West Germany, in which Nazi officers were buried ("What, Exactly, Is Reagan Honoring?"); the bombing by Philadelphia, Pennsylvania, police officers of a house occupied by an armed, radical group called Move, in which 11 people were killed and dozens of other houses were set afire ("Who's to Blame?"); the lack of knowledge and interest among most Americans about affairs in foreign lands ("Victim of Ignorance"); the Boy Scouts of America requirement that scouts believe in God ("A Scout Badge for Hypocrisy"); and point shaving and other illegal activities in college sports ("The Losers' Championship").

"Closing the Door on Crime," an article of Cohen's that appeared in the first issue of the *Washington Post Sunday Magazine* (September 7, 1986), sparked fierce controversy. For that piece Cohen had interviewed two Washington, D.C., retail-store owners and learned that they either refused to admit young black men into their shops or quickly hustled them out after they entered. Cohen wrote that the store owners were "reacting out of fear to a combination of race, youth, and sex. . . . Young black males commit an inordinate amount of urban crime." Cohen argued that since not only their race, but also their ages and sex figured in the storekeepers' decisions to bar the men, their actions could not be labeled racist. "And while race is clearly the most compelling factor," he also wrote, "ask yourself what their policies would be if young white males were responsible for most urban crime." Cohen's column drew a flood of angry phone calls and letters from people who accused him and the *Post* of projecting blacks in an unconscionably bad light and of reinforcing negative stereotypes. (The cover article of that issue of the magazine, about a black rap artist accused of murder, along with the absence of any advertisements containing images of blacks, drew further condemnation.) Cohen responded to that criticism the next week, writing for the *Post* (September 14, 1986), "Now I am being accused of racism. The accusation stings if only because there is no way to prove otherwise. It is said that in describing the situation and empathizing with the merchants, I am either somehow responsible for it or, worse, have abetted it. But I was attempting to point out . . . that what seems like racism—the refusal to admit or serve young blacks—is often more complicated than that. . . . A cabdriver who passes up a young black male is seeing more than race. He is also seeing sex and age. The three together fit the profile of the most common type of Washington criminal, and the cabdriver acts accordingly. . . . In a different city, a different kind of person would be passed up." Years later Cohen said to Erin Moriarty for the CBS News program *48 Hours* (January 5, 1994), "Is a single column worth . . . hundreds of phone calls, tons of letters, pickets outside of the *Washington Post*, the vilification that I got? There must be columnists out there who love that kind of controversy. My instinct was to go under the desk. . . . Black political leaders in Washington were upset to one extent or another and I felt besieged . . . It was an educational experience, like getting kicked in the teeth is an educational experience." On the *Post*'s op-ed page on October 6, 1986, the paper's executive editor, Benjamin C. Bradlee, apologized for causing offense with Cohen's article and the cover story.

During the 1990s Cohen often appeared on the CNN TV series *Crossfire*, debating current issues with the program's hosts, Robert Novak and Michael Kinsley. In his columns he discussed such issues as the death penalty, abortion and gay rights, the Israeli-Palestinian conflict, and affirmative action. When President George H. W. Bush nominated Clarence Thomas, an African-American, to fill the seat of the recently retired justice Thurgood Marshall on the Supreme Court, Cohen wrote for the *Washington Post* (July 4, 1991), "Thomas is not 'the best.' He is only the best of a certain category, and we all know it. He might be the best black nominee or, to be even more specific, the best black conservative nominee. . . . Thomas was picked because he's black. That's not to say that he's not smart and not learned and not . . . the most wonderful of all people. It's simply to say that if he were white, he never would have been summoned to Kennebunkport"—the site of Bush's summer home, in Maine—"and anointed the most meritorious of all people with merit."

Cohen was in New York City on September 11, 2001 and witnessed firsthand the events surrounding the terrorist attacks on the World Trade Center. The fall of the first of the twin towers, he wrote for the *Washington Post* (September 12, 2001), produced "a noise unlike any I've ever heard. It was a roar wrapped in thunder followed quickly by the feel of sound on your face. . . . I looked into the sky, but there was nothing there. Suddenly, a blizzard hit, and the quaint streets of lower Manhattan were turned white with powdered building material. . . . The World Trade Center had collapsed. I could not see and I could hardly breathe . . . Where is it safe? Nowhere. Nowhere, anymore." A few days later he wrote for the *Washington Post* (September 15, 2001), "New York and Washington grieve because we failed, and failed badly, at the business of intelligence. Republicans were at fault and Democrats were at fault and so, in a way, were we all. Most of us believed that high-tech could do the work of people and that war could be waged without the loss of life. On Tuesday, in the rubble somewhere, was an uncounted victim: our innocence."

In his column of January 17, 2006, Cohen discussed the talk-show host Oprah Winfrey's defense of James Frey's book *A Million Little Pieces* (2005) after the public revelation that it contained significant distortions and lies, making it more a work of fiction than a memoir, as its publisher, Doubleday, had described it in publicity material and advertisements. Purportedly an account of Frey's experiences as a recovering alcohol and crack-cocaine addict, *A Million Little Pieces* had enjoyed enormous commercial success after Winfrey featured it on her program the previous September. Several million copies were purchased before staff members of the investigative Web site the Smoking Gun posted evidence that important parts of the book were complete fabrications. Winfrey gave short shrift to that news, maintaining that Frey's failure to stick faithfully to fact did not diminish the value of the book as a story of redemption. In a column entitled "Oprah's Grand Delusion," Cohen wrote, "No one expects Oprah to fact-check every book she urges her audience to read. Sticking by it is quite another matter. . . . Fame and wealth has lured her into believing that she possesses something akin to papal infallibility. She finds herself incapable of seeing that she has been twice fooled—once by Frey, a second time by herself." To Cohen's surprise, Winfrey invited him to join a panel of journalists and others for the January 26, 2006 installment of her show, during which, under Winfrey's blunt questioning, Frey admitted that he had consciously included falsehoods in his book. Winfrey told Cohen that she appreciated his assertion that she had been "deluded" with regard to Frey. "I was impressed with that because I thought sometimes criticism can be very helpful," she said. "So thank you very much. You were right. I was wrong."

Cohen himself was subjected to intense disapproval during a period of violent conflict between Israel and the Muslim anti-Israel paramilitary group Hezbollah in 2006. The brouhaha began after the publication of a column entitled "Hunker Down with History" (July 18, 2006), in which Cohen wrote, "The greatest mistake Israel could make at the moment is to forget that Israel itself is a mistake. It is an honest mistake, a well-intentioned mistake, a mistake for which no one is culpable, but the idea of creating a nation of European Jews in an area of Arab Muslims (and some Christians) has produced a century of warfare and terrorism of the sort we are seeing now." Cohen expressed no opinion as to whether ownership of the land that is now Israel rightfully belongs to Jews or Arabs; referred to Hezbollah as a group of zealots that, as such, is "not amenable to reason," and another Arab organization, Hamas, as "a fetid, anti-Semitic outfit whose organizing principle is hatred of Israel"; and noted that "the underlying, subterranean hatred of the Jewish state in the Islamic world just keeps bubbling to the surface." After referring to the "horrific history of the Jews in 19th- and 20th-century Europe," he wrote, "Little wonder" that many Jews "embraced the dream of Zionism and went to Palestine, first a colony of Turkey and later of Britain. They were in effect running for their lives. Most of those who remained [in Europe]—97.5 percent of Poland's Jews, for instance—were murdered in the Holocaust." Cohen's article nevertheless drew hundreds of condemnations from defenders of Israel, on blogs, in the mailbox of the *Washington Post*, and, perhaps most prominently, in an article by Alvin H. Rosenfeld, a professor of Jewish studies and the director of the Institute for Jewish Culture and the Arts at Indiana University. In that article, called "'Progressive' Jewish Thought and the New Anti-Semitism," which was published by the American Jewish Committee, Rosenfeld criticized as examples of "the new anti-Semitism" the views of Cohen and a few other prominent Jewish intellectuals who had expressed misgivings about the establishment of the state of Israel in the Middle East. "Cohen is right about the never-ending violence, but wrong about its causes," Rosenfeld wrote. "Instead of placing the responsibility for terrorism squarely where it belongs, he dodges the issue. . . . Instead, he blames the agents of an abstract and errant 'history' for having brought the Jewish state into being in the first place."

In an opinion column for the *Jerusalem Post* (February 6, 2007), David A. Harris, the executive director of the American Jewish Committee, wrote that Cohen was an "exception" among the Jewish intellectuals criticized by Rosenfeld, because Cohen's "disturbing comments" in his controversial column "do not reflect the totality of his occasional writings on the Middle East." In response to his critics and Harris's comments, Cohen wrote for the *Washington Post* (February 6, 2007) that within a year of his being hired by that newspaper, he wrote his "first column about anti-Semitism. Since then, I have written about 90 more, most of them full-throated condemnations of the hatred that killed fully one-third of all Jews during my own lifetime. So it comes as a surprise that has the force of a mugging to be accused of aiding the very people I so hate—of being an abettor of something called 'The New Anti-Semitism.'" He also wrote, "My 'occasional writings' [on the Middle East] include at least 30 datelined columns from the region and a near-obsessive attention to the subject. . . . It's sad that the American Jewish Committee commissioned and published Rosenfeld's report. I can't imagine what good will come out of it. Instead, it has given license to the most intolerant and narrow-minded of Israel's defenders so that, as the AJC concedes in my case, any veering from orthodoxy is met with censure."

More recently, in his column of July 17, 2007, Cohen found fault with Richard Carmona, who served as the U.S. surgeon general (2002–06), for waiting until he had left office before he revealed publicly the extent to which he had been muzzled by the administration of President George W. Bush with regard to such controversial topics as stem-cell research and sexual abstinence among teenagers. Cohen's September 18, 2007 column criticized Democratic U.S. senator and presidential hopeful Hillary Rodham Clinton of New York for failing to comment on an ad placed in the *New York Times* in which the organization MoveOn labeled General David Petraeus, the commander of the U.S.-led forces in Iraq, "General Betray Us." Writing on September 25, 2007, Cohen agreed with the proposal, offered by the Democratic U.S. senator and presidential hopeful Joseph Biden of Delaware and Leslie Gelb, the president emeritus of the Council of Foreign Relations, that Iraq be divided into three parts: a Shi'ite south, a Sunni center, and a Kurdish north.

Married three times and divorced twice, Cohen lives in Washington, D.C., and New York City. He has one son, Alexander.

Coleman, Mary Sue

Oct. 2, 1943– University president; educator

Address: Office of the President, University of Michigan, 503 Thompson St., 2074 Fleming Bldg., Ann Arbor, MI 48109

"Being president of a university is a hard job, equally tough for men and women. The pressures are no different," Mary Sue Coleman, who began her academic career as a biochemist at the University of Kentucky, told Mark Clayton for the *Christian Science Monitor* (July 23, 2002), shortly after she was appointed the first female president of the University of Michigan (U.M.), in May 2002. Coleman, however, has had a particularly challenging tenure at Michigan—though her gender has had little to do with her difficulties—as she has found herself embroiled in a series of high-profile legal battles, one involving illegal payments that were made to U.M. basketball players during the late 1980s and throughout the 1990s, another centering on the university's use of affirmative action in its admissions process for its undergraduate and law schools, and still another concerning its decision to grant the search engine Google permission to scan and make available on the Internet every volume in its library. Coleman, who had anticipated some of those problems as well as the need to work on solving U.M.'s budgetary difficulties, was particularly well-prepared for dealing with the issues facing the university when she assumed her position. As the University of Iowa's president over the preceding seven years, she had not simply earned a reputation for being a skilled fundraiser—one of the factors that led to her being hired at Michigan—but had also shown a deep concern for making public education accessible to all and for preserving a diverse campus, issues central to the Google and affirmative-action cases, respectively.

Born Mary Sue Wilson on October 2, 1943 in Madison County, Kentucky, Coleman was the middle child of Leland and Margaret Wilson. Her father, who had grown up in rural Kentucky, had earned a doctorate through the G.I. Bill and worked as a professor at public colleges. (His background, many have noted, likely influenced Coleman's strong commitment to public institutions.) Her family later moved to Georgia, where Coleman received much of her elementary education. When she was 12 her father took a position at the University of Northern Iowa (UNI), and the family moved again. In Iowa Coleman's teachers feared that her strong southern accent would be a social detriment for her; in order to "correct" it, they saw to it that she received speech therapy, which was not wholly successful. "'The teachers were so kind,' Coleman says, still amused," Michael H. Hodges wrote for the *Detroit News* (October 25, 2002). "'I had a fabulous childhood. I can't describe it any other way.'" Hodges added, "It was, in fact, a classic 1950s small-town upbringing—*Leave It to Beaver* with pigtails, defined by sleepovers, softball games and camping out. And petri dishes." Those last items helped sustain the love for science that she developed early in life. She was not, she has claimed, influenced in that regard by her father, even though she took chemistry courses that he taught at UNI when she was still a high-school student. During her senior year Coleman was a finalist in the Westinghouse Science Talent Search, which led to her meeting President John F. Kennedy in the Oval Office. Following high school she attended Grinnell College, in Iowa, where she earned a bachelor's degree in chemistry, in 1965, and met her future husband, Kenneth Coleman, a political-science student. The two went on to attend graduate school at the University of North Carolina (UNC) at Chapel Hill, where they both earned doctorates, he in political science and she in biochemistry.

After completing graduate school, in 1969, Coleman followed her husband to the University of Kentucky. He had found a tenure-track faculty position there, and she took a job as a research associate in the university's medical-school laboratory. Her work led to her getting a faculty position in the Biochemistry Department. She was later given a top position at the university's Markey Cancer Center—where she did research on the effect of the immune system on malignancies—and was elected by her colleagues to represent them on the board of trustees. She remained at Kentucky until 1990, when she returned to UNC to take an administrative post, serving as the associate provost and dean of research between 1990 and 1992 and as the vice chancellor for graduate studies and research during the 1992–93 academic year. The move altered her perception of university campuses. When she had attended UNC, Coleman told Clayton, it was "really a pretty homogeneous place, not many women on the faculty, mostly Caucasian. . . . It was a good education, and I was happy with it, but then 25 years later I had the opportunity to go back and join the administration there. By then, it was a far more diverse place, faculty and students. It was just a much more intellectually vibrant place, and I've taken that [awareness of the value of diversity] with me." Coleman then moved to the University of New Mexico, where she was a provost and vice president for academic affairs between 1993 and 1995.

In what she predicted would be her final career move, in 1995 Coleman accepted a position as president of the University of Iowa, assuming her responsibilities in the middle of the 1995–96 academic year. There, she cultivated a spirit of collaboration between students and administrators, holding regular fireside chats to address students' concerns. She also devoted much energy to raising money, which was necessary to balance a budget that was continually shrinking due to cuts in state funding. In 2001, for example, the university faced a budget cut of $21.9 million. Coleman had prepared the school to absorb the loss, having raised $172 million in 2000. Indeed, during her tenure, the university saw an average annual increase in donations of 22 percent. To offset further its loss of state funding, Coleman cut deeply into the university's administrative costs (eliminating, for instance, a vice-president position), did not replace many of the faculty who had retired, and scrapped many course offerings. Despite such measures, the university was forced to increase its tuition. Worried that such increases threatened students' access to a public education, Coleman designated more money for financial aid. Her other great success at Iowa was her ability to raise money for research purposes, increasing the amount of money that Iowa held for research from $178 million to $300 million. During that time Coleman also remained active in the sciences, working as a professor of biochemistry at Iowa's College of Medicine and as a professor of biological sciences at its College of Liberal Arts. For that work she was elected to the National Academy of Sciences' Institute of Medicine, in 1997.

Upon assuming her position as the University of Michigan's president, in 2002, Coleman became the first woman to have attained the presidency of two Big Ten schools (the other being Iowa) and the first president at Michigan since 1979 who had no prior ties to the university. She signed a five-year contract with a starting salary of $475,000 per year—$200,000 more than she had earned at Iowa—making her one of the highest-paid public-university presidents in the country. Coleman immediately had to deal with the school's budget problems as well as two other major crises. While the cost of operating public universities in the state had risen dramatically, due mainly to health-care and utility expenses, state funding for the schools had remained flat. That led to an 83 percent increase in tuition between 1992 and 2002—more than double the rate of inflation during that period. To control further increases in tuition, the governor of Michigan had reached an agreement with Michigan's 15 public universities to continue current funding levels (rather than decrease them), provided they held tuition increases to 8.5 percent or lower. University presidents, pressed for further sources of income, had begun focusing on private donations, and as the U.M. president, Coleman began working hard to solicit private support as well as convince the public that the university is a valuable public asset. "I've made the argument that investment by the states is crucial," she told Clayton. "Having a great public university is more than just the private good that comes to those who seek education there. We're a big resource. I want to make the case to the residents of Michigan that they have a jewel here that's worth supporting."

The most immediate crisis that Coleman faced as president—and also the biggest sports scandal in the school's history—was over illegal loans that had been given to Michigan basketball players by a retired Ford Motor Co. electrician and local basketball booster named Ed Martin between 1988 and 1999. Martin had spent more than $600,000 on U.M. players—including the future National Basketball Association (NBA) star Chris Webber—using money that he earned by running an illegal lottery in Detroit auto plants. In June 2002 Martin pleaded guilty to a federal charge of conspiracy to launder money. That November, partly in an effort to avoid more serious penalties from the National Collegiate Athletic Association (NCAA), Coleman and the university imposed heavy penalties on its basketball program, including banning its team's participation in that year's postseason and forfeiting every game won while the four players who received money were on the team. (Those included the team's two appearances in NCAA championship games in the early 1990s.) "This is a day of great shame for the university," Coleman said at a news conference, as Danny Hakim reported for the *New York Times* (November 8, 2002). "I am determined nothing like this will ever happen again at Michigan." Several commemorative banners were removed from the school's sports arena, and the basketball program was placed on probation for two years. Coleman was especially aware of the potential harm of the scandal, having served on the board of trustees at Kentucky in 1989–90, when that school's basketball program was penalized, and its basketball coach and athletic director forced to resign, over illegal recruiting practices. "That experience made me very cognizant of this issue," she said at the news conference, as Maryanne George reported for the *Detroit Free Press* (November 8, 2002). "No one had to convince me about what can happen if you don't get to the bottom of these situations."

The other crisis Coleman faced involved admission policies at U.M.'s undergraduate and law schools. In 1997 two individuals who were denied admittance to those schools had filed separate lawsuits in which they claimed that the university's use of race as a factor in its admissions process was illegal under the 14th Amendment, specifically its Equal Protection Clause, and that Michigan's admissions policy relied on racial stereotyping. The cases brought renewed attention to *Regents of the University of California v. Bakke*, a 1978 U.S. Supreme Court case in which it was decided that race could be used as a factor in admissions but that quota systems to ensure racial diversity were prohibited. Lawyers for the individuals who had been denied admittance to U.M.—who themselves received the support of lawyers working for the administration of President George W. Bush—claimed that Michigan's practice of awarding "points" to minority applicants amounted to the use of quotas. "The enormous size of the preferences is what creates the 'two track' or 'dual' admissions system that enables the Law School to achieve its quota," one of the student's lawyers wrote in a brief, as Maryanne George reported for the *Detroit Free Press* (January 17, 2003). Coleman had been observing the proceedings while still at Iowa and discussed the issue in her meetings with the presidential-search advisory committee. "One of the questions I asked [during the interviews]," Coleman said, as Tamar Lewin reported for the *New York Times* (May 30, 2002) "was how people on campus feel about the court cases. And one of the things that impressed me was what a passionate discussion I heard of how people felt they were engaged at an important point in history, working for something that could influence all of higher education."

As Michigan's president, Coleman quickly began to defend the university's support of affirmative action, both in faculty appointments and student admissions, leading the fight against the lawsuits. In June 2003 the Supreme Court ruled that admissions processes that use mechanical formulas to weigh applicants' race were unconstitutional but upheld the legality of affirmative action. Thus, Michigan's undergraduate point system for admissions had to be changed, while the law school's practice of judging every applicant on an individual basis was allowed to remain the same. Colleges around the country had to make similar adjustments. For Coleman, the ruling meant that more money was needed for additional undergraduate-admissions staff to screen each individual applicant. She nonetheless remained committed to the ideal of diversity, telling Judy Woodruff for CNN (June 23, 2003): "I want to let students know that now we'll be looking, using a slightly different policy, but we're going to give every application a fair look. And we're going to build a diverse class because we think that's the best educational opportunity for students, both minority and non-minority. And we're going to be tailoring our policies in a way that the court says is constitutional." Over the next three years, Coleman worked vigorously at boosting diversity on Michigan's campus, investing "considerable time in personal admissions recruiting and outreach visits," as *US States News* (June 16, 2006) reported when it was announced, in 2005, that she had signed a new five-year contract with U.M. The report went on to note that she "also launched a major new commitment to financial aid in 2005 with the M-PACT program, which provides additional grants to approximately 3,000 Michigan undergraduates each year. Total student enrollment at the Ann Arbor campus has grown from 38,972 in fall 2002 to nearly 40,000 in fall 2005, with the majority of that growth in undergraduate enrollment."

It may have been Coleman's deep belief in public education's importance that led her into another controversy. In 2005 she announced that she had secured a deal with Google that would allow the search engine to scan the university's entire library and place electronic copies of its books on the

Google Library Project. Claiming copyright infringement, numerous authors and publishers, including five member groups of the American Association of Publishers (AAP), filed lawsuits against Google. The AAP accused the company of profiting from copyrighted material without the authors' permission. Coleman maintained that making books searchable on-line would only help sales. "I can't understand why any bookseller or publisher, especially scholarly presses with such narrow audiences, would oppose an approach that all but guarantees increased exposure," Coleman said in a speech given to the annual conference of the professional and scholarly division of the AAP, as Gabe Nelson reported for the *Michigan Daily* (February 7, 2006). Only excerpts, and not full texts, would be viewable to students, along with links to sites enabling students to buy the books or borrow them from libraries. Still, many were upset over Google's intention to sell advertising space on the Web pages on which access to the books would be available. "What gives [Google] the right to digitize my book without my permission?" one of the AAP members said in a question-and-answer session following Coleman's speech, as Andrea L. Foster reported for the *Chronicle of Higher Education* (February 17, 2006). "In most cases, that would be considered stealing." Coleman argued that digitization was necessary as research was increasingly being done on the Internet. "We must change with our students," she said, according to Foster. "And that means embracing the Internet for all it can, and does offer."

The admission policies that had been instituted to conform to the 2003 Supreme Court ruling were threatened in 2006, when Michigan's voters approved an amendment to the state's constitution called the Michigan Civil Rights Initiative (MCRI), which banned public agencies, including state schools, from using any form of racial preferences. Coleman was unmoved by the approval of MCRI, saying in a speech the day after the vote, as Steve Chapman wrote for the *Chicago Tribune* (November 23, 2006), that U.M. would do "'whatever it takes' to delay, frustrate and circumvent" the amendment, accusing voters, Chapman went on to report, "of opposing 'a community that is fair and equal for all.'" Coleman, Chapman added, "said California's 1996 ban on racial and gender preferences 'has been a horribly failed experiment' that 'we cannot, and will not, allow to take seed here in Michigan.' And she assured her campus audience . . . 'We will find ways to overcome the handcuffs that Proposal 2 [that is, the MCRI] attempts to place on our reach for greater diversity.'"

In September 2007, as Coleman began her second five-year term as president, she received a 3 percent raise in salary, bringing her annual pay to $532,000. Bonuses and other forms of monetary compensation brought her total compensation to $757,643—the third-highest salary among American public-college heads. Coleman announced that she would donate her additional $15,500 per year in earnings to the university, for scholarships for graduate and professional students.

In addition to serving as president, Coleman is a professor of biological chemistry in U.M.'s medical school and a professor of chemistry in its College of Literature, Science and the Arts. "Her manner," Hodges notes, "is breezy and engaging, her conversation punctuated with Iowaisms like 'Oh, gosh' and 'Oh my heavens.'" She and her husband have one son, Jonathan, who works as a mutual-funds manager in Denver, Colorado.

Coleman, Ronnie

May 13, 1964– Bodybuilder

Address: c/o International Federation of
Bodybuilding & Fitness, 2875 Bates Rd.,
Montreal, Quebec, Canada H3S 1B7

"I'll continue working out, regardless of whether I'm competing, because it's my hobby. I love it. I train with those weights not because I feel that's what's required in order to beat everyone else, but because it's fun, and part of the reason it's fun is that, when I'm in the middle of an extremely heavy set, my attitude is the same as it is with anything else I take on in life: I can do anything I want to do.

Nothing can prevent me." Those words, quoted by Julian Schmidt for *Flex* (April 1, 2004), were spoken by the bodybuilder Ronnie Coleman, who tied one of his sport's all-time records by reigning for eight years as the holder of the Mr. Olympia title. Coleman began training for bodybuilding contests in the early 1990s, while working as a police officer in Texas (a job he still holds). Not an "overnight" success in the world of professional bodybuilding, he followed his early victories in amateur competition with finishes of sixth place or lower in a string of Mr. Olympia professional contests. With his upset win over Flex Wheeler in the 1998 competition, he began his long series of first-place finishes, a run broken only in 2006 by Jay Cutler. Along the way Coleman set a record for most wins in International Federation of Bodybuilding & Fitness (IFBB) competition.

The oldest of four children, Ronnie Dean Coleman was born on May 13, 1964 in Monroe, Louisiana, and raised in nearby Bastrop. Because he was shy as a boy, his classmates occasionally bullied him during his grade-school years, despite the fact that he "was always the biggest kid in school," as his mother, Jessie Benton, said to Nancy Kruh for the *Dallas Morning News* (October 3, 1999). His mother forbade him from fighting back. Instead, as early as junior high school, he began lifting the weights his mother had purchased for him, in order to build his strength and confidence. Lifting weights soon "became a part of his life," as his mother said to Kruh.

The commitment to intense training for which Coleman is known began during his years at Bastrop High School. While playing football there, and also working various jobs after school, he always found time to lift weights. He said to Kruh that his teammates in high school "always vote[d] me 'most dedicated' because I was the only one in the summertime who would go to the weight room and work out." After graduating he enrolled at Grambling State University, in Grambling, Louisiana, majoring in accounting and playing on the football team there as well. At Grambling he earned the nickname "Big Arm" and won a campus-wide contest for the best male physique. Coleman earned a spot on the team's starting lineup in his junior year but realized that his chances of playing the sport professionally were small. He said to Ellen Mazo for the *Pittsburgh Post-Gazette* (May 1, 1999), "I wasn't given the genetics for football. This [bodybuilding] is my gift right here. I was always well-built." He added, "You can't do certain sports without the genetics, and talent, too, of course."

After graduating with honors from Grambling, in the late 1980s, Coleman headed to Dallas, Texas. In part because the national economy was sluggish at the time, Coleman had trouble finding work that interested him, and he took a job at a Domino's Pizza restaurant, serving at different times as delivery person, pie maker, and manager. "Domino's was the hardest job I ever had," he said, according to his Web site. "I dreaded every day working there, but I knew I was destined for something better." After working for roughly two years at Domino's, he responded to a newspaper recruitment ad placed by the Arlington, Texas, Police Department and trained to become a police officer. He enjoyed the varied nature of his new job; he was also happy that his schedule left him plenty of time to lift weights. After joining the MetroFlex Gym, in Arlington, at the suggestion of a fellow officer, he was approached by the gym's owner, Brian Dobson, an amateur bodybuilder, who offered Coleman a free lifetime membership if he would agree to let Dobson train him for the upcoming Mr. Texas bodybuilding competition. "As soon as he walked in, I could see the unbelievable potential," Dobson said to Kruh. "I could see his veins through his sweatpants. He didn't train very seriously, and I told him he could make a good living at this. He didn't believe me at first." Dobson added, "When he first started, he didn't know 'super-setting' [combining more than one exercise with no rest in between] and everyone used to make fun of how small his calves were. He knew all the basic lifts, but there are a lot of tricks—different ways to position the feet or your wrists to bring your peaks."

Bodybuilding competitions are usually based on a system of points awarded by a panel of judges. Most contests are divided into rounds: the Standing Relaxed (or Symmetry) Round, in which judges evaluate the symmetry of each competitor's physique; the Comparison (or Muscularity) Round, in which the bodybuilders flex their biceps, triceps, and other muscles in a series of standard poses; and the Free Posing Round, during which the contestants display their muscles in whatever manner they wish. (That round often includes music.) Accepting Dobson's offer to train him for the Mr. Texas competition, Coleman increased the intensity of his weightlifting regimen. Despite his initial reservations, he followed the common practice of donning bikini briefs and slathering oil over his body prior to competition. (He explained to Kruh that once onstage, "you get over your shyness real quick.") In April 1990 Coleman entered and won the Mr. Texas bodybuilding contest in both the heavyweight and overall categories, defeating Dobson, among others. Also in 1990 Coleman took the heavyweight and overall titles at that year's National Physique Committee (NPC) Texas Championships. In 1991 Coleman won the most prestigious competition in amateur weightlifting, the Mr. Universe contest. That victory qualified him to enter the professional contests sponsored by the IFBB, the sport's largest sanctioning body.

Coleman's rise to the top ranks of the professional bodybuilding circuit was gradual. In his first half-dozen years (starting in 1992) of competing in the Mr. Olympia contest, an invitation-only event, he placed sixth or lower. His slow ascent was uncharacteristic for champion bodybuilders. "Most Mr. Olympias are prodigies," Peter McGough, the editor in chief of *Flex*, said to Nancy Kruh. "If they're great, they come through very quickly. Ronnie came through slowly, bit by bit. It was a real study in perseverance." Making it particularly difficult for Coleman—and most of his competitors—to win during that period was the presence of the British bodybuilder Dorian Yates, who won the Mr. Olympia contest six consecutive times, from 1992 to 1997. A bright spot during those years came in 1995, when Coleman won his first competition as a professional—the Canada Pro Cup. He took first place in that contest again the next year, and in 1997 he won the Russian Grand Prix. Nonetheless, even with Yates's retirement, following his 1997 victory, Coleman was regarded as a long shot when he entered the 1998 Mr. Olympia contest, held in New York City's Madison Square Garden. Flex Wheeler, an American bodybuilder, was considered the favorite in the event. Coleman had finished second behind Wheeler in two 1996 contests: the Florida Pro Invitational and the Night of Champions. To prepare for the 1998 Mr. Olympia competition, Coleman enlisted the aid of the nutritionist Chad Nicholls; at Nicholls's suggestion, he experimented with lesser or greater amounts of liquids, protein, and carbohydrates, to see how his body would respond. "It's really a matter of trial and error," Nicholls admitted to Nancy Kruh. "But we got lucky." That was evidently true, as Coleman, by all accounts, arrived at the competition no larger than before but with a firmer physique. At the end of the contest, when he was declared the winner (Wheeler placed second), Coleman collapsed onstage and burst into tears. "I still haven't recovered," he told Kruh nearly a year later. "I can watch the tape now and start crying. It's so overwhelming. It's almost better than winning the lottery, because you worked for it. It's like something you want all your life, but you never thought it would happen, and all of a sudden it did."

Coleman defended his title successfully over the next seven consecutive years. In recent years his chief competition has come from the German bodybuilder Gunter Schlierkamp and the American Jay Cutler—who defeated Coleman in competition on September 30, 2006 to take the Mr. Olympia title. Coleman, who finished second, is thus tied with Lee Haney for the most consecutive Mr. Olympia titles, with eight. (Haney won the contest from 1984 through 1991.) Coleman has won 26 IFBB competitions during his career; his victories have come in contests held in Russia, Holland, New Zealand, and England. Speaking with Evan Rapp in a videotaped interview for *ProSource* (October 30, 2006) after his controversial loss to Cutler, Coleman said that the defeat was "hard at first" to accept but that he planned to "put it behind" him and continue to compete. The 42-year-old added, "I'm having too much fun to retire."

On September 29, 2007 Coleman finished fourth in the Mr. Olympia competition, losing to Cutler, who again captured the title. Prior to that event, Coleman had announced that that year's Mr. Olympia appearance would be his last.

According to a profile of Coleman appearing in *Muscle & Fitness* (March 1, 2003), in the 10 weeks prior to tournament competition, the bodybuilder consumes about 50 pounds of steak, 210 pounds of chicken, 96 pounds of potatoes, and ample portions of grits and rice. In addition, at 2 a.m. he drinks a "meal-replacement" shake packed with as many as 80 grams of protein. Coleman has parlayed his success as a professional bodybuilder into numerous product endorsements and other opportunities. His schedule includes a great deal of travel—up to nine months per year. On the road Coleman makes guest appearances at gym openings in the U.S. and frequently visits countries including China, Brazil, and Australia, where he is equally admired. Since 1997 he has released several training videos: *Ronnie Coleman's First Training Video*; *The Unbelievable*; *The Cost of Redemption*; and *On the Road*. In the videos Coleman dispenses tips for more experienced weightlifters, while cautioning against overexertion and improper form. Coleman said to Julian Schmidt, "Strength is my goal in training and the basis of my muscle gains, but it's never at the expense of getting a full range of motion with every repetition. Anytime someone asks me what I feel is the most important technique in the performance of an exercise, that's always my answer. In order to work ever fiber in a muscle and allow it to pump itself to its maximum capacity with blood, it must be fully stretched, then fully contracted. Feel that stress all the way, and that muscle has choice but to grow." He also said to Schmidt, "People seem to be awed at how strong I am, but my lifts . . . on my video are not my max. I can always do more, but I would have to strain and cheat, which does not necessarily build strength or mass. Furthermore, I would be risking injury."

When working out, Coleman uses free weights rather than machines in order to maximize his flexibility and range of motion. He lifts weights six days per week. "Regardless of how heavy I lift, the preeminent principle in all of my training is to work the muscle as best I can," he said to Schmidt. "That is efficiently accomplished by applying maximum resistance [weight], so the muscle is exhausted as quickly as possible and the target muscle—not the ancillary muscles or leveraged joints—do the work. Every rep is therefore performed in a very strict manner, and the success of this is gauged by the fullness of the pump in that muscle."

Ronnie Coleman stands five feet 11 inches tall. His top-form measurements, in inches, are as follows: biceps, 24; chest, 60; and thighs, 34. In the words of Nancy Kruh, Coleman is "5 feet 11 inches of perfectly molded muscle mass that makes just about every other male specimen of the species look like the 'before' picture in the old Charles Atlas ads." During competition Coleman tips the scales at 280 pounds; in the off-season his weight is closer to 315 pounds. He is able to shed weight quickly in the weeks leading up to competition by adding cardiovascular exercise to his daily workout routine.

Coleman is devoutly religious and is known for his humility. He lives in Arlington, Texas, where he remains a reserve officer of the Arlington Police Department. (He requires specially tailored uniforms.) Coleman enjoys listening to hip-hop music, especially during weight training.

Craig, Daniel

Mar. 2, 1968– Actor

Address: c/o Creative Artists Agency, 9830
Wilshire Blvd., Beverly Hills, CA 90212

The average celebrity is probably unable to identify the moment he or she became a star as exactly as the British actor Daniel Craig can. On October 14, 2005, after months of speculation over who would next portray the suave, high-living master spy James Bond, Craig showed up at a press conference held on the banks of the River Thames. The manner of his arrival—he sped up on a military boat, wearing a dark, tailored suit and dark glasses—made his announcement clear to the press before he even alighted. By the time Craig's feet were on solid ground, all present knew they were looking at the man who would be the sixth Agent 007. Debonair, self-possessed, used to playing emotionally complex characters, Craig seemed fully prepared to play the main character in arguably the most successful film franchise of all time. With his blond hair, lesser height, and—as he admits—craggy features, Craig is a physical departure from past Bonds, played by Sean Connery, George Lazenby, Roger Moore, Timothy Dalton, and, most recently, Pierce Brosnan; but Craig's Bond was not meant to be like those of the past—he was to be a tortured character, more suited to the 21st century and its fraught international climate. Craig's attraction to elusive and not-always-likable characters made him an appropriate choice to personify the new Bond. "On screen, [Craig] exerts a supreme amount of control, releasing emotions in the most subtle of ways," Gaby Wood wrote for the London *Observer* (April 27, 2003), over two years before the announcement that made Craig a recognizable name. "His face is slightly rugged without being steely—in some lights it looks handsomely sculpted, in others that of a life-worn boxer. His eyes are a lethal blue—when you see them on celluloid they seem too pale and too strange not to carry some meaning. . . . Craig is a commanding, powerful actor. Seen back to back, his film roles show off an extraordinary range, and an exceptional grasp of rawness and complication." Now hailed as one of the best Bonds in the series, Craig initially met with a great deal of skepticism when he first stepped into the role, though those who knew him well insisted that he would make a good 21st-century Bond. "The thing that is really exciting is that he is a proper actor," Clive Owen, who was also rumored to have been considered for the part, told the BBC News (September 19, 2006) of his fellow Brit. "He is not shallow or posing, they have cast a really serious actor and I think when the film comes out everyone will see what a great choice he was." *Casino Royale* (2006), the first film to star Craig as Bond, represented an opportunity for the actor to play the kind of character in which he had come to specialize: a man in the process of understanding his own identity and confronting his "demons." "I just look for characters who are trying to change or are in the process of changing," Craig told Lawrie Masterson for the Queensland, Australia, *Sunday Mail* (August 7, 2005), "who are maybe on the edge."

Daniel Wroughton Craig was born on March 2, 1968 in Chester, England. His father, Timothy James Craig, held various positions as a merchant seaman, steel erector, and landlord of Ring O'Bells, a pub in Frodsham, Cheshire. His mother, Carol Olivia Williams, was an art teacher. The couple, who also had a daughter, Lea, divorced when Craig was four, and he moved with his mother and sister to Liverpool. There, Craig's mother spent considerable time at the city's famously left-wing Everyman

Theatre, which served as a base for her artsy, politically active social circle. Growing up in that environment contributed to Craig's decision, made when he was six, to be an actor. At Hilbre High School Craig played rugby and also starred in many of the school's theatrical productions, including *Oliver*, *Romeo and Juliet*, and *Cinderella*. Never a stellar student, he had by age 16 fallen behind in the rigid British school system and had decided to drop out. His mother encouraged his acting ambition, applying to the National Youth Theatre (NYT) on his behalf and sending him to its auditions, in Manchester, in 1984. After succeeding there, Craig moved to London to perform with the NYT. He recalled to Jasper Rees for the London *Times* (January 17, 2004), "I was always going to move to London. I always wanted to be an actor. I had the arrogance to believe I couldn't be anything else." In London he worked in restaurants as a cook and a waiter to make ends meet—sometimes barely. "When you first come here you have to survive," he told Rees. "You tend to end up being selfish. You have to live off people's floors and rent property and you end up doing runners"—that is, he left dwellings while still owing rent money. Craig has recalled that his youth was, in some ways, a distinct advantage in coping with life in London. "When you're 16, bravery doesn't come into it," he explained to Lottie Moggach for the *Times* (September 18, 1999). "You do what you do. You either come here and fall flat on your face, or you survive and become successful." While with the NYT Craig made his stage debut, as Agamemnon in Shakespeare's *Troilus and Cressida*; he also toured with the company in Spain and Russia. In 1988, after repeated rejections, Craig was accepted at the prestigious Guildhall School of Music and Drama, from which he graduated in 1991. (He studied alongside a young Ewan McGregor.)

While still in school, Craig had been cast as a bullying South African neo-Nazi in the high-budget film *The Power of One* (1992). Next, he played a German officer in *The Adventures of Young Indiana Jones: Daredevils of the Desert*, which went straight to video. A small part in the television show *Boon* in 1992 was followed by a role in the play *No Remission*, with the Midnight Theatre Company, in which Craig played a vicious paratrooper. Despite strong reviews that noted Craig's ability to convey latent fury—Georgina Brown, reviewing *No Remission* for the London *Independent* (July 24, 1992), wrote that the actor "contains his violence like an unexploded mine"—Craig was becoming frustrated with what he saw as the limited parts available to young British male actors at the time. He later told Moggach, "I was getting all these parts of terribly posh boys and I'm not posh. It was a great lesson, because I can't play posh. Posh is breeding. I'm not interested in that kind of stuff. It's lovely, and it may have relevance somewhere but it has no relevance to me whatsoever. . . . Films should be about everybody." In 1992 he took a role in the television series *Covington Cross*, a medieval family drama, which aired for only a short time. The next year saw parts in several British television series: the news satire *Drop the Dead Donkey;* the police drama *Between the Lines*; and the comedy *Heartbeat*. Craig also starred in a staging of Tony Kushner's *Angels in America* at the Royal National Theatre and in the television movies *Sharpe's Eagle* and *Genghis Cohn*. In 1994 he was seen onstage in *The Rover*, a production of a play by the 17th-century dramatist Aphra Behn, mounted by the Women's Playhouse Trust, and in 1995 he made perhaps his most prominent appearance up to that point, as the love interest of the character played by a then-unknown Kate Winslet, in the film *A Kid in King Arthur's Court*.

Craig got a bigger break the following year, with a role that suited his preference for gritty, streetwise characters. Playing Geordie Peacock—a man who sold drugs to corrupt police officers, committed arson, was sentenced to life in prison, and then escaped—in the popular, nine-part BBC2 television series *Our Friends in the North*, Craig became a minor heartthrob in England. By the time he appeared as a highwayman in the 1996 made-for-TV film *The Fortunes and Misfortunes of Moll Flanders*, Craig had become a legitimate star in his native country. That year he also appeared in *Saint-Ex*, a BBC film about the French author Antoine de Saint-Exupery. In 1997 he appeared in the little-watched television movie *The Ice House* and in the British film *Obsession*, on the set of which he met the German actress Heike Makatsch, whom he dated for seven years.

In the 1990s Craig appeared only infrequently in films that gained wide notice in the U.S. In 1998 he had a small role in *Elizabeth* and also starred in the considerably less-noticed Irish film *Love and Rage*, as the real-life James Lynchehaun, a would-be murderer, on whom J. M. Synge based his play *The Playboy of the Western World*. Craig also took on a risky role in the film *Love Is the Devil*, about the British writer Francis Bacon; Craig played Bacon's lover in a story complete with violent, graphic love scenes. In 1999 Craig starred in William Boyd's World War I saga *The Trench*. "His screen presence is, quite simply, breathtaking," Moggach wrote. Boyd told Wood that he was impressed by Craig's ability not only to portray aggression but to harness and modulate it. He added that Craig has "an amazing ability to express emotion of the most poignant kind as well as the most vehement kind. Not all leading men have that—they can do the tough stuff, but they can't always do both." Still not particularly well-known in Hollywood, Craig told Moggach that he was nonetheless happy with his career, portraying the kind of emotionally conflicted, and often disturbed, characters to which he was so drawn. "The most important thing for me is that I'm really enjoying my work at the moment," he said. "I'm having a good time, and I want to maintain this feeling for as long as possible."

In 2000 Craig starred opposite Kim Basinger as a land manager in 1970s Kenya in *I Dreamed of Africa*, which garnered little notice in the U.S. The same year he was seen in a role more characteristic of his past work, as a schizophrenic in the independent film *Some Voices*, whose script required him to run naked down a busy London street. In 2001, after an acclaimed turn as Guy Crouchback in an adaptation of the novelist Evelyn Waugh's *Sword of Honour* trilogy, Craig made a mark in Hollywood—the place he had been so ambivalent about—with exactly the kind of role he usually avoided, that of the title character's love interest in the big-budget film *Lara Croft: Tomb Raider*, starring Angelina Jolie. He explained to James Mottram for the London *Sunday Express* (July 1, 2001) that while the part was not ideal for him, it would allow him greater latitude as an actor in the future. "I'd hate to think I was nailing my colors to the mast with something I didn't believe in," he said. "I had to do it because it is an experience. I'd never done something on this scale before. It will be nice to think that if I do this film, I'll have more of a choice as to what I do here." Ironically, Sam Mendes, the director of Craig's next major film, *Road to Perdition* (2002), cast Craig not because of the actor's exposure from *Lara Croft* but on the strength of his performance in *Sword of Honour. Road to Perdition* was highly acclaimed, and Craig, as the deranged, vengeful son of the gangster played by Paul Newman, began to receive wider critical notice. Also in 2002 Craig returned to the London stage in two plays: Michael Frayn's Pulitzer Prize–winning *Copenhagen* and Caryl Churchill's *A Number*, which addressed the controversial issue of human cloning. Michael Gambon, Craig's co-star in *A Number*, told Matthew Sweet for the London *Independent on Sunday* (September 22, 2002), "I've never worked with a young actor so smoothly. He's so intelligent and sharp and clever. And I'm not just saying that, he's just perfect. He can do anything."

The truth of that statement was tested to a degree the next year, with Craig's decision to portray one of the most controversial figures in contemporary English literature, the poet Ted Hughes. Opposite Gwyneth Paltrow as Hughes's wife and fellow poet, Sylvia Plath, in *Sylvia*, Craig came under fire from fans of Plath, who still accuse Hughes of being responsible for Plath's suicide and opposed any effort to represent Hughes in anything but a negative light. Craig strove to portray Hughes as a man who was deeply conflicted about commitment but nonetheless passionately in love with his wife. Although the movie got a lukewarm reception, Craig got rave reviews for his success in conveying his character's stony façade as well as the sensitivity underneath. Also in 2003, again making a risky choice, he starred in *The Mother*, as a carpenter who beds both his client and her mother, who is 30 years his senior.

In 2004 Craig received more attention for his personal life than for his professional achievements. He starred in the gangster film *Layer Cake* as the unnamed narrator; his much-lauded performance ("Daniel Craig really owns the film," Liz Braun wrote for the June 10, 2005 edition of the *Toronto Sun*) was overshadowed in the press by his successive romantic relationships with his co-star, Sienna Miller; the British supermodel Kate Moss; and the film producer Satsuki Mitchell, his current girlfriend. In 2005, with his personal life apparently sorted out, Craig starred in *The Jacket*, with Adrien Brody; the little-noticed television thriller *Archangel;* and Steven Spielberg's high-profile film *Munich*, for which he underwent an unusually easy audition process. "I had a meeting with Steven Spielberg that was 10 minutes long," Craig told Masterson. "He offered me the job. I walked out and went and had a drink."

Craig joked that he also indulged in a drink—James Bond's favorite: a martini—when he found out he had been chosen to play the spy in *Casino Royale*, a new film version of Ian Fleming's same-titled first Bond novel, published in 1953. "I had never even *considered* [the role]," he told David Katz for *Esquire* (September 1, 2006). "Well, of course, as a child I considered it. But once I started acting, it was never an agenda." Few diehard fans of the Bond series had predicted that a blond actor would follow in the footsteps of the prototypical—and, in the opinion of many, definitive—screen Bond, Sean Connery. Immediately after the announcement, Bond devotees created vitriolic anti-Craig Web sites, such as one called Daniel Craig Is Not Bond, railing against the actor's perceived physical shortcomings. "It was a big risk . . . ," *Casino Royale*'s director, Martin Campbell, told Nick Curtis for the London *Evening Standard* (November 15, 2006) of casting Craig. "And with a new Bond, you never know if it's going to work. Even if you've got the best actor in the world, you don't know until the last minute if he will connect with the public as Bond." While the announcement of a new Bond has always been met with some skepticism among fans, the attacks against Craig were especially personal. "I knew there would be criticism because he is not your stereotypical, pretty-boy Bond," Campbell told Curtis. "He's sexy but he's not poster pinup goodlooking." Despite the public's reaction, the choice of Craig had the overwhelming support of the actor's co-stars and predecessors—even Connery, who told Richard Price for the London *Daily Mail* (November 15, 2006), "He's a great choice, really interesting—different." "You lose your sense of humor very rapidly . . . ," Craig told Katz about the period when the criticism started being posted on the Internet. "I had a very dark two or three days. I was very despondent. But . . . I vowed to work twice as hard and get it right. Get it *beyond* right."

Critics and fans unanimously agreed that Craig had achieved that goal, breathing new life into the Bond series as a younger, more conflicted secret agent who has just earned his "double-0" status (meaning that he is, in a phrase well-known among Bond fans, "licensed to kill"). In the *Atlanta Journal-Constitution* (November 16, 2006), Eleanor Ringel Gillespie wrote, "Craig is definitely the Real Thing—dangerous, seductive, with a wired intensity that, along with his irradiated blue eyes, calls to mind Connery's sex-symbol contemporary, Steve McQueen." Price noted that Craig's idiosyncrasies had turned out to be great advantages in reviving the image of Bond. "With his impeccable pedigree as a serious actor he has immediately made the role his own, introducing an edgier appeal which harks back to the original Bond novels." Noting Craig's muscular build, Katz wrote, "Connery may have been vaguely menacing, but Daniel Craig looks like he could actually hurt you." While *Casino Royale* represented a departure in some ways from past Bond films—with fewer gadgets, the absence of the recurring characters Moneypenny and Q, and more intense violence—Craig said that he was well aware of the tenets of success for the character and the film. "I'm a Bond fan," Craig told Jo Walker for the Liverpool, England, *Daily Post* (November 11, 2006). "If I go and see a Bond movie there are certain things I think should be in it. And they're there. We've got them in spades. Nobody knows more than I do how important this is, and it's my job to get it right." *Casino Royale*, the 21st movie in the series, went on to become the highest-earning Bond film of all time, bringing in $454 million by late December and surpassing the record of $431 million set by *Die Another Day* (2002). Craig is currently filming the next Bond movie, which is scheduled for release in 2008 and has the working title "Bond 22."

In 2006 Craig also starred in *Infamous*, about the writer Truman Capote, as one of the murderers Capote profiled in his nonfiction classic *In Cold Blood*. In 2007 Craig starred opposite Nicole Kidman in *Invasion*, a remake of *Invasion of the Body Snatchers*. He also appeared, again opposite Kidman, in *The Golden Compass*, the first in an intended trilogy based on Philip Pullman's best-selling fantasy series His Dark Materials. In addition to the next Bond film, Craig was cast in at least three motion pictures scheduled for release in 2008, including *Flashbacks of a Fool*, *Defiance*, and *I Lucifer*.

In 2007 Craig was invited to join the Academy of Motion Picture Arts and Sciences, an honor given to those who have "distinguished themselves by their contributions to theatrical motion pictures," according to an academy press release. Craig has one daughter, Ella, from his 1992 marriage to the Scottish actress Fiona Loudon; the couple divorced in 1994. He is the chairman of the honorary board of directors of STOP (Stop Trafficking of People), an organization devoted to combating the sexual and economic exploitation of women and children.

Crocker, Ryan

June 19, 1949– U.S. ambassador to Iraq

Address: Embassy of the U.S., APO AE 09316, Baghdad, Iraq

As demonstrated by his successive posts as U.S. ambassador to Lebanon, Kuwait, Syria, and Pakistan, Ryan Crocker is "a man who doesn't mind the hot spots," as Greg Palkot put it for the Fox News Network (March 28, 2007). "In fact, his resume reads like a timeline of terrorism and conflict during the last four decades." In March 2007 Crocker took on what is widely considered to be his most difficult assignment yet, when he became the U.S. ambassador to Iraq. U.S. secretary of state Condoleezza Rice told reporters at a press conference on January 8, 2007, on the occasion of Crocker's nomination to the post, "Few diplomats have the kind of experience in the broader Middle East that Ryan has amassed in his three decades of service. . . . Ryan Crocker is known and respected throughout our government, throughout the Middle East, and throughout the world. He knows the language and culture of the region, as well as the leaders and the societies that they lead. . . . Ryan will be a demanding boss in our embassy, you can be sure of that, but a fair and inspiring one." Crocker has worked with the heads of the Iraqi government and U.S. military officials in an attempt to bring stability to Iraq, which has been riven by sectarian violence since the American occupation that began in 2003. A former colleague of Crocker's, speaking with Scott Shane for the *New York Times* (January 6, 2007), called the ambassador "incredibly hard-working, very serious, a little introverted. I'd say he's more respected than loved in the State Department, but he certainly is respected. He's done the dirtiest, hardest assignments you can imagine."

Ryan Clark Crocker was born on June 19, 1949 in Spokane, Washington. Because his father was an officer in the U.S. Air Force, he lived in several countries as a child, attending schools in Morocco, Canada, and Turkey as well as the United States. He studied at University College Dublin, in Ireland, and Whitman College, in Walla Walla, Washington, obtaining a B.A. degree in English literature from the latter school in 1971. Intent on a career in the Foreign Service, he entered Persian-language training through the State Department, in 1972, and was assigned to work at the American Consulate in Khorramshahr, Iran, later that year. In 1974 he was assigned to the American Embassy in Doha, Qatar, as an economic-commercial officer. In 1976 he returned to Washington, D.C., to begin Arabic-language training, completing a 20-month program at the Foreign Service Institute's Arabic School in Tunis, Tunisia, in June 1978. At one point during Crocker's training, he spent two weeks with a Bedouin desert tribe in Jordan, practicing Arabic and helping to herd sheep.

In 1978 Crocker was assigned to be chief of the economic-commercial section at the American Embassy in Baghdad, Iraq. At the time Saddam Hussein was on the verge of taking over that country's presidency and beginning the 24-year authoritarian rule that has often been called a reign of terror. During his swearing-in ceremony as the United States ambassador to Iraq, on March 29, 2007, Crocker recalled his earlier days in Baghdad, saying, "There was no security. Iraqis everywhere lived in terror of the midnight knock on the door. Neighbors were afraid to talk to neighbors. It truly was the republic of fear." Beginning in 1981 Crocker served in the political section at the U.S. Embassy in Beirut, Lebanon. He told Greg Palkot, "Lebanon in the early '80s was just awful." Lebanon underwent a civil war from 1975 to 1990, during which neighboring countries aided the various factions seeking to win control of the nation. In June 1982 the Israeli Defense Forces (IDF) invaded northern Lebanon; the following August another of the armed groups fighting in Lebanon's civil war, the anti-Israel Palestine Liberation Organization (PLO), agreed to leave Lebanon, and Israel agreed not to move its troops further south into Beirut. Later that summer the Lebanese president-elect, Bachir Gemayel, an ally of Israel, was assassinated. In September the IDF advanced into West Beirut and sent members of a pro-Gemayel Christian militia group, the Lebanese Forces, into the Sabra and Shatila refugee camps, near Beirut, which housed Palestinians who had been displaced from their homes during various Israeli military actions. According to Israeli officials, the militia was instructed to capture any PLO fighters remaining in the camps. Instead, over a three-day period, the militia tortured, raped, and killed hundreds of men, women, and children in what came to be known as the Sabra and Shatila Massacre. Images of the massacre were broadcast all over the world, sparking international outrage.

The Sabra and Shatila killings presented a diplomatic challenge for the United States, which had strong military, economic, and cultural ties to Israel. Beth Jones, who served as Crocker's contact at the State Department at the time, told Renee Montagne for the National Public Radio (NPR) program *Morning Edition* (February 7, 2007) that Crocker "was one of the first on the scene, and there was no cell phone, there was no Blackberry, there was no anything. So there were plenty of periods of time where we didn't know where he was or whether he was safe. And mind you, this was a horrific set of scenes that he was looking at. He went through all of it for me on the phone, but at the same time was working with the rescue workers and others, and the survivors, to try to help them sort out who was still alive, who needed urgent medical care and what else needed to be done."

In the aftermath of the massacre, the U.S. sent troops to Lebanon to quell uprisings from anti-Israeli groups in the country. The U.S. backed the parliamentary election in which Bachir Gemayel's brother, Amine Gemayel, was elected president. On April 18, 1983 a suicide bomber drove a van into the United States embassy, causing an explosion that killed 63 people. Jones told Renee Montagne that Crocker "was blown across his office. I was in touch with him pretty quickly after that and then out of touch with him because he was down on the rubble, pulling people out . . . and trying to help us identify who had been hurt and who hadn't made it through." Anti-U.S. attacks continued in Lebanon throughout the early 1980s. Crocker left the country in 1984.

Crocker spent the 1984–85 academic year at Princeton University, in Princeton, New Jersey, pursuing coursework in Near Eastern studies. From 1985 to 1987 he served as the deputy director of the Office of Israel and Arab-Israeli Affairs at the State Department, in Washington, D.C. From 1987 to 1990 he worked as a political counselor at the American Embassy in Cairo, Egypt. In 1990 he returned to Beirut to serve as the U.S. ambassador to Lebanon. Augustus Richard Norton, the author of

Hezbollah: A Short History and other books, told Barbara Slavin for *USA Today* (September 9, 2007), "While most officials in the U.S. Embassy were clueless about developments in the Shiite community [in Lebanon], Ryan proved to be a different story. He immediately grasped that something important was going on and as a result pursued his own contacts in southern Lebanon." Scott Shane reported that at that time Crocker, a marathon runner, ran "several miles early every morning, even in . . . Beirut, where he was trailed by burly security guards who sometimes had to hop on bicycles to keep up."

Following the Iraqi invasion of neighboring Kuwait, in August 1990, Crocker also became the director of the Iraq-Kuwait Task Force, which advised the State Department during the Persian Gulf War of 1991—in which the U.S. and its allies drove Iraqi forces from Kuwait. In 1993 he stepped down from his post as ambassador to Lebanon, and in the following year he received the Presidential Distinguished Service Award from President Bill Clinton. From 1994 to 1997 Crocker served as the U.S. ambassador to Kuwait. In 1997 he received the Department of Defense Medal for Distinguished Civilian Service.

Crocker became the U.S. ambassador to Syria in 1998. After President Clinton nominated him for that post, Crocker testified before the Senate Committee on Foreign Relations (May 7, 1998), stating, "As you know, our relationship with Syria is complex and touches on our core foreign policy interests in the region. The United States has serious policy differences with Damascus [Syria's capital] over Syria's continued support for terrorist groups [including Hezbollah] and its human rights record. You have my firm commitment to continue the fight against terrorism and to press the Syrian government to improve its human rights treatment of the Syrian people." Crocker's tenure in Syria included an incident in which an armed Syrian gang breached embassy security and ransacked the ambassador's residence. U.S. senator Charles Hagel, Republican of Nebraska, told the Senate Foreign Relations Committee (September 29, 2004), as quoted by the Federal News Service, "I recall arriving in Syria one afternoon when Ambassador Crocker was there. It was the day after the United States embassy in Damascus had essentially been sacked. And in a very low-key way, as we went into the ambassador's residence, I asked how his family was, and he said, well, it had been a bit harrowing for his wife, who had locked herself in a room on the second floor of the ambassador's residence as this group of thugs was . . . stealing what they could from the house, and shooting up the house. A rather hectic time in the life of an ambassador and his family. But Ambassador Crocker . . . did not blink. He stayed with the schedule we had." Ultimately, Crocker and his team were not able to end Syria's financing of Hezbollah, which continued to operate in southern Lebanon and beyond. In 1999 Crocker was given the Presidential Meritorious Service Award by President Clinton. He ended his ambassadorship to Syria in 2001.

In May of that year, Crocker received an honorary doctor of laws degree from his alma mater, Whitman College. In August he became deputy assistant secretary of state for Near Eastern affairs, a post that enabled him to live in the United States, though he was still required to travel frequently. (According to Shane, Crocker "prefers working overseas.")

After the September 11, 2001 terrorist attacks on the United States, Crocker's Middle East expertise and language skills were in high demand. In January 2002 President George W. Bush appointed Crocker to be the interim envoy to the new government of Afghanistan, which was formed after the United States military invasion captured, assassinated, or drove into hiding members of the Islamic fundamentalist Taliban government. While the United States was able, with Crocker's help, to facilitate the transition to a nominally democratic government, the Taliban retained power in many parts of the country, particularly along the rural Pakistan-Afghanistan border. Crocker received the Robert C. Frasure Memorial Award from the U.S. State Department for "exceptional courage and leadership" in Afghanistan. (The award was named for a U.S. diplomat who died in an automobile accident while on a peacekeeping mission in Bosnia in 1995.)

Near the end of 2002, Crocker sent a memo to then–Deputy Secretary of State Richard Armitage and then–Secretary of State Colin L. Powell. At the time the Bush administration was preparing to go to war in Iraq, for the stated purpose of ridding that country of so-called weapons of mass destruction, which were not subsequently found there. Armitage told Montagne that Crocker's memo pointed out "the tremendous difficulties that would ensue after an invasion of Iraq. The decision to invade is one thing, but the management of the post-invasion process is fraught with some difficulties that are rooted in history. Lack of a homogeneous population, the sectarian strains, the tribal nature of the society—all led to a very difficult equation. . . . From my point of view [the memo] was dead on the money." Montagne, speaking in early 2007, noted that the memo had "become a touchstone . . . about pre-war planning."

In May 2003 Crocker left his position in Afghanistan to become the first director of governance for the Coalition Provisional Authority in Iraq, a post in which he oversaw political reconstruction in the country following the U.S. invasion. Many observers in the Iraqi and international press opined that Crocker made a mistake in helping to create Iraq's first government council with certain numbers of seats reserved for members of various ethnic or religious affiliations; indeed, some later blamed that decision for the increased sectarian tension and violence in Iraq. Crocker reportedly had a tense relationship with then-ambassador to Iraq L. Paul Bremer, as they disagreed on the direction that political reconstruction should take. Crocker told the Iraqi journalist Aziz Al-Haff for Al-Iraqiya Television (April 19, 2007), "Clearly after the fall of Saddam we all faced a very complex situation in Iraq. And it was one without a roadmap. We had to deal with the reality as we and the Iraqis found it. And the reality is . . . that there were a number of parties that defined themselves in Islamic terms. And they were represented on that initial governing council. . . . We—the United States and the Coalition—did not create these parties. We recognized their existence. We recognized their weight on the political stage, and we worked together to try to build a governing mechanism that would advance the cause of Iraq." In August 2003 Crocker left his position in Iraq and returned to the United States, where he became the international-affairs adviser at the National War College, part of the National Defense University. Many senior military and government officials study at the National War College in order to prepare for more advanced positions. Also in 2003 Crocker received the Presidential Meritorious Service Award again, this time from President Bush.

In September 2004 Bush awarded Crocker the rank of career ambassador, the highest level attainable in the Foreign Service. The Bush administration then nominated Crocker to be the next U.S. ambassador to Pakistan. On September 29, 2004 Crocker told the Senate Foreign Relations Committee, "If confirmed, I will place particular emphasis on our education programs, where we are working with the Pakistani government to improve the quality and affordability of Pakistan's public schools so that parents of limited means have an alternative to narrow, religiously oriented education." He added that while he had more experience in the Middle East than in South Asia, he had "extensive experience with the issues that shape that area [South Asia] as well: the problem of global terrorism, the problem of Islamic extremism, the problem of underdevelopment, the problem of bad governance, the problem of regional conflict. These are all issues that I wrestled with in the Middle East dimension my entire career." Crocker was confirmed as the ambassador to Pakistan and served there from 2004 to 2007.

In January of the latter year, Secretary of State Condoleezza Rice announced President Bush's decision to nominate Crocker to be the new ambassador to Iraq, replacing Zalmay Khalilzad, who had been appointed in April 2005. Armitage told Montagne about Crocker, "He's the best field man, I think, that we've got in the Foreign Service . . . someone who is always reveling in the dirty, hard and dangerous jobs." The Senate confirmed Bush's choice on March 7, and Crocker left his post in Pakistan to prepare for his job in Iraq. On March 29 he officially took over ambassadorial duties at a swearing-in ceremony in Baghdad. While such ceremonies generally take place in Washington, D.C., Crocker requested that his be held in the country where he would serve; he told those assembled on that occasion, as quoted on the Web site of the U.S. Embassy in Iraq, "It was very important to me to have this ceremony here, not just in the interest of time, but because here in Iraq America faces its most critical foreign policy challenge. . . . The Iraqi people themselves face a historic test—one rooted in a shared view of common humanity as the grounds on which to base sometimes very difficult compromises. Turning the tide from oppression to freedom does not come overnight. It does not come without high costs. . . . We must stand by . . . all Iraqis who seek a better future and remain committed to their success." In Baghdad Crocker has worked closely with Iraqi president Jalal Talabani, Prime Minister Nuri Kamal Al-Maliki, and the top U.S. military commander in Iraq, General David H. Petraeus. Crocker told Renee Montagne for *Morning Edition* (June 6, 2007), "If my day starts with the alarm going off, rather than an overnight phone call, nothing really, really bad has happened overnight. My first thought every morning is, did we have casualties?"

The situation in Iraq is complicated by numerous factors. Though the arrest and execution of Saddam Hussein ended a nearly quarter-century-long, murderous dictatorship, they did not eliminate the deep-seated sectarian tensions dividing various ethnic and religious factions in Iraq. The majority of Iraqis are Muslim, but they are not united. Members of the largest sect, the Shi'ites, follow a theological tradition different from that of the members of the second-largest group, the Sunnis. There exist both interdenominational and intradenominational fighting, the latter often based upon ethnic tribal allegiances. In January 2007 President Bush announced a plan for a "surge," or increase, in the number of American troops sent to Iraq, in an effort to quell the extensive violence; 30,000 more troops and support personnel were committed to active service. According to NPR.org, U.S. troop fatalities from March 2003 through August 2007 numbered 3,740. The number of Iraqi civilian casualties, while disputed, was far greater.

Since he assumed the top U.S. diplomatic post in Iraq, Crocker has often, in press conferences and speeches, stressed the need for patience with regard to conditions there. He has often used the terms "Washington clock" and "Baghdad clock" to refer to the desire of the American public and U.S. government officials for quick action—a desire that is at odds, he feels, with the reality of slow progress on the ground in Iraq. At a press roundtable in Baghdad on May 18, 2007, Crocker told journalists, "I think we are seeing some progress, as it were, at the strategic level, but there's a tremendous amount of damage out there that's got to be repaired. I mean, the sectarian violence over the last year has been hugely corrosive. And you just don't wave a wand over it and make that go away in a day, a week or a month." He told Renee Montagne for *Morning Edition* (June 6, 2007), "Sometimes I think that in the U.S. we're looking at Iraq right now as though it were the last half of a three-reel movie. For Iraqis, it's a five-reel movie and they are still in the first half of it. I don't see an end game, as it were, in sight. . . . You know, if we were to scale back our engagement here in a major way before there has been a major change in circumstances on the ground, what are the consequences? My experience—three-and-a-half decades in this part of the world—suggests to me that things could get very much worse." On September 10, 2007 Ambassador Crocker appeared with General Petraeus before a joint session of the U.S. House Committee on Foreign Affairs and the House Armed Services Committee; in that eagerly anticipated session, Petraeus described what he called slow progress in Iraq and said that the U.S. should be able to return to its "pre-surge" troop level of about 130,000 soldiers in that country. Crocker, for his part, again sought to discourage a quick withdrawal of all U.S. troops from Iraq.

Crocker is married to Christine Barnes, whom he met in 1979, when she was a secretary for the Foreign Service.

Culpepper, Daunte

(DAN-tay)

Jan. 28, 1977– Football player

Address: Oakland Raiders, Network Associates Coliseum, 7000 Coliseum Way, Oakland, CA 94621

In the 2007 season of the National Football League (NFL), the quarterback Daunte Culpepper has been attempting a professional comeback, a return to the spectacular play that preceded a series of career-derailing injuries. With his speed, agility, strong throwing arm, and pinpoint accuracy, Culpepper was touted at the outset of his career as one of the most talented quarterbacks in football, despite a six-foot four-inch, 260-pound frame not traditionally associated with his position. Over the course of his four years at the University of Central Florida (UCF), Culpepper threw for 84 touchdowns and more than 11,000 yards, shattering a 15-year National Collegiate Athletic Association (NCAA) record for completion percentage in a single season and becoming one of only three players in NCAA history to reach 10,000 passing yards and 1,000 rushing yards. Drafted in 1999 by the Minnesota Vikings, Culpepper went on to set single-season team records in touchdowns and rushing yards and to appear in three Pro Bowls. Following the 2005 season—the second of his professional career to be cut short by injury—he was traded to the Miami Dolphins, spending only one, incomplete year with that team before undergoing knee surgery. Released from the team in June 2007, Culpepper signed a contract two months later with the Oakland Raiders.

Daunte Richard Culpepper was born on January 28, 1977 in Ocala, a town in north-central Florida, 30 miles south of Gainesville. The identity of his father has not been publicly divulged. At the time of Culpepper's birth, his mother, Barbara Henderson, was a resident of the McPherson School for Girls, a state-run juvenile-reform institution, and was headed to prison. Determined to prevent the state from placing her son with a family she did not know, Henderson asked Emma Culpepper, a McPherson School house parent, to adopt the boy. Emma Culpepper had raised 14 children (none of them her biological offspring), including her late brother's four children and the sons and daughters of other McPherson School girls. Emma Culpepper, who was 62 years old then, "said no to Barbara. Two or three times," as she recalled to Marcus Hayes for the *Philadelphia Daily News* (February 2, 1999). "I know it was the Lord who told me to take him, because I was sick of kids. Sick of 'em." As quoted on *Culpepper Connections!* The Culpepper Family History Site (on-line), she said, "I'm so glad I said yes. . . . He was a blessing from God." Daunte had been living with Emma Culpepper for about five years when Henderson, who had been released from prison, came to take him home with her. Daunte Culpepper told Michael McLeod for the *Orlando Sentinel* (October 18, 1998), "All I remember is: I didn't like it. My biological mama tried everything to calm me down, but I just wouldn't stop screaming and carrying on. Finally, [Emma] came back for me. I was never so happy as I was when I saw her." Daunte, who regularly visits Henderson (the mother of several other children), continued to live with Emma. "I'm just glad that [Henderson] had enough in her heart to give me up," he said for the *Culpepper Connections!* site. "Actually, she gave me up twice. . . . I knew she was my mom, but I didn't want to live with anybody but Emma." Culpepper grew up with three older boys, whom he considered his brothers. "We slept in bunk beds in the same room every night," he told Bruce Lowitt for the *St. Petersburg (Florida) Times* (September 30, 1998). "We were pretty happy all the time, fighting and arguing. That's what boys do. I was always bigger than anyone my age, so I didn't get picked on much at school. But I was the baby at home. I got it all the time. I think my competitive nature came from living with those guys." As a child Culpepper demonstrated musical talent at an early age; he learned to play the cello, violin, and bass violin while attending elementary school and became so proficient that he was invited to play with a community-college orchestra.

Culpepper abandoned his music lessons when he became involved in football, during middle school. At 12 he started as a wide receiver in the Marion County Junior Football League; one day during practice, after retrieving a ball that had been thrown too far down the field, he threw it to the coach, who was so impressed with Culpepper's strong arm that he moved the young athlete to the quarterback position. At Vanguard High School, in Ocala, Culpepper lettered in baseball and basketball in addition to football. He was not as accomplished in the classroom. "My freshman and sophomore years, I didn't do anything," he told Rana L. Cash for the *Miami Herald* (January 27, 1995). "I was lazy. It wasn't that I couldn't do it, I just didn't apply myself." At the end of Culpepper's junior year, his cumulative 1.5 grade-point average (GPA) was below the 2.0 average required by the NCAA to qualify for an athletic scholarship. Amid waning interest from Division I schools that had sought to recruit him, including Florida State University, the University of Miami, and the University of Florida, and media speculation that he would have to attend junior college, Culpepper worked hard to improve his GPA. With the help of Phil Yancey, his high-school coach, and Paul Lounsberry, a former high-school teacher and the offensive-line coach for the Golden Knights football team at the University of Central Florida (UCF), a school that still had interest in recruiting Culpepper, he improved his study habits and his grades. He met the NCAA's academic requirement with a 3.4 average in his final year of high school, which raised his overall GPA to 2.03, and he earned a qualifying score of 17 on the ACT (American College Test), a standardized college-entrance exam, on his third attempt.

In his senior year of high school, 1994–95, Culpepper led the Vanguard Knights football team to its first undefeated regular-season record and to the Class 5-A state title game, which they lost to Bradenton Southeast, 19–17. His 3,070 passing yards, 602 rushing yards, and 31 touchdown passes garnered Culpepper All-American honors and the title "Mr. Football" from the Florida Athletic Coaches Association. Over his three seasons at Vanguard, Culpepper passed for 6,107 yards, throwing 57 touchdowns and only 29 interceptions while rushing for 927 yards and 26 touchdowns; his eight completed passes for 137 yards propelled Florida to a victory in the annual Florida-Georgia High School All-Star Classic. He posted equally impressive numbers in baseball and basketball that year. Although he was drafted by the New York Yankees in the 26th round of the 1995 Major League Baseball June amateur draft, he turned down that opportunity in order to attend the University of Central Florida on an athletic scholarship, despite renewed interest from several Division I-A schools. He explained to Larry Guest for the *Orlando Sentinel* (August 6, 1995), "UCF stayed with me all the way, so I felt I should stay with them." Another factor in Culpepper's decision was that he was slated to be the cornerstone of UCF's Golden Knights, a team that was preparing to make the leap from the NCAA's Division I-AA to Division I-A, the highest level of competition, in 1996, during Culpepper's sophomore year.

As a UCF freshman, Culpepper faced an immediate challenge, taking over the offense from Darin Hinshaw, whose 9,000 career passing yards and 82 touchdowns made him the most accomplished quarterback in the Knights' history. He reportedly also encountered resistance from UCF fans over Coach Gene McDowell's decision not to start the returning backup quarterback Kevin Reid. Culpepper demonstrated poise in his debut against the ninth-ranked Division I-AA team Eastern Kentucky, leading his team to a 40–32 victory; in that game he was successful in his first 12 pass attempts, ultimately completing 20 of 25 passes for three touchdowns and 254 yards and earning national offensive player-of-the-week honors in the division. In describing his performance, McDowell told Jerry Greene for the *Orlando Sentinel* (November 20, 1998), "Neither 'spectacular' nor 'extraordinary' begin to describe it. My guess is that it was the best first-time performance ever by a freshman quarterback." Culpepper was even more impressive in his second game of the season, against Carson-Newman College, throwing 22 of 30 completions for two touchdowns and 307 yards. Completing 14 of 16 passes in an October 1995 game against Alabama's Samford University, Culpepper set a school record for completion percentage (.875) in a game. Despite the departure of the defensive leaders Travis Cooper and Greg Jefferson (both of whom graduated) and the loss of two starting wide receivers, Todd Cleveland and Rufus Hall (because of academic failure and a knee injury, respectively), Culpepper led the Golden Knights to a 6–5 record, closing out the final game of the 1995 season with a two-touchdown, 184-yard performance in Central Florida's 37–17 victory over Maine. At the end of his freshman season, Culpepper, who had thrown for 2,071 yards and 12 touchdown passes, was ranked 28th in the U.S. in passing efficiency (122.9) and 40th in total offense (189.9). He received the Most Outstanding Offensive Rookie of the Year Award from UCF and was named third-team I-AA All-American and Freshman Offensive Player of the Year.

Culpepper got off to a strong start in 1996, in his sophomore season—and Central Florida's first season at the Division I-A level—leading the Golden Knights to a 39–33 comeback victory in the Florida Citrus Bowl with a 13-play, 79-yard scoring drive in the fourth quarter of their opening game, against William and Mary College. However, he was unable to finish the second game of the season, completing 14 of 23 passes for 159 yards and two touchdowns in a loss against South Carolina's Gamecocks before suffering an ankle sprain in the third quarter, which kept him off the football field for a month. In October 1996, in his return game against the Division I-AA's Samford, his two-touchdown, 162-yard passing performance propelled the Knights to a 38–6 victory—and only their second win of the season. Following a 39–38 loss to Northeastern Louisiana, Culpepper suffered a setback in a game against Georgia Tech when he separated the shoulder of his non-throwing arm in the second quarter and was replaced by Jason Thorpe. (UCF lost, 27–20.) Despite media speculation that Thorpe would take over at the starting-quarterback position, Culpepper led UCF's offense to wins in the remaining three games, against Illinois State (42–15), the University of Alabama at Birmingham (35–13), and Bowling Green (27–19), during which he threw for 1,008 yards and eight touchdowns and completed 60 of 95 passes with only two interceptions. While the Golden Knights finished the 1996 season with a 5–6 record and a passing offense ranked 16th nationally, Culpepper, who was named Offensive MVP by UCF, improved his rankings in the categories of total offense (242.5) and passing efficiency (138.6).

Nineteen-ninety-seven was arguably Culpepper's breakthrough season. Following UCF's losses in the first three games, the Golden Knights, with Culpepper at the helm, rallied to win the next five of their eight remaining games and to match their 1996 record of five wins and six losses. Culpepper's best performance came against Northeast Louisiana, a game in which he recorded 385 passing yards, 95 rushing yards, and five touchdowns while setting a school record with 480 total offensive yards. He also rose to the occasion against established Southern Conference teams in Division I-A. Central Florida's game against the then–sixth-ranked Nebraska Cornhuskers represented Culpepper's debut on a national stage; he completed 24 of 35 passes for 318 yards and one touchdown, giving the Golden Knights a 17–14 halftime lead before they were outscored, 24–7, in the second half. Against eighth-ranked Auburn University, Culpepper's 19-pass, 210-yard performance—with one touchdown—was good enough to lead the Knights to a 14–14 tie through the first two quarters, after which Auburn scored 27 unanswered second-half points. Culpepper finished fourth in the nation in total offense, with 320 yards per game, and 15th in passing efficiency, with a 146.91 rating; he set 15 new school records, including total passing yards (3,086) and total offensive yards (3,524). In addition to his being named as a finalist for the Davey O'Brien National Quarterback Award and First-Team All-American by the NFL Draft Report, *Football News* selected him as a semifinalist for Offensive Player of the Year and gave him All-American honorable mention.

Despite his dominating performance during the 1997 season, Culpepper did not declare himself eligible for the 1998 NFL draft, deciding to return to the University of Central Florida for his senior season. "My mom always taught me about loyalty. UCF stood by me. They helped me when I needed it, and now I feel the program's at a point where maybe I can help them," he told Philip Singerman for *Sport* (September 1998). He adapted well to the new, professional-style offense implemented by the team's new head coach, Mike Kruczek. His stellar performances in the first two games of the season, victories against Louisiana Tech (64–30) and Eastern Illinois (48–0), began talk about him as a possible Heisman Trophy candidate. Culpepper followed a 35–7 loss to Purdue in his national debut on ESPN with five consecutive wins, highlighted by a winning 320-yard performance against Bowling Green (38–31) that made him the school's all-time leading passer and a 438-passing-yard performance against Southwestern Louisiana, which set a school record. His CFU career statistics of 11,412 passing yards and 1,020 rushing yards made him one of three players in the history of the NCAA, along with Steve McNair of Alcorn State University and Doug Nussmeier of the University of Idaho, to reach 10,000 passing yards and 1,000 rushing yards. Culpepper also set a new NCAA mark with his pass-completion percentage (73.6), breaking Steve Young's previous record of 71.3 at Brigham Young University in 1983. Culpepper's numbers for the season in passing yards (3,690) and touchdowns (28) garnered him five first-place votes and a ranking of sixth overall in the balloting for the Heisman Trophy, which was awarded to the running back Ricky Williams.

After graduating from Central Florida with a degree in secondary education, Culpepper—who made himself eligible for the 1999 NFL draft—was projected to be one of a group of five quarterbacks, including Donovan McNabb and Tim Couch, to be selected in the draft's first round. While his speed, arm strength, and exceptional mobility made Culpepper attractive to team officials, his relative lack of experience against the higher-seeded teams in the division was a concern for NFL teams. (Central Florida's schedule included several games against some of the lower-seeded Division I schools.) As a result he ended up the 11th pick overall, getting drafted in April by the Minnesota Vikings. Despite skepticism from Vikings fans, Culpepper was given a five-year, $7 million contract.

In his rookie season with the Vikings, Culpepper served as the third-string quarterback behind Randall Cunningham, who had long been his role model, and the backup quarterback Jeff George. After the Vikings' 1999 season, Cunningham and George were released, and the starting-quarterback reins were turned over to Culpepper, who ended fans' and critics' doubts with victories in the first seven games, helped in part by his scrambling and by the receiving corps of Randy Moss, Cris Carter, and Robert Smith. "The game is changing so much, it's forcing the [quarterback] position to be played by somebody like me," Culpepper had said the previous year to Mike Bruton for the *Philadelphia Inquirer* (April 11, 1999). "Somebody that's big, because the defense is getting faster. The defense is getting bigger and stronger, and you've got to have a quarterback that's getting bigger and stronger along with them." The Vikings finished the 2000 season with an 11–5 record and defeated the New Orleans Saints to advance to the National Football Conference (NFC) Championship Game, in which they lost to the New York Giants, 41–0. Culpepper ranked third in Vikings history in passing yards for the season (3,937), third overall in the NFC in quarterback rating (98.0), and fourth overall in the NFL in the same category. He was also selected to his first Pro Bowl.

Culpepper failed to repeat that success in the 2001 season, hampered by Smith's unexpected retirement, the ineffective play of an aging Cris Carter, and the loss of the offensive tackles Todd Steussie, a free agent, and Korey Stringer, Culpepper's close friend, who had died after suffering heat stroke during training camp. With a dearth of offensive playmakers, Randy Moss became Culpepper's main offensive ally and drew double and even triple coverage from opposing teams. In the first 11 games, Culpepper completed 64.2 percent of his passes, throwing 235 completions for 2,612 yards, 14 touchdowns, and 13 interceptions before undergoing surgery for a sprained ligament in his left knee, which ended his play for the season. He endured the loss of Head Coach Dennis Green after that year, during which the Vikings posted a 5–11 record. Culpepper's problems with overthrows, fumbles, and turnovers continued during his 2002 season with the Vikings, the first under the team's new head coach, Mike Tice. Halfway through the season, Culpepper, with the wide receiver Moss as his sole target, had thrown only eight touchdowns, with 14 interceptions; after 13 games, the Vikings had three wins and 10 losses. In a home game against the New York Giants, Culpepper was booed by fans and benched in the third quarter in favor of the backup Todd Bouman; the Vikings lost, 27–20. "Driving home that night, I made up my mind. I would never play like that, ever again," Culpepper recalled to Josh Elliott for *Sports Illustrated for Kids* (January 2005). He remained the starter and worked with the offensive coordinator Scott Linehan on improving his footwork, ball handling, and accuracy. In the final three games of the season, Culpepper completed 67 of 94 passes for 868 yards and four touchdowns, and the Vikings finished the season with a 6–10 record. He ended the 2002 season as the second-ranked passer in the NFC, with 3,853 passing yards, and set team records in rushing yards (609), attempts (106), and rushing touchdowns (10); his rushing-yards total qualified as the eighth-highest by a quarterback in NFL history, and his rushing-touchdowns total was the fourth-highest. Despite an up-and-down 2002 season, the Vikings' then-owner, Red McCombs, signed Culpepper in July 2003 to a 10-year, $102 million deal.

Culpepper's throwing accuracy continued to improve in the 2003 season, as the Vikings recorded victories in their first six games. Despite his cutting his number of interceptions by half (from 23 in 2002 to 11 in 2003), the team managed only three victories in the remaining 10 games, finishing the season with a record of 9–7 and failing to make the play-offs. In 2004 the Vikings were among the NFC's favorites to appear in the Super Bowl. Culpepper's 18 touchdowns over a month-long period, including three games in which he threw five touchdowns each, brought the team a 4–1 record and put him on pace to break Dan Marino's record of 48 touchdowns in one season (which has since been surpassed by the Indianapolis Colts' quarterback Peyton Manning, who completed 49 touchdown passes during the 2004 season). The Vikings' defense struggled the rest of the season, and the team won only one of their last five games; they made the play-offs, however, with a record of eight wins and eight losses. In the first round, against the Green Bay Packers, Culpepper made 19 completions for 284 yards and four touchdowns to lead the Vikings to a win, 31–17. The Philadelphia Eagles' defense proved to be a greater challenge for Culpepper, who, despite an injured Moss, managed to keep the Vikings in the game until the fourth quarter before losing 27–14. Culpepper posted league-leading statistics of 4,717 passing yards and 39 touchdowns (a Vikings' record) with only 11 interceptions and a quarterback rating of 110.9, which also earned him his third Pro Bowl appearance. His total offensive yards (5,123), passing and rushing, surpassed Marino's NFL record.

Culpepper's 2005 season got off to a shaky start, following the departures of Linehan and Moss and a season-ending injury suffered by the Pro Bowl center Matt Birk. The quarterback failed to complete a touchdown pass in either of the first two games, which the Vikings lost. He managed a three-touchdown, 300-yard performance in a 33–16 home win against the New Orleans Saints but was plagued by two interceptions and a fumble in Minnesota's 30–10 loss to the Atlanta Falcons. The Vikings' season was further marred by charges of sexual misconduct by team players during a charter-boat cruise on which Culpepper was reported to be a passenger. (In April the case against Culpepper was dismissed. Three of his teammates received fines and were ordered to perform community service.) Culpepper managed only two interceptions in a losing 28–3 effort against the Chicago Bears, then suffered knee-ligament damage in October during the Vikings' loss to the Carolina Panthers—marking the second time in six years that Culpepper's season was cut short by injury. He finished 2005 with only six touchdowns and a quarterback rating of 72.0, while leading the league with 12 interceptions; he underwent surgery the next month and was replaced by Brad Johnson.

Prior to the 2006 season, Culpepper was traded to the Miami Dolphins. His year with that team was marked by disagreements—including heated exchanges—with the head coach, Nick Saban, and by injuries: after winning only one of the four games in which he played, he underwent arthroscopic surgery at the end of November and was placed on the injured-reserve list the following month, ending his season. In June 2007 Culpepper asked to be released from the Dolphins. In August he signed a one-year contract with the Oakland Raiders. "All I want is an opportunity," he said to Jarrett Bell for *USA Today* (August 15, 2007, on-line). "Then the rest is on me. I feel like I'm a starter in this league. When that happens, who knows? But I know I have a lot to contribute."

Culpepper made his Raiders debut in the third week of the 2007–08 season, when he replaced the first-string quarterback Josh McCown to start the second half of a game against the Cleveland Browns. Culpepper completed eight of 14 passes for 118 yards, helping Oakland hang on for a 26–24 win. The following week, on September 30, in a game against the Miami Dolphins, he earned his first start of the season. Culpepper scored five touchdowns, rushing for three and passing for two, as the Raiders posted a 35–17 win. After the game he insisted that he had no hard feelings toward his former team. "The only thing I felt bad about is I didn't have a chance to show the fans here me healthy as a Dolphin," he said, according to the Associated Press (October 1, 2007). "But now I had a chance to show them today, and I'm glad I was able to do that." Culpepper was named AFC offensive player of that week.

Culpepper was less successful in his second start, on October 14, 2007, as the Raiders lost to the San Diego Chargers, 28–14. In the course of the game, he fumbled once, threw two interceptions, and was sacked six times. Despite his spotty play, he was slated to start against the Kansas City Chiefs in the Raiders' next game. Observers speculated that McCown, who was getting ready to return after breaking a toe, might regain his first-string quarterback job the following week, in a road game against the Tennessee Titans. "I don't know because Josh isn't healthy," the Raiders coach, Lane Kiffin, told David White for the *San Francisco Chronicle* (October 18, 2007). "He's not all the way back, so Daunte's our starter right now."

Culpepper and his wife, Kimberly Rhem, his high-school sweetheart, have three children.

Dallek, Robert

May 16, 1934— Historian; biographer

Address: c/o Author Mail, Seventh Fl.,
HarperCollins, 10 E. 53d St., New York, NY
10022

According to the historian and writer Robert Dallek, no biographer can fully understand his or her subject. "I don't think any historian worth his or her salt would dare argue the production of a definitive study of any major historical figure . . . ," he told Jeff Guinn for the *Fort Worth (Texas) Star-Telegram* (May 17, 1998). "There is no definitive history, ever—just better-informed history." Dallek, who has taught at Columbia University, the

University of California at Los Angeles, Boston University, and Dartmouth College, is renowned for his meticulously researched biographies of American presidents—studies that, with few exceptions, his peers view as among the best-informed in that genre and as outstanding for their distinctive readings of people and events. In most of his biographies—notably, an 848-page tome on President John F. Kennedy and a two-volume work on Kennedy's successor in the White House, Lyndon B. Johnson—Dallek has applied his psychoanalytic training to analyze his subjects' characters and motivations. As someone who loves the American presidency as an institution, he has often been praised for his fairness, avoiding both the idolization and the belittlement of his subjects. "Robert Dallek's passion for history, politics and the presidency seems to fuel him—that and his Brooklyn skepticism not only about politicians, but also about half-baked political theory," Patrick Butters wrote for the *Washington Times* (June 9, 1998). "Sometimes," Butters added, "he's so emphatic [when he speaks] that he runs out of breath." Engagingly written and accessible to interested lay readers as well as specialists, Dallek's books have transcended the niche market of biography. "Quality writing can still find a wide audience. So can the kind of quality leadership historians love to write about," he told Guinn. "I'm certain of that."

Robert Dallek was born to Rubin and Esther Dallek on May 16, 1934 in the New York City borough of Brooklyn. He received a B.A. degree in history with high honors from the University of Illinois in 1955. He earned an M.A. degree, in 1957, and a Ph.D, in 1964, both in history, from Columbia University, in New York City. His doctoral dissertation, entitled "Roosevelt's Ambassador: The Public Career of William E. Dodd," was about the historian and biographer who served as President Franklin D. Roosevelt's ambassador to Germany from 1933, when Adolf Hitler became Germany's chancellor, to 1938, the year that nation invaded Austria. While working toward his doctorate, Dallek lectured in history at the City College of New York from 1959 to 1960 and in the same subject at Columbia from 1960 to 1964. Immediately after he completed his formal education, Dallek took a position as an assistant professor of history at the University of California at Los Angeles (UCLA); he later became a full professor there. From 1972 to 1974 he served as vice chairman of the school's History Department. In 1984 he earned UCLA's Henry L. Eby Award for the Art of Teaching.

In 1968 Dallek published his first book, *Democrat and Diplomat: The Life of William E. Dodd*, which grew out of his Ph.D. dissertation. His next, *Franklin D. Roosevelt and American Foreign Policy 1932–1945* (1979), won the Bancroft Prize (awarded by Columbia University) and was nominated for the American Book Award in history. (It was reissued in 1995 with a new afterword by Dallek.) The reviewer for the *Economist* (September 8, 1979) called the book "an able and even exhilarating vindication of Roosevelt's policy. Its chronological narrative gains in lucidity as events themselves gather momentum. . . . The author provides a balanced defence of Roosevelt's policy at the Yalta conference . . . in which he shows an exceptional talent for advocacy." From 1981 to 1985, concurrently with his work at UCLA, Dallek was a research associate at the Southern California Psychoanalytic Institute, in Beverly Hills.

Dallek's third book, *The American Style of Foreign Policy: Cultural Politics and Foreign Affairs* (1983), was his first to receive widespread notice. In examining U.S. foreign policy from the last years of the 1800s through the presidency of Richard Nixon, Dallek argued that the international dealings of the U.S. served primarily as an outlet for domestic concerns; in effect, they represented battles within the national psyche between conformity and individualism played out on the world stage. The Spanish-American War, for example, according to Dallek, served as a psychological release for a populace that felt oppressed by increasing industrialization. Mark Garrison, who reviewed *The American Style of Foreign Policy* for the *Washington Post* (May 8, 1983), found that Dallek did not have sufficient evidence to back up some of his assertions, but he praised the writer "for consciously stepping off into uncharted territory, offering his own controversial interpretations of domestic sources of American foreign policy in order to stimulate discussion and further investigation." He continued, "Studies like Dallek's should help us face up to our own shortcomings." The *New York Times Book Review* selected *The American Style of Foreign Policy* as one of 200 notable books of 1983.

In the middle of the Reagan presidency, Dallek published *Ronald Reagan: The Politics of Symbolism* (1984), an analysis of Reagan's ideology and its popularity within the U.S. In Dallek's "interesting but not entirely convincing" argument, as Gaddis Smith put it in a critique of the book for *Foreign Affairs* (Summer 1984), Dallek tried to show that Reagan's opposition to all forms of dependency—including welfare in the U.S. and the dependency on the government of citizens in the Soviet Union—stemmed from the president's growing up with a dependent, alcoholic father. The book was reissued in 1999 with a new preface in which Dallek discussed the then-upcoming 2000 presidential election.

In 1991 Dallek published *Lone Star Rising: Lyndon Johnson and His Times, 1908–1960*, the first volume of a planned two-volume biography. By his own account, his research at the Southern California Psychoanalytic Institute helped him to recognize that Johnson's self-regard was so extreme that it could be considered a psychiatric disorder. "One doesn't simply write about Lyndon Johnson," Dallek told James Willwerth for *Time* (July 29, 1991). "You get the Johnson treatment from beyond the grave—arm around you, nose to nose. I should admit that he also reminds me of my father, quite an overbearing and narcissistic character. And in some ways, he reminds me of myself. Another workaholic." Coincidentally, the publication of *Long Star Rising*, which Dallek had been working on for seven years, closely followed that of *Means of Ascent*, the second volume in a projected three-volume biography of Johnson by the best-selling biographer Robert Caro. While Caro's account was considered more readable than Dallek's, Dallek's was widely praised as a more accurate and more penetrating portrayal of Johnson. "On balance, as a historian seeking to place his subject in context and as a biographer sensitive to the full range of Johnson's stupefyingly complex character, Dallek has Caro beat all to feathers," David M. Kennedy wrote for the *Atlantic* (September 1991). Kennedy also expressed his admiration for Dallek's willingness to confront the "unsavory" elements of Johnson's life and those of his other subjects as well as those of the times in which they lived: "Dallek is not a cartoonist but a scrupulously faithful portraitist. He appreciates how tangled is the skein of history, and how mysterious is the human heart—especially Lyndon Johnson's heart. He gives us Johnson warts and all. . . . If understanding Johnson's life is in fact the key to understanding the 1960s, in Dallek's telling neither the puzzle nor the solution will be a simple matter."

In the spring of 1993, Dallek was a visiting professor at the California Institute of Technology, in Pasadena. The following year, prompted by cutbacks in the University of California system, he took early retirement. He was a visiting professor at Oxford University, in England, from 1994 to 1995 and at the Lyndon B. Johnson School of Public Affairs at the University of Texas in the spring of 1996. In September of that year, he joined the faculty of Boston University, in Massachusetts, as an adjunct professor in the History Department, a position he held until 2002. Also in 1996 Dallek published *Hail to the Chief: The Making and Unmaking of the American Presidents*, described by Fritz Lanham in the *Houston (Texas) Chronicle* (October 13, 1996) as "rather schematic but thought-provoking." Dallek explained to Lanham that he wrote the book because he had felt "distressed at how cynical people have been in the country about the presidential office and our political institutions. And what I wanted to say was that the institution has worked well in the past and can work well in the future."

The second volume of Dallek's Johnson biography, *Flawed Giant: Lyndon Johnson and His Times, 1961–1973*, was published in 1998. Again, Dallek received wide praise for his willingness and ability to view Johnson and his presidency in a balanced fashion, especially the administration's handling of the Vietnam War. Dallek said he thought that the book, published during the events leading up to the impeachment trial of President Bill Clinton, in early 1999, came at a time when both historians and the American public were beginning to view Johnson differently—as a president who, for all his flaws, at least knew how to give the illusion of authority. "We currently sense a vacuum of political leadership in this country and, I think, a yearning for strong leadership," Dallek told Jeff Guinn for the *Fort Worth (Texas) Star-Telegram* (May 17, 1998). "There are no political heroes anymore. Politicians are seen as questionable folks. LBJ, by God, was a man who acted like he was in charge." In *Flawed Giant* Dallek concluded that Johnson's narcissism and occasional paranoiac behavior led to his downfall as president, causing him to be deeply troubled and incapable of making the decisions necessary to get the United States out of Vietnam. Most reviewers lauded *Flawed Giant*, though with reservations. Milton Rosenberg, for example, wrote for the *Chicago Tribune* (April 12, 1998), "Dallek has given us a great narrative history, superbly researched, richly detailed, sensitively nuanced and compellingly told. But the narrative method works against the clear assignment of responsibility, the precise location of cause."

For his next subject, President John F. Kennedy, Dallek had to contend with a considerably larger amount of source material. After gaining exclusive access to Kennedy's previously unseen medical files, he decided to focus on the president's struggles with Addison's disease, colitis (also called irritable bowel syndrome), and severe back pain. In *An Unfinished Life: John F. Kennedy, 1917–1963* (2003), Dallek revealed that Kennedy led not the charmed life many Americans imagined, but rather one seldom free of extreme pain or heavy medication. "It's a complicated portrait—and yes, in the end, a positive one—but its greatest achievement is the way it avoids both myth-making and myth-breaking, while exposing us to the complicated life within," David Ulin wrote for *Newsday* (June 22, 2003). Other reviewers, however, found fault with the medical drama presented in the book. "It doesn't rise to the level of magisterial, nor does it move along in a sprightly way. . . ," Jack Ohman wrote for the *Oregonian* (June 8, 2003). "*An Unfinished Life* is neither grossly titillating nor studiously academic; it merely chugs along through the now-familiar JFK curriculum vitae." Many other reviewers also commented on the familiarity of the story but expressed the opinion that Dallek may have produced as near to a definitive biography of the 35th president as may be possible. "With his personal knowledge of the Kennedy years and with his deep scholarship, Robert Dallek has produced a biography of John F. Kennedy that will not be easy for any future author to surpass," Lewis Gould wrote for the *Chicago Tribune* (September 7, 2003). The book, which was excerpted in the December 2002 issue of the *Atlantic*, became a number-one *New York Times* best-seller and remained on the best-seller list for two months.

Over the next few years, Dallek revised his first book on Johnson and delved further into his study of Kennedy. In 2003 he published *Lyndon B. Johnson: Portrait of a President*, a condensed version of his two-volume biography. Dallek co-wrote, with the historian Terry Golway, essays that accompanied the CD *Let Every Nation Know: John F. Kennedy in His Words* (2006). In 2004–05 he was a guest professor and Montgomery fellow at Dartmouth College, in Hanover, New Hampshire.

Dallek's most recent book, *Nixon and Kissinger: Partners in Power* (2007), describes and analyzes the relationship between President Nixon and his national security adviser and, later, secretary of state, Henry Kissinger, each of whom had been the subject of extensive scrutiny. Dallek argued that many of the successes and failures of the Nixon administration resulted from the competitive yet symbiotic partnership the men maintained. In writing the book, more than 30 years after the Nixon presidency, Dallek made use of a large amount of recently declassified material: 20,000 pages of transcripts of Kissinger's telephone conversations, 2,800 hours of Nixon's tape recordings, and millions of pages of national-security documents. Though Dallek did not draw extended parallels between the administrations of Nixon and George W. Bush within the text, in the preface he noted that certain similarities presented fodder for future study. "Arguments about the wisdom of the war in Iraq and how to end U.S. involvement there, relations with China and Russia, what to do about enduring Mideast tensions between Israelis and Arabs, and the advantages and disadvantages of an imperial presidency can, I believe, be usefully considered in the context of a fresh look at Nixon and Kissinger and the power they wielded for good and ill," he wrote, as quoted by Michiko Kakutani in the *New York Times* (April 24, 2007). In an interview with Terry Gross for the National Public Radio program *Fresh Air* (April 25, 2007), Dallek said, "What I find interesting with this material on Nixon and Kissinger is that this was the most secretive administration in American presidential history until maybe this current administration."

In an assessment of *Nixon and Kissinger* for the *Boston Globe* (May 6, 2007), Martin Nolan called the book "admirable and important," while Kakutani described it as "engrossing." Mark Atwood Lawrence, however, writing for the *New York Times Book Review* (May 13, 2007), claimed that Dallek had led the reader astray. "Dallek's attention to personalities makes *Nixon and Kissinger* remarkably engaging for a 700-page study of policy making," Lawrence wrote. "But this emphasis also underlies its chief weakness: the implication that foreign policy devised by Nixon and Kissinger lacked intellectual coherence" and seemed haphazard. In reality, Lawrence asserted, the two men had followed a coherent strategy of realpolitik. Other reviewers applauded Dallek's focus on "psychobiography"—a subset of biography that seeks to understand the subject through psychological theory. Writing for the *Los Angeles Times* (May 13, 2007), Tim Rutten admired Dallek's dissection of the often-fraught relationship between Nixon and Kissinger. "What sets Dallek's work so forcefully apart from others who have attempted it is his carefully sourced insight into the psychodynamics of their relationship," he wrote. That insight—in addition to Dallek's extensive scholarly legwork and his fluid writing—Rutton wrote, made the book the ideal biography. "Dallek's *Nixon and Kissinger* is everything one could want in a contemporary history—a meticulously researched story, written with unobtrusive elegance, unsparing in its judgments, but tempered by sobriety and a genuine compassion for its compelling yet breathtakingly flawed subjects," he wrote. Rutten also expressed the view that *Nixon and Kissinger* surpassed Dallek's books on Johnson and Kennedy—which he described as "magisterial" and "deservedly bestselling," respectively—and set "a new benchmark for the field." It "surely will come to be regarded as a classic work of contemporary American history," he concluded.

Among other honors, Dallek was a John Simon Guggenheim fellow in 1973–74; a senior fellow of the National Endowment for the Humanities in 1976–77; and a Humanities fellow of the Rockefeller Foundation in 1981–82. In 1994 Dallek was elected a fellow of the American Academy of Arts and Sciences, and in 1995 he served as president of the Society for Historians of American Foreign Relations. He has lectured at schools including University College London, the University of Wyoming, Vassar College, and the University of Texas at Austin. He has served as a consultant for several television documentaries and has been a member of many prize committees, among them the committee for the 1985 Pulitzer Prize in history.

Dallek's first marriage, in 1959, to Ilse Shatzkin, ended with her death three years later. Since 1965 he has been married to the former Geraldine Kronmal, a health-policy consultant; the couple live in Washington, D.C. Their son, Matthew Dallek, a historian and speechwriter, is the author of *The Right Moment: Reagan's First Victory and the Decisive Turning Point in American Politics* (2000). Their daughter, Rebecca Dallek, is a specialist in technology in education.

Christian Steiner, courtesy of Antonio Damasio

Damasio, Antonio R.

Feb. 25, 1944– Neurobiologist; writer; educator

Address: Health Sciences Campus, Neurobiology Division, University of Southern California, Los Angeles, CA 90033

The story of a horrific accident that severely injured a railroad-construction foreman in mid-19th-century Vermont played a large role in attracting Antonio R. Damasio to a career in research—a career that has placed him among the world's most accomplished neuroscientists. The foreman, Phineas Gage, a smart, well-mannered, personable man, was on the job when an explosion drove a 13-pound, three-foot-long, one-and-a-quarter-inch-diameter iron bar upward into his skull just below his left cheekbone. The bar passed through one or both of the frontal lobes of his brain and emerged from the top of his head with a tremendous force that carried it 90 feet (the distance from first base to second on a baseball diamond). Much to his doctor's surprise, within about two months Gage had regained his ability to walk and talk, but his personality had changed irreversibly, leaving him hot-tempered, foul-mouthed, unpredictable, and unable to conduct himself responsibly. "At first I was interested in all types of neurological injuries," Damasio recalled to Manuela Lenzen during an interview for *Scientific American Mind* (April 2005). "If one area of the brain would lose its ability to function, the patient's behavior could change either dramatically or only subtly. One day I asked myself, 'What is missing in a person who can pass an intelligence test with flying colors but can't even organize his own life?' Such patients can hold their own in completely rational arguments but fail, for example, to avoid a situation involving unnecessary risk. These kinds of problems mainly occur after an injury to the forebrain. As our tests prove, the result is a lack of normal emotional reactions. I continue to be fascinated by the fact that feelings are not just the shady side of reason but that they help us to reach decisions as well."

Damasio is among the vanguard of scientists who have expanded neuroscience to include not only biology and medicine but psychology, philosophy, and literature. Fundamental to his work is the distinction between emotion and feeling—terms that most laypeople use interchangeably. For neuroscientists, as Damasio told Lenzen, emotions are "more or less" the complex automatic and unconscious reactions of the body to particular stimuli; feelings, he explained, "occur after we become aware in our brain of such physical changes." A racing heart, dry mouth, sudden copious sweating, constriction of the throat, trembling, and loss of bowel or bladder control are all *emotional* (bodily) reactions to intense fear. The *feeling* (mental awareness) of fear is what we experience when the brain recognizes those physical changes. As a gatherer of information, the brain relies on signals from the body's sensory and motor nerves and on chemical signals that circulate through the bloodstream, and its stored data change constantly along with changes in those signals. Damasio has identified specific areas of the brain that are involved in the processing of emotions, and he has found evidence that casts doubt on the long-held belief that logic and rational thought require the control and suppression of emotion; rather, as his research has shown, emotion is essential to logical reasoning and integral to sound decision-making. He has also proposed that humans' internal processes not only preserve life but also motivate and shape the development of cultures and systems of morality. In a related area, Damasio has constructed a theory about levels of consciousness.

In an interview posted on the Harcourt Books Web site in 2002, Damasio said that recent neurological research had enabled scientists to "speak with confidence about 'what feelings are'—where they come from, how they happen, what they are made of biologically. . . .We have identified brain areas and brain pathways necessary to feel emotions. Armed with the new knowledge we can even venture to say what feelings are for. The new knowledge broadens our view of human nature. We can not really know who we are if we do not understand the brain mechanisms behind emotion and feeling—what causes emotions, what leads to feelings, how they affect our decisions, social behavior, and creativity, and where they fit in evolution." Damasio also said to the Harcourt interviewer, "Interestingly, the moral behaviors are emotional—compassion, shame, indignation, dominant pride or submission. As in the case of culture, the contribution of everything that is learned and created in a group plays a major role in shaping moral behaviors. Only humans can codify and refine rules of moral behavior. Animals can behave in moral-like ways, but only humans have ethics and write laws and design justice systems." Damasio believes, as he told the same interviewer, that "knowing about the workings of mind and brain can help us deal more effectively with the social problems we face today. Part of our failures in the past may well be due to underestimating the positive and negative power of emotions. On a purely practical level, the new knowledge will also let us develop new medications to cure causes of human suffering such as pain and depression."

In 2005 Damasio, a native of Portugal, joined the faculty of the University of Southern California (USC), after working at the University of Iowa for 30 years. According to information about him on USC's Web site, his major contributions to neuroscience also include discoveries about the roles that the parts of the brain known as the cortex and subcortex play in humans' ability to recognize faces and objects, and about pathological changes in victims of Alzheimer's disease. Damasio has written or co-authored hundreds of scientific papers, many of them with his wife, Hanna Damasio, a highly accomplished specialist in neurological imaging, who, like him, holds an endowed chair at USC. Antonio Damasio has also written three widely praised books for knowledgeable laypeople that have been described as both surprisingly accessible and entertaining and as daunting for the average reader: *Descartes' Error: Emotion, Reason and the Human Brain*, which has sold more than 500,000 copies, been translated into 18 languages, and earned Damasio a *Los Angeles Times* Book Award nomination; *The Feeling of What Happens: Body and Emotion in the Making of Consciousness*, which the *New York Times* chose as one of the 10 best books of 1999; and *Looking for Spinoza: Joy, Sorrow and the Feeling Brain.* According to Damasio, neuroscience is developing so rapidly that many of his conclusions may soon become outdated. In his introduction to *Descartes' Error*, he wrote, "I have a difficult time seeing scientific results, especially in neurobiology, as anything but provisional approximations to be enjoyed for a while and discarded as soon as better accounts become available."

Antonio R. Damasio was born on February 25, 1944 in Lisbon, the capital of Portugal. He received an M.D. degree in 1969 and a Ph.D. in 1974, both from the University of Lisbon. From 1971 until 1975 he served as chief of the Language and Research Laboratory at the Centro de Estudos Egas Moniz, in the same city. His interest in neuroscience deepened following a year (1974–75) at the Aphasia Research Center in Boston, Massachusetts. There, he studied under Norman Geschwind, a trailblazer in behavioral neurobiology. After he returned to Lisbon, Damasio became an auxiliary professor in the Neurology Department at the University of Lisbon Medical School. Also in 1975 he settled in the U.S., where he became a naturalized citizen.

From 1975 until 2005 Damasio taught at the University of Iowa in Iowa City, a leading center for the study of the nervous system and behavior. He was promoted to associate professor in 1976 and full professor in 1980. Beginning in 1977 he chaired the division of Behavioral and Cognitive Neuroscience within the Department of Neurology, and from 1986 until his departure from the university, he headed the Neurobiology Department. Between 1985 and 2005 he also directed the Alzheimer's Disease Research Center, an arm of that department. While at the University of Iowa, Damasio helped to establish, with his wife, one of the world's largest databases of brain injuries; it contains thousands of diagnostic images and information about hundreds of studies of brain lesions. He also helped to set up a world-renowned laboratory for research on a wide range of brain injuries. In 2005 Damasio left Iowa to join the faculty of USC, in Los Angeles, where he holds the David Dornsife professorship in neuroscience and directs the school's Brain and Creativity Institute. He also teaches at the University of Iowa part-time. In addition, since 1989 he has been an adjunct professor at the Salk Institute for Biological Studies, in La Jolla, California.

As recently as 20 years ago, neuroscientists generally viewed the brain as a glorified computer or calculating machine. Brain research focused on the biological underpinnings of perception, memory, and other cognitive processes. Damasio has found evidence that, like perception and memory, emotions and feelings can be defined biologically; specifically, he has discovered, so-called gut reactions have biological foundations, and humans rely on emotional cues when they make decisions. Through work with patients with brains damaged as a result of strokes, trauma, or disease, including severe epilepsy, he has shown that a person who lacks the faculty to process emotion has difficulty in making rational decisions. People who lack functional amygdalas, for example, as he explained to Alexander Star for the *New York Times Magazine* (May 7, 2000), "cannot recognize fear in people's expressions, and they cannot experience fear themselves." Damasio is also studying the role of emotion in feelings related to social relations, among them sympathy, shame, and pride, thus using neurobiology to develop theories about human nature as well as human interactions. Damasio believes that his research on emotions has practical implications for the treatment of psychological maladies. "Emotional disorders form the core of most psychological illnesses—a good example of this is depression," he told Lenzen. "Specific treatments will be developed in the future, such as new types of medicine that target distinct cellular and molecular systems. Other forms of therapy are also sure to benefit, from traditional psychotherapy to social intervention."

Damasio's first book, *Lesion Analysis in Neuropsychology*, was published by Oxford University Press in 1989. Written with Hanna Damasio, it was named the outstanding book of the year in biology and the medical sciences by the Professional and Scholarly Book Division of the Association of American Publishers. The Damasios have often conducted joint research; together, they have written more than 60 book chapters or articles for scientific journals. Hanna Damasio's career has closely paralleled her husband's: she graduated from the same medical school in the same year that he did and joined the faculty of the Department of Neurology at the University of Iowa in 1976. At that school she directed the Laboratory for Neuroimaging and Human Neuroanatomy from 1982 to 2004 and co-directed the Division of Cognitive Neuroscience from 1985 to 2004. She was named the Dana Dornsife chair in neuroscience and professor of psychology at USC in 2005. Like her husband, she is an adjunct professor at the Salk Institute for Biological Studies and at the University of Iowa. At USC she also directs the Dornsife Cognitive Neuroscience Imaging Center. She pioneered the use of computerized tomography, nuclear magnetic resonance, and other methods for producing images of the brain—important tools in the diagnosis of neurological diseases. Her book *Human Brain Anatomy in Computerized Images* (1995) has become a standard reference.

Antonio Damasio's next book was *Descartes' Error: Emotion, Reason and the Human Brain* (1994). René Descartes (1596–1650) was an enormously influential French philosopher, scientist, and mathematician. The error to which Damasio referred was Descartes' formulation of a mind-brain duality. Descartes conceived of the brain as a tangible machine that obeys the laws of physics and has as its defining attribute "spatial extension." The mind, in Descartes' view, is an intangible entity that does not obey those laws; its defining attribute is thought. Cartesian dualism, as that idea is known, posits that the brain and the mind are profoundly different and have nothing in common; according to Descartes, they interact only in the pineal gland, a pea-sized part of the brain. The deeply puzzling question of how the nonmaterial mind and the material brain interact is known as the mind-body problem. In the quarterly journal *Independent School* (Fall 2005), Richard Barbieri wrote that in *Descartes' Error* (and *Looking for Spinoza*), "Damasio takes on the issue of mind-brain dualism, not as a militant materialist, but as a believer in the absolute interconnectedness and interdependence of brain and body experiences. In this dense and difficult book . . . Damasio connects the quests of philosophers, playwrights and poets to the modern efforts of neuroscientists. . . . For all his technical language of somatic markers and skin conductance, Damasio sides with the saints and poets, as when he observes that 'Emily Dickinson was right, one single brain, being wider than the sky, can comfortably accommodate a good intellect and the whole world besides.'"

In *Looking for Spinoza: Joy, Sorrow and the Feeling Brain* (2002), Damasio drew upon scientific discoveries made during the previous eight years to expand upon the content of *Descartes' Error* and discuss aspects of the philosophy of Baruch (also known as Benedict) Spinoza (1632–77), a descendant of Portuguese Jews living in exile in Amsterdam, the Netherlands. Spinoza, whose heretical beliefs led the Dutch Jewish community to excommunicate him, wrote that mind and body are not separate entities but are different manifestations of the same thing (nature or God). "Spinoza fascinates me not only because he was ahead of his time with his ideas on biology but also for the conclusions he drew from these ideas about the correct way to live life and set up a society," Damasio told Lenzen. "Spinoza was a very life-affirming thinker. He recommended contrasting the negative emotions such as sadness and fear with joy, for example. He understood this kind of practice as a way to reach an inner peace and stoic equanimity." Damasio told the Harcourt interviewer, "The book shows how Spinoza, alone and marginalized, was able to achieve happiness by cultivating curiosity, knowledge, and goodness of character." In a critique of *Looking for Spinoza* for *Scientific American* (March 2003), Erica Goode wrote, "Scientists who write books come in two varieties: those who are cautious, reluctant to stray beyond the data before them, and those who are bold and synthetic, using what is known as a springboard for journeys into unproved theory. Damasio, whom some have accused of leaping ahead of what scientists actually know in order to construct convincing narratives, obviously belongs to the latter group. Some readers will fault him for it; others will see it as a strength. It is through such speculative leaps, after all, that understanding often advances. Those who have read Damasio's popular works *Descartes' Error* and *The Feeling of What Happens* will find [in *Looking for Spinoza*] much that is already familiar. Still, *Looking for Spinoza* is compelling, in part because it so strongly conveys the feel of a personal expedition: the neurologist sifts through what is known about the philosopher's life as if pursuing a lost relative."

The Feeling of What Happens: Body and Emotion in the Making of Consciousness (1999), written after *Descartes' Error* and before *Looking for Spinoza*, offers Damasio's assessment of a phenomenon usually relegated to the realm of philosophy. While many scientists have studied the ways in which the brain processes what our senses tell us, in *The Feeling of What Happens*, Damasio concentrated on the ways in which those sensations contribute to the creation of the "autobiographical self"—an individual's notion of him- or herself. (Our sensations include not only what we see, hear, smell, touch, and taste but also what we learn from our awareness of pain, for example, as well as of temperature, balance, movement, and the positions of our arms, legs, and other body parts at any moment, and such sensations as nausea and blushing.) Damasio explained that philosophers and scientists have traditionally located humans' center for consciousness at the sites connected with the brain's greatest attributes or products—language, memory, creativity. He has learned from his studies of people with crippling epilepsy and other forms of brain damage that individuals who cannot speak or understand speech, lack long- or short-term memory, and show no creativity nevertheless often exhibit some form of consciousness, and he has theorized that consciousness arises from activity in scattered parts of the brain. Based on clinical research, he constructed a theory according to which there are three levels of consciousness: proto-consciousness, which monitors our bodily states (in essence, what is known as homeostatic regulation) and of which we are mostly unaware; core consciousness, which arises from our moment-to-moment awareness of outside objects, events, feelings, or memories; and extended consciousness, "in which there are many levels and grades, providing an elaborate sense of self—an identity and a person, you and me . . . ," as David Walton wrote for the *Dallas Morning News* (September 19, 1999). Damasio, describing the constantly changing "autobiographical self," wrote in *The Feeling of What Happens*, "It is astonishing that we have a sense of self at all, that we have . . . some continuity of structure and function that constitutes identity, some stable traits of behavior we call a personality." He also wrote, "The drama of the human condition comes solely from consciousness." But the price we pay for consciousness "is not just the price of risk and danger and pain. It is the price of knowing risk, danger and pain . . . the price of knowing what pleasure is and knowing when it is missing or unattainable." According to the neuroscientist William H. Calvin, writing for the *New York Times* (October 24, 1999), *The Feeling of What Happens* "is a must-read book for anyone wanting a neurologist's perspective on one of the greatest unsolved mysteries, human consciousness and how it exceeds that of the other apes."

Currently, Damasio is co-leading a project, supported by USC's Annenberg Center for Communication, that explores "the systematic investigation of facial, postural, and vocal behaviors during social interactions across different ethnic/cultural groups," according to the center's Web site. The study grew out of the observation that ethnic or cultural groups often misread the social communications of other groups.

In the *New York Times* (April 19, 2003), Emily Eakin described Damasio as "a slight, fine-featured man with elegant manners and a shock of white hair . . . [who] exudes old-world charm. His conversation is a velvet murmur that hints at his Portuguese roots; his passion is in his hands, which slice the air in quick, graceful movements as he speaks." Damasio's curriculum vitae lists 32 honors and awards. With his wife and Yves Christen, Damasio edited the book *Neurobiology of Decision-making* (1996); with three others, he edited *Unity of Knowledge: The Convergence of Natural and Human Science* (2001). Antonio and Hanna Damasio live in Los Angeles.

Davis, Evelyn Y.

Aug. 16, 1929– Shareholder activist; publisher of Highlights and Lowlights

Address: Highlights and Lowlights, *Watergate Office Bldg., Ste. 215, 2600 Virginia Ave. NW, Washington, D.C. 20037*

The editors of *People* (May 20, 1996) dubbed Evelyn Y. Davis "America's most dreaded corporate gadfly." The metaphor of the gadfly is frequently applied to Davis, who has made it her mission to represent the small investor at the numerous shareholder meetings she attends every year. A colorful figure, whom even those sympathetic to her cause describe as abrasive, Davis is known for haranguing company heads about their performance, credibility, or even appearance. (She famously told Lee Iacocca, then the widely respected chairman of Chrysler, that he needed to watch his diet.) She has agitated for more transparent corporate governance and increased accountability, among other measures, and while some observers argue that Davis, who owns shares in some 100 companies, has undermined the cause of shareholder rights with her antics, others have acknowledged her great positive impact. Michael Rosenzweig, a corporate attorney and law professor, told Mike Tierney for the *Atlanta (Georgia) Journal-Constitution* (May 22, 2005), "My view . . . is she was something of a visionary. Evelyn was one of the earliest proponents of shareholder democracy. In a sense, the market has come to her." "She's one of a kind," Ray Smith, the former chief executive of Bell Atlantic, told Amy Feldman for the New York *Daily News* (May 24, 1998). "She's not a gadfly . . . she's a gadeagle."

Davis was born Evelyn Yvonne DeJong on August 16, 1929 in Amsterdam, the Netherlands. Her father, Herman DeJong, was a prosperous neurologist, and her mother, Marianna, was a psychologist. The family employed a French governess for Davis and her older brother, Rudolph, as well as two maids to care for their large home. Although she has told journalists that her parents sometimes favored Rudolph over her, she has also said that her childhood was generally happy. (She has credited some of her drive and ambition to her rivalry with her brother, who pursued a career in medicine.) One day in December 1942, while her father was lecturing in the United States, Nazis arrested Davis, her mother, and her brother. Along with some 650 other wealthy Dutch Jews, they were sent to an old castle in Barneveld, a suburb of Amsterdam, where they were imprisoned for nine months. "Compared to other places, [Barneveld] was a country club," Davis told Jack Kelley for *USA Today* (May 5, 1997).

In the fall of 1943, the three DeJongs were sent to a small concentration camp called Westerbork, in the Dutch province of Drenthe. (Westerbork is perhaps best known as the camp in which Anne Frank was imprisoned before being transported to Auschwitz.) There, Davis labored picking potatoes and, during a mortar attack, was hit by shrapnel that left a deep scar on the back of her right calf. Conditions worsened the following year when she and her mother and brother were sent by railway car to Theresienstadt, a concentration camp in the former Czechoslovakia, where she was forced to split mica in a factory for several hours a day. Unafraid, even then, to speak her mind, she once got into an argument with a female guard and was severely beaten as punishment. Food was scarce—inmates were served mainly meager portions of thin soup and potatoes—and she often dreamed at night of chocolate pudding. As a further form of mental escape, Davis began constructing romantic fantasies about the director of the mica factory, a Czech Nazi. She told Peter Carlson for the *Washington Post* (April 20, 2003), "I'd look forward to going to the factory because I'd see this guy. Nothing happened: I was still an innocent girl. But it made the whole thing bearable for me. Ever since then, I've had infatuations with what you'd call very prominent authority types." In May 1945 Russian troops liberated Theresienstadt. Davis believes that if the war had continued much longer, she would have died before being freed. "But I don't want people to feel sorry for me," she told Kelley. "Every person has a tragedy in their past. This is mine."

Davis's parents divorced after the war. Her mother stayed in the Netherlands, while Davis and her brother moved to Catonsville, Maryland, to live with their father, who had remarried and was teaching at Johns Hopkins University, in Baltimore. In 1947 Davis graduated from Catonsville High School. With the intention of pursuing a degree in business, she attended Western Maryland College for a semester and then transferred to George Washington University, in Washington, D.C., where she studied for two years. She then dropped out of school, for reasons she is unwilling to discuss with reporters, and began to take a series of secretarial jobs.

After being jilted by a lover (reportedly a high-level government official) with whom she had had a five-year relationship, Davis wanted to spite him, as she has related to reporters, by getting married to someone else. In 1957 she married William Henry Davis III, an accountant from a wealthy North Carolina family. She has kept his name ever since, although they divorced in 1958. Davis then moved to New York City with money she had won in the divorce settlement. Her father, who had died in 1956, had left her several thousand dollars in securities, which Davis used to invest in the stock market.

In 1959 Davis attended her first stockholders' meeting, held by International Business Machines (now commonly known as IBM). When she stood up to ask a question, she was "shaking like a leaf," as she recalled to Pamela Moore for the *Charlotte (North Carolina) Observer* (April 26, 1995). Davis strengthened her confidence by means of a $20 course in public speaking at a YMCA. "Then I became like a fish in the water," she told Moore. Emboldened, she started taking classes in securities analysis at the New York Institute of Finance.

Davis traveled all over the country to attend shareholder meetings and parties. In the early 1960s, for the first time, she proposed a shareholder resolution, challenging the wisdom of the charitable contributions made by R. H. Macy and Co. While her resolution did not pass, it attracted attention to an important issue: federal securities laws prevented shareholders from knowing the amount of a company's contributions and prevented them from learning who was receiving a company's largesse.

At about that time Davis started her own business, Shareholder Research, which operated out of a hotel room not far from United Nations headquarters, in New York City. She frequented the U.N. delegates' lounge and managed to obtain a temporary U.N. press pass. In 1963, in a widely reported incident, she was arrested at the hotel and charged with prostitution. (Tabloid reporters speculated that she was running a call-girl ring frequented by U.N. officials.) Davis was convicted and received a 30-day suspended sentence. She has refused to talk about the scandal. When asked about it, she told Amy Feldman, "I don't comment. It's all garbage."

In 1965 Davis moved her one-woman enterprise to an office in the Watergate Building, in Washington, D.C., and began to publish a newsletter, *Highlights and Lowlights*. The newsletter included business analysis along with Davis's views on politics, travel, and other topics. Adopting the mantle of a muckraker, Davis wrote it in the style of a gossip column with an idiosyncratic use of punctuation. "The corporate secretary at Safeway is no longer there, thank goodness!!! We don't care whether she got fired, quit or retired. She is gone—hoorah!!!" read a typical entry, as quoted by Carlson. Another, as quoted by John M. Doyle in the *Chicago Tribune* (April 22, 1990), read: "At one of the most important meetings of the year only ONE 'outside' director, the son of the founder, attended!!! Time Inc.!!!! This showed disrespect for the chairman, the stockholders and other attendees!!"

Highlights and Lowlights initially sold for about $20 per copy. As Davis's profile rose in the corporate world, she repeatedly increased the price. It is currently sold—only to CEOs and presidents—for almost $600 a copy, with a two-copy minimum required. Detractors, who charge that Davis is less likely to attack a newsletter purchaser at a shareholders meeting, have criticized her for browbeating executives into buying the publication. When questioned about her tactics, Davis asked Susan Decker, writing for the *Seattle (Washington) Times* (August 11, 2000), "I bully them?" and then added, "More power to me if I can, right?" In November 1969 Davis married her second husband, a stockbroker named Marvin Knudsen; the union ended in divorce three months later.

Throughout the 1970s Davis got increasing attention with her stunts. During one General Motors meeting, she strutted around the room in a bathing suit, waving the American flag. At a *Washington Post* company meeting, Davis criticized the paper for not giving her enough publicity. In 1977 she was assaulted by a fellow stockholder and sent to the hospital with an injury that required five stitches. Undaunted, she returned an hour later to attend another meeting. By the late 1970s she had been granted access to White House press conferences. Even in that rarefied atmosphere, Davis did not modify her behavior: once, when she was excluded from a conference with Mikhail Gorbachev, she buttonholed Gorbachev's press secretary for foreign affairs and ended up getting a short private meeting with the Soviet leader. During the administration of President Bill Clinton, after being forced to stand at one press conference, she screamed that seats should be assigned according to income level.

Most of Davis's proposals called for the disclosure of a company's legal fees; for annual elections of auditors; or for the disclosure, limiting, or cessation of corporate contributions to charities and politicians. In 1980 the Securities and Exchange Commission (SEC) supported claims that Davis's habitual heckling was meant merely to draw attention to herself and agreed to let several major corporations ignore her resolutions. Spurred by Davis's prolonged diatribes, Citicorp passed a resolution that allotted just three minutes for individual shareholders to air their grievances at annual meetings. Still, Davis continued to behave in a manner designed to irritate. In 1984, for example, she began pushing for an anti-greenmail policy in response to General Motors' $700 million payment to the shareholder and onetime presidential candidate H. Ross Perot. (A twist on blackmail, greenmail is a company's repurchase of its stock from an undesirable shareholder at a greatly inflated price.) After years of resistance, General Motors adopted an anti-greenmail policy in 1990.

When Davis got her first driver's license, in 1984, she asked Lee Iacocca to deliver a car to her personally. When he declined to do so, she approached the head of Ford, Philip Caldwell, who delivered the keys to a Ford model to her himself. (Since then, whenever Davis has bought a new car, the manufacturer's chief executive officer has delivered the keys in person.)

In 1985 Davis started fighting for the elimination of staggered elections for company directors. In staggered elections only a portion of a board is elected each year, which makes it more difficult for outsiders to mount successful takeovers. While many companies insist that staggered elections provide necessary continuity, some others, including the pharmaceutical giant Bristol-Myers Squibb, have eliminated such elections in response to Davis's resolutions.

In 1989 Davis established the Evelyn Y. Davis Foundation; she currently donates millions each year to business schools, museums, and hospitals. The foundation recently endowed a scholarship fund for students interested in business or political journalism. (By her own admission, Davis requires institutions to which she has given funds to mount conspicuous plaques bearing her name.) In 1991 Davis married her third husband, the economist Walter Froh, whom she had met at a U.S. Senate Banking Committee hearing. They divorced three years later. "I'm a beautiful woman. Men find me extremely intriguing. But I have been unlucky in love," she told Gary Strauss for *USA Today* (April 28, 2003).

Age has not tempered Davis's behavior. In 1991, for example, the year she turned 62, she asked the chairman of the struggling U.S. Airways, as reported by Robert Trigaux for the *St. Petersburg (Florida) Times* (May 22, 2002), "Are you going to stay or jump out and leave us holding the bag?" Later in the 1990s, when Chrysler's chairman, Robert Eaton, endorsed his company's sale to Daimler-Benz (a firm that had contributed greatly to the German war effort during World War II), she attacked him, saying, according to Trigaux, "You'll always have that on your conscience, Bob. Remember that."

When a number of high-profile corporate corruption scandals surfaced in the early 2000s (with the Enron debacle being a prime example), even Davis's foes were forced to admit that rigorous shareholder oversight was needed in the corporate world. Davis has continued to propose several resolutions each year, many of them relating to the elimination of staggered elections or the need for greater fiscal disclosure. "What else would I do with myself?'" she asked Strauss. "I love the challenges, the conflict, and the intrigue."

Davis, who divorced her fourth husband, John E. Patterson, in 2006, is known for her vibrantly colored hair, designer suits, and distinctive Dutch accent. She has no offspring. "Stocks are my children," she told Strauss. Davis has purchased a burial plot and headstone at Rock Creek Cemetery, in Washington, D.C. The headstone, which mentions only two divorces and lacks only the as-yet-unknown date of death, reads, in part, "Power is greater than love, and I didn't get where I am by standing in line and being shy."

Decemberists

Music group

Meloy, Colin
Oct. 5, 1974– Songwriter; singer; guitarist

Query, Nate
June 7, 1973– Bassist

Funk, Chris
1971(?)– Multi-instrumentalist

Conlee, Jenny
1971(?)– Keyboardist

Moen, John
1968(?)– Drummer

Address: c/o Capitol Records, 1750 N. Vine St.,
Los Angeles, CA 90028-5209

"Among the current crop of skinny emo boys whining about unattainable love and blinged-out divas searching for street credibility, the Decemberists stand out like a skull and crossbones on an empty blue horizon," Abigail Clouseau proclaimed in *SF Weekly* (January 14, 2004). "Where most bands play chord changes, rhythms, and melodies, the Decemberists score short musical films. Where most write lyrics about a disenchanted girlfriend or flowery, musical self-help manuals, this band crafts meticulous fables, creating curious characters . . . with words that give us glimpses of their personalities and music that fills in the gaps." Led by the songwriter, vocalist, and guitarist Colin Meloy, the Portland, Oregon–based Decemberists are distinguished by their unusually literary lyrics, which contain archaic or arcane words, and their penchant for story songs, which have been described as simultaneously beautiful and creepy. Seldom about contemporary events, most of them feature pirates, ghosts, or wandering soldiers and tell of a love that ends with death. "Mr. Meloy has lovingly created his own alternate universe, and he draws his hapless characters with enormous wit and tenderness," Kelefa Sanneh wrote for the *New York Times* (March 30, 2004). Since its formation, in the wake of the September 11, 2001 terrorist attacks on the U.S., the group has released four full-length albums: *Castaways and Cutouts*, *Her Majesty the Decemberists*, and *Picaresque*, all on the independent label Hush Records, and *The Crane Wife*, which bears the Capitol label. In an on-line poll, listeners of National Public Radio programs ranked *The Crane Wife* number one among CDs released in 2006. In addition to Meloy, the current members of the Decemberists are Chris Funk, multi-instrumentalist; Jenny Conlee, keyboardist; Nate Query, bassist; and John Moen, drummer. Past members include Jesse Emerson, guitarist; Ezra Holbrook, drummer; and Rachel Blumberg, drummer and vocalist.

Colin Meloy, who plays the most prominent part in shaping the direction of the Decemberists and usually acts as the band's spokesperson, was born on October 5, 1974 and raised in Helena, Montana. His mother works in the field of public health; his father, Peter Michael "Mike" Meloy, is a lawyer who in the 1970s served in the Montana state legislature. Meloy's older sister, Maile, is the prize-winning author of the books *Half in Love*, *Liars and*

Autumn De Wilde, courtesy of Capitol Records

The Decemberists (l. to r.): J. Conlee, C. Funk, C. Meloy, J. Moen, N. Query

Saints, and *A Family Daughter*. His great-uncle Henry Meloy was an accomplished 20th-century artist; a gallery is named for him at the University of Montana. Speaking of his great-uncle, Colin Meloy told Terry Gross for the National Public Radio program *Fresh Air* (January 29, 2007, on-line), "Even though I never met him . . . just knowing that he had been a part of the family and had been a successful painter, . . . in a family of mostly . . . attorneys and judges . . . [showed me that] it was a possible thing." A drawing by Henry Meloy is on the cover of an album Colin Meloy made with his alternative-country band Tarkio.

During his childhood, Meloy told Sara Scribner for the Westchester County, New York, *Journal News* (October 23, 2003), "my parents' friends used to call me 'Underwater Boy' because I was constantly wandering around sort of in my own head, sort of floating in water. I was always lost in my own imagination." He felt like an outsider among his peers, in part because he lacked interest and talent in sports but enjoyed reading. His musical tastes, too, differed from those of others his age. "Finding records for me was an epic struggle, a Herculean struggle that involved a lot of trying to talk record stores into carrying a certain kind of record," he told Scribner. "It wasn't an environment that fostered my sort of person." A turning point came when he joined the theater group in his high school and won parts in student musicals. "Theater, for me, was an important outlet and really the first thing I discovered that gave me a community of friends . . . doing something expressive," he told Michael Roberts for the *Denver (Colorado) Westword* (March 11, 2004).

Meloy attended an Oregon college briefly before transferring to the University of Montana at Missoula. He rejected his father's advice that he study a subject that would lead to an assured steady income and instead majored in creative writing and minored in theater. But he heeded the suggestion of professors of his that he not enter a master's degree program immediately after his graduation. Before he completed his college education, he formed Tarkio, named for a town near Missoula. In 1999, reportedly unhappy with the types of audiences Tarkio attracted, he left Missoula and moved to Portland, Oregon.

The Decemberists formed in Portland in 2001. Meloy named the band partly in homage to the Decembrists, a group of early 19th-century Russian revolutionaries who wanted to establish representative democracy in their country; in December 1825 soldiers loyal to Czar Nicholas I crushed the attempt by 3,000 of the rebels to force the czar's removal. Meloy told Scribner that the name of the band also refers to people who like "wintry climes." In addition to Meloy, the founding members were Nate Query, born on June 7, 1973; Chris Funk and Jenny Conlee, both born around 1971; and the vocalist Ezra Holbrook, a fixture of the Portland independent-music scene. Funk, an Indiana native, joined the Decemberists after attending Coe College, in Iowa. Conlee and Query had played in the Portland band Calobo during the 1990s.

In 2002 the small independent label Hush Records, located in Portland, released the Decemberists' first full-length album, *Castaways and Cutouts*, "a smattering of songs we'd been performing live for the past year or so—it was done so innocently, there were absolutely no expectations whatsoever . . . ," as Meloy told Devon Powers for popmatters.com (September 25, 2003). "We were [recording the album] merely to create something to give to the world." *Castaways and Cutouts*, and in particular its song "Odalisque," attracted much attention in the Portland area, and in May 2003 a larger label, the Olympia, Washington–based Kill Rock Stars, re-released the album. "Second chances in life can be rare, but almost all of us deserve them. Especially the Decemberists . . . ," Mark Woodlief wrote for the *Oregonian* (April 25, 2003). "If you missed *Castaways and Cutouts* the first time around, this is a second chance you shouldn't pass up." Joshua Klein, a reviewer for the *Chicago Tribune* (August 18, 2003), reacted quite differently. "The Decemberists . . . are pretentious Portland musicians led by Colin Meloy, who has no problem packing his self-consciously literate lyrics with enough references to exotic places and events to shame even the shameless Sting," Klein wrote.

Later in 2003 Kill Rock Stars released the band's next album, *Her Majesty the Decemberists*. Its 11 tracks include "Shanty for the Arethusa," "The Gymnast, High Above the Ground," "Los Angeles, I'm Yours," "The Chimbley Sweep," and "Song for Myla Goldberg," the last of which is dedicated to the author of the novel *Bee Season.* Meloy told Powers that while he had been responsible for most of the writing, arranging, and producing for *Castaways and Cutouts*, *Her Majesty* was "much more collaborative." A number of reviews of *Her Majesty* cited the Decemberists' similarity to another critically acclaimed indie band, the Jeff Mangum–fronted Neutral Milk Hotel. Dylan Siegler, for example, wrote for the *Dallas (Texas) Observer* (September 25, 2003), "If you are one of the 75,000-plus people who bought Neutral Milk Hotel's last album, the first thing you will think when you hear the Decemberists is this: Damn, that guy sings like Jeff Mangum from Neutral Milk Hotel. . . . Acoustic guitar makes way for bells, strings, horns and accordion, and here and there, schmaltzy '70s AM-radio flourishes add an ironic smirk to offset the endemic seriousness of Meloy's vocal. If upping the irony quotient pulls those theatrics into even more confusing territory, it's really the only barrier to enjoying this varied record. That is, if you haven't heard Neutral Milk Hotel." Similarly, Jesse Jarnow wrote for *Salon.com* (September 16, 2003), "I have an instant affection for Meloy and the Decemberists. And the reason for my instant affection, which is admittedly unfair to all parties, is that they uncannily resemble an entirely different band: Neutral Milk Hotel. . . . They sound like them right down to the smallest of mannerisms: the nasal faux-English accent, the ragtag marching rhythms, the fascination with the Old World, the songs about dead European girls. It's forgivable, because it doesn't sound exactly intentional."

Reviewers of *Her Majesty the Decemberists* also mentioned the band's penchant for old-fashioned language. Scribner wrote of their use of archaic terminology, "It's worth it to look up the words: otherwise, how would you know that 'bombazine' is a fabric using silk and cotton and used for mourning clothes?" Meloy told Scribner, "I don't think I use any words that I wouldn't relish to use in a conversation. There are words in the English language that are so amazing and so beautiful and so underused it's a bit of a crime, so it's not like I'm going through the dictionary looking for these words." He told Clouseau, "I come at it from a historian's perspective. The characters that appear in the songs, if you really boil it down, are pretty much anachronistic stereotypes or just literary motifs or figures that have popped up in literature since the 19th century."

In 2004 the Decemberists recorded a five-part, 18-minute operetta called *The Tain*, produced by Chris Walla, the guitarist and producer for the indie band Death Cab for Cutie. Released on Acuarela Discos, a Spanish label, the operetta was loosely based on the late-11th-century/early-12th-century Irish epic *Táin Bó Cúalnge* (*The Cattle Raid of Cooley*) about the attempt by the teenage Ulster hero Cúchulainn to prevent Queen Medb and her husband, Ailill, from stealing a stud bull. Kelefa Sanneh, the *New York Times* critic, described *The Tain* as "an appealing (if sometimes exhausting) homemade epic, full of intriguing narrative fragments and nimble musical U-turns." Sanneh, who attended the band's sold-out show at the Bowery Ballroom, in New York City, on March 25, 2004, wrote that the *Tain* songs "never curdle into mere parody" and noted, "As if to offset the willful obscurity of his lyrics, Mr. Meloy often seizes on bright, sometimes maddeningly catchy tunes." In an assessment of the Decemberists' performance at the Troubadour, a club in West Hollywood, California, on April 7, 2004, Steve Hochman wrote for the *Los Angeles Times* (April 9, 2004) that *The Tain* "went from a heavy blues riff to a [Kurt] Weill-like waltz and back—something that might appeal to fans of Belle & Sebastian and Jethro Tull." Of the concert as a whole, he wrote, "Yes, it can get a bit precious at times, even with the encore-closing cacophony in which Meloy smashed not a guitar, but a mandolin. But it's a worthwhile price for an entertaining evening of smarting up rather than the standard dumbing down."

During the winter of 2004–05, Meloy embarked on a solo tour. He told Annie Zaleski for the *Phoenix (Arizona) New Times* (October 20, 2005), "It was just great to play because it was smaller audiences. It seemed like, in each city, it was your normal Decemberists audience boiled down to the core 150, 200 people. It was a lot of fun in that respect . . . and everyone who was there knew all the songs, and inevitably [it] turned into this big sing-along thing. . . . We're very lucky to have won over such sweet people."

In Portland on March 17, 2005, the trailer containing the band's instruments and equipment was stolen—a loss totaling approximately $70,000. In the next few weeks, fans raised over $8,000 to assist the band. Thanks to an anonymous tip and the help of the police, the Decemberists eventually recovered about $50,000 worth of their instruments.

The Decemberists' next album, the 11-song *Picaresque* (2005), was the last to be released by Kill Rock Stars, as specified in the band's contract. Its tracks include "Sixteen Military Wives," "Eli, the Barrow Boy," "The Bagman's Gambit," "The Mariner's Revenge Song," and "Of Angels and Angles." "Like its predecessors, it's filled with allusions to rogues and prostitutes, sailors and kings," Jim Farber wrote about that album for the New York *Daily News* (April 1, 2005), adding that the melange of instruments included the shofar, made from the horn of a ram or other animal and blown during certain Jewish ceremonies. Yeow Kai Chai, reviewing *Picaresque* for the Singapore *Straits Times* (August 12, 2005), wrote, "Musically, it's invigoratingly cavalier, ranging from Tin Pan Alley to nighttime balladry to operetta, with the group adding saxophones, trombones and violins to their delicious chop suey." Praise for the CD also came from Jessica Grant, who wrote for the *Kansas State Collegian* (May 3, 2005), "It is impossible to capture the moving and cohesive power of this album"; Thor Christensen, who opined in the *Dallas (Tex-*

as) Morning News (April 10, 2005), "It's hard not to get sucked into these tragic-yet-hummable tales"; and Jen Carlson, who enthused on Gothamist.org, "*Picaresque* delivers gem after gem of epic songcrafting, making it one of those rare abums we can listen to straight through (and repeatedly, at that)." The few dissenting voices included that of Scott Faingold, who complained in the *Houston (Texas) Press* (September 22, 2005), "The sound of the Decemberists is not unlike Nick Cave's Bad Seeds, if that band were drained of all testosterone and fronted by [the nerdy] Arnold Horshack from [the 1970s sitcom] *Welcome Back, Kotter.*"

Prior to recording *Picaresque*, Meloy had told a *Grand Rapids (Michigan) Press* (September 21, 2004) reporter that Kill Rock Stars had "a completely hands-off approach" to the band's work, and he characterized the Decemberists' relationship with the label as "great." Nevertheless, he said that the band was hoping to move to a larger label, and in 2005 the band signed a contract with Capitol Records. "The idea of reaching a wider audience has become really attractive," Meloy told Amy Phillips for pitchforkmedia.com (December 12, 2005). "It just felt like we had tapped out the resources of Kill Rock Stars. We could have stayed on that label until the end of time, putting out proper Decemberists records that sold x amount of copies. But there was a general thought after this last tour that the music and the stage show were evolving. We felt like there was an opportunity for something bigger." He added, "We've never been the sort of group that has lived and breathed indieness."

In late 2005 John Moen (born around 1968) joined the Decemberists. The next year the band released *The Crane Wife*, produced by Chris Walla and Tucker Martine. The title track offers Meloy's take on a traditional Japanese tale. "There was a real strong sense among the band that we were not going to try to make a record that somebody would typically make for a major label," Meloy told NPR.org. "We didn't want the fact that we had signed onto a major label [to] change our approach or aesthetic. In some ways, I think it pushed us farther to the left, farther out of the comfortable Decemberists zone." Simon Cosyns wrote for *MX* (February 8, 2007), a magazine published in Australia, where *The Crane Wife* arrived in early 2007, that "without doubt," *The Crane Wife* "is the first truly great record of 2007." Stephen M. Deusner wrote on PitchforkMedia.com, "Given the band's graduation from minor to major leagues, *The Crane Wife* may prove to be the most crucial record the Decemberists will release in their lifetime. Fortunately, their fourth album further magnifies and refines their strengths. . . . Here the band gels into a tight, intuitive unit. The musicians give each song a particular spark and character, not just reinforcing the lyrics but actively telling a story."

The Decemberists received unexpected publicity in November 2006 when Stephen Colbert, on his fake-news TV program *The Colbert Report*, denounced the band for allegedly copying a segment of an installment of his show in a music video in which they made use of so-called green-screen (or bluescreen) technology. The denunciation came in a full-length *Colbert Report* installment that featured appearances by the TV journalist Morley Safer, former secretary of state Henry Kissinger, and the British musician Peter Frampton.

Meloy is the author of "Let It Be," a long essay in which he described the influence on him during his childhood of the Replacements' 1984 album of the same title; the essay was published in 2005 by Continuum International as part of a series about landmark rock-and-roll albums. In 2006 Meloy and the artist Carson Friedman Ellis, who has illustrated the covers for all of the Decemberists' albums, became the parents of a boy, Henry "Hank" Meloy.

Desai, Kiran

Sep. 3, 1971– Writer

Address: c/o Grove/Atlantic, 841 Broadway, New York, NY 10003

"Writing, for me, means humility," the Indian-born novelist Kiran Desai told an interviewer for *Rediff* (January 30, 2006, on-line). "It's a process that involves fear and doubt, especially if you're writing honestly." Such doubt and humility notwithstanding, Desai—the daughter of the noted writer Anita Desai—has won a great deal of praise for her two novels. The first, *Hullabaloo in the Guava Orchard* (1998), drew comparisons to the work of her fellow Indian-born writer Salman Rushdie, for the richness of her writing, characters, and multiple plots, and she won Britain's Man Booker Prize for her 2006 novel, *The Inheritance of Loss*, a multigenerational story set in India and New York. Those accomplishments have apparently not altered her attitude about writing fiction. "Each book is its own

Kiran Desai

challenge," she explained to the *Rediff* interviewer, "and I find myself at exactly the same level of trepidation and doubt as when I began the last time around."

Kiran Desai was born on September 3, 1971 in New Delhi, India, one of the four children of Anita Desai, whose novels include *Voices in the City* (1965), *Clear Light of Day* (1980), and *Baumgartner's Bombay* (2000), and Ashvin Desai, a businessman. Anita Desai's mother was German, her father a refugee from what later became Bangladesh; Ashvin Desai's parents were from the western Indian region of Gujarat. Kiran Desai was raised in India, sometimes living outside New Delhi and sometimes in Kalimpong, in the Himalayas, where her family had a house "that was named Chomiomi after a snow mountain in Tibet," as Desai told the interviewer for *Rediff.* She had a happy childhood. Her earliest memories, she said to the *Rediff* interviewer, are of "sitting under the table pulling the toes of all my older siblings and parents in turn. Utter happiness. I remember my father whistling in his bath," and, she said, she recalls "sitting, a very little girl, in my mother's lap, layers of soft, old Bengali striped sari, playing with the bangles she wore, one on each wrist, a book in front, and her voice which is an utterly beautiful voice, reading." She added, "Human warmth is such an innate part of India, and good humour." At the same time, as Desai explained for *Rediff,* "Kalimpong has a population of Tibetan refugees and a majority population of Nepalis who were brought generations ago to work on British tea plantations. It is a very beautiful place, but the strains were obvious even when we were living there." Long-festering class tensions led to unrest in the area.

Desai received part of her education at St. Joseph's Convent in Kalimpong and then, when she was 15, moved to England to continue her schooling. (Some sources say that she was 14 at the time; Desai herself, in different interviews, has said both.) After a year in England, Desai moved to the United States. She attended high school in Massachusetts before enrolling at Bennington College, in Bennington, Vermont. She studied for a time at the writing program at Hollins University, in Roanoke, Virginia, and later went to Columbia University, in New York City, where she obtained an M.F.A. degree.

It was at Hollins that Desai began writing her first novel, *Hullabaloo in the Guava Orchard,* published in 1998. In an interview for the Random House on-line publication *Bold Type* (May 1999), Desai revealed that she had gotten the idea for the novel after reading an account in an Indian newspaper of a hermit who lived for many years, until his death, in a tree. "So I began to wonder about what it was about someone like this who would do something as extreme as to spend his life in a tree," Desai said. "So it started really with that character, and then the story built up around it." She began writing, she added, with "no idea what the story would be" and "no idea of the plot. It sort of gathered momentum and drew me along. It was an incredibly messy process." *Hullabaloo in the Guava Orchard* tells the story of Sampath, a misfit young man in an Indian village whose life lacks direction until he becomes a tree-dwelling guru, attracting followers from far and near. Sampath's traditionalist father, disconcerted at first by his son's actions, is ultimately not above making profits from the sale and resale of objects of devotion that are to be placed at the foot of the tree; the novel follows many others among Sampath's family members and fellow village dwellers, as well.

"Although the publishers of *Hullaballo in the Guava Orchard* have been comparing the book to Arundhati Roy's award-winning novel *God of Small Things*, 27-year-old Kiran Desai turns out to have less in common with Ms. Roy or Salman Rushdie than with an older generation of Indian writers, including her mother, Anita Desai, and R. K. Narayan," Michiko Kakutani wrote for the *New York Times* (June 12, 1998). "There are no grand, mythic visions at work in *Hullabaloo*, no ambitious displays of magical realism. Rather, the novel stands as a meticulously crafted piece of gently comic satire—a small, finely tuned fable that attests to the author's pitch-perfect ear for character and mood, and her natural storytelling gifts." Reviewing the novel for *Newsday* (June 1, 1998), Lise Funderburg wrote that Desai "has attacked classic themes: women's roles, worship of false idols, intolerance, generation gaps. Couched in the broad comedy that relies on the familiarity of each subplot, these issues ambush the reader. What seems merely to be the lead-in to a good laugh and nothing more actually lingers, leaving questions that are, for all their familiarity, no less profound." For

Hullaballo in the Guava Orchard, Desai was presented with the Betty Trask Award, given by the Society of Authors, a British organization.

Asked why eight years had passed between the publication dates of her first and second novels, Desai said to an interviewer for *Jabberwock* (January 20, 2006, on-line), "I suppose I was working and reworking the second book a lot." Most critics seemed to feel that her second book was worth the wait. "If *Hullabaloo in the Guava Orchard* established Desai as an expert storyteller, *The Inheritance of Loss*," Desai's 2006 novel, "distinguishes her as a writer of note," Jenifer Berman commented in the *Los Angeles Times Book Review* (January 22, 2006). Set mainly in Kalimpong, where Desai spent much of her childhood, *The Inheritance of Loss* follows the lives of a retired, English-educated judge, whose time abroad has caused him to feel permanently out of place in his homeland; the judge's granddaughter, Sai, an orphaned teenager who lives with him; the judge's cook, who dotes on Sai; the cook's son, Biju, who earns subsistence wages as a waiter in New York; and Sai's tutor and romantic interest, Gyan, an ethnic Nepalese who becomes involved with a rebel group and thereafter rejects what he sees as Sai's bourgeois lifestyle.

"Although it focuses on the fate of a few powerless individuals, Kiran Desai's extraordinary new novel manages to explore, with intimacy and insight, just about every contemporary international issue: globalization, multiculturalism, economic inequality, fundamentalism and terrorist violence," Pankaj Mishra wrote in an assessment of *The Inheritance of Loss* for the *New York Times Book Review* (February 12, 2006). "Despite being set in the mid-1980's, it seems the best kind of post-9/11 novel." The book, according to Marjorie Kehe's review for the *Christian Science Monitor* (January 24, 2006), "is populated by characters who are mostly either exiles, eccentrics, or both. It is a work full of color and comedy, even as it challenges all to face the same heart-wrenching questions that haunt the immigrant: Who am I? Where do I belong? . . . Nothing sours the warm heart at the center of this novel. Desai is sometimes compared to Salman Rushdie, and the energy and fecundity of imagination in her works do make them somewhat akin to his. But the tenderness in her novels is all her own." In 2006 Desai won the Man Booker Prize, awarded to writers who are British or Commonwealth citizens, for *The Inheritance of Loss*, becoming the youngest woman ever to receive the prize. (As quoted by Dwight Garner in the December 3, 2006 edition of *New York Times*, Desai said that "in an odd way" she owes her award to U.S. president George W. Bush, as it was his 2004 reelection that led her to put off becoming a U.S. citizen.)

Desai said during her interview for *Bold Type*, "There are all kinds of theories that you get told in writing workshops—'Write what you know,' and that sort of thing, which I don't believe at all. I think one of the great joys of writing is to try and explore what you don't know, that's exciting to me. There are all kinds of little [rules]—show, don't tell—I just wouldn't pay attention to any of that really." Asked by the *Bold Type* interviewer about her mother's influence on her own writing, Desai said, "I'm sure she did have a big influence, because all my life I've grown up hearing her talk about writing and literature and books. It was wonderful to have her around when I was writing [*Hullabaloo in the Guava Orchard*]. . . . She was very good through that whole time, not providing critical support as much as emotional support. A very motherly role, really."

Kiran Desai lives in Brooklyn, New York. Each year she visits India, where much of her immediate family live. Her connection with India, she commented to the *Rediff* interviewer, "was never broken."

Deutsch, Linda

1943– Associated Press trial reporter

Address: Associated Press, 221 S. Figueroa St.,
Third Fl., Los Angeles, CA 90012-2553

"I am the eyes and ears of the public," the courtroom reporter Linda Deutsch said to Nancy Mills for the *Spirited Woman* newsletter (December 2003, on-line). "I'm there to say what happened, not to give any opinions on why it happened or who's responsible. I am an unbiased observer. TV cameras are not always there and even when they are people do not sit and watch every minute, they depend on the reporter to sum up what happened. . . . I fill two notebooks a day and bring it down to a manageable size where people can know what was said, what was important, what's happened, and if possible, how it felt to be in the courtroom when all this happened." Deutsch has been on the staff of the Associated Press (AP) for the past 40 years, and for much of that time, she has been ranked among the foremost American courtroom journalists of modern times. When she joined the AP, where speed, accuracy, objectivity, fairness, and the ability to cover varied subjects are highly valued, Deutsch welcomed the rush of adrenaline that deadline pressures stirred in her. Her articles have appeared in newspapers and on Web sites

Damian Dovarganes-Pool/Getty Images

Linda Deutsch

worldwide, and her work has occasionally taken her overseas—for example, to Guam, in 1975, when she wrote about the fall of Saigon, which marked the end of the Vietnam War. Among the wide array of events she has witnessed, she is best known for her detailed, objective reporting on some of the most sensational, newsworthy, and influential trials of recent decades, including those of Sirhan Sirhan, Charles Manson, Patty Hearst, Angela Davis, Daniel Ellsberg, Lynette ("Squeaky") Fromme, Claudine Longet, Joseph Hazelwood (the skipper of the *Exxon Valdez*), the four Los Angeles police officers who beat Rodney King, John Z. De Lorean, Michael Jackson, and O. J. Simpson. At the end of Simpson's criminal trial, in 1994, the AP awarded Deutsch its Oliver Gramling Reporter Award for her outstanding work. Two years earlier the AP had named her a special correspondent, a title she shares with only 18 past and present AP journalists. Patt Morrison, the president of the Los Angeles Press Club, described Deutsch to the PR Newswire (March 24, 2005) as "an irreplaceable and irreproachable source of information to the millions who read her reportage, truly free from spin or slant" and as "a supremely and scrupulously thorough, accurate, fair and honest reporter who has the respect and regard of both sides in any trial she covers—before, during and after." "I can't think of anything I would rather do," Deutsch told Michele Norris, who interviewed her for National Public Radio (January 15, 2007). "It's like being in a theater everyday. It's like being in the front row seat to history. . . . No other beat offers this kind of access to human emotion. You get at the heart of what people are about. And I think that the murder trial, whether it has any historical significance or not, is always of interest because people wonder: Could I do that? And I sit there and have to listen to both sides, put the pieces together, and present them to an audience. It's the most exciting thing I can think that any reporter could do."

Linda C. Deutsch was born in 1943 in New Jersey. Her mother was a writer. Deutsch began writing poetry and prose at an early age. On her ninth birthday she received her first typewriter, from her father (who died before she reached her teens). Her first attempt at reporting sprang from her interest in the rock-and-roll star Elvis Presley. "I got the idea that I could start an Elvis fan club and I could put out a newspaper," she told Lesley Visser for CBS News (August 15, 2002). "And that's what I did. I published the *Elvis Times*, which went all over the world." In 1958, while Presley was serving in the U.S. Army, thousands of people signed a petition that Deutsch had organized, urging Dick Clark, the host of the popular TV show *American Bandstand*, to promote his music. At about the same time, Deutsch began working for a local newspaper, the *Asbury Park Press*, writing a weekly column about area high schools and, occasionally, other subjects and events. One of her uncles, a newspaper editor, encouraged her to take up journalism as a career, telling her that it was exciting and would offer a stable income and opportunities to meet many people.

Deutsch attended Monmouth University (called Monmouth College then), in West Long Branch, New Jersey, where she majored in journalism. "I was interested in history and the way social trends evolve and journalism gave me a front row seat at history," she told Nancy Mills. Bank loans and earnings from part-time jobs enabled her to pay for her tuition and expenses. Deutsch wrote for the campus weekly and spent her summers interning at local newspapers. In the summer of 1963, she worked the night shift at the *Evening News* in Perth Amboy, reporting on municipal meetings and gathering information for obituaries. One day that summer she learned that a major civil rights march was to take place in Washington, D.C., on August 28. Although she was eager to attend, she "wouldn't dare have had the guts to say something [to the editor]," as she recalled to John Hughes for the *Orange County (California) Register* (November 14, 1995). "So I left him a note saying I thought the march was something the paper should cover. He called me the next day and said, 'OK, if it won't cost us anything, you can go.'" Deutsch hitched a ride to Washington with members of the Perth Amboy branch of the NAACP (National Association for the Advancement of Colored People), and, with an estimated 250,000 others, she witnessed Martin Luther King Jr. giving his historic "I Have a Dream" speech in front of the Lincoln Memorial. The next day her account of the march appeared on the front page of the *Evening News*. "After you do something like that, there's no turning back," Deutsch told Michelle Sahn for the East Brunswick, New Jersey, *Home News Tribune* (July 8, 2004). "I knew then that journalism was my life." In November of that year, when John F. Kennedy was assassinated, she volunteered to help workers at the *Asbury Park Press* prepare articles for the next day's edition, as a way of conquering the helpless feeling she experienced after hearing of the president's death. Her assignment—to make a list of all the local businesses and services that would be closed the day of Kennedy's funeral—made clear to her the public-service aspect of journalism. "It gave us a role in history," Deutsch told Hughes. "It was so amazing to realize that we could do something."

After she earned a bachelor's degree, in 1965, Deutsch covered entertainment news for several New Jersey newspapers. In 1967 she moved to Los Angeles, in order to be close to Hollywood, where many such stories originated. After a brief stint with the *San Bernardino Sun*, she got a job as a general-assignment reporter with the Associated Press. (Founded in 1846, the AP is the oldest news-gathering organization in the world. It is a not-for-profit cooperative that is owned by the American daily newspapers—currently, there are 1,500—that are among its members. A board of directors, elected by its U.S. members, directs its operations. Some 200 weekly, non-English, and college newspapers are also members. Five thousand radio and television outlets, too, use its services, and it maintains a radio network, called AP Radio News, that has 850 affiliates. Currently, the AP's staff includes approximately 2,730 journalists, associated with 243 news bureaus in 97 countries. In addition to written, audio, and visual news reports, the AP supplies photos and graphics.) Whenever she could, Deutsch wrote about the entertainment industry, with the thought of making it her area of expertise. Along with many other AP reporters, she covered the assassination of Senator Robert F. Kennedy of New York, in June 1968, during his bid for that year's Democratic presidential nomination. Her assignment as a "backup" reporter at the trial of the senator's killer, Sirhan Sirhan, was her "first huge, huge story in the L.A. bureau [of the AP]," and, in leading her to decide on court reporting as her specialty, "it changed my life," as she told Michele Norris. Her decision was reinforced in 1970, when she became the AP's principal reporter during the highly publicized, sensational trial of the cult leader Charles Manson and several of his followers, who had murdered the actress Sharon Tate (the pregnant wife of the filmmaker Roman Polanski), four of her friends, and two others in 1969. Deutsch has referred to her experiences during the nine-month trial (1970–71) as her own "trial by fire." "It was exhausting, and it was mind-bending . . . ," Deutsch explained to Norris. "You lived in a different reality, because you were suddenly in this world of this commune that [Manson] ran." She told Hughes, "At some point I realized that [a courtroom trial] was the greatest theater in the world. This was true theater, the morality play for our times. . . . And it is the one story [in journalism] that has a beginning, a middle and an end." Deutsch has attended many of the hearings at which Susan Atkins, Leslie Van Houten, and Patricia Krenwinkel, the women convicted of murder in the Charles Manson trial, have unsuccessfully applied for parole. (The women's death sentences were changed to sentences of life imprisonment after California abolished the death penalty, in 1972. The state reinstated the death penalty in 1977.)

During the Sirhan and Manson trials, Deutsch had many conversations with the highly respected trial reporter Theo Wilson of the New York *Daily News*. Wilson became her "mentor, teacher, sister, and best friend," as Deutsch told Jeff Baker for the *Oregonian* (April 12, 1997), and before long their peers began referring to them as "Thinda" or "the Snoop Sisters." From Wilson, Deutsch learned that good trial reporters are always the last people to leave the courtroom, pay close attention only to what is said inside the courtroom (on the witness stand, by the judge, and by the lawyers), disregard anything lawyers or others say outside it (which is often "spin"), and never make up their minds about defendants' guilt or innocence until the trials end. "Theo believed in observation and description," Deutsch told Baker. "She always said, 'Keep writing, no matter what, and don't leave the courtroom unless you have to file.'" As an example of what one might miss by not following that rule, Deutsch mentioned that during the Manson trial, while some reporters were smoking outside the courtroom, Manson "leaped at the judge with a pencil in his hand"—an incident bound to interest many newspaper readers. Theo Wilson died in 1997, a few days after she began a promotional tour for her book, *Headline Justice: Inside the Courtroom: The Country's Most Controversial Trials* (1996). Deutsch toured in her stead, between her AP assignments.

In addition to the Manson trial, well-known trials that Deutsch has covered include those of Patty Hearst, a granddaughter of the newspaper magnate William Randolph Hearst, who in 1976 was found guilty of taking part in a bank robbery along with members of the Symbionese Liberation Army, an urban guerrilla group that had kidnapped her in 1974; Angela Davis, a one-time member of the Black Panther and Communist Parties, who was acquitted in 1972 of murder, kidnapping, and criminal-conspiracy charges in a case involving the killing of a judge during the attempted escape from a California courtroom of three prisoners in 1970; Daniel Ellsberg, whose 12 counts of felony, stemming from his giving to the *New York Times* a copy of the *History of Decision Making in Vietnam, 1945–1968*—a classified government report better known as the Pentagon Papers, which he had helped to write—were dismissed by a judge in 1973, on the grounds of government misconduct; Lynette ("Squeaky") Fromme, a follower of Charles Manson, who in 1975 was convicted of the attempted assassination of President Gerald R. Ford; the entertainer Claudine Longet (the ex-wife of the singer Andy Williams), whose killing of the champion skier Vladimir ("Spider") Sabich was deemed criminally negligent homicide and earned her, in 1979, a 30-day jail sentence; the automobile executive and designer John Z. De Lorean, who in 1984 was acquitted, on grounds of entrapment, of charges of selling cocaine to undercover police and conspiring in money laundering; Joseph J. Hazelwood, who in 1990 was found guilty of misdemeanor negligence in connection with the spillage into Alaskan waters of more than 11 million gallons of oil from the *Exxon Valdez* in 1989, when he was the ship's captain; the criminal (1991) and civil (1993) trials of the four Los Angeles police officers who beat Rodney King, a black man, with the first trial ending in the nearly all-white jury's verdict of not guilty, which sparked days of riots in Los Angeles that left several dozen people dead, thousands injured, and as much as $1 billion in property damage; the former football star O. J. Simpson, who in 1994, in a criminal trial, was acquitted of the murder of his ex-wife Nicole Brown Simpson and her friend Ronald Goldman and in 1997, in a civil trial, was found liable for their deaths; and the singer Michael Jackson, who was charged with child molestation and was acquitted on all counts in 2005. Deutsch told Michele Norris, "I always say that trials mirror history. That if you wanted to know what was going on in America at a specific time, you needed to walk into a courtroom and look around and listen to what was happening. And you would see, for instance in the Ellsberg trial, you saw the Vietnam War. In the Angela Davis trial, you saw the story of the Black Panthers. In the Patty Hearst trial, we had post-Vietnam alienation. . . . You go on and on, and you come up to the more present time with the O.J. Simpson trial, which . . . had all the elements of celebrity and racism and domestic violence—a lot of issues."

At the outset of Simpson's criminal trial, Deutsch's peers chose her to be the sole journalist in the courtroom during jury selection. Laurie L. Levenson, a former senior trial attorney and assistant chief of the Criminal Division of the Los Angeles district attorney's office, told Nerissa Young for the *Quill* (October 1, 1998) that Deutsch "can watch jury selection, which is like watching paint dry on the wall, and she makes it interesting." Simpson's defense attorney Johnnie Cochran told Young that he considered Deutsch "without peer" and revealed that she was the only reporter to whom he had given both his home and office telephone numbers. On one occasion another of Simpson's lawyers, Robert Shapiro, interrupted Deutsch's daily wrap-up of courtroom events to the media pool outside the courthouse to accuse her of being "too objective." "I try to put myself in the position of the juror," Deutsch told Hughes. "I've always believed that if you told the public what came out in a court, they could make their own decision." Deutsch's reporting of the Simpson trial earned her a Pulitzer Prize nomination—as well as a personal telephone call from Simpson at the conclusion of the trial, thanking her for remaining impartial throughout. *Verdict: The Chronicle of the O.J. Simpson Trial*, co-authored by Deutsch, other AP reporters, and the true-crime writer Michael Fleeman, was published in 1995.

In recent years Deutsch has become an advocate for greater media access to the courts. "It is a fight to cover the courts because a lot of people try to keep you out . . . ," Deutsch said, as reported by City News Service (May 7, 2001). "It is a daily First Amendment battle." She is also battling what she views as a decline in journalists' objectivity and has argued that sensationalistic media coverage hurts journalists who seek to cover trials objectively. "The Simpson trial was a huge setback, not just for TV but for media in general," Deutsch told Michael Ollove for the *Baltimore Sun* (October 7, 1998). While she has no objection to having cameras in courtrooms, she felt that television coverage of the Simpson trial was often inaccurate, poorly researched, and inconsequential to the outcome of the trial and often presented to the public a scene different from that experienced by the jurors. Also contributing to the decline in media objectivity, Deutsch has said, is the desire of many television journalists to be celebrities. At a lecture she gave in 2005, as reported by Keith Brown for the *Asbury Park Press* (September 23, 2005), she complained that journalists sometimes forget that their primary concern should be reporting the facts. "That's what being a reporter is all about," she said. "[The public] should never know what you are thinking." At the same time, she said, "Journalists have always had soul. It's their business to have soul, to care." Coverage of the devastating effects of Hurricane Katrina, in her opinion, demonstrated that element of journalism powerfully.

With the AP's court reporter Dick Carelli, Deutsch wrote *Covering the Courts: An Associated Press Manual for Reporters*. Her awards include the Honor Medal for Distinguished Service in Journalism from the University of Missouri School of Journalism and the First Amendment Award from the Society of Professional Journalists.

Dodge, Charles

June 5, 1942– Composer; educator

Address: Dartmouth College, Music Dept.,
Hanover, NH 03755

The often-performed piece *Any Resemblance Is Purely Coincidental* and many other compositions by Charles Dodge, a major figure in the realm of computer music, "toy with sounds of speech, tease them, twist them and toss them about with acrobatic virtuosity," as Edward Rothstein wrote for the *New York Times* (April 19, 1982). According to an unnamed writer quoted on the Web site of New Albion Records, which released an album containing *Any Resemblance Is Purely Coincidental* in 1998, "If there is one piece identified with Dodge, a 'signature' piece if you will, it would have to be *Any Resemblance . . .* , which has those qualities that seem to imbue his work in general—charm, wit, poignancy and technical brilliance." Classically trained in music, Dodge studied under such 20th-century luminaries as the composers Darius Milhaud and Gunther Schuller. As a graduate student in the 1960s, he gained attention for his orchestral and chamber-ensemble pieces, winning a Woodrow Wilson fellowship and four Broadcast Music Inc. (BMI) awards between 1963 and 1967. Beginning during that period, his fascination with synthesized speech led him to gain enough technical knowhow to experiment with state-of-the-art computerized sound, in such compositions as *Earth's Magnetic Field* and *Speech Songs*. In the opinion of the composer and music critic Tom Johnson, writing for the "Musical America" section of *High Fidelity* (October 1975), those compositions as well as his *In Celebration* and *The Story of Our Lives* showed that Dodge was the only person who, by the mid-1970s, had "really grasped the medium and produced computer music which compares with the finest instrumental and vocal music." While "conventional classical-music lovers quaked at the prospect of diabolical scientist-composers coaxing squat and ominous metal boxes into musical life," as John Rockwell wrote for the *New York Times* (September 22, 1985), Dodge has long regarded the computer as "just another instrument, albeit a very important one," as he said during an interview with Tim Page for the *New York Times* (October 10, 1983). "We are not making the instruments of the past obsolete, only adding one more contemporary sound." Before he became a visiting professor at Dartmouth College, in 1993, Dodge taught at Columbia and Princeton Universities and at Brooklyn College. His compositions include works written on commissions from the National Endowment for the Arts, the Koussevitzky Music Foundation, the Contemporary Music Society of New York, Swedish National Radio, the São Paulo Bienale, the Los Angeles Philharmonic Orchestra, and the American Guild of Organists, among other sources, and they have been performed at many musical festivals and other sites. With Thomas A. Jerse, he is the co-author of *Computer Music: Synthesis, Composition, and Performance* (1985; second edition, 1997). Dodge was the composer-in-residence at the 16th annual Florida Electroacoustic Music Festival, held at the University of Florida at Gainesville in April 2007.

Charles Malcolm Dodge was born in Ames, Iowa, on June 5, 1942 to Albert Francis Dodge and Constance Dodge. In 1960 he entered the University of Iowa, whose school of music is considered among the finest in the U.S. At the end of his freshman year, he studied at the summer school run in conjunction with the Aspen Music Festival, in Colorado; his instructor was the French composer Darius Milhaud. Dodge earned a B.A. degree with honors and high distinction in music from the University of Iowa in 1964. That summer he studied under the composer Gunther Schuller at the Berkshire Music Center (now known as the Tanglewood Music Center), in Tanglewood, Massachusetts. A composition in five parts that he wrote for cello and piano in 1964 is the first in his official list of creative works. That year he enrolled at Columbia University, in New York City, where his instructors included Otto Luenig, an electronic-music pioneer; Richard Hervig, the founding director of the University of Iowa's Center for New Music; Jack Beeson, who has composed operas, choral music, and chamber works; and Chou Wen-chung, whose special interest is the integration of music from Asia and the West. Dodge held a Woodrow Wilson fellowship in 1964–65 and, the following year, a Lydia C. Roberts fellowship (available only to Iowa natives who earned bachelor's degrees from Iowa colleges). Dodge received an M.A. degree in 1966 and a D.M.A. (Doctor of Musical Arts) degree in musical composition in 1970, both from Columbia. Nonesuch released his long-playing record *Computer Music* in the latter year. Dodge taught at Columbia from 1967 to 1969, then spent a year teaching at Princeton University, in New Jersey. At Princeton he studied computer music with Godfrey Winham, an influential music theorist during the 1960s and 1970s. In 1970 Dodge returned to Columbia, where he held the title of assistant professor of music for the next seven years. During that time he introduced a graduate program in computer music there.

Dodge used equipment at the Columbia University Computer Center to record his album *Earth's Magnetic Field: Realizations in Computed Electronic Sound*, for which he "translated" into music the data in scientific charts tracking the sun's effects on Earth's magnetic field. The graphic depictions of the measurements, compiled by the geophysicist Julius Bartels, resembled musical notation—so much so that the charts were known among scientists as "Bartels's musical diagrams." In a critique for the *New York Times* (November 8, 1970) of *Earth's Magnetic Field*, Donal Henahan wrote that the music sounded "astonishingly simple and atonal." "For one reason or another," he also wrote, "the music tends to 'go nowhere,' as a listener trained to expect development in musical ideas might say. But no doubt we would say the same of the magnetic-field phenomenon itself, while a geophysicist would easily deduce patterns." Although Henahan questioned the effectiveness of Dodge's reliance on Bartels's charts, he acknowledged that "there is, at any rate, a great deal of pleasing sound on this record, even if interest flags long before its half hour of life."

Concurrently with his duties at Columbia, Dodge conducted research after-hours on computerized speech and electronic music at the Behavioral and Acoustic Research Center at Bell Telephone Laboratories, in Murray Hill, New Jersey. The center was directed by Max V. Matthews, who made recordings of computer music in the 1950s and is considered to be the inventor of that genre. In an essay for a series about the early "gurus" of electronic music gathered by Jason Gross and posted on the on-line magazine *Perfect Sound Forever* (April 2000), Dodge recalled that the research on electronic speech carried out in Matthews's lab fascinated him. "I was . . . struck how much more interesting the sounds of synthesized speech which were made by the researchers were than the attempts at musical sounds that my friends and I were making," he wrote. With Matthews's permission, Dodge used the lab's equipment at night to create a computer program that would produce compositions incorporating synthetic speech. Joseph Olive, one of Matthews's programmers, and several other computer experts—among them Kenneth Steiglitz of Princeton University and two of Dodge's Columbia colleagues, Howard Eskin and Richard Garland—helped him to write the program. As text, he used four "almost dreamlike," "surreal" poems, as he described them, that were written by the poet Mark Strand, a Columbia professor and friend of his. "I'd never been able to write very effective vocal music and here was an opportunity to make music with words," Dodge explained for *Perfect Sound Forever*. "I was really attracted to that. It wasn't singing in the usual sense. It was making music out of the nature of speech itself." The new software enabled him to retain the pitch of a recorded voice while making the words speed up or slow down, or retain the rhythm of the speech while changing the pitch—changes not possible with audiotapes at that time. In an undated entry posted on CDeMusic.org, the Web site of the Electronic Music Foundation, Dodge was quoted as saying, "The first stage was to reproduce the spoken voice as accurately as I could. I made one run through the poem that way. Then I made another run through the poem making continuous glides through the vowel sounds. Then I made another run where the natural pitch contour of the voice was replaced by a melody. And there were a couple of other runs, one where I replaced the vowel part of the speech with noise so that it sounded whispered. . . . The piece went together by cutting between them." The resulting album, *Speech Songs*, released in 1972 on Nonesuch Records, was Dodge's first published work for synthesized voice. The pieces sounded to Edward Rothstein like "heightened speech that nearly qualified as song." *Speech Songs* "astounded the computer experts almost as much as it has delighted musical audiences . . . ," Johnson wrote. "The quality of the computer's voice does not hold up very well against Sills"—a reference to the soprano Beverly Sills—"but it sings tricky atonal passages far faster than she could, and with immaculate intonation and a sense of humor to go with it. And its diction is at least as comprehensible as that of most opera stars."

In subsequent works that contained synthetic speech, Dodge included live instrumentation and randomly generated musical passages. *In Celebration* (1975), another synthesis of a poem by Mark Strand, also offers echo and whisper effects. "Throughout this work you'll hear slithering motifs and drunken-sounding chords seeming to fade in and out of a unique, bizarre sound-scape, all to subtly encompass the feeling—and perhaps the elusive meaning—of Mark Strand's esoteric poem," Robert Cummings wrote for *Computer Music Journal* (Summer 1997). For *Coscondo* (1978), Dodge added music to a radio play in places selected by its creator, Samuel Beckett. Dodge also had a speaking part, accompanied by two computerized sound sources, dubbed "Voice" and "Music." According to Joan Reinthaler, a *Washington Post* (November 20, 1984) reviewer who attended a concert featuring Dodge compositions in Bethesda, Maryland, in 1984, *Coscondo* "sets a vintage Beckett thesis in a perfect context of mechanically droning voices and intermittent aimless sounds, some musical and some not, all electronic." She added, "Some might dispute that what Dodge is creating is music, but whatever it is, it's interesting, it's imaginative, and it's part of our future."

Dodge won fellowships from the Guggenheim Foundation twice in the 1970s (1972–73 and 1975–76). He left Columbia in 1977 to teach music as an assistant professor at Brooklyn College, a division of the City University of New York. He held the title of professor from 1980 to 1995 and founded and directed the school's Center for Computer Music. Much of Dodge's work in the 1980s explored "the confrontation between new, often dehumanizing technology and the musical expression of human thought and feeling," according to his profile in the *New Grove Dictionary of Music and Musicians* (2001). In his eight-minute piece *Any Resemblance Is Purely Coincidental* (1980), written for live piano and tape, Dodge used what he identified as a "computer restoration and resynthesis" of a 1907 recording of the great Italian tenor Enrico Caruso (1873–1921) singing the aria "Vesti la giubba" ("Put on the Costume"), from Ruggiero Leoncavallo's opera *I Pagliacci*; the resynthesis dated from the early 1970s and was the work of Thomas G. Stockham, a pioneer in digital audio recording, and his University of Utah student Neil J. Miller. "In the course of the work," Dodge wrote, as quoted in an undated entry on the Web site Art of the States, "the voice searches for an accompaniment and is heard at different times with the original band, with electronic sounds, with copies of itself, with the live piano, and the combinations of them all. There is a surrealistic, dreamlike aspect to these apparent dislocations. The initial efforts are humorous; as the work progresses other emotions come into play." Along with works by other contemporary American composers, among them Milton Babbitt and John Cage, *Any Resemblance Is Purely Coincidental* premiered in 1981 at the Carnegie Recital Hall, in New York City. In a review of the concert for the *New York Times* (May 16, 1981), John Rockwell described the piece as "really successful"; it "alternates between the funny and the eerie and . . . is mostly very charming," he wrote. The CD *Any Resemblance Is Purely Coincidental*, recorded for the New Albion label in 1994, offers six works composed by Dodge in the 1980s in addition to the title piece: four "Speech Songs," "sung" by Dodge; "The Waves," with text by Virginia Woolf and electronic permutations of the voice of the soprano Joan La Barbara; and "Viola Elegy," for which Dodge's son, Baird, played the solo instrument.

From 1971 to 1975 Dodge served as president of the American Composers Alliance, which publishes scores of concert music composed by its approximately 200 members, and from 1979 to 1982 he was the president of the American Music Center, which, according to its Web site, is dedicated to "building a national community for new American music." In 1974 he organized the first International Computer Music Conference; sponsored since 1979 by the International Computer Music Association, the annual event includes concerts, lectures, and workshops.

Dodge's son, Baird Dodge, a violist with the Chicago Symphony Orchestra, and his daughter Samantha are his children from his first marriage, which ended in divorce in 1971. Since 1978 he has been married to the former Katherine King Schlefer, with whom he has one daughter, Margaret. The couple live in Putney, Vermont.

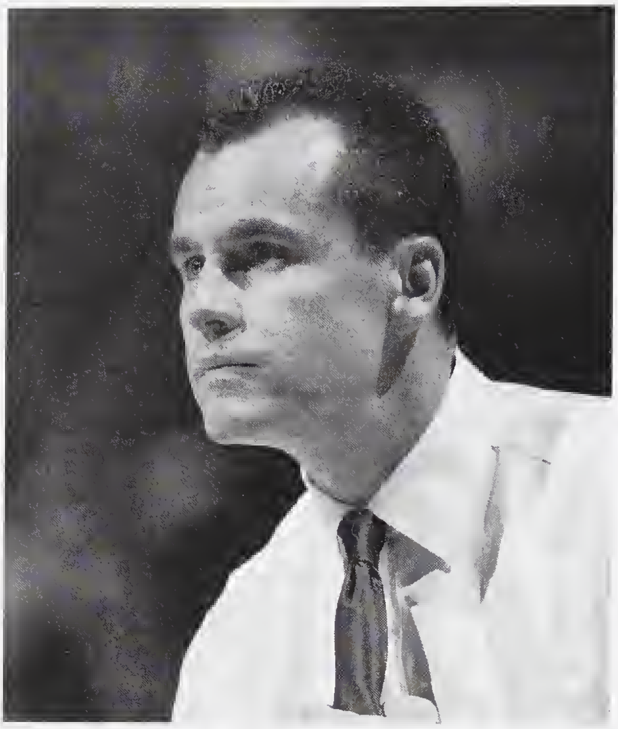
Donovan, Billy

May 30, 1965– College basketball coach

Address: University Athletic Association, P.O. Box 14485, Gainesville, FL 32604

Billy Donovan coached the University of Florida men's basketball team to the NCAA (National Collegiate Athletic Association) Division I championships in both 2006 and 2007, thus becoming only the third college coach (after John Wooden of the the University of California at Los Angeles and Mike Krzyzewski of Duke University) to win back-to-back titles. He is also one of very few in college basketball to appear in the Final Four as a player and later win a title as a coach. Donovan first gained national attention in 1987, while playing with the Providence College basketball team and helping to lead them on a surprising run to the Final Four. After a brief career as a professional, Donovan began working as a coach. He earned the title of head coach for the first time in 1994, at Marshall University. As the head coach at the University of Florida since 1996, he has turned that school's basketball team into one of the most consistently successful in the nation. Donovan is well known for his fierce work ethic, his unusual skill as a recruiter, and his boyish infatuation with the game of basketball. "I really felt, as a player, in order for me to play at the level I played at, obviously I had to be a student of the game," he explained to Michael



Brian Bahr/Getty Images

Billy Donovan

Vega for the *Boston Globe* (March 28, 2000). "I love watching games as a basketball junkie, and I still am. . . . I love watching film. I love being at practice. I love being on the floor with these guys, and I love trying to find innovative ways to try to motivate them and try to bring out the best in them." He added, "In life, very few people are fortunate to be able to do something that they love, and I feel very privileged to do that." Donovan's honors include being named Southern Conference Coach of the Year in 1994 and ESPN.com National Coach of the Year in 2001. In 1999 he was enshrined in the Providence Hall of Fame for his efforts as a player and coach.

The eldest of the three children of William J. Donovan and his wife, Joan, William John Donovan was born on May 30, 1965 in Rockville Centre, New York, a Long Island suburb of New York City. His father played basketball at Boston College during the 1960s; he worked for J. P. S. Yarn and Converter as a salesman and after 22 years became the company's president. The younger Donovan started to play basketball at an early age; one of his first heroes was Walt Frazier of the New York Knicks. When Donovan, as a sixth-grader, wrote an essay about his dream of playing basketball professionally in the National Basketball Association (NBA), his teacher told the class that he had a better chance of getting struck by lightning. Short, chubby, and not a gifted athlete, Donovan had a difficult time making it onto the St. Agnes High School basketball team and did not earn consistent playing time until his junior year. His father challenged him to work harder at becoming a better basketball player, and in response he adopted the motto "Do more," promising himself that he would always work harder than his competitors. "A lot of what I did was out of fear," Donovan told S. L. Price for *Sports Illustrated* (November 23, 1998). "Fear of someday looking back on my career and seeing I hadn't done the best I could. Fear of knowing I wasn't overly talented. It came from my dad. He made me realize who I was." Donovan often honed his basketball skills in his backyard alone at night. His mother would receive phone calls from neighbors at 11 o'clock, complaining about the noise. "I used to call from the bedroom window, 'Billy, come in now! The neighbors are tired of hearing that basketball bounce . . . they want to go to sleep!'" she told Chris Harry for the *Orlando Sentinel* (October 27, 1996). Donovan eschewed typical teenage social events in order to concentrate on basketball; sometimes he broke into his high-school gymnasium to work out after the building had closed. His father recounted a now-famous story to Michael Vega for the *Boston Globe* (March 28, 2000), about a night when Donovan never came home. "His mother and I went over to the gym and found him there, and we were like, 'Billy, do you have any idea what time it is?' and he says 'I just lost track of time.'" Donovan's efforts paid off: he starred at point guard in his junior and senior years at St. Agnes, leading the team to a 51–5 record over the course of two seasons. A handful of Division I basketball programs recruited Donovan, among them Seton Hall, Temple University, and Providence College, in Rhode Island. After showing Donovan game tape of the legendary point guard Ernie DiGregorio, a Providence star in the early 1970s who went on to play in the NBA, the Providence coach at that time, Joe Mullaney, told Donovan that he could be the next "Ernie D." The stocky, barely six-foot-tall Donovan agreed to attend Providence and join the Friars, the school's basketball team.

Donovan did not excel in Mullaney's slow-paced, half-court system, and in his first two seasons, he had little playing time and grew bored. He also struggled with his weight, and he fell out of favor with the coaching staff. He averaged only 2.7 points per game in his first two seasons, and many, including Donovan himself, thought that he was overmatched in the Big East Conference, one of the toughest divisions in the country. After the 1984–85 season, in which Providence earned 11 wins and 20 losses, Mullaney resigned and was replaced by Rick Pitino, a young coach who had recently been an assistant coach in the NBA. Donovan had considered transferring to another school, but he changed his mind after Pitino told him that in the upcoming season, they would play a fast-paced offense that would use four guards, and that if Donovan got into better physical condition and increased his mobility, he would have a chance to earn more playing time. Donovan returned home after his sophomore year intent on becoming one of the four starting guards. "I always had worked hard," Donovan told Chris Harry. "But Coach Pitino taught me the right way to work." Again using his high-school gymnasium after dark, Donovan worked tirelessly to improve his conditioning and his jump shot. He also began joining pickup games in New York City playgrounds, where competition was intense. "It was great playing with those guys," Donovan told Michael Wilbon for the *Washington Post* (March 27, 1987). "I learned how to get my shot off, use different dribbles. And you just got an appreciation for winning. On the playground, if you lose, you have to sit an hour to get back on the court because there's about 15 guys [in teams of five] waiting for winners." He entered his third year at Providence 18 pounds lighter, faster on his feet, and with a better understanding of the game. As a junior he averaged 15.1 points per game as the Friars' starting point guard. At Pitino's urging, he practiced diligently over the summer.

During the 1986–87 season, Donovan again flourished under Pitino's high-octane offense system, averaging 20.6 points and 7.1 assists per game and gaining recognition as one of the best guards in the Big East Conference. The Friars achieved a record of 25–9, fourth-best in the league, and earned an invitation to the NCAA Tournament. Over the course of the tournament, Donovan and Pitino garnered national praise for leading Providence, a small, Catholic college with a student body of 3,600, to victories over some of the most successful teams in the country, among them the University of Alabama and Georgetown University. With an approach that favored the three-point shot, full-court pressure, and a frantic pace, Providence won four games to reach the Final Four. Led by Donovan, who had averaged 26.5 points per game during the four games preceding the Final Four, the Friars became the "feel-good" success story of the season. Sportswriters referred to the three-point arc as the "Friar Patch" because of the frequency with which Donovan's team made the long-range shots, and they called Donovan "Billy the Kid," after the Old West gunfighter, a reference to his quick release and accurate shots. Although the team lost to Syracuse University in the national semifinal match, their improbable run to the Final Four earned a permanent place for Providence College in NCAA basketball lore. Looking back on that success, Pitino told Harry, "Billy Donovan went from being the Pillsbury Doughboy to taking a middle-of-the-pack team to the Final Four. He's one of the greatest rags-to-riches stories I've ever been associated with."

After he graduated from college, with a B.A. degree in general social studies, in 1987, the Utah Jazz selected Donovan in the third round of the NBA draft. He was unable to make the team, however, and joined the Wyoming Wildcatters of the Continental Basketball Association (CBA), a weaker professional league. He performed well, and during the season the New York Knicks of the NBA offered him a contract. Skeptics wrote that that opportunity came his way only because of Rick Pitino, who had become the Knicks' head coach the previous summer. Gary Binford, writing for *Newsday* (February 2, 1988), described Donovan as "too small and too slow" and as "a liability defensively," but acknowledged that he was "adroit at feeding the ball to the pivot—a skill that no other Knick possesses with the exception of Mark Jackson." Overall, as a member of the Knicks, Donovan was ineffective, and he was cut from the team after 44 contests. The following season Donovan got another chance to play with the Utah Jazz, but he performed poorly and soon found himself back in the CBA, playing for the Rapid City Thrillers. In February 1989 Donovan ended his career as a player, because no professional teams were interested in hiring him. "I left without any excuses," Donovan told Harry. "I had my shot. I wasn't good enough and I could live with that."

His impending marriage, planned for that summer, led Donovan to take a job as a broker with a Wall Street investment firm. He soon realized that such work did not suit him. "I hated it," he told Monte Burke for *Forbes* (March 19, 2001). "I was cold-calling all day, trying to drum up leads, studying for the Series 7 broker test. I'd played basketball my whole life, and there I was calling some guy in Texas, trying to get him to give me money like I knew what I was doing." Although he passed the test, after three months on Wall Street, Donovan decided that he would look for a job as a basketball coach. By his own account, he had always wanted to be a coach but had been deterred by the long hours and low pay. He telephoned Pitino, who told him that he was taking the head-coach position at the University of Kentucky the following season and could hire Donovan as a graduate assistant with a salary of $370 a month. Donovan's father, who was present during the conversation with Pitino, saw his son's face "[light] up like a Christmas tree," as he told Price. Donovan accepted the offer, buoyed by his father's advice to pursue his dream. Although Pitino had "never thought of Billy as a coach," as he told Price—"I guess I just thought he was too nice a kid," he explained—Donovan worked his way to the top assistant position. "I'd always prided myself in working 16-hour days," Pitino explained to Harry. "Billy was a guy who took that to another level. He camped out in the office." Donovan's dedication to his work took a toll on his home life. His wife, the former Christine Hasbrouck D'Auria, "fought his job for two years . . . ," as she told Price. "All of a sudden it was just Coach Pitino and 20-hour workdays. No joke."

After five seasons with Pitino and his team, the Wildcats, Donovan accepted the head-coach position at Marshall University, in Huntington, West Virginia; at 28 he became the youngest head coach in Division I. During the previous season, 1993–94, Marshall's basketball team, the Thundering Herd, had won only nine games, and students' interest in the team had waned. Under the breakneck-paced system, similar to Pitino's, that Donovan introduced—it was nicknamed "Billy Ball" by the local media—the players' performance improved markedly; the team won 18 games and earned a berth in the Southern Conference tournament. Although they lost in the first round of the tournament, the team had won back many of their previous fans and earned many new ones. Two days after the 1994–95 season ended, Donovan was hospitalized for several days with exhaustion. The following year the team won 17 games and lost 11.

After the 1995–96 season Donovan left Marshall to become the head coach of the University of Florida's team, the Gators. He took the position against the advice of Pitino, who compared the Gators unfavorably with the Thundering Herd and all the teams in the Southeastern Conference (SEC) and warned Donovan that the school's football team, under the venerated Steve Spurrier, captured the lion's share of attention on campus; indeed, Florida was widely perceived as a "football school." Nevertheless, Donovan welcomed the challenge. Determined to build a talented team, he made his top priorities the recruitment and the development of relationships with top basketball high schools—tasks his predecessor, Lon Kruger, had largely neglected. "Recruiting good players is obviously the key to any successful program," Donovan told Matt Hayes for the *Florida Times-Union* (August 3, 1997). "But there's a lot of hard work and commitment involved, too—from the players and coaches. You can't just assume if you walk on the court with these great high school numbers that it's going to translate to the college level. You have to recruit players to fit your system, and everyone has to work as hard as they can to get where they want to be. It's a never-ending process." Twelve hours after he was installed as the Gators' head coach, Donovan called Frank Martin, who was then the coach at Miami Senior High School, one of the top basketball schools in Florida, to discuss ways to attract basketball players from all over Florida. "Billy and his staff have been working their tails off since the day they were hired," Martin told Matt Hayes for the *Florida Times-Union* (August 3, 1997). "As a high school coach, you're impressed with a group of people that get after it like that." Within a few months Donovan had persuaded Brindley Wright of Miami Senior, one of the highest-rated players in the state, to enroll at the University of Florida.

During his first year at Florida, Donovan installed his "Billy Ball" system, but he had difficulty motivating players who had been recruited by Kruger; seniors in particular had grown disenchanted as the Gators' fortunes had worsened. A low point for Donovan came at the end of January 1997, when the Gators lost a game against Rick Pitino's Wildcats, 92–65. The team struggled for the remainder of the season, finishing with a record of 13–17, but Donovan believed that he had established an effective system. During the 1997–98 season the team—led by a former Marshall student, Jason Williams, who had followed Donovan to Florida—won 14 games and lost 15, and they participated in the National Invitational Tournament at the conclusion of the regular season. In 1998–99 the team, fortified by Donovan's young recruits, racked up 22 wins, a Florida record. They finished the season 17th in the nation and made it to the third round of the Men's Division I NCAA Tournament.

The 1998–99 Gator team featured Donovan's first full class of recruits. Before that season he had attracted four of the state of Florida's top players and Mike Miller, a two-time South Dakota high-school Player of the Year, who chose Florida over several traditionally more successful basketball programs. Donovan's ability to attract Miller to Florida made considerable waves on the national basketball scene. Miller was counted among the elite high-school basketball players in the country and had been strenuously courted by some of the most celebrated programs in the U.S. Speaking of his recruitment efforts, Donovan explained to S. L. Price, "We don't have the tradition of Kentucky or Kansas. We have to be innovative. We have to call at midnight. We've got to have a different type of relationship with the kids. We've got to watch them play every day during the July period [when NCAA-sanctioned evaluations occur]. Hopefully, all that stuff means something in the end." He also said, "We take the rules to the extreme, but we're doing things the right way. I realize more and more in this recruiting game that there is a perceived hierarchy: Certain programs are supposed to get certain players, then the next tier schools fall in and then the next. We've ruffled feathers going after guys that maybe we weren't supposed to be in on, much less get. But we've been nothing but aboveboard." Lauded by some coaches, Donovan's recruitment efforts angered those who complained that he was "stealing" prime prospects. At the request of Roy Williams, the head coach at the University of Kansas, an NCAA committee began to investigate Florida for possible recruiting violations. Ten months later the committee cleared Florida of any wrongdoing. Mike Miller attributed Donovan's success as a recruiter to his age and personal attributes. "Coach Donovan is younger than most head coaches, he's got a lot of enthusiasm," Miller explained to Price. "That's what sells him to a lot of recruits. He relates to us better than the older coaches, he knows how we feel and what we want out of basketball."

In 1999–2000, led by Mike Miller and Donovan's other second-year stars, the Gators made their second-ever Final Four appearance, defeating the University of North Carolina in the semifinals before falling to Michigan State in the championship game. In just four years Donovan had established Florida as one of the top basketball schools in the United States. Since the 1998–99 season, the team has reached the NCAA Tournament in every year—currently, a streak of eight consecutive times. (Prior to Donovan's arrival, the school had never reached the tournament in more than three consecutive years in eight decades.) During the 2002–03 season the Gators achieved a number-one ranking in the ESPN/*USA Today* poll for the first time in school history, and they earned the number-one ranking the next year as well. Nevertheless, Donovan was criticized for his inability to lead the team to victories in the postseason. After their 2000 Final Four appearance, the Gators were perennial contenders for the national championship yet seemed to play at their worst in the most important games; they never made it past the second round and often lost to far inferior teams. With all the new talent Donovan had brought in, expectations had risen, and for the first time in his life, he was labeled an underachiever. Some detractors believed that Donovan pushed his players too hard, so that by the end of the season, they were burnt out and ineffective. Others questioned his system and suggested that though he was a top-notch recruiter, he seemed to be unable to coach the game at the highest level.

Donovan reversed that trend partially during the 2004–05 season, when Florida won its first SEC Tournament championship but again fell in the second round of the NCAA Tournament. At the conclusion of the season, the Gators' top three players left for the NBA, and Florida began the 2005–06 season absent from the ESPN/*USA Today*'s list of top-25 ranked schools. The team surprised many by winning their first 17 games, rising to the number-two ranking during that streak. Florida again won the SEC Tournament and was seeded third in their region for the NCAA Tournament. With the help of their star player Joakim Noah, the Gators beat every team they played in the NCAA Tournament by considerable margins. The only close score was their 57–53 third-round victory over Georgetown University. On April 3, 2006 the Gators beat the University of California–Los Angeles for the national championship by a score of 73–57. At 40 years of age, Donovan thus became the third-youngest basketball coach to win the NCAA Tournament. Pitino, who had watched his protégé from the stands during the championship game, said to Pat Forde for ESPN.com (April 4, 2006), "Billy was well prepared tonight. That was a coaching clinic." In an example of the strength of the players' team-first mentality, three of the Gators' stars chose to return to Florida for the 2006–07 season, despite the assumption that they were certain to be NBA draftees. On December 20, 2006 Donovan won his 236th game at Florida, surpassing Norm Sloan to become the winningest coach in Florida basketball history.

In 2007 the Gators were SEC Regular Season and SEC Tournament champions and received the number-one overall seed in the NCAA Tournament, reaching the Final Four. On March 31, taking on UCLA for the second year in a row, they won by a score of 76–66. Then, on April 2, they defeated the Ohio State Buckeyes, 84–75, to secure their second national championship in two years. In a testament to the strength of the players' team-first mentality, three members of the Gators—Joakim Noah, Al Horford, and Corey Brewer—had postponed their availability for the NBA draft in order to have the chance to win the NCAA title two years in succession.

In June 2007, much to the surprise of many fans and participants in college basketball, Donovan agreed to a five-year, $27.5 million deal with the Orlando Magic of the NBA. Six days later he changed his mind and signed a six-year contract with the Gators worth $3.5 million per year. In an Associated Press article posted on msnbc.com (June 7, 2007), Donovan was quoted as saying, "As long as the University of Florida would like to have me here, this is where I want to be. For my part, I want to be at the University of Florida for the rest of my time coaching."

Donovan and his wife married in 1989. For some years Christine Donovan taught fourth grade. The couple live in Florida with their four children: William, Hasbrouck, Bryan, and Connor.

Dungy, Tony

(DUN-jee)

Oct. 6, 1955– Football coach

Address: Indianapolis Colts, 7001 W. 56th St., Indianapolis, IN 46254

In the fall of 2007, Tony Dungy embarked on his sixth season as the head coach of the Indianapolis

Colts of the National Football League (NFL). In his first five years with the Colts, Dungy directed the team to more than 10 wins per season, a 60–20 regular-season record, five play-off appearances, four American Football Conference (AFC) South titles, two AFC championship-game appearances, and, most recently, a 29–17 victory over the Chicago Bears in Super Bowl XLI—which made Dungy the first African-American head coach to win the Super Bowl and just the third person to do so as both a player and a head coach. (The others are Mike Ditka and Tom Flores.) The 2007 season marked Dungy's 12th as an NFL head coach, a post in which he has established himself as an innovator and as one of the brightest defensive minds in the league. His coaching excellence is illustrated by a 120–62 career regular-season record (as of mid-October 2007) and an overall mark of 129–70; in nine of his 11 seasons as an NFL head coach, his teams have made play-off appearances. The .648 regular-season winning percentage he had achieved by the start of the 2007 season was the best among active NFL coaches with more than 50 regular-season victories. In 2005 Dungy became the 35th coach in NFL history to earn 100 victories. Dungy's success in both the National Football Conference (NFC) and the AFC has earned him the distinction of being the only NFL coach to defeat each of the 32 franchises in the league.

Prior to becoming a head coach, Dungy was a defensive assistant or defensive coordinator with the Pittsburgh Steelers, Kansas City Chiefs, and the Minnesota Vikings, all of the NFL, as well as a defensive assistant for the University of Minnesota football team. Dungy's teams have been characterized by their preparation, strong grounding in fundamentals, and attention to detail. His quiet coaching style and professorial image are atypical for an NFL head coach, but his calm demeanor belies strong convictions. While some have suggested that Dungy would be more effective if he raised his voice more often, Dungy has refuted that assertion. "I think there are people who want coaches to rant and rave," Dungy said to Bob Glauber for the *Sporting News* (February 27, 1995), "but there are a lot of coaches who don't. . . . I think there are a lot of different ways to be successful." Dungy also has gained a reputation as a "player's coach" through his willingness to listen to his players' suggestions. "I hear people say, 'Well, he doesn't holler at the guys,'" Dungy told Gwen Knapp for the *Philadelphia Inquirer* (January 1, 1995). "It's hard for me to understand that grown men can't understand simple directions. I never felt that I had to curse at a guy to make him understand that something needs to be done a certain way. If I reach the point where I have to say 'You SOB, what were you doing there,' we're already in trouble." "You have to make them believe that what you're doing is going to help them to win football games," Dungy told Alan Robinson for the Associated Press (September 19, 1984). "You have to appeal to their intellect." When he is confronted with a player who is unable or unwilling to take instruction, Dungy's solution, rather than belittling the player, is to replace him with another—which has proved to be an effective means of motivation. The Colts' defensive lineman Anthony McFarland told James Patrick for the *Salt Lake (Utah) Tribune* (February 4, 2007), "[Dungy's] a laid-back guy, but he's also a very firm guy. He has expectations and he presents them to you in a manner that's easy to follow, and he expects you to be a man about it."

The second of Cleomae and Wilbur Dungy's four children, Anthony Kevin Dungy was born on October 6, 1955 and grew up in Jackson, Michigan, 100 miles west of Detroit. His mother taught English and speech courses at Jackson High School, where she also coached the cheerleading squad for a time; his father taught surgical anatomy at Delta Community College. Dungy's parents, who raised their children in the Baptist faith, "were very supportive," Dungy told Mick McCabe for the *Detroit Free Press* (September 6, 1996). "They created an atmosphere where we thought it was important to study and do things right. They set a good example for us." Ray Hill, a former student of Dungy's mother, told Martin Fennelly for the *Tampa Bay (Florida) Tribune* (January 7, 2002) that Cleomae Dungy "never yelled or raised her voice. She just had a way of saying things, of looking at you, that commanded respect. She was low key, but in control." Alluding to Tony Dungy, Fennelly wrote, "Sound familiar?" Dungy's father, who had taught high-school biology in an all-black school in Virginia during the 1950s, also pushed his children to pursue their dreams despite the racial prejudice they might face. Tony Dungy said to S. L. Price for *Sports Illustrated* (June 10, 1996), describing the family's attitude toward racial discrimination, "Don't use it as an excuse, don't let it beat you, don't give up." In his youth Dungy nonetheless let his frustration get the better of him on occasion. As Price reported, in ninth grade Dungy was expelled from a basketball game for fighting. That episode taught him a lesson. "I realized that because I got out of control, I satisfied a little anger but I was out of the game," he said to Price. "Now I wasn't playing, and what good did it do?"

As a youngster Dungy proved to be a natural athlete and often played sports with older children. "I enjoyed the challenge of being the worst player on a good team rather than the best on a bad team," Dungy explained to Jerry Green for the *Seattle Times* (November 30, 1997). When he was 14 and playing as a quarterback at Frost Junior High, a photograph of him appeared in the "Faces in the Crowd" section of *Sports Illustrated*. The next year, as a sophomore, he was the starting quarterback at Parkside High School. Dungy was successful at other sports as well: in his three years at Parkside, playing football, basketball, and baseball at the varsity level, he helped win eight out of a possible nine league championships. His coaches were impressed by his leadership, preparation, and intelligence as well as his playing ability. "His vocabulary is unbelievable," Dungy's high-school football coach, Dave Driscoll, told Jerry Green. "He could talk with the most intelligent people at Parkside High School and did quite often, teachers. . . . Then he could talk to the kids on the street, talk at that level, and make everybody feel comfortable. I don't know what his IQ is, but I'll bet you it's close to 200. He had a sense of humor, particularly with his peers. When he talked with me and others, he was serious. He had a tremendous desire for knowledge in all areas. He could have been a businessman. He could have been a lawyer, a doctor." In an interview with Mick McCabe for the *Detroit Free Press* (September 6, 1996), Driscoll called Dungy "a once-in-a-lifetime young man." Dungy graduated from Parkside High School in 1973 with a 3.74 grade-point average.

Dungy entered the University of Minnesota in 1973 on an athletic scholarship and played on both the football and basketball teams in his freshman year. After averaging 2.6 points per game as a reserve shooting guard, Dungy quit the basketball team in his sophomore season in order to concentrate on football—the sport at which he showed the most promise. He starred at quarterback for the Golden Gophers, emerging as a threat at both running and passing. He finished his years at the school as its career leader in pass attempts (576), completions (9,274), passing yards (3,577), and touchdown passes (25). Additionally, he rushed 413 times for 1,345 yards and 16 touchdowns and twice earned the team's Most Valuable Player award. As a senior he played in the East-West Shrine game, the Hula Bowl, and the Japan Bowl, all postseason all-star games. After graduating in 1976, with a bachelor's degree in business administration, Dungy ranked fourth in Big Ten conference history in total offense, behind Mike Phipps, Archie Griffin, and Bob Griese.

Dungy hoped his success would lead to an opportunity to play quarterback in the NFL, but despite his impressive college statistics, he was not drafted by an NFL team. In May 1977 he signed as a free agent with the Pittsburgh Steelers; the team did not intend for him to play quarterback, instead making him a wide receiver and, finally, a safety—the first time since grade school that he had played a defensive position. At first Dungy believed the team's assertion that, at just an inch over six feet, he was too short to be a quarterback in the NFL. As he spent more time in the league, however, he began to believe that teams were biased against African-American quarterbacks. "I'd stand next to [quarterback] Bob Griese and look him right in the eye, and stand next to [quarterback] Fran Tarkenton and look him right in the eye," Dungy told Price. "I'd watch some of the backups throw and say, 'These guys are not very good.' It wasn't until I played a couple years that I started thinking that maybe there was something to this," he continued, referring to racial discrimination. Still, because his role as a defensive player allowed him to stay in the league, Dungy dedicated himself to watching many hours of film in order to learn the nuances of the position. He played in 14 games as a rookie and intercepted three passes. He also was the Steelers' emergency option at quarterback. In one game, after the quarterbacks Terry Bradshaw and Mike Kruczek had both been injured, Dungy played his former position, completing three of eight passes for 43 yards while rushing three times for eight yards. In that game Dungy became the only player in NFL history to throw an interception and make a defensive interception in the same game. The following year, 1978, Dungy played in 16 games, starting in two at safety, and ranked second in the AFC in interceptions, with six. That season he appeared in Super Bowl XIII, in which Pittsburgh defeated Dallas, 35–31. He was then traded to the San Francisco 49ers, playing in 15 games for them during the 1979 season before being traded once more, this time to the New York Giants. Cut from the Giants during training camp prior to the 1980 season, he retired as a player.

Dungy was not out of work long. He began his coaching career in the fall of 1980, as the defensive backs' coach for the University of Minnesota. The following year, on the recommendation of the Giants' owner, Wellington Mara, Dungy was hired as a defensive assistant by the Steelers. At just 25 years of age, Dungy was the youngest assistant coach in the NFL. In 1982 the Steelers promoted Dungy to defensive backs' coach, a position he held for two seasons before being promoted again, to defensive coordinator, in 1984. At the time Dungy was the only African-American coordinator in the NFL, and the youngest; in fact, he was younger than many of the players he instructed. In his five seasons as defensive coordinator of the Steelers, Dungy's defenses averaged 24 interceptions and 37 takeaways and scored 20 touchdowns—and were considered among the league's best. In 1988, following a disappointing season, the Steelers restructured their coaching staff, firing four assistants and reassigning several others. Rather than accepting a demotion, Dungy resigned.

During his time with the Steelers, Dungy was considered one of the rising coaching stars in the NFL, and many speculated that he would become the first African-American head coach in the modern NFL. (At the time Frederick "Fritz" Pollard, who became the head coach of the Hammond Pros in 1921, was the only African-American coach in NFL history.) Dungy was not considered for many head-coaching positions, however, though he had at least two interviews for such posts, with the Philadelphia Eagles in 1985 and the Green Bay Packers three years later. Referring to the latter, Dungy said to G. D. Clay for New York *Newsday* (January 9, 1994), "I think it was just something to keep the NAACP and Jesse Jackson off their back. I don't consider that interview an interview." At the time many sportswriters offered their points of view as to why Dungy had not gained a head-coaching position. Some suggested that his quiet demeanor and humility, which made him ill-suited for self-promotion, slowed his ascent up the coaching ladder. Many more suggested that the lack of an African-American head coach in the league, despite the fact that a majority of the players were African-American, was a clear sign of discrimination. Dungy was among those who suggested that the situation stemmed from the league's historical discrimination and the insularity of its network of owners, all of whom were tradition-oriented, conservative, elderly white men. (In 1934, through a "gentlemen's agreement," NFL owners had colluded to phase African-American players or coaches out of the NFL, and the league remained all-white until 1946.) "[The owners] just don't know very many minority guys to talk to," Dungy said, as reported by Sid Hartman for the Minneapolis, Minnesota, *Star Tribune* (January 24, 1993). "I don't think it is any kind of blatant discrimination because they want to win. But I just don't think it occurs to them that some of the black coaches could by very effective." "Most owners, when they visualize their head coach, they have trouble visualizing someone black because they haven't seen many of those," Dungy told Ron Lesko for the Associated Press (October 31, 1994). "Myself, when I think of head coaches, I think of Vince Lombardi, Don Shula, Tom Landry, Chuck Noll. All your role models have been white coaches. You have to reassess your thoughts and try to open it up to everybody who's out there, and that's where I think the system's been slow." Dungy also believed that because owners were often removed from developments on the field, they had to rely on publicity and name recognition when hiring coaches—a process that did not favor the NFL's few black assistants, who were not in a position to have their successes noticed. "What we're looking for is a day when a black coach can be interviewed, hired and lose their jobs and it's not newsworthy," Dungy told Gary Shelton for the *St. Petersburg (Florida) Times* (June 2, 1991).

After leaving the Steelers, Dungy served as the defensive backs' coach for the Kansas City Chiefs from 1989 through 1991, helping the Chiefs earn a play-off berth in each of his final two seasons. In 1989 the Chiefs finished first in the AFC and second in the NFL overall in pass defense. In 1989 and 1990 Dungy's defensive backs allowed the second-fewest completions in the NFL and the second-lowest completion percentage in the league. Under Dungy's tutelage the defensive backs Albert Lewis and Kevin Ross were both selected twice for the Pro Bowl. Following the 1991 season Dungy took the defensive coordinator's position with the Minnesota Vikings under head coach Dennis Green, who in January 1992 had become just the third African-American head coach in the NFL. (Art Shell had become the head coach of the Oakland Raiders in October 1989.) In his new position—just below head coach in the leadership hierarchy—Dungy once more put himself in a position to be considered for a head-coaching job. Taking over a veteran-heavy squad was not an easy task for the young coach, but in one year, through his innovative strategies, Dungy turned a mediocre defense into one of the league's best. He experimented with different lineups, changed the positions of many of the players, and displayed a gift for placing athletes in positions that would allow them to anticipate the play of the opposing team. He also promoted a ball-hawking style of defense and demanded that his players try on each possession to take the football from the opposing team's offense. That tactic made the Vikings one of the best teams in the NFL at forcing turnovers. Dungy tried to confuse offenses by switching from zone to man-to-man defenses and presenting unusual defensive alignments. During his tenure as Minnesota's defensive coordinator, Dungy reestablished himself as one of the top defensive minds in the NFL. In four seasons his defenses intercepted a league-high 95 passes, and his players spurred the team to three play-off appearances. The Vikings' defenses under Dungy ranked eighth in the NFL in 1992, first in 1993, fifth in 1994, and 20th out of 30 in 1995. "One of the keys to our defense is Tony being such a smart guy," the defensive tackle John Randle told Jeff Lenihan for the *Star Tribune* (January 7, 1994). "To me, it's like he goes into the future to the next game, sees what is going to happen, and then comes back to practice and tells us. When we're in practice, it's like he's already been in the next game. It's amazing." Randle's teammate Jack Del Rio concurred, telling Lenihan, "He's the best football mind I've ever been around. . . . I have a tremendous amount of respect for him."

In 1996 Dungy fulfilled his dream of becoming an NFL head coach, when he was hired by the Tampa Bay Buccaneers. The team had one of the worst franchises in the NFL—including an all-time win-loss ratio of 94–213 and just three play-off appearances in its 20-year history. Dungy employed a defense in Tampa that came to be known as the Tampa 2. With roots in the two-deep coverage schemes Dungy had used in Pittsburgh in the 1970s, the Tampa 2 placed a premium on speed and thus on players who were fast but undersized by NFL standards. The strategy is now used widely in the NFL. Under Dungy's watch the Buccaneers' defense quickly became one of the NFL's tightest. In just his second season in Tampa Bay, Dungy guided the team to a 10–6 record and a wild-card berth in the play-offs, where they earned a first-round victory over the Detroit Lions. Dungy was named Professional Coach of the Year by the Maxwell Football Club for his efforts that season, and the team sent a league-high eight players to the Pro Bowl. The Buccaneers slumped in 1998, finishing with an 8–8 record and out of contention for the play-offs, but Dungy received a vote of confidence from the organization, earning a new contract. In 1999 the Buccaneers rebounded, winning the NFC Central Division title, their first division championship since 1981 and just the third in franchise history. They advanced to the NFC Championship game, where they lost to the eventual Super Bowl champion St. Louis Rams, 11–6. In 2000 Tampa Bay again displayed a ferocious defense, which recorded a club-record 55 sacks and sent nine players to the Pro Bowl, but the team finished the season with a disappointing 21–3 loss to the Philadelphia Eagles in the first play-off round. In 2001 Tampa Bay finished sixth in total defense and eighth in the NFL in points allowed and sent six players to the Pro Bowl, but again lost in the first play-off round. Dungy designed some of the best defenses of the era during his time with Tampa Bay, but although he employed several offensive coordinators during those years, he was never able to generate an offense good enough to make Tampa Bay into a genuine championship contender. When the Buccaneers lost to the Philadelphia Eagles in the first play-off round of 2001 by a score of 31–9, the occasion marked the third consecutive play-off game in which Tampa Bay was unable to score an offensive touchdown. Despite the players' loyalty to Dungy, he could not overcome the team's offensive woes and was fired at the end of the season. (Following Dungy's dismissal, Tampa Bay hired the offense-minded John Gruden, and the Buccaneers, using many of Dungy's defensive strategies, won the Super Bowl the following year.) As head coach Dungy had compiled a 54–42 regular-season record and led the Buccaneers to four play-off appearances, leaving as the most successful coach in Tampa Bay history. The former Tampa Bay player Hardy Nickerson told S. L. Price that Dungy was a quiet but effective motivator. "He's a man of integrity, he has a great deal of character," Nickerson said. "He has that aura. You want to do your best because of the type of guy he is."

A variety of teams expressed interest in hiring Dungy, impressed with what he had accomplished with the Tampa Bay players both on and off the field. In January 2002 he was hired as the head coach of the Indianapolis Colts. The team had a potent offense but a marginal defense; in his first three seasons with the Colts, Dungy made improvements on defense a priority—employing the Tampa 2 approach—without altering many of the offensive schemes. The effects were immediate: in 2002 the team won 10 games while losing just six. In 2003 the Colts, for only the eighth time in franchise history, went for the whole season without losing consecutive games. The team won 12 regular-season contests before falling to the New England Patriots in the AFC Championship Game. In 2004 the offense scored 522 points, the fifth-highest in NFL history, led by quarterback Peyton Manning. The defense contributed to the success by forcing 36 turnovers, tied for third in the NFL, and 45 quarterback sacks, led by Dwight Freeney's NFL-leading 16. Freeney became the first Colt to win the sack title since the category became an official statistic, in 1982. After again winning 12 games while losing just four, the Colts lost to their rivals the Patriots in the second play-off round.

In 2005 the Colts set an NFL record by winning 13 consecutive games by a margin of seven or more points. Dungy's defensive strategies had gelled, and the team, with a similarly effective offense, had achieved a greater balance than in the past. The Colts, who ranked second in the NFL in both scoring offense and scoring defense, trailed in only four games all season—for a total of 148 minutes and 16 seconds—and finished with 14 wins and two losses. That record earned them a first-round bye in the play-offs, and they were a favorite to advance to the Super Bowl. They were defeated by the Pittsburgh Steelers, however, in their first play-off game. The loss brought questions about Dungy's ability to win in the postseason.

In the following season Dungy silenced his critics. The Colts were undefeated in their first nine games, earning a perfect home record en route to a 12–4 season finish. Despite their regular-season success, previous postseason failures led the Colts to be considered underdogs in the play-offs. In the first round they faced the Kansas City Chiefs, in a game billed as a shootout between two high-scoring clubs. With a dominant defense, the Colts won easily, 23–8. Next, in a match against the Baltimore Ravens, another stirring defensive effort—and five field goals from the kicker Adam Vinatieri—led to a 15–6 Colts victory. In the AFC Championship game, against the New England Patriots, the Colts had fallen behind 21–6 by half-time but scored 32 second-half points to notch another victory—and a long-awaited berth in the Super Bowl. The Colts faced the Chicago Bears, a team that relied on a stout defense and a conservative offense. The game pitted Dungy against Lovie Smith, who had worked under Dungy at Tampa Bay; the matchup, on February 4, 2007, brought added attention because both coaches were African-American, and the victor would be the first black head coach to win the Super Bowl. Dungy prevailed, and the Colts won the game by a score of 29–17.

In August 2007 President George W. Bush appointed Dungy to his Council on Service and Civic Participation, a 25-member group established in 2003 to "help recognize outstanding volunteer service, and in so doing, foster even greater participation among all Americans to answer [the president's] call to service," according to Joe Oehser, writing for the official Colts Web site (August 14, 2007). That month Tyndale House Publishers brought out *Quiet Strength: The Principles, Practices, and Priorities of a Winning Life*, a memoir Dungy wrote with Nathan Whitaker. The book reached number one on the *New York Times* nonfiction best-seller list, marking the first time an NFL-related book had attained that position. The publishing company Simon & Schuster announced in September 2007 that Dungy had signed on to write *You Can Do It*, a children's book, due out in July 2008.

Dungy and the Colts started the 2007 season with six straight wins. By mid-October the Patriots, their longtime rivals, were the only other undefeated team in the NFL, having won their first seven games. The two teams were scheduled to play each other on November 4, 2007.

Throughout his career Dungy has been active in community organizations in the cities where he has lived and worked. While with the Buccaneers, he served as a public speaker for the Fellowship of Christian Athletes and Athletes in Action. He launched Mentors for Life, a program that provided area youths and their mentors with tickets to Buccaneers home games. He was also a supporter of charitable programs for children, such as Family First, Big Brothers/Big Sisters, Boys & Girls Clubs, the Prison Crusade Ministry, and foster-parenting organizations. In Indianapolis Dungy helped implement a local Baskets of Hope program that benefits the Riley Hospital for Children. He has been a spokesperson for All-Pro Dad, a family-themed organization; Arby's Combo, which benefits Big Brothers/Big Sisters; and the Boys & Girls Club. He also appeared at the Black Coaches Association National Convention and Indiana Black Expo. He participates frequently in local faith-based events and at family football clinics.

Dungy and his wife, Lauren, have five children—Tiara, Eric, Jade, Jordan, and Justin—the last three of whom are adopted. Justin joined the family as an infant in mid-2006, a half-year after the Dungys' son James committed suicide. "It's human nature to grieve, and you're going to have some pain," Dungy told Jarrett Bell for *USA Today* (August 31, 2006, on-line). "But then the choice is how you handle the pain. You can choose to go on and fight through it, or you can choose to succumb to it. . . . You can't make the feeling go away. There's no Novocain or anything that can just take it away. You begin to realize that you can still function, you can still move forward."

Dwight, Ed

Sep. 9, 1933– Sculptor

Address: Ed Dwight Studios, 3824 Dahlia St.,
Denver, CO 80207

When Ed Dwight began his career as a sculptor, in the early 1970s, he knew virtually nothing about such prominent figures in African-American history as Harriet Tubman, Sojourner Truth, and Frederick Douglass. Now—more than 2,500 sculptures later—Dwight has made a name for himself with statues of those and many other historically important African-Americans. In the 1960s Dwight himself had come close to becoming a historic first: the United States' first black astronaut. Passed over for that job after years of training, he turned to art, and he has since created more than 80 publicly commissioned monuments. "Anything that has to do with black folks' accomplishments, I am interested in," he told Fahizah Alim for the *Sacramento (California) Bee* (April 11, 2003). "I go through a metamorphosis and become [the subjects]." In his 30,000-square-foot studio in Denver, Colorado—one of the largest privately owned, single-artist production facilities in the western U.S.—he has produced works that in some cases have earned him more than $250,000 apiece. Dwight has been credited with introducing significant innovations in the "negative space" technique, which focuses on the spaces around and between the elements of a sculpture as well as on its solid parts. "I am a very

Ed Dwight (left) with Bill Dixon, owner, Atlanta Art Gallery. (Photo: Courtesy of the Atlanta Art Gallery) gifted man and very confident in what I do every day," he told Tony Perez-Giese for the *Denver Westword* (May 29, 1997). Such self-assurance has helped Dwight to overcome the obstacles that have often faced artists interested in publicly commemorating subjects other than Caucasian males. According to Richard Halicks, writing for the *Atlanta Journal-Constitution* (May 26, 2002), "Dwight thinks and talks big, by turns strident and thoughtful." Dwight hopes that exposure to his work will prevent other African-American children from remaining ignorant about their heritage. Recalling his own youthful unawareness, he said in a speech at the unveiling of his memorial to Martin Luther King Jr., as quoted by Sandy Alexander in the *Baltimore Sun* (August 28, 2006), "There are a lot of Ed Dwights out there. They need this message."

The second of the four children and the only son of Edward J. Dwight Sr. and Georgia Baker Dwight, Edward J. Dwight Jr. was born in Kansas City, Kansas, on September 9, 1933 and grew up in the rural outskirts of that city. His father was a professional baseball player; he was often away from home, manning second base for the Kansas City Monarchs, a team in the Negro League. For that reason his mother, whose forebears included whites from Austria, was his primary caregiver. "My mother raised me to think of myself as a citizen of the entire universe, not a racial one," he told Karen Pride for the *Chicago Defender* (August 22, 2004). The family lived near Kansas City's Fairfax Airport, and Dwight's mother would often take him to watch planes take off and land. "My mother would tell me stories about where the planes went, and I was fascinated because after they took off, they always disappeared," he recalled to Pride. His mother encouraged his interest in art as well as in aircraft. When he was young she would read the text of newspaper cartoons aloud to him, and Dwight—who has said that he began to draw before he learned to walk—would then illustrate the stories himself, shading his sketches with cross-hatching. At 14 Dwight opened his own sign shop, creating church banners, ads, collages, and oil paintings for hundreds of customers. As part of an integration effort, he became the first black male student at Kansas City's Bishop Ward High School, a previously all-white Catholic school. When one of his teachers, a nun, entered his artwork in the annual Kansas Scholastic Art Competition, he won all three prizes. Thanks to that achievement, he won a scholarship to the Kansas City Art Institute, in Kansas City, Missouri, just across the Kansas border, but his father refused to let him attend. "'You are not going to be an artist. You are going to be an engineer,'" his father told him, as Dwight recalled to Alim. Dwight added that his father was "a macho man."

In 1953 Dwight joined the U.S. Air Force. After basic training and pilot training, Dwight became a military pilot, flying more than 2,000 hours in high-performance jets such as B-57s. He did so despite his being three-quarters of an inch below the then-minimum height requirement for pilots (five feet four inches). "Every night I was stretched out, and two guys pulled my legs to make me taller," he recalled to Michael Neill for *People* (May 25, 1987). "I didn't grow a goddamn inch." Nonetheless, Dwight's drive and determination led his superiors to allow him to continue up the ranks. In 1961 Dwight earned a degree in aeronautical engineering from Arizona State University–Tempe. That year, while serving as a captain at Travis Air Force Base, in California, Dwight received a letter bearing the signature of President John F. Kennedy and inviting him to apply to test-pilot school as an astronaut. As the first black astronaut trainee, Dwight was thrown into the international media spotlight, with his image appearing on the covers of *Ebony*, *Jet*, and *Sepia* magazines. He studied at the Experimental Test Pilot School and completed the Aerospace Research Pilot Course, but he was not selected to be an astronaut. After that rejection—which he has attributed to the abandonment of efforts to diversify the National Aeronautics and Space Administration (NASA) following Kennedy's assassination—Dwight sent a 15-page, single-spaced letter to officials in Washington, D.C., describing the racism he had experienced during training. He told Alim that he had never dealt with discrimination before he entered the space program and that he was shocked by what he felt was NASA's bias against him as an African-American. "I didn't even know I was black," he explained to Alim. "I knew black folks had some problems, and I didn't know what they were. I went to white schools and colleges and I lived in a white universe. It wasn't until I got to the space program that I found out how it was to be treated as a black man." In *Yeager: An Autobiography* (1986), Chuck Yeager, the first commandant of the United States Air Force Aerospace Research Pilot School, dismissed Dwight's claims. "Ed Dwight was an average pilot with an average academic background," Yeager wrote, as quoted by Perez-Giese. "He wasn't a bad pilot, but he wasn't exceptionally talented, either. He worked hard . . . but he just couldn't hack it." In *The Right Stuff* (1979), about the U.S. space program, Tom Wolfe offered a different take on what had happened. In his view, Dwight may not have had "the right stuff" to succeed as an astronaut, but as an unwitting subject in an experiment in diversity, he had been treated unfairly. "He was being set up for a fall because the chances of NASA accepting him as an astronaut appeared remote in any event," Wolfe wrote, as quoted by Perez-Giese. Out of frustration, his letter to Washington having elicited little attention, Dwight held a press conference at the Naval Ordnance Test Station in China Lake, California, in which he accused NASA and the federal government of racism. "I was just a guinea pig," he later reflected to Doug MacCash for the New Orleans, Louisiana, *Times-Picayune* (November 12, 2002). "I was on Kennedy's agenda. I was like a P.R. stunt. I was a pawn." Dwight soon received orders assigning him to West

Germany, considered a very undesirable post at the time; when he refused them, he entered into a prolonged dispute with the air force that ended with his resignation, in 1966.

Dwight next held a series of jobs, including one with the IBM Corp. and another as the manager of a chain of barbecue restaurants. He also worked as a real-estate and construction entrepreneur in Denver, Colorado; as the builder of condominiums there, he became a millionaire by the early 1970s. Then, in the middle of that decade, a housing-market recession caused him to lose much of his property. Meanwhile, while creating paintings to decorate model units in the condominiums, he experienced a reawakening of his passion for art. The paintings were popular with interior decorators and architects, and Dwight realized that making a career as an artist was a realistic possibility for him.

Dwight's first commercial artistic project was a 1974 commission to sculpt a bust of George Brown, Colorado's first African-American lieutenant governor. The following year he was offered a job by the Colorado Centennial Commission to create a series of sculptures with the title *Black Frontier Spirit in the American West.* His 30 bronze works depict the often-overlooked contribution of African-Americans in the settling of the West. For Dwight, working on the project was eye-opening. "There were black cowboys, black pioneers, black jockeys," he told Michael Neill. "I had never heard of this before." The completed series was exhibited throughout the United States.

Dwight received a master of fine arts degree from the University of Denver in 1977. In the vast workshop he opened around that time, the Ed Dwight Studios, he created his next large series, *Jazz: An American Art Form*, which illuminated the history of jazz through more than 70 bronze sculptures of such jazz greats as Miles Davis, Charlie Parker, Dizzie Gillespie, Louis Armstrong, and Ella Fitzgerald. With the jazz series, one of his best-known works, Dwight began to experiment with the concept of negative space. Positive space is that filled by the sculpture itself; negative space is the empty space around or between parts of the sculpture. Dwight designed the jazz luminaries so that the negative space of each piece seemed to have an energy of its own. "Though based in realism, Dwight's new gallery works take dramatic compositional liberties while depicting well-known and obscure jazz musicians," as MacCash wrote. "He often removes the legs, arms and lower torsos of his figures, to focus attention on the faces and hands, and to cause them to seem to float weightlessly in space." Part of the series was displayed at the Smithsonian Institution, in Washington, D.C.

As he established himself as one of the nation's foremost contemporary sculptors, Dwight found himself the artist of choice in projects involving African-American subjects, a long-neglected area in sculpture. "I have 12 huge memorials in the house right now, 'cause there's nobody else to do 'em," Dwight told Richard Halicks in 2002. Earlier, in the late 1990s, Dwight came to national attention with two prominent commissions. The first, a monument dedicated to the international underground-railroad movement, was completed in 2001. Dwight originally envisioned the monument—which stands in Detroit, Michigan, and Windsor, Ontario, Canada—as an arc that would span the river separating the two cities. When he visited the site, however, he realized that he would not be able to build such a structure. Instead, he fashioned a two-piece sculpture: on the Detroit side, a 42-foot-high monument called *Gateway to Freedom*, which shows a group of slaves about to be ushered to freedom in Canada, some looking back at the U.S. and others looking ahead, across the river; on the Windsor side, the 22-foot-high *Tower of Freedom*, which depicts the provider of a sanctuary on the underground railroad greeting a slave family. Writing for the *Baltimore Afro-American* (November 9, 2001), Vicki Lee described *Gateway to Freedom*, which had been selected from more than 100 other proposals, as "a true masterpiece that embodies the spirit of the Underground Railroad, its conductors and passengers." The following year Dwight unveiled his 26-foot-tall monument to the civil rights leader Martin Luther King Jr. in Denver. The bust of King measures nine feet eight inches, with smaller busts of other important U.S. and international civil rights figures—among them Rosa Parks, Sojourner Truth, and Mahatma Gandhi—surrounding King's figure, and quotes from King carved into the sides of the monument's base. The sculpture, like all of Dwight's work, is a literal representation of the subject. Dwight told Mary Voelz Chandler for the *Rocky Mountain News* (June 8, 2002) that he bristles at the idea of making an abstract sculpture of anyone or anything who represents his heritage. "When white people glorified themselves, they used figurative art," he explained. "When black people came along and want to do that, they say, 'Make it abstract.' You can't abstract history." Also in 2002 Dwight unveiled a memorial in Baltimore, Maryland, which commemorates the slave Kunta Kinte, who arrived in Baltimore from Africa, and Kinte's descendant Alex Haley, who wrote about Kinte's struggle for freedom in his book *Roots: The Saga of an American Family* (1976). Leonard Blackshear, the head of the Kunta Kinte–Alex Haley Foundation, which commissioned the piece, praised Dwight's depiction of Haley reading to a group of schoolchildren. "Ed Dwight expressed understanding of the individual heritage stories, but he also underlines the importance of adults sharing stories so they will not become rootless," Blackshear told Jamie Stiehm for the *Baltimore Sun* (May 15, 2005). "African-Americans are beginning to see the importance of memorializing their history, because it is American history."

Dwight has been working for several years on the Black Revolutionary War Patriots Memorial, which was to have been located between the Lincoln Memorial and the Washington Monument in Washington, D.C. In honoring the 5,000 free and enslaved black soldiers who served on the side of the colonists in the Revolutionary War, the memorial would have been the only one on the Washington Mall devoted specifically to African-Americans. Dwight's design calls for 63 figures occupying a space 90 feet long, with heights ranging from 30 inches to more than seven feet high. After securing the last vacant spot for a memorial on the Mall, the Black Patriots Foundation, the organizer for the memorial, was unable to raise enough funds to build Dwight's sculpture, and its claim expired. "The politics of the memorials has gotten outrageous," Dwight told MacCash. "I do mostly memorials to black people, but memorials to black folks don't warrant the same money as memorials to white people. If it's a white memorial and you ask for $20 million, it's fine. If it's a black memorial, they say, 'What are you going to do with $20 million?' The cost of marble and bronze isn't color coded." The location of the memorial has yet to be determined.

Among Dwight's recent projects is a monument called alternately the *Tower of Reconciliation* or the *John Hope Franklin Greenwood Tower of Reconciliation*, the latter title bearing the names of an eminent contemporary black historian and a once-prominent black neighborhood in Tulsa, Oklahoma. Destined for a site in Tulsa, the tower will commemorate the race riots that decimated Greenwood and left dozens of blacks dead in 1921. The 27-foot monument is designed to evoke the concepts of diversity and partnership, with the word "reconciliation" featured across the top of the tower. "The good news is reconciliation," Dwight told Judy Robinson for the *Oklahoman* (September 24, 2006). "It's not what you did, it's how you recover from it."

Dwight lives in Denver, which honored him with one of the 2002 Mayor's Awards for Excellence in the Arts. He has five children and has been married several times.

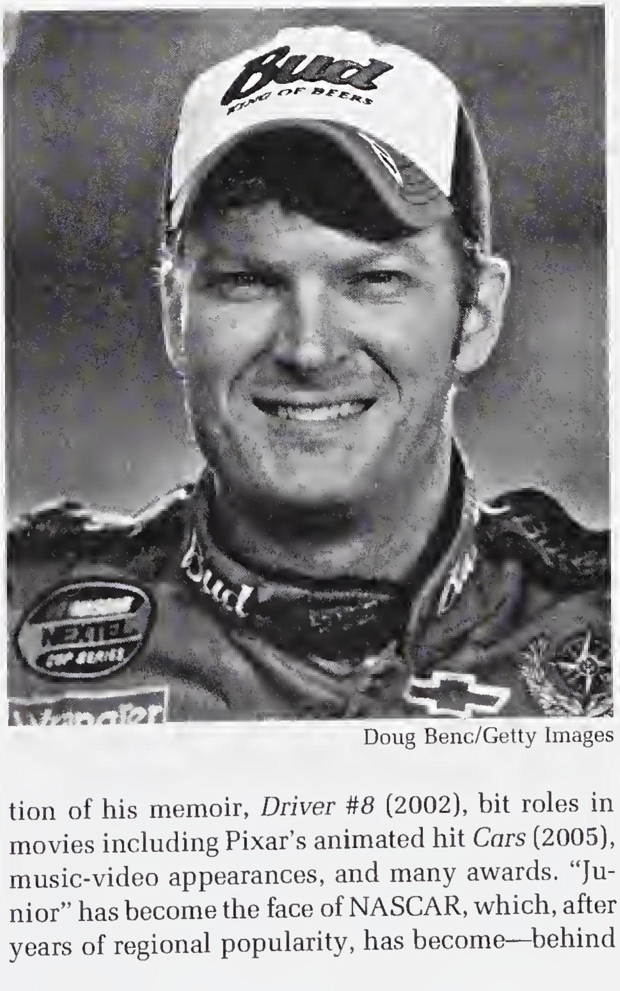
Earnhardt, Dale Jr.

Oct. 10, 1974– Race-car driver

Address: Club E Jr., P.O. Box 5190, Concord, NC 28027

"I know when I go out there, I could die," the race-car driver Dale Earnhardt Jr. said in 2002, as quoted by Pam Lambert, Johnny Dodd, and other reporters in *People* (August 2, 2004). "If I quit driving race cars because of that, I wouldn't be living." Those words reflect the driver's understanding of the risks involved in racing at speeds upwards of 200 miles per hour—an understanding that deepened when his father, Dale Earnhardt Sr., died in a crash in 2001. Known as "Junior," "The Dominator," and "Little E," Dale Earnhardt Jr. is a third-generation NASCAR (National Association of Stock Car Racing) driver, and for over a decade after he started racing, at 17, his father's storied career overshadowed his own accomplishments. In recent years, however, the younger Earnhardt has developed a celebrity status of his own. While NASCAR's most prestigious championship—the Nextel Cup—has so far eluded Earnhardt, his statistics have grown more and more impressive, to include many wins and top-10, top-five, and top-three finishes. He has taken his father's place as the most visible NASCAR driver, with dozens of commercial appearances and other endorsements, the publication of his memoir, *Driver #8* (2002), bit roles in movies including Pixar's animated hit *Cars* (2005), music-video appearances, and many awards. "Junior" has become the face of NASCAR, which, after years of regional popularity, has become—behind



Doug Benc/Getty Images

football—the second-most-watched sport in the United States.

Ralph Dale Earnhardt Jr. was born in Concord, North Carolina, on October 10, 1974 to Dale Earnhardt Sr. and his second wife, Brenda. When he was three his parents divorced, and afterward Dale Jr., his half-brother, Kerry, and sister, Kelley, lived with Brenda. Three years later the house where they were living caught fire, and the children's mother sent them to live with their father. There they were exposed to racing from two older generations of enthusiasts. Their grandfather, Ralph Lee Earnhardt, had begun racing on dirt tracks and became known for his skills as a driver when he won the 1956 NASCAR Sportsman Championship. His best-remembered contribution to the sport, however, was his innovation in the garage. His profile on the Stock Car Hall of Fame Web site states, "Ralph Earnhardt was the first car builder/driver to understand and use tire stagger [different-size tires to improve handling], developed the capability to adjust the amount of bite in his race cars as well as standardizing crash bars on the driver side door." Ralph Earnhardt discouraged Dale Earnhardt Sr. from racing, but soon the young man dropped out of high school to pursue his dream. Dale Sr. became one of the most successful NASCAR drivers ever, with 76 wins and seven championships—tying Richard Petty for most championships. Though observers have recognized similarities between the abilities of Dale Earnhardt Jr. and his father, they have pointed to contrasting qualities in the men themselves. "They both live in the fast lane, but in Dale Earnhardt Jr.'s case, it was the metaphor that defined him," Paola Boivin wrote for the *Arizona Republic* (November 2, 2000) before the elder Earnhardt's death. "Like many fathers and sons, the similarities seem to end at the cut of the jaw. Senior's words are measured. Junior's flow easily and with less calculation. Senior likes the sunrise. Junior often misses it. And, yes, senior is a little bit country and junior is more than a little bit rock and roll." One difference between the two has to do with their sport's increase in popularity and the resulting need for the young generation of drivers to adopt more restrained driving styles. Dale Earnhardt Sr., nicknamed "The Intimidator," drove aggressively, sometimes intentionally bumping or spinning-out other drivers. Now that NASCAR fines drivers for such aggressiveness, Dale Earnhardt Jr.'s driving is more calculated.

The sport of stock-car racing developed in the southern U.S. during the first half of the 20th century. Many of the drivers were bootleggers who had modified their cars to be faster and more maneuverable than other vehicles, particularly the police cars that chased them during their attempted moonshine runs. Early stock-car races were loosely organized and plagued by corrupt promoters, who would often abscond with the proceeds and prize money before races had ended. William France Sr., deciding that the sport's fan base would increase with the creation of a formal sanctioning organization, formed NASCAR, which held its first event in Daytona Beach, Florida, on February 15, 1948.

Stock-car racing has undergone many changes since then. Before NASCAR was set up, races in Daytona took place half on the highway and half on sand; as the sport developed, half-mile and one-mile oval tracks were built. Currently NASCAR events are held on superspeedways (tracks that are over one mile long), built with high banks. (The longest, at 2.66 miles, is Talladega, in Alabama.) Due to the high rate of accidents and possibility of fatalities, safety measures have been implemented. Originally the cars remained stock (that is, they retained their original manufacturer specifications), but for the sake of safety as well as performance, the modern-day "stock" cars bear only a surface resemblance to ordinary vehicles. Their engines are extremely powerful, with 750 horsepower, and the cars' insides are fortified with roll cages and safety bars; some tracks require that cars have restrictor plates, which limit speed. Building and maintaining the precision of today's race cars requires teams of engineers, mechanics, and designers.

Today NASCAR hosts many events worldwide, the most popular and profitable of which are the races in the Busch Series (akin to the triple-A leagues of professional baseball), the more prestigious Nextel Cup (formerly Winston Cup) Series, and the Craftsman Truck Series. Each series operates on a system of points, awarded to drivers over the course of the season. First-place drivers receive the most points (180 in the 2006 season), with progressively fewer points given to racers who place farther back. Drivers also score an additional five points in a race if they lead for at least one lap, and still more points if they lead for the greatest number of laps. Since it is impossible for a driver to win without having led for at least one lap during the race, the leader receives a minimum of 185 points. Points are awarded to the driver who starts the race; a driver who is injured after the first lap or unable to compete for the entire race may be replaced and receive the points that his relief driver earned. The current point system, aside from a few later alterations, was established in 1975, after NASCAR had tried dozens of others.

When Dale Earnhardt Jr. was 17, he and Kerry sold their go-kart in order to buy a 1978 Chevy Monte Carlo from a junkyard. Dale Sr. did not oppose his namesake's racing career, but, following Ralph Lee Earnhardt's example, he did not support it financially, at least in the beginning. That choice forced Dale Jr. and his brother to restore the Monte Carlo on their own, which in turn helped Dale Jr. gain an understanding of how his race car performed, and of how minuscule variations in engine performance and handling could affect the outcome of a race; that knowledge was crucial to his development as a racer. During his first years of racing, he honed his abilities in the Street Stock (a local competition sometimes sponsored by NASCAR) and later in races in NASCAR's Late

Model Stock Car divisions, at many tracks in the Southeast. Concurrently, he attended a community college in North Carolina and earned a two-year automotive degree, thus enabling him to begin working as a mechanic at his father's Chevy dealership—where, his Web site claims, he was the fastest oil changer.

In 1996 Earnhardt made 53 starts in the Late Model Stock Car division, earned eight pole positions, or poles (the pole is the foremost position on the starting grid, awarded to the fastest qualifier), and won two races to finish second in points for the season. His success demonstrated that he was ready to advance to NASCAR's Busch Grand Nationals. He decided to run a partial schedule in 1997, and in his first Busch Series race, at Myrtle Beach, South Carolina, he finished 14th. In the next year he began competing full-time. He drove the No. 3 ACDelco Monte Carlo for the racing team Dale Earnhardt Inc. in his first race, the NAPA 300, at Daytona International Speedway. In that contest his car flipped end over end, but it landed on its wheels, and he walked away, shaken but uninjured.

Earnhardt Jr.'s first win came on April 4, 1998 at the Texas Motor Speedway. He won six more races that season, earning enough points to claim the Busch Series—and to become the first third-generation driver to win a NASCAR championship. He repeated that feat the next year, even though his first win eluded him until his 15th race. On July 3 Earnhardt was involved in a crash during practice in Milwaukee, Wisconsin, and his backup driver, Ron Hornaday, drove the No. 3 car in the qualifying round. Still sore, Earnhardt returned to the driver's seat and mustered a third-place finish from a 15th-place starting position. Overall Earnhardt won six races in 1999, and his Busch Series earnings were a record-setting $1,680,598. After two successful seasons that garnered him two championships and more than $3 million, he decided to advance to the Winston Cup circuit full-time in 2000.

Earnhardt's rookie season in the Winston Cup series saw him move into a new car (No. 8) sponsored by Budweiser. He set records at tracks in Charlotte, North Carolina, and Michigan and won the Winston All-Star Race, the first time a rookie had done so. With race victories in his 12th and 16th career starts in the Winston Cup Series, he tied Davey Allison and Jimmie Johnson for the earliest multi-race wins in Cup history. Leading up to the season, Earnhardt was considered the favorite to win the Raybestos Rookie of the Year Award, but his friend and rival Matt Kenseth outraced him at the traditional, season-opening Daytona 500, often called the "Great American Race," and Earnhardt trailed Kenseth in points throughout the season, losing by 42 and coming in second among rookies. Also during Earnhardt's rookie year, at the Pepsi 400 at Michigan International Speedway, Dale Earnhardt Sr. raced against his two sons. (Dale Sr. finished eighth, Dale Jr. and Kerry 35th and 43d, respectively.) That occasion marked only the second time in NASCAR history that a driver and his sons had competed in the same race. (On the first occasion Lee Petty raced against his sons Richard and Maurice.)

Earnhardt's sophomore season began with tragedy. On February 18, 2001, at the Daytona 500 season opener, the Dale Earnhardt Inc. drivers Michael Waltrip, Dale Earnhardt Jr., and Dale Earnhardt Sr. were in first, second, and third place, respectively, when, on the last turn of the last lap, Dale Sr. careened into the outer wall after another driver bumped him. Doctors reported that he died instantly from head and neck trauma. His death affected the NASCAR community immensely. Days after the funeral, Dale Earnhardt Jr. told reporters, as quoted by *People* (March 12, 2001), "I miss my father, and I've cried for him. I just try to . . . remember that he's in a better place." A week later he returned to the driver's seat and was involved in an accident that was described in the *People* article as "frighteningly reminiscent of the crash that killed his father."

The sentimental favorite when he returned to Daytona on July 7, 2001, for the first time since his father's crash, Earnhardt did not disappoint. He was in command of the race for most of the laps, when, with 17 laps to go, a 12-car pileup sent several vehicles to the garage. Because of the timing of the pileup, Earnhardt was stuck on the track while other drivers were able to make their pit stops. When he finally emerged from the pit, in sixth place, his chances of winning seemed slim. According to Mark Bechtel, writing for *Sports Illustrated* (December 3, 2001), Earnhardt's crew chief and uncle, Tony Eury Sr., said in an interview during the race that Earnhardt simply did not have time left to take first place. But within two laps Earnhardt made a move on the leader, Johnny Benson, in the same short stretch of track between turns three and four where his father had been killed five months earlier. With Waltrip's help in drafting (which occurs when two drivers take advantage of wind and aerodynamics to help each other move faster), Earnhardt won an emotional victory. As he crossed the finish line, according to the Web site dalejrpitstop.com, he told his crew over the radio, "Y'all know who that's for, guys." Earnhardt finished the 2001 season eighth in points for the year, with three victories (at Dover, Talladega, and Dayton), two Bud Pole Awards (monetary awards given by Anheuser Busch for each pole position won during point races, which also qualifies the driver to compete in the following year's season-opening all-star race, the Bud Shootout), and winnings of nearly $6 million.

During the 2002 season Earnhardt won at Talladega again and had multiple top-10 and top-five finishes. Nevertheless, he finished the season in 11th place. He nonetheless told Joel Poiley and Ed Duarte for *Sports Illustrated for Kids* (February 2003), "We grew as a team. I don't see why we can't string together that sort of consistency all year."

Along with racing, Earnhardt had time to publish a book, *Driver #8*, written with Jade Gurss, about his rookie season. He also signed endorsement deals with companies including Wrangler and Drakkar Noir, and made other commercial appearances for Budweiser, NAPA Auto Parts, Dominos's Pizza, Gillette, and Enterprise Rent-A-Car.

Returning for the next year's opener, Earnhardt tied the record for the most wins in a single Daytona Speedweek, with three: the Budweiser Shootout, one of the Twin-125-mile races for the Daytona 500, and a Busch Series race. His win at Talladega set a record for most consecutive victories there (four); his overall statistics, except for total laps led, were the highest of his career. He finished third overall in points in 2003, earned nearly $7 million, and had 10 top-three finishes as well as 13 top-five and 21 top-10 showings; in four races he led by the most laps. At the end of the season, he was awarded the National Motorsports Press Association's Most Popular Driver Award, receiving 1.3 million votes from NASCAR fans—more votes than were received by the other top 10 candidates combined.

The beginning of the 2004 season was also the start of NASCAR sponsorship by the cellular-phone company Nextel; the Winston Cup was rechristened the Nextel Cup. That year also saw the inaugural play-off series, the Chase for the Cup (more popularly known as the Chase), in which the top 10 racers compete during the last 10 races for the championship. Earnhardt began the season, on February 15, 2004, with his first Daytona 500 win. He had not only succeeded on the track where his father had lost his life, but won the race six years to the day after Dale Sr. had achieved his only win at the Daytona 500—the one victory that eluded him until late in his career. Dale Jr. again won one of the Twin-125 qualifying races for the Daytona 500, and with wins at Atlanta, Richmond, Bristol, Talladega, and Phoenix, he ended his season with the greatest number of single-season victories of his career. He also set career bests in top-three finishes (13), top-five finishes (16), and laps led (1,133) and tied a career-best record in top-10 finishes (21). He was again presented with the Most Popular Driver Award.

Many Winston/Nextel Cup drivers compete periodically in the Busch Series, whose races, run the day before the more elite division races, allow drivers to acclimate themselves to track conditions and evaluate the conditions of their cars. Earnhardt is no exception, and having achieved three Busch Series wins in as many starts in 2003, in 2004 he accomplished two "weekend sweeps," twice winning a Busch Series and a Cup Series race in the same weekend. As co-owner, with his stepmother, Teresa, of the Chance2 team, Earnhardt shared a NASCAR title in the Busch Series, thanks to the efforts of the driver Martin Truex Jr. Earnhardt finished the 2004 season with his second consecutive top-five finish, placing fifth overall for the season—an impressive feat, considering that on July 18, during a non-points contest at the Infineon Raceway in Sonoma, California, his canary-yellow Corvette spun out on the first turn, crashed into the wall, and burst into flame. He walked away from the accident badly shaken but with only second-degree burns.

The 2005 season proved to be one of change and disappointment for Earnhardt. His Budweiser-sponspored team finished 19th overall, and his statistics were down, with only one victory (in Chicago), three top-three finishes, seven in the top five, and 13 in the top 10. His team went through three different crew chiefs, finally settling on his cousin, Tony Eury Jr. The season was not without its triumphs, however. Earnhardt won the Most Popular Driver Award for the third straight year, becoming only the fourth driver since 1956 to have done so, and he earned the MBNA Mid-Race Leader Award, the Mobile 1 Command Performance Driver of the Race Award, and the WIX Filters Lap Leader Award in the Bass Pro Shops/MBNA 500 at Atlanta Motor Speedway. Also, his Busch Series team won its second consecutive championship. After that season Earnhardt announced that he would start his own company, J. R. Motorsports, with a driver who would compete in the Busch Series the next year. The Chance2 team has since disbanded.

The Budweiser team entered 2006 with their worst season to date behind them and with a renewed sense of purpose. Earnhardt and Eury stated, according to many sources, that while they had had problems communicating following a stressful 2004 season, they had learned to put their differences aside and focus on the future. That attitude seemed to benefit them, as Earnhardt recorded a win at the Crown Royal 400 in Richmond, Virginia, and 18 top-15 finishes over the season, which put him as high as third place in points, and no lower than 11th, leading up to the Chase. With a third-place finish at the Sharpie 500 at Bristol Motor Speedway, in Tennessee, and a second-place showing the following week at the Sony HD 500 at the California Speedway, Earnhardt emerged as a contender for the title.

Late in the race at Talledega, on October 8, 2006, Earnhardt was in first place and seemed about to win for the fifth time. Then Brian Vickers attempted to bump-draft his teammate Jimmie Johnson past Earnhardt in the final lap. (In bump-drafting, a driver uses drafting and slight bumping to propel the car ahead of him.) But the bump was too aggressive, and Johnson spun out of control, causing Earnhardt to spin as well. Vickers went on to win the race, while Earnhardt and Johnson finished 23d and 24th, respectively. Two weeks later Earnhardt spun out again, at the Subway 500, which caused him to drop to 22d place in the race. Next he managed a sixth-place finish at the Dickies 500 at the Texas Motor Speedway, while he was afflicted by strep throat and sore muscles. With two races left, Earnhardt was in third place in points behind the leader, Jimmie Johnson, and Matt Kenseth. The following week, at the Checker Auto Parts 500 in

Phoenix, due to spectacular races by Johnson (the eventual Chase winner) and others in contention, Earnhardt dropped to fifth place, his final standing for the season.

Early in the 2007 Nextel Cup season, Earnhardt finished second in the Gatorade Duel 1 and 32d in the Daytona 500. He finished seventh in the Food City 500, fifth in Goody's Cool Orange 500, and seventh in Aaron's 499. Later in the season he ended up fourth in the Lenox Industrial Tools 300, second in the Pennsylvania 500, and third in the Dodge Dealers 400. He had seven finishes in the top five and 12 in the top 10 as of the Bank of America 500 in October, in which he ended the course in 19th place.

In May 2007 NASCAR fined Eury $100,000 and suspended him for six races after illegal rear wing mounts were discovered on Earnhardt's car. In addition, Earnhardt's team was docked 100 championship points, which caused Earnhardt to drop from 12th to 14th place in the standings. Eury told David Newton for espn.com (May 19, 2007) that the illegal brackets were "a part that got put on there that shouldn't have. We've done a lot of off-season testing for NASCAR. There's been three different styles of brackets on there and it just happened to be one of those old-style brackets."

Shortly before that incident, Earnhardt announced his controversial decision to leave Dale Earnhardt Inc. after his contract for the season expired. In a news conference attended by Viv Bernstein for the *New York Times* (May 11, 2007), Earnhardt said, "At 32 years of age, the same as my father was when he made his final and most important decision, it is time for me to compete on a consistent basis and contend for championships now." Bernstein wrote that although Earnhardt was not the first NASCAR driver to become a free agent, "it is rare for a driver of Earnhardt's stature, at the height of his career and popularity, to make himself available to other teams." Earnhardt later picked up a contract to drive the No. 5 car for Hendrick Motorsports in 2008.

Dale Earnhardt Jr. is single. He lives in Mooresville, North Carolina, where he enjoys relaxing and drinking beer with his friends.

"The nicest thing about going into film composing from rock & roll," Danny Elfman said to Jeff Gordinier for *Entertainment Weekly* (March 13, 1998), was that "I went from being an elder statesman in one profession to a young pup in the next." Elfman first achieved fame as the singer for the rock band Oingo Boingo, whose albums include *Only a Lad* (1981) and *Dead Man's Party* (1985). It was at the urging of the filmmaker Tim Burton that Elfman began composing for the screen; in Elfman, Burton had found a kindred soul, whose understanding of the director's darkly humorous vision enabled him to create music that captured the mood of Burton's movies. Since the pair's first collaboration, on *Pee-wee's Big Adventure* (1985), Elfman has scored each of Burton's films (with the exception of the 1994 release *Ed Wood*). "I found I was always on a tightrope in Tim's movies between the quirky and the spooky and the sweet and the energized and the on-the-money and the off-centre," Elfman told Jay Stone for the Victoria, British Columbia, *Times Colonist* (July 19, 2005). "Finding the correct tone is so crucial." Some of the best-known films on which Elfman and Burton have worked include *Beetle Juice* (1988), *Batman* (1989), *Edward Scissorhands* (1990), *The Nightmare Before Christmas* (1993), *Big Fish* (2003), and the 2005 releases *Charlie and the Chocolate Factory* and *Corpse Bride*. Elfman's other screen work includes the scores for the movies *Dick Tracy* (1990), *To Die For* (1995), *Mission: Impossible* (1996), *Planet of the*

Apes (2001), *Spider-Man* (2002) and its 2004 sequel, and *Nacho Libre* (2006), as well as compositions for more than 100 other movies and TV shows, among them—perhaps most famously—the theme song for the animated television series *The Simpsons*, which was adapted for the silver screen in 2007. His music for the hit show *Desperate Housewives* won an Emmy Award in 2005. "The name—Elf-man—conjures up the image of a miniature person, with twinkling eyes, busy hands, a quick smile and a rather mischievous nature," Stephen Williams wrote for *Newsday* (December 22, 1996). "Danny Elfman is all of this, and it explains in part why he does what he does, which is write eclectic music for eclectic movies."

Daniel Robert Elfman was born on May 29, 1953 in Los Angeles, California, to two schoolteachers, Milton and Clare Elfman—the latter of whom also penned young-adult novels under the name Blossom Elfman. He was raised in the Crenshaw district of Los Angeles with his older brother, Richard, nicknamed Rick. (On one occasion, bored with repeating his life's story, Elfman claimed falsely that he was born in Amarillo, Texas, and that his father was an air-force officer.) As a youngster Elfman was fascinated with films, particularly those in the horror and science-fiction genres, and he papered his bedroom walls with pictures torn from his favorite magazine, *Famous Monsters of Filmland*. He also developed an affinity for film scores. "Most people probably never will notice film music: It's just a bunch of noise," Elfman said to Stephen Williams. "But I noticed. . . . If the movie had the names [of the composers] Ray Harryhausen or Bernard Herrmann [in the credits], I was in for an extra treat." Despite his appreciation for music, Elfman performed poorly in his music lessons, telling Rick Clark for *Mix* (May 2001), "I'm really bad at one-on-one. I'm much better in front of a thousand people." In high school, bespectacled and inept at sports, Elfman "was the little weird-looking albino kid that couldn't see anything in the sun," as he recalled to Clark. "When they did team sports, I was as blind as a mole in the light." A "pretty bitter kid, a nerd, at that age," as he admitted to Clark, Elfman felt out of place among most of his male classmates—who seemed to him "stupid and proud of it"—and much preferred the company of girls. "I had some friends who were boys, but they were misfits like myself," he said to Clark. "They were eccentrics."

To his parents' disappointment, Elfman left high school several months early in order to travel. (He had enough credits to graduate and later had his diploma sent to him.) He also began to teach himself to play the violin, choosing that instrument in part for its portability. In 1971 Elfman left for France, where his brother, Richard, was working with a musical-theater troupe called Le Grand Magic Circus. He spent nearly a year touring with the group as a violin player. According to John M. Glionna, writing for the *Los Angeles Times Magazine* (April 18, 1999), in an article appearing on Elfman's Web site, during those years Elfman also spent long periods traveling alone in West Africa, where he was often ill. "It was cleansing," he recalled to Glionna. "I spent months in quiet observance. I was like a ghost." Meanwhile, Richard Elfman had returned to Los Angeles to found a music/drama/improvisation troupe in the style of Le Grand Magic Circus, called the Mystic Knights of the Oingo Boingo. (They were once described as performing "dark, surrealistic cabaret," Danny Elfman told Richard Harrington, as quoted on *washingtonpost.com* [June 10, 1990].) When his younger brother arrived back home in California (with hepatitis), Richard Elfman promptly recruited him to become the troupe's music director.

Over the next eight years, Danny Elfman learned—mainly on his own—to play an assortment of instruments, including the trombone and percussion instruments, particularly enjoying the latter; he and one of the other troupe members, Leon Schneiderman, even built their own percussion instruments, based on those Elfman had encountered in Africa. (He also became one of the group's two fire-breathers, on one occasion accidentally igniting an audience member's hairsprayed Afro; his brother extinguished the flames.) The group's musical sound was based in part on early jazz, an influence that reflected what Elfman described to Clark as his decade-long refusal to listen to contemporary music. As musical director of the Mystic Knights, Elfman taught the other members of the troupe their parts by singing or humming his original tunes to them; as his musical creations became more elaborate, Elfman realized that reading and writing music had become a necessity. He taught himself composition by transcribing pieces by Duke Ellington, Django Reinhardt, and Cab Calloway. Moreover, Elfman learned to dream up or listen to snippets of music and remember them long enough to write down the notes, a vital skill in both transcription and composition. The final piece Elfman wrote for the Mystic Knights before the troupe disbanded was an ambitious work entitled "The Oingo Boingo Piano Concerto, Number 1½."

Richard Elfman, wanting to create a record of the troupe's act, decided to direct a film showcasing Oingo Boingo's antics, with Danny Elfman providing the musical score. The movie, *Forbidden Zone*, details the bizarre adventures of a family who stumble through a portal in their basement into the Sixth Dimension, the realm of a diminutive king, played by Hervé Villechaize (best known for his work on the TV show *Fantasy Island*), and his jealous queen, portrayed by the B-movie actress Susan Tyrrell. Satan, played by Danny Elfman, sings Cab Calloway numbers, and underwear-clad actors parade around in blackface. The low-budget, determinedly silly film was so politically incorrect that some college theaters where it was shown in 1980 received arson threats. It has since grown in popularity on the midnight-movie circuit. Joyce Slaton, writing for the San Francisco, California, *SF Weekly* (August 25, 2004), called *Forbidden Zone* a "loopy masterpiece" with a "delectably freaky soundtrack."

Upon the dissolution of the Mystic Knights of the Oingo Boingo, Elfman and several other members—Schneiderman, Steve Bartek, Kerry Hatch, John "Vatos" Hernandez, Sam Phipps, and Dale Turner—dropped part of the group's name, as well as its theatrical component, to form the band Oingo Boingo. A horn-heavy African musical style called Highlife became the model for their sound, and their live performances earned a reputation for being very high-energy. Their annual Halloween shows were favorites for both audiences and the band members, who included, in addition to Elfman and the other former Mystic Knights, John Avila, Richard Gibbs, Warren Fitzgerald, and a rotating group of other musicians. Oingo Boingo's early albums included *Only a Lad* (1981), *Nothing to Fear* (1982), *Good for Your Soul* (1983), and *Dead Man's Party* (1985). The band amassed a strong following on the West Coast, and they gained fans across the country with the release of their hit single, "Weird Science," the theme song of the 1985 film of the same title.

One of Oingo Boingo's fans was a young film director named Tim Burton, who approached Elfman about scoring an upcoming film about a character named Pee-wee Herman (the childlike persona of the actor and writer Paul Reubens). Though Elfman had scored only *Forbidden Zone* and was reluctant to accept Burton's offer, the director expressed such confidence in Elfman that the latter signed on as composer for the film, *Pee-wee's Big Adventure*. The movie was well-received and marked the beginning of a close and continuing collaboration between the pair. Before Burton and Elfman had a chance to work together again, though, Elfman was kept busy with other projects. He composed the main themes for the TV shows *Pee-wee's Playhouse* and *Sledge Hammer!* (both in 1986) and music for the films *Wisdom* (1986), *Summer School* (1987), and *Midnight Run*, *Big Top Pee-wee*, *Hot to Trot*, *Face Like a Frog*, and *Scrooged* (all 1988). He also worked with Oingo Boingo to release the albums *BOI-NGO* (1987) and *Boingo Alive* (1988). Discussing the differences between playing in a band and composing for film and TV, Elfman told Ron Givens for *Entertainment Weekly* (February 23, 1990), "You can't let song consciousness direct what you write for film. You have to resist the temptation to simplify things to verse-bridge-chorus." Elfman learned to match his scores to the onscreen action. "If a character lifts his arm and swings a knife at another guy, which kicks at the first guy and sends him crashing through a door, I want the music to reflect each of those four actions," he explained to Ron Givens.

Elfman told Rob Lowman for the *Daily News of Los Angeles* (August 5, 2001) that if a film or TV show is "very anything, it's likely that I can find some musical angle to grab onto." "That means very quirky, very silly, very dark, very dramatic, very stupid," he explained. Once Elfman agrees to write a score, he begins a lengthy ritual of sorts. "My process is to procrastinate as long as possible," Elfman explained to Kathy Cano Murillo for the Phoenix *Arizona Republic* (July 14, 2005). "And then, when I can't possibly procrastinate any longer, I lock myself away and get really depressed. I get miserable at the fact that I have no life. I always feel like saying, 'This is hopeless! I can't come up with anything!' And then finally, I quit [complaining] and get to work." But first he throws himself a party. "When I'm about to do a score," he told Rob Lowman, "I have a little going-away party, just like I'm going to jail. It's like I've been busted, had the arraignment and I have to show up and turn myself in. I'll say goodbye to everyone and then lock myself up." That is only a slight exaggeration: he works at home on a film score for 12 to 18 hours a day until his task is complete—usually after six to nine weeks—declining all invitations during the process. Elfman accomplishes much of his work at night. "I've got vampire's blood," he said to John M. Glionna. "Sunlight makes me ill and lethargic." First, he creates themes for each character. "I can't start writing the score until I have all of my themes completely laid out," he told Rick Clark. "I have to know what they are and how they are going to work and how they interrelate. . . . Once I have all of those elements together, there is no method anymore. I just dive into the first cue. I go as close to chronologically as I possibly can. I don't plan or think about where the music is going to go. It really is extremely unmethodical. I tend to let the music carry itself, and I become very often surprised by it. I never question it."

Burton and Elfman next collaborated on the films *Beetle Juice* (1988), *Batman* (1989), and *Edward Scissorhands* (1990). The two men, each of whom had grown up feeling like an outsider, shared a dark sense of humor and found that they worked well together. While Elfman's relationship with Burton flourished, the composer learned to his dismay about rumors that others had written his music. "For a while everybody who worked for me was getting credit for my music. That hurt," he told John M. Glionna. In addition, upon the premiere of *Batman*, Elfman was unhappy to discover that Warner Bros. Records had released a Prince album entitled *Batman: Motion Picture Soundtrack* (prior to releasing Elfman's soundtrack album, which was not completed until later), despite the fact that only six minutes of Prince's music was featured in the film. Newspapers and magazines frequently attributed the entire score to Prince. "None of this is Prince's fault," Elfman conceded to Dennis Hunt for the *Los Angeles Times* (June 27, 1989). "People heard Prince was writing songs for the movie and assumed he was doing the score. But the score is all that music that underscores the action. I did that. . . . I just spent three months, working day and night on this score. I'm proud of it. I want people to realize that *I* wrote it." That desire was fulfilled when Elfman won a 1989 Grammy Award for best instrumental composition, and a Grammy nomination for best score, for the theme from *Batman.*

In 1989 the cartoonist Matt Groening asked Elfman to write the theme song for Groening's animated television series *The Simpsons.* Elfman perused some of Groening's character sketches, found that his and the animator's ideas for a main theme were compatible—they agreed that something retro would be appropriate—and agreed to work on the project. *The Simpsons* premiered in 1989 and has been running ever since, beginning every episode with Elfman's theme. "That which I'm probably most famous for took me all of one day of work. There's some weird irony there," Elfman commented to Jay Stone. "There's so many projects where I've slaved literally 18 hours a day for three months only to have the [movie] disappear in one weekend. And this thing I worked—okay, maybe two days, but that's it—of my life, and it's following me around like my most known piece of work." During those years Elfman also wrote the themes for the TV shows *Tales from the Crypt* (1989), *The Flash* (1990), and *Batman Returns* and *Family Dog* (both 1992), as well as scores for the films *Nightbreed, Dick Tracy, Darkman* (all 1990), *Article 99* (1992), and *Sommersby* (1993). His albums with Oingo Boingo from that period include *Skeletons in the Closet: The Best of Oingo Boingo* (1989) and *Best O'Boingo* (1991).

In 1993 Elfman and Burton joined forces again to create an unusual movie: *The Nightmare Before Christmas*, an animated musical whose main character, Jack Skellington, the skeletal king of Halloweentown, discovers Christmas Town and decides to take over the duties of Santa Claus. "I realized that I was writing a lot from my own character," Elfman told Richard Zoglin for *Time* (October 11, 1993). "I went to Tim and said, 'I'm not the best singer alive by a long shot, but no one's going to sing Jack Skellington better than I am.' And he agreed." (The actor Chris Sarandon provided Jack's speaking voice.) While composing the *Nightmare* score, Elfman relied not only on Burton's advice but on that of his younger daughter, Mali, then nine, as well. He wanted to make sure that the songs were enjoyable and catchy, and so, as Elfman told Richard Zoglin, "until Mali signed off on it, nothing was approved." The resulting score—and film—were roundly praised. "In *Nightmare Before Christmas*, Elfman's witty, melodically intricate songs drive the action forward as surely as does the animation," Zoglin wrote. The film is arguably the most popular collaboration between Elfman and Burton to date. (After its completion the two men had a falling-out and did not speak to each other for nearly two years. Neither has publicly discussed the source of their disagreement.)

In 1994 Elfman's band changed its name from Oingo Boingo to simply Boingo. In the following year the group disbanded. "Nobody looks at a rock band as a lifelong career, except the Rolling Stones, maybe," Elfman pointed out to Mike Boehm during an interview for the *Los Angeles Times* (October 25, 1990). "You know it's going to end." Oingo Boingo's final performance took place on Halloween night 1995, at the Universal Amphitheatre in Universal City, California, and was recorded as a live concert album, entitled *Farewell: Live from the Universal Amphitheatre* (1996). Tickets to the group's final four concerts sold out in less than an hour.

Free to concentrate on composing for the screen, Elfman took on projects including the 1995 movies *Dolores Claiborne, To Die For*, and *Dead Presidents* and the 1996 films *Freeway, Mission: Impossible, The Frighteners, Extreme Measures*, and another Burton project, *Mars Attacks!*. He worked on three 1997 movies: the drama *Good Will Hunting* and the comedies *Flubber* and *Men in Black.* Although he was initially reluctant to work on the lighthearted *Flubber*, preferring to focus on creating dramatic scores, Elfman told Don Jeffrey for *Billboard* (December 6, 1997), "There are times when I'm doing a really silly piece that I have to reluctantly admit to myself that I do it well. I don't want to be the king of wacky, but I do wacky very well." Elfman earned two Academy Award nominations in 1998, for best musical or comedy score (*Men in Black*) and best dramatic score (*Good Will Hunting*).

Also in 1998 Elfman again collaborated with Gus Van Sant, who had directed *Good Will Hunting*, on a remake of Alfred Hitchcock's classic horror film *Psycho.* In accepting that assignment Elfman took on the daunting job of adapting the original film's score, composed by Bernard Herrmann. When Jon Burlingame asked him in an interview for *Daily Variety* (October 21, 1998) about his approach to reworking the music, Elfman said that Herrmann's score is "sacred territory. There's no way I'm going to pollute it by trying to make it more modern or pumping it up with drums or anything else." Instead, he continued, "I'm going to attempt to do as respectful a recreation as I can, acknowledging the fact that it is a different movie and no scene is exactly the same length as the original." Other movies for which he wrote the scores during that period include *A Simple Plan* and *A Civil Action* (both 1998); *Instinct, Anywhere But Here*, and another Burton film, *Sleepy Hollow* (all 1999); *Proof of Life* and *The Family Man* (both 2000); *Spy Kids, Mazer World*, and the Burton remake of *Planet of the Apes* (all 2001); and *Spider-Man, Men in Black II*, and *Red Dragon* (all 2002). Also in 2002 he contributed music to the film version of *Chicago*, filling in any gaps left by the original score, by John Kander and Fred Ebb. That year he received the Richard Kirk Award for outstanding career achievement at the BMI Film and Television Awards. In 2003 Elfman composed music for *Hulk* and earned an Oscar nomination for his score for *Big Fish*, another collaboration with Burton. In the Charlottetown, Prince Edward Island, *Guardian* (March 5, 2004), Doug Gallant called the *Big Fish* score "a wondrous, fanciful and richly imaginative thing, artfully conceived and handsomely executed by a composer who, like Burton, has a gift for capturing minute detail."

Elfman next scored *Spider-Man 2* (2004) and provided the theme songs for the television shows *Desperate Housewives* (2004) and *Point Pleasant* (2005). His music for *Desperate Housewives* brought Elfman his first Emmy Award. He then rejoined Burton for two films released in 2005: *Charlie and the Chocolate Factory*, based on Roald Dahl's classic children's novel, and *Corpse Bride*, a story created by Burton in the vein of *The Nightmare Before Christmas*. In creating songs for the diminutive characters called Oompa Loompas in *Charlie and the Chocolate Factory*, Elfman took an approach different from that used in *Willy Wonka & the Chocolate Factory*, the 1971 film version of Dahl's book. Whereas the songs in that movie all had the same melody but different lyrics, Elfman—at Burton's suggestion—followed the example of Bollywood musicals, using a different genre of music for each of the songs. Thus, when the Oompa Loompas sing to the spoiled Veruca Salt, the music is reminiscent of 1960s folk rock; the video-game junkie Mike Teavee merits a hair-metal song; and the downfall of the obnoxious Violet Beauregarde is set to 1970s-style funk. Elfman recorded multiple tracks of his own voice to provide the voices of the Oompa Loompas. "Recording the songs, there were moments when it was hard to control myself, I was having such a good time," Elfman told Jay Stone. "I would have to stop because I was laughing and screwing up takes."

In February 2005 Elfman's first orchestral work for the concert stage, the 40-minute *Serenada Schizophrana*, premiered at Carnegie Hall, in New York City. Prior to that event, he had never been to Carnegie Hall, "and it was incredibly intimidating," as he told Mac Randall for the *New York Observer* (March 7, 2005). "I felt like a little kid in the playground of the big boys. I just thought, '. . . These walls are used to some serious [music], and they're going to hear my notes bouncing around and simply *reject* them." Those fears notwithstanding, his composition struck Mac Randall as being "imbued with a winning, what-the-hell spirit that left one hoping for a repeat performance." In 2006 Sony BMG Masterworks released a recording of *Serenada Schizophrana*.

Elfman's recent projects include the music for the 2006 Imax film *Deep Sea 3D*. Elfman's "mystical sounds serve up just the right atmosphere for this almost complete immersive experience," Laura Kern wrote for the *New York Times* (March 3, 2006, on-line). Later in the year Elfman collaborated with Erik Sanko on the music for Sanko's *The Fortune Teller*; that dark-themed puppet show, performed at the Here Arts Center, in New York City, is "a morality fable for grown-ups," as Anne Midgette described it in the *New York Times* (October 30, 2006, on-line). Elfman provided the score for the film *Charlotte's Web*, which is based on E. B. White's classic children's book and opened during the 2006 Christmas season. The *New York Times* (December 15, 2006) film critic A. O. Scott wrote that Elfman's music is "perfectly adequate if not terribly imaginative [and] plays under the action loudly and virtually without interruption, robbing the picture of a sense of rustic tranquility that would ground its antic flights"; he also described it as the film's "only serious flaw." In 2007 Elfman contributed the soundtracks to *The Kingdom* and *Meet The Robinsons*. His original music was to accompany *The Sixth Element*, directed by his brother, Richard, and *Hellboy 2: The Golden Army*, both set to be released in 2008. He was also composing the score for *Ripley's Believe It or Not!*, scheduled to reach theaters in 2009.

Elfman married the actress Bridget Fonda in November 2003. The couple's son, Oliver, was born in January 2005. Elfman has two daughters, Lola and Mali, from a previous marriage. Despite Elfman's penchant for the macabre (he collects such items as shrunken heads, sinister-looking dolls and ventriloquists' dummies, and drums made from skulls), he is "just a sweet kid with a streak of dark humor," as his mother told John M. Glionna, as well as a devoted parent. Elfman's quirky sense of humor is merely an expression of his creativity, his brother told Glionna: "He's the nice old lady who writes wicked mystery novels, not the village ax murderer." In 2007 Elfman received an honorary doctorate from the North Carolina School of the Arts, where he spoke at the commencement ceremony.

Ellison, Keith

Aug. 4, 1963– U.S. representative from Minnesota (Democrat)

Address: 1130 Longworth House Office Bldg.,
Washington, DC 20515

On November 7, 2006 Keith Ellison became not only the first African-American elected to the U.S. House of Representatives from Minnesota but the first Muslim to be elected to Congress in the history of the United States. While Ellison has said that his intention is to represent his entire Minnesota constituency rather than merely becoming a spokesman for Islam among the nation's lawmakers, he will likely find it difficult to separate himself from his faith in the eyes of the public. Religion has become an increasingly polarizing political issue in the United States in recent years, particularly since the September 11, 2001 terrorist attacks in New York and Washington, D.C., carried out by members of the Islamic extremist group Al Qaeda, and the subsequent launch of the "war on terror"; Ellison's candidacy, emerging in the context of that war—the rhetoric surrounding which has frequently equated Islam with terrorism—provoked a great deal of interest and controversy around the country. After Ellison's election, which was a front-page news item in many majority-Muslim countries, Nihad Awad, executive director of the Council on American-Islamic Relations (CAIR), told Rochelle Olson for the Minneapolis *Star Tribune* (November 13, 2006), "By default [Ellison] will become a national symbol in the Muslim community and a voice heard around the world." Agha Saeed, chairman of the California-based American Muslim Taskforce, said to Noam N. Levey for the *Los Angeles Times* (October 20, 2006) that Ellison's election is a "huge victory for both Muslim Americans and America," adding that it "has eradicated two stereotypes: one against Muslims, that they cannot work and succeed in a democratic setup, and the other against the United States, that it is not a tolerant society." As a Muslim legislator in the United States—which John Zogby of the polling firm Zogby International described to Tim Jones for the *Chicago Tribune* (June 29, 2006) as "a nation that, by and large, doesn't understand Islam"—Ellison will have an opportunity to advocate for American Muslims, who as a group have been widely vilified since the 2001 attacks. Ellison, while not wanting to limit himself to that role, understands that his religion will make him an influential voice in Congress, and believes that he will be able to help educate lawmakers who might hold views toward Islam grounded in ignorance or intolerance. "I see my faith as something that builds bridges—doesn't build walls. I mean, for example, if somebody got up on the House floor and said something misinformed or even bigoted about Islam, of course I would stand up and correct the record and put forth the truth. But that's not something only I would need to do. Anybody could do that if they studied the subject matter," Ellison explained in an interview with Farai Chideya for National Public Radio (November 20, 2006). Ellison, who has been appointed to the House Financial Services and Judiciary Committees, has ambitious legislative goals, specifically concerning the Iraq War and the protection of civil rights. He told Chideya, "I want to join with other members of Congress to say . . . this policy [regarding Iraq] not only is destructive to the lives of our soldiers, destructive to the lives of Iraqis but is actually having a corrosive effect on civil and human rights inside of the United States. Stuff like the Military Commissions Act, which deprives detainees [of] the right to challenge their detention. Stuff like domestic spying. These things are horrible . . . and they're not in the best tradition of this country. And I'm going to join with other members of Congress of any party, I don't even care, who believed that, you know, we should face the future bravely and not give in to fear because there are some bad people out there who are trying to get us."

The third of five sons, Keith Maurice Ellison was born on August 4, 1963 to Clida and Leonard Ellison. The family resided in Detroit, Michigan; Ellison's father was a psychiatrist, his mother a social worker. At an early age Ellison was inspired by stories of his mother's father, a former activist with the National Association for the Advancement of Colored People (NAACP), who had organized black voters in Louisiana during the 1950s—provoking anger on the part of some of the whites in the community. When Ellison's mother was a child, her family "would receive threats and had crosses burned on their front lawn," as Ellison told Chideya, "and it really was a topic that made a great impression on me." Issues of civil rights and justice were common subjects of dinner-table discussions in Ellison's youth. As a consequence, he told Chideya, "it really wasn't that unusual for me to gravitate toward political activism, trying to make a change, trying to include more people, make our society live up to the ideals that are stated in our Declaration of Independence and Constitution." Ellison's brothers—of whom three became lawyers, one a minister—were politically active as well, but Keith stood out. "He had a real sense of righteousness and justice," Ellison's brother Brian told Kathleen Gray for the *Detroit Free Press* (September 17, 2006), adding that Keith's passion sometimes led to confrontations, "maybe even [to] getting into a fistfight every once in a while" during elementary school. Ellison attended Hampton (now Barbara Jordan) Elementary before enrolling at the University of Detroit High School, where he was active in sports and the student senate. Ellison has credited his high-school football coach, Lou Offer, with helping him learn to avoid violent confrontations. "He was one of the people who helped me find a sense of purpose in my life," Ellison said of Offer to Kathleen Gray.

After high school Ellison enrolled at Wayne State University, in Detroit, where he studied economics, graduating with a bachelor's degree in 1987. At 19 Ellison, frustrated with social injustice and racism, converted to Islam, saying to Alan Cooperman for the *Washington Post* (September 11, 2006) about his conversion that it "had a political angle to it, a reaction against status quo politics." In 1987 Ellison moved to Minneapolis to attend the University of Minnesota Law School. Because he was one of only three black students in his class of 265, Ellison's awareness of his minority status increased, as did his political activism. He was instrumental in bringing controversial African-American speakers, such as Kwame Ture, the former Black Panther once known as Stokely Carmichael, to campus to lecture. Ellison also wrote about his political frustrations in the school press and in other local newspapers, sometimes under the name Keith E. Hakim or Keith X. Ellison. His first editorial, published in the Minneapolis *Star Tribune* in 1988, raised concerns about racist and anti-Semitic graffiti on a pedestrian bridge near the university. In other articles Ellison discussed more controversial topics, such as reparations for descendants of slaves and the effects of affirmative action, sometimes drawing resentment from other students. His writings were later publicly scrutinized during his campaigns for elective office.

After graduating from law school, Ellison was hired as an attorney by the firm Lindquist & Vennum, in Minneapolis, where he worked for three years. He served as the executive director of the Legal Rights Center in Minneapolis before entering private practice in that city with the law firm Hassan & Reed Ltd.; there, he specialized in trial litigation, focusing on such issues as civil rights, employment, environmental justice, and indigent defense law. He was also an active community member, volunteering his time as host of a public-affairs radio program and as a youth track coach for several city organizations. Ellison was also directly involved in organizing citizens to address the issue of police-community relations, an effort that resulted in the establishment of the Minneapolis Police–Civilian Review Board in the early 1990s. He was active and vocal with regard to other issues as well, helping locally in 1995 to organize the Million Man March, the large gathering of black men in Washington, D.C., that was spearheaded nationally by the Nation of Islam leader Louis Farrakhan. He wrote editorials on such topics as the political implications of the highly publicized police beating of a black man, Rodney King, and contributed a piece in defense of the Symbionese Liberation Army member Kathleen Soliah. Ellison was eventually drawn toward politics, a transition he has described as a natural one for a concerned citizen and parent. He explained to Tom Lonergan for the *Session Weekly–Minnesota House of Representatives* (January 24, 2003) that he chose to become involved in politics instead of "sitting at home thinking about safe neighborhoods, community economic development, better schools and not doing anything about it."

In 2002 Ellison was elected to the Minnesota House of Representatives, representing District 58B, one of the most culturally, economically, and demographically diverse regions in the state. During his first term Ellison was appointed to the Governmental Operations and Veterans Affairs Policy Committee, the Judiciary Policy and Finance Committee, and the Local Government & Metropolitan Affairs Committee. He was reelected in 2004, carrying 84 percent of the vote, and served during his second term on the Civil Law and Elections Committee and the Public Safety Policy and Finance Committee. While a state representative Ellison developed a reputation as an effective lawmaker and was recognized for his ability to push progressive legislation through a largely conservative House of Representatives. Among other causes, Ellison advocated for non-prison alternatives to punishment and rehabilitation of nonviolent offenders; suffrage for paroled felons; public-school reform; and the opportunity for same-sex domestic partners of state employees to be included in state benefits programs. Ellison also argued that a proposed bill that defined marriage as "only the union of one man to one woman" was unconstitutional. In his time as a state representative, Ellison played an essential role in the creation of an organization called the Environmental Justice Advocates of Minnesota, which worked to combat the damaging effects of lead, mercury, and pesticides, which had long contributed to the health problems of Minneapolis children—specifically, a high incidence of asthma. That group worked toward the conversion of a north Minneapolis coal plant into a natural-gas facility.

In 2006 Ellison campaigned for a seat in the U.S. House of Representatives from Minnesota's Fifth District. That district, one of eight in the state, includes not only the 58B District of the Minnesota legislature but also upscale sections of downtown Minneapolis and several affluent suburbs. Ellison presented himself as a progressive candidate in the tradition of a late U.S. senator from Minnesota, Paul Wellstone; his campaign platform, which included providing universal health care, raising the minimum wage, and withdrawing troops from Iraq, jibed well with the opinions of voters in a generally liberal district. Ellison did not highlight his potential to be the first Muslim U.S. congressman and rarely discussed his religion unless asked to do so by interviewers, who in many cases found his Islamic faith to be among his most noteworthy attributes. "I'm proud to be a Muslim. But I'm not running as a Muslim candidate," Ellison explained to Alan Cooperman. "I'm running as a candidate who believes in peace and bringing the troops out of Iraq now. I'm running as a candidate who believes in universal, single-payer health care coverage and an increase in the minimum wage." After earning the endorsement of the Minnesota-based Democratic-Farmer-Labor Party—affiliated with the national Democratic Party—Ellison cruised to victory in the Democratic primary and was generally acknowledged as the favorite to win the congressional election, as the district had last elected a Republican in 1962.

Still, for voters in the Fifth District, which includes Muslim as well as Jewish communities, Ellison's Sunni Muslim religion and his past affiliation with the Nation of Islam created considerable controversy during the campaign. While a law student at the University of Minnesota, Ellison had written in defense of the Chicago-based Nation of Islam and its leader, Farrakhan, who has been accused of anti-Semitism. Republicans attacked Ellison for receiving campaign contributions from, and appearing at fundraisers with, leaders of the Council on American-Islamic Relations, a group that some—including Democratic U.S. senator Charles Schumer of New York—had previously accused of supporting Hamas before that Palestinian group was designated by the United States as a terrorist organization. In addition, Ellison came under fire for his defense, during his time as an attorney, of gang members charged with committing violent crimes; he also took heat for a quote he gave to the Minneapolis *Star Tribune* (May 1, 1992), in which he stated, with regard to the acquittals of policemen involved in the Rodney King beating, "Black people do not live under a democracy. You don't have an obligation to obey a government that considers you to be less than human." Conservatives used those past actions and statements to depict Ellison as a divisive, anti-Semitic radical who could not represent the best interests of the Fifth District. Alan Fine, Ellison's Republican opponent, launched a salvo on the day following the primaries. "I'm extremely concerned about Keith Ellison. . . . He is the follower of a known racist, Louis Farrakhan, who promoted division between the people of our nation. . . . I'm personally offended as a Jew that we have a candidate like this running for U.S. Congress," Fine said, as reported by Rochelle Olson for the Minneapolis *Star Tribune* (September 14, 2006).

Ellison's supporters were quick to counter what they saw as hypocritical and baseless attacks. The Minneapolis attorney Jordan Kushner, who had studied with Ellison at the University of Minnesota, publicly came to the candidate's defense, stating that Ellison's actions during his time in law school were being misrepresented. "There were things [Ellison] admired about the Nation of Islam," Kushner, who is Jewish, said to Aron Kahn for the St. Paul, Minnesota, *Pioneer Press* (October 31, 2006), "with the emphasis about black people having self-reliance, but it had nothing to do with anti-Semitism. He understood the connection between racism and anti-Semitism." In response to concerns by Jewish members of the Democratic-Farmer-Labor Party about his association with the Nation of Islam, Farrakhan, and others who had previously made anti-Semitic or anti-homosexual remarks, Ellison wrote a public letter addressed to the Jewish Community Relations Council. As quoted by Josh Gerstrin for the *New York Sun* (September 5, 2006), Ellison wrote that he "did not adequately scrutinize the positions and statements" of the Nation of Islam and its leaders. "They were and are anti-Semitic, and I should have come to that conclusion earlier than I did. I regret that I didn't. But at no time did I ever share their hateful views or repeat or approve their hateful statements directed at Jews, gays, or any other group," Ellison added. The letter assuaged the concerns of many voters, but others remained skeptical about Ellison's past. Ellison eventually received the endorsement of the *American Jewish World*, Minneapolis's foremost Jewish newspaper. Ira Forman, the executive director of the National Jewish Democratic Council (NJDC), posted a press release on the organization's official Web site on September 21, 2006, describing Fine's comments as intolerant and xenophobic. "Republicans can't beat Keith Ellison on the merits of their policy positions. So instead, they appear to be using his religion as a weapon to question his patriotism . . . ," Forman wrote. "Keith has recognized his past mistakes and renounced his brief association with the Nation of Islam and has condemned the anti-Semitic statements and beliefs of Louis Farrakhan and [his fellow Nation of Islam official] Khalid Muhammed." The press release put the NJDC at the forefront of Ellison's defense. Although Ellison received endorsements from many groups, a number of high-ranking Democratic candidates were conspicuously absent from his support base, avoiding Ellison because of the controversy surrounding his campaign.

Throughout the campaign Ellison tried to sidestep the personal attacks against him, arguing that the candidates owed it to their constituents to focus on the issues rather deriding one another. "I am the only person to say we must boldly and unapologetically affirm our progressive values by making peace the guiding principle of our nation, assert the right of labor to strengthen, and demand universal, single-payer health care," Ellison said when asked to differentiate his platform from those of his opponents, according to Aron Kahn of the St. Paul *Pioneer Press* (October 16, 2006). Despite Republicans' efforts to derail his campaign and a lack of support from local Democratic politicians, Ellison won the election over Fine, Tammy Lee of the Independence Party, and the Green Party nominee, Jay Pond. While Ellison's progressive political positions won support in the generally liberal district, political analysts and community organizers attributed his success in both the primary and general elections to a strong turnout from African-American Muslim and particularly immigrant Muslim voters—a rapidly growing constituency in Minnesota and one that includes many who voted in 2006 for the first time. Ellison told Neil Macfarquhar for the *New York Times* (October 8, 2006, online) that being the first Muslim and first African-American from Minnesota to win a seat in Congress "holds no magic for me," but he acknowledged the importance of his role in energizing black Muslim and immigrant voters, an effort he described to Macfarquhar as "build[ing] political power." He added, "They can't ignore us anymore when we show up to vote."

Ellison chose to take his oath of office with his hand on the Koran rather than the Bible, a decision that sparked further controversy and exposed the negative attitudes of a number of prominent figures toward Islam. In Townhall.com (November 28, 2006), Dennis Prager, a popular radio host and columnist, contended that Ellison's decision "undermine[d] American civilization" and was "an act of hubris that perfectly exemplifies multiculturalist activism." Arguing that "when all elected officials take their oaths of office with their hands on the very same book, they all affirm that some unifying value system underlies American civilization," Prager concluded with the assertion that by taking the oath on the Koran, "[Ellison] will be doing more damage to the unity of America and to the value system that has formed this country than the terrorists of 9-11." Virgil Goode, a U.S. representative from Virginia, was also against Ellison's decision; he wrote in a December 7, 2006 letter to one of his constituents, who shared it with the Charlottesville, Virginia, publication *C-Ville* (December 19, 2006, on-line): "I do not subscribe to using the Koran in any way. The Muslim Representative from Minnesota was elected by the voters of that district and if American citizens don't wake up and adopt the Virgil Goode position on immigration there will likely be many more Muslims elected to office and demanding the use of the Koran. . . . I fear that in the next century we will have many more Muslims in the United States if we do not adopt the strict immigration policies that I believe are necessary to preserve the values and beliefs traditional to the United States of America." Goode's comments provoked an outpouring of support for Ellison by other members of the U.S. House of Representatives, among them Jim Moran of Virginia, Bill Pascrell of New Jersey, Michael M. Honda of California, and Tom Tancredo of Colorado. In a letter published on his official Web site and addressed to Goode, Pascrell stated that he was "greatly disappointed and in fact startled by your recent constituent letter." Pascrell also expressed alarm that Congressman Goode had "wrongfully equat[ed] the issue of immigration with a fear of Muslim integration in our society," and added that "promoting a fear and disrespect of Muslims is . . . wrongheaded." In taking his oath, administered by House Speaker Nancy Pelosi, Ellison used a copy of an English translation of the Koran, published in 1750, that was once owned by President Thomas Jefferson. Amy Argetsinger and Roxanne Roberts, writing for the *Washington Post* (January 3, 2007), called that choice "a savvy bit of political symbolism," referring to the "all-American" nature of the text. An Ellison spokesman, Rick Jauert, told Argetsinger and Roberts, "Keith is paying respect not only to the founding fathers' belief in religious freedom but the Constitution itself."

As the first-ever Muslim congressman, Ellison will likely have an important voice in congressional debate with regard to both initiatives in the Middle East and Muslims living in the United States. The freshman representative hopes that his election will influence the estimated five million to six million Muslims residing in the United States to become more active participants in the electoral process. The number of Muslim political candidates nationwide dropped from more than 700 in 2000 to just 70 in 2002, which in turn left the American Muslim population feeling disempowered. Abdisalam Adam, the director of a Somali cultural center in Minneapolis, who helped organize volunteers to recruit Muslim voters for the 2006 elections, believes that Muslims were more motivated to vote that year because there was a candidate who promoted a positive image of Islam. "They were resistant to voting [before] because a lot of them thought it wouldn't make a difference," Adam explained to Neil Macfarquhar. That view is shared by Parvez Ahmed, chairman of the Council on American-Islamic Relations. Ahmed said in reference to Ellison's candidacy, prior to the election, "Every other community wants someone from their community to be part of the mosaic that represents the country. [Ellison] would be a voice for the people who don't have representation," as reported by Frederic J. Frommer for the Associated Press Worldstream (September 22, 2006).

In May 2007 Ellison joined the Speaker of the House, Nancy Pelosi, and other Democrats in voting against H.R. 2206, which provided additional military funds for the war in Iraq but did not specify timetables for withdrawals of U.S. troops. The bill passed, 280–142. In the same year Ellison spent a weekend in Iraq with five other freshman representatives. There, he met with two Muslim sheiks who told him that the tenets of Al Qaeda misrepresented the principles of Islam. According to an Associated Press report published in *USAToday* (on-line), Ellison said that the sheiks explained to him "what I can possibly do to work with them to give a clearer, more accurate picture of what Islam is all about."

Ellison was described by Aron Kahn in the St. Paul *Pioneer Press* (October 16, 2006) as "a cross between a Gospel preacher and the silver-tongued political orators of the past." He is married to his high-school sweetheart, the former Kim Brookins, a high-school math teacher. The couple have four children. Ellison divides his time between his Washington, D.C., office and his home in Minneapolis.

During the last week of August 2005, a huge hurricane of near-record-breaking power slammed into the United States along the north-central coast of the Gulf of Mexico, bringing torrential rains and fierce winds to a 90,000-square-foot area encompassing parts of several southern states. Among the places hardest hit by the storm, named Katrina, was the city of New Orleans, Louisiana, where breaches in the levees along Lake Pontchartrain led to floods that left 80 percent of the city under water; more than a thousand people were killed, and many thousands were left homeless. An uncannily accurate description of what happened in New Orleans appears in a book that was published less than two months before Katrina began to form, on August 23, over the Bahamas: *Divine Wind: The History and Science of Hurricanes*, by Kerry A. Emanuel, a professor of meteorology at the Massachusetts Institute of Technology. On August 4, 2005, less than four weeks before the deadly storm reached its peak strength, the British journal *Nature* published an article in which Emanuel reported that in recent decades both the intensities and the lifetimes of tropical cyclones (which, like "typhoons," is another name for hurricanes) had increased significantly. That phenomenon, Emanuel wrote, "is highly correlated with tropical sea surface temperature, reflecting well-documented climate signals"—one of them being global warming. "My results suggest that future warming may lead to an upward trend in tropical cyclone destructive potential, and—taking into account an increasing coastal population—a substantial increase in hurricane-related losses in the twenty-first century." Although, for years, many scientists in addition to Emanuel had warned of the dangers that unusually forceful hurricanes posed to New Orleans, Emanuel's prescience regarding the events in that city, along with his timely words concerning the link between global warming and hurricane intensity, made him a highly sought-after hurricane expert during and after Katrina's devastating rampage, and he was interviewed and quoted widely by the media. In its May 8, 2006 issue, *Time* magazine named him one of the "100 people who shape our world." Earlier, the American Meteorological Society honored him with its Meisinger Award, in 1986, for his work on atmospheric motions; in 1992 the organization presented him—along with Richard Rotunno, a senior scientist at the National Center for Atmospheric Research—with its Banner I. Miller Award, for their paper on the relationship between sea-surface temperature and the inner dynamics of hurricanes, which the society deemed to be an "outstanding contribution to the science of hurricane and tropical-weather forecasting." In addition to *Divine Wind*, Emanuel's professional writings include some 120 journal articles and book chapters and the book *Atmospheric Convection*, published by Oxford University Press in 1994. With three others, he co-edited *Tropical Cyclone Disasters*, published by the Peking Press, also in 1994.

The second of three brothers, Kerry Andrew Emanuel was born in Cincinnati, Ohio, on April 21, 1955 to Albert Emanuel II and Marny Catherine (Schonegevel) Emanuel. His mother was a former flight instructor and homemaker, and his father was an aircraft mechanic. During his childhood his family moved several times, setting up house in Pennsylvania, Maine, and Florida as well as Ohio. The few hurricanes the Emanuels experienced while they lived in Florida made an indelible impression on young Kerry. Early on, the subjects of climate and weather interested him more than any others. In school, Emanuel told *Current Biography*, he was "pretty much a straight arrow." He attended the Massachusetts Institute of Technology (MIT), in Cambridge, Massachusetts, where he earned an S.B. degree (equivalent to a B.S.) in earth and planetary sciences in 1976 and a Ph.D. in meteorology only two years later. From 1978 to 1981 Emanuel taught as a member of the Department of Atmospheric and Oceanic Sciences at the University of California at Los Angeles (UCLA). Concurrently, in 1979, he held a postdoctoral fellowship at the Cooperative Institute for Mesoscale Meteorological Studies at the University of Oklahoma at Norman. (Mesoscale meteorology is the study of thunderstorms and other weather systems that extend anywhere from about 10 miles to about 600 miles.) In 1981 he returned to MIT, as an assistant professor in the Center for Meteorology and Physical Oceanography, which is associated with the Department of Earth, Atmospheric, and Planetary Sciences; he was promoted to associate professor in 1983 and to full professor in 1987. He directed the center from 1989 to 1997.

Emanuel began his research on hurricanes in the early 1980s, after he was assigned to teach a course in tropical meteorology. While he was preparing his notes for the class, as he recalled to Claudia Dreifus for the *New York Times* (January 10, 2006), "I realized I didn't understand what I'd been taught on the subject. As with many things, you think you understand something until you try to teach it. After some reading, I realized that the reigning theory [of hurricane formation] had to be wrong." A hurricane forms when water vapor evaporates from the ocean and later condenses as a ring of tall thunderstorm clouds surrounding the eye of the storm. The accepted theory of how hurricanes develop, known as conditional instability of the second kind, as Emanuel told Dreifus, "held that the main thing that drives a hurricane is just ingestion of enormous quantities of water vapor from the atmospheric environment"; thus, it would depend on a "magical grouping" of winds and clouds. But the predictions that Emanuel derived from the theory were false, he discovered. "So it became a very big intellectual challenge to me. The more I got into it, the more interesting it became." Emanuel amended the theory of hurricane development in a way that accounted for the connection that exists between hurricane circulation and evaporation from the surface of the sea.

Hurricanes gather strength from the heat energy in tropical oceans. Warmer ocean waters evaporate more quickly than cooler ones and have been linked to hurricanes that are more powerful and travel faster than others. In a paper for *Nature* (April 2, 1987) entitled "The Dependence of Hurricane Intensity on Climate," Emanuel suggested that global warming, which causes the surface water of oceans to get warmer, could lead to an increase in hurricane strength. In preparing his paper, Emanuel assumed that if the quantity of carbon dioxide (one of the so-called greenhouse gases) in the atmosphere doubles by sometime in the 21st century, the temperature of the surface waters of the oceans in tropical regions will rise by about two to three degrees Centigrade, or four to five degrees Fahrenheit, and, in turn, "the maximum possible intensity for hurricanes could rise 40 percent to 50 percent generally and 60 percent in the Gulf of Mexico," as Malcolm Ritter wrote for the Associated Press (April 1, 1987), paraphrasing Emanuel's findings. But the assumption regarding the relationship between carbon-dioxide increase and water-temperature increase could prove to be unfounded, as Emanuel told Ritter. Indeed, until recently Emanuel believed that nobody had found any evidence that hurricanes were growing more intense; as Claudia Dreifus wrote, he remained a "cautious centrist on questions of global warming and hurricane ferocity," often asserting that "no firm link had been established between warming and the intensity and frequency of hurricanes." In an interview with Jules Crittenden for the *Boston Herald* (November 29, 1998), for example, Emanuel suggested that, even if projections of global warming were accurate, no evidence pointing to the increasing intensity of hurricanes would be findable until the last quarter of the 21st century. "In the Atlantic, natural variability is what we need to worry about right now," he said, referring to an apparent 20-year cycle of waxing and waning of hurricane strength, known as the Atlantic multidecadal oscillation.

Then, in the early 2000s, while conducting research on El Niño (an irregularly occurring current of unusually warm water in the Pacific Ocean) and other phenomena related to climate oscillations, Emanuel unintentionally discovered that hurricanes in the North Atlantic and western North Pacific had increased in overall power by roughly 60 percent since the 1970s. Until then, he told Dreifus, he and others had predicted that "if you warmed the tropical oceans by a degree Centigrade, you should see something on the order of a 5 percent increase in the wind speed during hurricanes. We've seen a larger increase, more like 10 percent, for an ocean temperature increase of only one-half degree Centigrade"—a trend closely correlated with the increase in ocean and air temperatures due to global warming. Emanuel acknowledged the existence of that correlation in his August 4, 2005 *Nature* paper, thus indicating how much his thinking about hurricane intensities had changed by that time.

Critics of Emanuel's *Nature* paper, which drew upon data from some 4,800 hurricanes, charged that he had left out measurements of storms in the 1950s and 1960s because they were inconsistent with his findings, and thus that he had based his conclusions on incomplete historical data. "His conclusions are contingent on a very large bias removal that is as large or larger than the global warming signal itself," Christopher Landsea, a researcher at the federal National Oceanic and Atmospheric Administration (NOAA) in Miami, Florida, told Joseph B. Verrengia for the Associated Press (August 1, 2005). Landsea, along with two others who disagreed with Emanuel—the Colorado State University meteorologist William Gray and Max Mayfield, the director of the National Hurricane Center—blamed the rise in hurricane intensity since the 1970s on the Atlantic multidecadal oscillation. "That cycle," according to Gray, "caused 11 major hurricanes to hit Florida's peninsula from 1933 to 1965," as Robert P. King wrote for the *Palm Beach (Florida) Post* (October 8, 2005). "In contrast, just one major hurricane—Andrew in 1992—struck during the lull that followed for the next three decades." Mayfield insisted before a U.S. Senate Committee that increased hurricane activity was due to the natural cycle and not to global warming. Emanuel responded to criticisms of his paper by reaffirming his stance. "I maintain that current levels of tropical storminess are unprecedented in the historical record and that a global-warming signal is now emerging in records of hurricane activity," he wrote in a letter to *Nature* (December 29, 2005), as quoted by Mark Schleifstein in the New Orleans *Times-Picayune* (July 9, 2006, on-line). Less than six months later, Emanuel told Marc Airhart for *Earth and Sky* (June 14, 2006, on-line), "I think the idea that [the increase in hurricane intensity is] part of a natural cycle is dead."

Much of the media coverage of Emanuel's work during and after the Katrina disaster oversimplified his findings. In particular, news stories often failed to mention that his data came from records of hurricanes that had remained over the ocean as well as the much smaller number that had made landfall. Moreover, reporters neglected to remind the public that no conclusion about the connection between global warming and hurricane intensity can be derived from measurements of a single storm or even from a fraction of all hurricanes—although, as Jeffrey Kluger pointed out in *Time* (May 8, 2006), it was not surprising that journalists reporting on the events in New Orleans did just that. "It's easy to argue about the hypothetical causes and effects of global warming," Kluger wrote. "It's a lot harder for any serious disagreement to continue when extreme weather is demolishing a major city." "If you consider hurricanes over their entire life and not just when they make landfall, you really do see an upward trend in the power of hurricanes, not in their frequency but in the magnitude of the wind speed and also in their duration," Emanuel told Alex Chadwick for the National Public Radio program *Day to Day* (September 6, 2005). "But you really can't see such tendencies in landfalling storms in the U.S. simply because their numbers are so small. . . . It's impossible statistically to detect any kind of meaningful trend in that."

Emanuel's book *Divine Wind: The History and Science of Hurricanes*, which was published on July 1, 2005, was judged by most reviewers to be well-written, beautifully illustrated (with images of works of art as well as photos of storms), and suitable for lay readers as well as scientists. "Connoisseurs of natural disasters will devour [the book], but I hope it finds its way into numerous school libraries, too," Karen R. Long wrote for the Cleveland, Ohio, *Plain Dealer* (September 11, 2005). "The author's gifts as a science teacher combine with a cultivated taste in folklore, literature and art." She also wrote, in mentioning Emanuel's description of the hypothetical sequence of events if a Category 5 hurricane—such as Katrina proved to be—were to hit New Orleans: "The only thing [Emanuel] left out . . . is the likelihood of a loose barge crashing into the levee." In a review for *Weatherwise* (July/August 2006, on-line), Jeffrey B. Halverson wrote, "Those who have been touched by the awesome power of hurricanes, are curious about storms' long association with world culture, or just plain confused by what is being presented on the evening news will benefit from reading *Divine Wind*." When Dreifus asked Emanuel how he felt about the timing of the book's publication, he said, "Not terribly good. If one is just interested in sales, I suppose it was fortuitous. But I was trying to convey a sense of hurricanes as not just things of scientific interest, but as beautiful. A leopard is a very beautiful animal. But if you took it out of its cage, it would go for your jugular. Anyone can understand that neither a leopard nor a hurricane is a willful killer."

A decade earlier, in a paper for the *Journal of Geophysical Research* (July 20, 1995) co-written by Richard Rotunno and three others, Emanuel wrote about the types of hurricanes that would form if an asteroid were to hit a body of warm, tropical waters on Earth, or in the event of "shallow-sea volcanism, or, possibly, by overturning of superheated brine pools formed by underwater volcanic activity." The computer simulations that he and his colleagues devised indicated that the resultant groups of storms, dubbed "hypercanes," could produce winds of up to 90 percent the speed of sound. (The speed of sound varies with the type of medium through which the sound is moving—for example, air or water—and the temperature of the medium. Under "standard" conditions at sea level, the speed of sound is about 761 miles per hour.) Moreover, unlike normal hurricanes, hypercanes could drastically affect the climate of the entire planet. "[Emanuel's] model predicts that a hypercane would form in about a day if an area of water only 50 kilometers [about 31 miles] in diameter is heated to a temperature of 50 degrees C [122 degrees Fahrenheit]," Jeff Hecht wrote for *New Scientist* (February 4, 1995). "He calculates that such a hot spot could be formed if an object larger than 10 kilometers in diameter [about six miles] crashed into a shallow sea." In addition to intense winds, the hurricane could have an eye with atmospheric pressure less than a third the normal level. Air at such low pressure would act like a vacuum, pulling dust and water vapor up into the stratosphere, where it could remain for years. Moreover, as Hecht reported, "The Sun's ultraviolet radiation would act on stratospheric water droplets to form hydroxyl radicals. Together with chlorine from saltwater thrown up by the hypercane these radicals could destroy vast quantities of stratospheric ozone. UV radiation would then reach the Earth's surface unhindered, killing organisms on land and in the upper layers of the ocean." Emanuel believes that hypercanes could have contributed to the extinction of the dinosaurs.

In his most recent book, *What We Know About Climate Change* (2007), Emanuel continued to warn of the potential dangers of global warming as it relates to intensified hurricane activity. He offered a scientific explanation of global warming and discussed the media's influence on the public's understanding of it. In an assessment for nybooks.com (October 11, 2007), Bill McKibben wrote, "In an epic feat of concision, [Emanuel] manages in eighty-five very small pages to explain the state of the science of climate change, concluding on the optimistic note that 'the extremists [who deprecate the threat of climate change] are being exposed and relegated to the sidelines, and when the media stop amplifying their views, their political counterparts will have nothing left to stand on.'"

When Marc Airhart asked Emanuel if his new role of public hurricane expert had changed his life, the scientist answered, "It has. A lot of people write to me or phone me. They're all completely well-meaning people and they're curious about nature. It's frustrating, because I'd dearly like to be able to talk to each of these people and answer their emails, and it's become humanly impossible for me to do that. So it's forced me to make judgment calls. On the one hand, I want to use the opportunity to convey to the public my understanding of the problem. That's very much a part of the duty, perhaps even a moral obligation, of a scientist. But on the other hand, I want to get back to the work, to the research and the teaching. It's hard to know where to strike that balance under circumstances like this."

Emanuel lives in Lexington, Massachusetts, with his wife, Susan Boyd-Bowman, whom he married in 1990, and their son, David Tristan Emanuel.

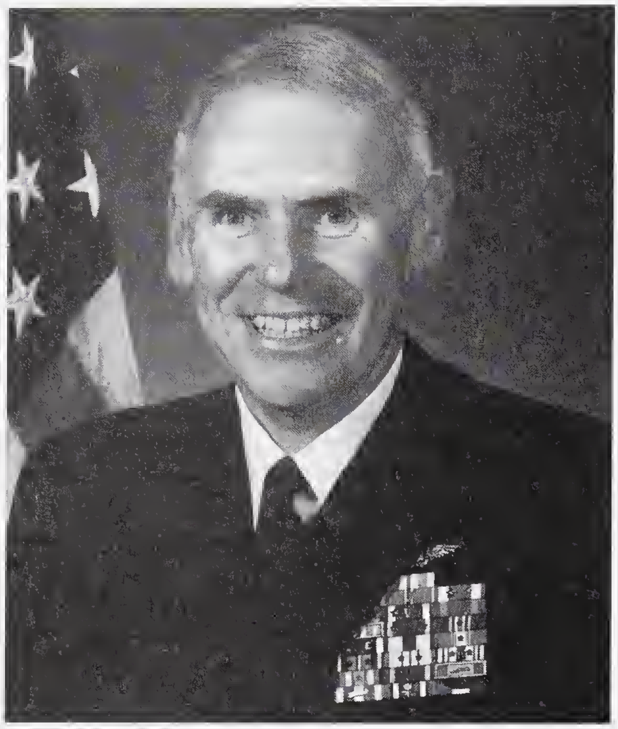
Fallon, William J.

Dec. 30, 1944– Commander of the U.S. Central Command

Address: U.S. Central Command, 7115 S. Boundary Blvd., MacDill AFB, FL 33621-5101

On March 16, 2007 William J. Fallon, a four-star admiral in the United States Navy, became the commander of the United States Central Command—CentCom, as it is known familiarly—with responsibility for the entire U.S military in the Middle East, Central Asia, and East Africa. When Fallon assumed his new position, U.S. troops were involved in two distinct campaigns, in Iraq and Afghanistan, and in the estimation of many military historians, Iraq was on the cusp of civil war. "The situation in Iraq is critical and time is of the es-



U.S. Navy/Getty Images

William J. Fallon

sence," Fallon said at his swearing-in ceremony, as quoted by William R. Levesque in the *St. Petersburg (Florida) Times* (March 17, 2007). At his confirmation hearing before the Senate Armed Services Committee, as reported by Peter Spiegel for the *Los Angeles Times* (January 31, 2007), Fallon said, "Going back to 2003, we had hundreds of good ideas of things that we would like to see in Iraq that are more reflective of the kind of society and process that we enjoy here. We probably erred in our assessment of the ability of these people [Iraqis] to take on all these tasks at the same time." "Maybe we ought to redefine the goals here a bit and do something that's more realistic in terms of getting some progress and then maybe take on the other things later," he also said at the hearing, as reported by Carl Hulse and others for the *New York Times* (January 31, 2007). U.S. army general David H. Petraeus, the commander of multinational forces in Iraq, reports to Fallon.

Fallon began his military service as a bombardier/navigator in 1967, during the Vietnam War. In 24 years as a pilot, he logged 4,800 flight hours and landed on aircraft carriers 1,300 times. During the next decade and a half, he served as a commander both in the Persian Gulf War, in 1991, and during NATO intervention in the Bosnian civil war, in what had been Yugoslavia, in 1995. He next served as deputy commander in chief and chief of staff of the U.S. Atlantic Fleet (1996–97); commander of the Norfolk, Virginia–based Second Fleet (1997–2000); vice chief of naval operations, U.S. Navy (2000–03); commander of the U.S. Fleet Forces Command and U.S. Atlantic Fleet (2003–05); and commander of the U.S. Pacific Command (2005–07). He was selected to head CentCom as much for his diplomatic credentials as his military expertise. Fallon, who holds a master's degree in international studies, is said to be "confident but not imperious, . . . combin[ing] a tough, unvarnished style with a light touch and a keen interest in other cultures," as Ann Scott Tyson wrote for the *Washington Post* (January 14, 2007). According to Tyson, Defense Secretary Robert M. Gates has described Fallon as "one of the best strategic thinkers in uniform today" and said that "his reputation for innovation is without peer."

William Joseph Fallon was born to Catholic parents on December 30, 1944 in East Orange, New Jersey. As the oldest of nine siblings, he had many duties from an early age. His younger brother Joseph told Joseph A. Gambardello for the *Philadelphia (Pennsylvania) Inquirer* (April 6, 2004), "Everybody looked up to Billy. He was a very strong leader. . . . Billy has never had a gray area. He's always black and white. Decisive." Fallon's father worked for the U.S. Postal Service as a mail carrier, and young Billy's first job was delivering newspapers alongside him. "Expectations were that you take advantage of what you had and get to work. Having an opportunity to do a variety of things . . . to get a little money to go to school and do other things . . . was good exposure as to how life really is on a working level. . . . You don't take things for granted," Fallon told Edward Colimore for the *Philadelphia Inquirer* (February 19, 2007). When he was 12 the family moved to Merchantville, New Jersey, a suburb of Camden (across the Delaware River from Philadelphia). Fallon attended Camden Catholic High School, where he was a member of the track team; after school he worked part-time at a supermarket. After he graduated from high school, in 1963, Fallon accepted a navy ROTC (Reserve Officers Training Corps) scholarship and enrolled at Villanova University, in Philadelphia. During summers Fallon had night jobs at the Campell Soup Co. factory in Camden; he unloaded boxcars and worked on assembly lines. He earned a B.A. degree in 1967.

That same year Fallon received his commission through the ROTC, and upon completion of flight training, in December 1967, he was designated a naval flight officer. He was then sent to Vietnam, where he co-piloted an all-weather carrier-based bomber. Fallon enjoyed that experience far more than he had anticipated. "I thought I would go in and just do some time," he told Gambardello. "When I came back [from Vietnam], I had a really interesting [navy] job and then another. . . . It was pretty challenging, and I thought, 'I'll do this,' and ended up staying for a few years. Then I had an opportunity to change to a different airplane, and that was interesting, so I thought I'd do that. So through a combination of very interesting work, challenging assignments and great people . . . I ended up staying in." During his 24 years as a navy pilot, Fallon served on five aircraft carriers in the Atlantic, Pacific, and Indian Oceans and the Mediterranean Sea. He earned the Defense Distinguished Service

Medal and seven other navy awards as well as various unit and campaign decorations.

In the 1991 Persian Gulf War, Fallon commanded Carrier Air Wing (CAW) Eight, which consists of 10 squadrons and, at that time, 2,400 sailors. CAW Eight was deployed in the Arabian Gulf during Operation Desert Storm, in which the U.S. and its allies ousted Iraqi troops from Kuwait. Between January 16 and February 28, 1991, when the war ended, the sailors conducted more than 4,300 missions. Four years later Fallon led the navy's battle group, which included the *U.S.S. Theodore Roosevelt*, in Operation Deliberate Force—NATO's first military action, which aimed to destroy Serbian strongholds in Bosnia and bring the warring factions (Bosnians and Croats as well as Serbs) to the peace table. Navy secretary John Dalton said that the 680 combat missions flown by the *Theodore Roosevelt*'s 70 planes played a crucial role in creating "an atmosphere of peace that has eluded Bosnia for years," as Jack Dorsey reported for the *Virginian-Pilot* (September 22, 1995). As a commander of coalition forces, Fallon learned important lessons about working with allies, especially the need for each nation's military leaders to recognize the capabilities of other countries' forces. During the next few years, Fallon oversaw training exercises for U.S. and foreign sailors and took part in "peace games," simulations of potential real-world events, whose goal was to maintain peace in a fractious region and avoid killing and destruction.

Fallon was named deputy commander in chief and chief of staff of the U.S. Atlantic Fleet in 1996 and then became commander of the Norfolk, Virginia–based Second Fleet in late 1997. In the latter position Fallon again directed the training of sailors, a task that had become difficult because of shortages of both materiel and manpower. He was especially hampered by the closure of the navy's live-fire range on the island of Vieques, in Puerto Rico, which naval officers have described as the only place in the Atlantic on American soil where sailors and Marines could practice amphibious landings while under fire. He arranged practice exercises at a firing range in Scotland but "felt badly about going over there and telling them, 'We can't do it in our country. Do you mind if we come over to your country to do it?,'" as he told Dave Mayfield for the *Virginian-Pilot* (December 13, 1999).

In 2000 Fallon was promoted to vice chief of naval operations. He became a four-star admiral and relocated to the Pentagon, in Washington, D.C. In his new position he attracted international attention after an American submarine, the *U.S.S. Greeneville*, crashed into a Japanese fishing boat, the *Ehime Maru*, on February 9, 2001; the boat sank, and nine people died. Seven months earlier, the alleged molestation of a young girl by a U.S. Marine on the Japanese island of Okinawa, where thousands of American troops were stationed, had severely strained relations between Japan and the U.S. With tensions between the two nations worsening following the *Ehime Maru* accident, President George W. Bush selected Fallon to meet with Japanese leaders and the families of the victims. Koichi Yamamoto, a member of the Japanese Parliament, told Doug Struck for the *Washington Post* (March 2, 2001) that Fallon was "dealing with the situation in a very Japanese manner, considering Japanese sentiment. I think this will be a very strong turning point." Admiral Dennis Blair, who then headed the Pacific Command, told Susan Taylor Martin years later for the *St. Petersburg (Florida) Times* (January 14, 2007) that Fallon "wasn't terribly familiar with Japan at the time but he did a marvelous job handling a ticklish diplomatic situation."

In 2003 Fallon took over the navy's U.S. Fleet Forces Command and the U.S. Atlantic Fleet. He held that position until early 2005, when then–Defense Secretary Donald H. Rumsfeld named him head of the U.S. Pacific Command (PacCom). Based in Camp H.M. Smith, Hawaii, PacCom directs 300,000 troops and is responsible for activities in 43 countries spanning more than 100 million square miles in the Pacific Ocean and East Asia. That area includes two of the world's most serious potential hotspots—the Korean Peninsula and the Taiwan Strait. Fallon assumed control of PacCom when the command was overseeing military relief efforts for victims of the tsunami that devastated parts of Indonesia, Thailand, India, Sri Lanka and other countries in December 2004. With many Bush administration Cabinet members and other officials occupied with conflicts in the Middle East, Fallon became a de facto ambassador-at-large to countries on the Pacific Rim. Bates Gill, a China expert at the Center for Strategic and International Studies, told Susan Taylor Martin, "His main task was trying to create an atmosphere of mutual interests and reassurance." Fallon has said that China's size and the growth of its military, economy, and regional influence made rapport with that nation a priority in network-building efforts. The 2001 collision between a U.S. spy plane and a Chinese fighter jet had soured relations between the two countries' militaries, and Fallon tried to improve matters through visits with Chinese leaders and mutual-benefit military exercises with the Chinese navy. He gained a reputation for engaging with occasionally antagonistic governments, at times defying the Bush administration in doing so. In light of the expansion of China's military and the shrinking of the U.S. Pacific fleet from 350 ships in 2000 to about 100 in 2005, Fallon thought that the U.S. must combine diplomacy with undersea superiority. Although he often disagreed with Washington, Fallon was highly regarded within the Pentagon for his willingness to speak his mind and for his openness with subordinates.

In March 2007 Fallon succeeded army general John P. Abizaid as commander of the U.S. Central Command. Based at MacDill Air Force Base, in Tampa, Florida, CentCom is the headquarters for all U.S. military operations in the Middle East, Central Asia, and East Africa. Fallon is the first navy officer to lead CentCom since its inception, in 1983. Although threats in the region have usually been land-based, military leaders believed that Fallon was well-suited for the job, because of his diplomatic and strategic skills and because the U.S. had recently dispatched two carrier strike groups (including two aircraft carriers and other ships) to the Persian Gulf for the first time since 2003. "The reality is, if you look at the CentCom area of responsibility, there's a lot of water there," Defense Secretary Robert M. Gates told reporters, as quoted by Ann Scott Tyson and Glenn Kessler in the *Washington Post* (January 31, 2007). "And as you look at the range of options available to the United States, . . . it makes sense to me . . . for Admiral Fallon to have the job." Among those who disapproved of Fallon's appointment was an unnamed, retired Marine general, who told Sally B. Donnelly and Douglas Waller for *Time* (January 9, 2007), "To put in a naval aviator without any command combat experience is like putting a baseball coach in to run the offense in the Super Bowl."

In early 2007 the Bush administration decided to increase the number of troops in Iraq by some 20,000. General Abizaid was against that troop escalation, because he believed that it pushed the responsibility of security further from Iraqi law-enforcement officers. He believed that diplomatic, economic, and political pressures are more effective than military power in wars such as the one in Iraq—but that in any case, the Iraq conflict could last as long as 11 years. "The biggest problem we've got is lack of patience," Abizaid told David Ignatius for the *Washington Post* (March 16, 2007). "When we take upon ourselves the task of rebuilding shattered societies, we need not to be in a hurry. We need to be patient, but our patience is limited. That makes it difficult to accomplish our purposes." Fallon, by contrast, has described himself as "not a particularly patient man," according to Tyson and Kessler, and he has removed the term "long war" from the CentCom lexicon of words that can be used to describe the Iraq war in press releases and media statements. He also approved the so-called troop surge. "One of the reasons I have been selected is because I will be coming at [the war] from a different perspective," he told Edward Colimore. "I like to ask questions, and I'm naturally skeptical about what I hear."

Unlike Abizaid, Fallon will not focus on the day-to-day operations of combat, leaving those responsibilities to army lieutenant general David H. Petraeus, who became the commander of multinational forces in Iraq in January 2007. Instead, Fallon will concentrate on diplomacy. Stephen R. Pietropaoli, a retired rear admiral who now serves as executive director of the Navy League, an advocacy group, told Thom Shanker for the *New York Times* (January 8, 2007), "Admiral Fallon will have very experienced commanders in charge of operations in Afghanistan, Iraq, the Horn of Africa. But the Central Command commander needs to be above that, looking at how to enhance America's influence throughout his area of responsibility and how to truly work hand in glove with the Department of State to enhance America's image and influence and prestige in that part of the world." "The extent [to which] we can understand better the thoughts and actions of others reduces substantially, in my experience, the danger of miscalculation, and so I strongly endorse that approach," Fallon said at his confirmation hearing, as reported by Peter Spiegel.

In a March 27, 2007 interview with Kyra Phillips for CNN, Fallon stressed that security in Iraq is unquestionably the biggest challenge for the nascent government and the U.S.-led troops and the biggest concern of the Iraqi people. "They want more security. They want to get out on the streets and do things," Fallon told Phillips. He added that Iraqis themselves needed to participate more in public affairs if peace is to return; they have to "do everything they can to help us identify those who don't abide by rules of justice," he explained. Others believe that the Iraqi government must bring about a political reconciliation between opposing factions before stability is possible. Former Democratic congressman Lee H. Hamilton of Indiana, who co-authored *The Iraq Study Group Report* (2006), told the Senate Foreign Relations Committee that making the security of Baghdad a precondition for other goals is a mistake. "You've got to deal with these problems comprehensively, and if you're focused solely on questions of security, you're not going to get there," Hamilton said, as quoted by Spiegel. "Because you can not isolate that security from the other aspects."

"There were a couple of times during the years when I wondered what I was doing—like spending a year away from home in the Indian Ocean. But, frankly, it has been fantastic," Fallon told Gambardello. With his wife, the former Mary Trapp, Fallon has four children, two of whom have served in the navy. Fallon is a world-history buff and an avid jogger and has recently taken up surfing.

Faust, Drew Gilpin

Sep. 18, 1947— President of Harvard University; historian

Address: Office of the President, Harvard University, Massachusetts Hall, Cambridge, MA 02138

On July 1, 2007 the historian Drew Gilpin Faust became the first woman to hold the post of president of Harvard University in the school's 371-year history, thus attaining what many consider to be the most prestigious post in academia in the United States. "I've spent a lot of time thinking about the past, and about how it shapes the future," Faust said five months earlier, when Harvard announced her appointment, as quoted by the *Harvard University Gazette* (February 11, 2007). "No university in the country, perhaps the world, has as remarkable a past as Harvard's. And our shared enterprise is to make Harvard's future even more remarkable than its past." Defying what was traditionally expected of a young woman from an affluent southern family in the 1970s, Faust earned a doctorate in American civilization and became a college teacher. During her 25 years as a faculty member at the University of Pennsylvania, she published five books on topics connected to the American Civil War, the last of which—*Mothers of Invention: Women of the Slaveholding South in the American Civil War*—became a *New York Times* best-seller and won several honors. In 2001 Faust was appointed dean of the Radcliffe Institute for Advanced Study, a newly created division of Harvard, in Cambridge, Massachusetts; she succeeded in transforming Radcliffe into an internationally renowned academic center. That accomplishment and her "talent for stimulating people to do their best work, both individually and together," as James R. Houghton—a member of the Harvard Corp. and the chair of the Harvard presidential search committee—phrased it to the *Gazette*, made her a leading candidate to succeed Lawrence H. Summers, who had stepped down from the university's top post in 2006. Harvard, the oldest institution of higher learning in the U.S., is the fourth of the eight Ivy League universities to select a woman as president. Faust has acknowledged that her appointment is significant in women's struggle for equality in the workplace, but she has also said, as quoted by the Associated Press (February 12, 2007), "I'm not the woman president of Harvard. I'm the president of Harvard." The first president of Harvard since 1672 to hold neither an undergraduate nor a graduate degree from the university, Faust will be responsible for a number of recently launched projects, among them the overhaul of Harvard's undergraduate curriculum and the construction of a state-of-the-art science center in which stem-cell research will be conducted.

Catharine Drew Gilpin Faust was born on September 18, 1947 in New York City to the former Catharine Mellick and McGhee Tyson Gilpin, who owned several farms in the Shenandoah Valley and raised Thoroughbred horses. She has always been called by her middle name (and was nicknamed Drewdie as a youngster). Along with her older brother, McGhee Tyson Gilpin Jr. (called Tyson), and her two younger brothers, Donald and Lawrence, Faust grew up in Clarke County, Virginia, in a privileged household and a community ruled by rigid racial segregation. "I lived in a world where social arrangements were taken for granted and assumed to be timeless," she wrote for *Harvard Magazine* (May/June 2003). "A child's obligation was to learn these usages, not to question them. The complexities of racial deportment were of a piece with learning manners and etiquette more generally." Faust attended the Blue Ridge Country Day School, an all-white private school her family helped to found in Millwood, Virginia. When she was nine she had a conversation with the family's black handyman and driver that inspired her to send a letter to President Dwight D. Eisenhower in which she argued fervently for desegregation. Gender was also a defining aspect of Faust's upbringing; her mother repeatedly told her, "It's a man's world, sweetie, and the sooner you learn that the better off you'll be," as Faust recalled to Sara Rimer for the *New York Times* (February 12, 2007).

While Faust lived up to some of what was expected of a southern girl—she raised a beef cow, joined the Brownies, and took dancing lessons—she also resisted some of the traditional female activities of her time. She refused, for example, to become a debutante, a prelude, it was assumed, to marriage with a rich man and full-time homemaking. As a student at Concord Academy, a prep school in Massachusetts, Faust "took off on her own track . . . ," as her older brother, Tyson, now a lawyer, recalled to Rimer. "I think she read the scene pretty well. She was ambitious. She wanted to accomplish stuff." After she graduated from Concord, in 1964, she enrolled at Bryn Mawr College, a women's school in Pennsylvania. (Her father, two uncles, a great-uncle, and two of her three brothers attended Princeton University, but the college did not admit women until 1969.) Mary Maples Dunn, who, as acting dean, preceded Faust at the Radcliffe Institute, told Rimer that when Faust was an undergraduate, women's colleges "tended to give these young women a very good sense of themselves and encouraged them to develop their own ideas and to express themselves confidently. It was an invaluable experience in a world in which women were second-class citizens." Faust earned a B.A. degree in history magna cum laude from Bryn Mawr in 1968. That year she married Stephen Faust, a medical-school student at the University of Pennsylvania (Penn); soon after her graduation, she, too, enrolled at Penn, to pursue graduate degrees.

Faust earned a master's degree, in 1971, and a Ph.D. degree, in 1975, in American civilization at Penn. In 1976 she was appointed an assistant professor in Penn's Department of American Civilization; that year she also got divorced. In 1977 Faust's Ph.D. dissertation was published as the book *A Sacred Circle: The Dilemma of the Intellectual in the Old South, 1840-1860*. In 1980 she was promoted to associate professor at Penn. Two years later she published the books *The Creation of Confederate Nationalism: Ideology and Identity in the Civil War South* and *James Henry Hammond and the Old South: A Design for Mastery*. She was honored for distinguished teaching in 1982 and 1996. She became a full professor in 1984 and was named the Stanley I. Sheerr professor of history in 1988. From 1989 to 2000 she held the position of Annenberg professor of history. Her fourth book, *Southern Stories: Slaveholders in Peace and War*, appeared in 1992.

Faust's fifth book, *Mothers of Invention: Women of the Slaveholding South in the American Civil War* (1996) won the 1996 Avery O. Craven Award from the Organization of American Historians for the best book on the Civil War and the 1997 Francis Parkman Prize from the Society of American Historians for the best nonfiction book on an American theme. During the historian Sheldon Hackney's interview with Faust, recorded by Ellen Marsh for *Humanities* (July/August 1997), Hackney—at the time the chairman of the National Endowment for the Humanities—described the work as "a book about very large ideas and large implications," adding, "yet those ideas and implications don't intrude; it is the very interesting lives and words of real people that drive a reader along from chapter to chapter"; he praised *Mothers of Invention* as displaying "craftsmanship in the historical profession at its highest." In discussing the impact that southern women had on the outcome of the Civil War, Faust examined two issues with which she had struggled since her youth—race relations and gender inequalities. "I guess I've been studying unpleasant people or politically incorrect people for my whole academic career," she told Hackney. "My feeling is that it's very important to understand how individuals in the past rationalized lives that we might find unthinkable, because we have our own set of rationalizations that make us blind to injustices in our own society." She also told Hackney that in some ways historians are like novelists, because both have a responsibility to address the complexities of the individuals in their accounts. "I also think that history should not simply be celebration of people in the past, even simply celebration of groups who've been neglected in the historical records. It is important to celebrate people but not to do so uncritically," she said. "They're not heroes and heroines. They're combinations of heroism and villainy."

While at the University of Pennsylvania, Faust increasingly took on administrative duties. From 1988 to 1990 she chaired the President's Committee on University Life, which focused on such campus issues as diversity, the relationships among faculty, students, and staff, and Penn's interactions with surrounding communities. From 1993 to 1994 Faust was a member of the university's presidential search committee, and she chaired the presidential inaugural committee in 1994. She chaired the Department of American Civilization for five years and directed Penn's Women's Studies Program from 1996 to 2000.

On January 1, 2001, after an eight-month search and evaluations of more than 80 candidates, Faust was named dean of the Radcliffe Institute for Advanced Study, a new academic center created out of Radcliffe College, formerly a women's college associated with Harvard University. (Harvard and Radcliffe stopped issuing separate degrees in 1977; on October 1, 1999 they officially merged, and all undergraduates became students of Harvard College.) Upon her appointment, Neil L. Rudenstine, then the president of Harvard, welcomed Faust as an innovator. "Drew Faust is a person and a scholar of unusual depth and range," he told a *Harvard University Gazette* (April 6, 2000) reporter. "Faust has the clarity of mind, the commitment, and the leadership qualities essential to the successful launching of this new venture—particularly within an institution as complex as Harvard." Faust's second husband, Charles E. Rosenberg, whom she had married in 1980, secured a tenured position in Harvard's Department of the History of Science. (Faust and Rosenberg had rejected offers of tenured positions at Harvard in 1989, citing in part the hassle of moving. The opportunity for Faust at the Radcliffe Institute, they felt, was too attractive to turn down.)

As dean, Faust oversaw the final steps of Radcliffe's transformation into a highly respected scholarly institute, one that currently receives about 800 applications a year for 45 to 50 fellowships. In recognition of its roots in the all-female Radcliffe College, she made sure that the institute maintained a commitment to the study of women, gender, and society. Faust also had to tackle the details of running a multimillion-dollar organization. Soon after she became dean, budget cuts forced her to reduce significantly the number of the institute's administrative positions. She also began aggressive fund-raising efforts and an extensive renovation of the campus. Within the greater community of Harvard University, she served on the Harvard Committee on the Status of Women from 2001 to 2006, and in 2004 she was a member of the Allston Task Force on Undergraduate Life. In 2002 she was a top candidate for dean of Harvard's faculty of arts and sciences, a post ultimately filled by the historian William C. Kirby. Three years later, as reported by Claire M. Guehenno for the *Harvard Crimson* (January 12, 2007, on-line), Lawrence H. Summers, then Harvard's president, tried without success to recruit Faust to replace Kirby. In 2003 Faust removed her name from a list of candidates being considered for the presidency of the University of Pennsylvania, and she later did so in connection with the top post at the University of Chicago.

In January 2005, at the National Bureau of Economics Research Conference on Diversifying the Science & Engineering Workforce, Summers made a comment that many interpreted as implying that women might be innately less talented at math and science than men. Later that year, amid a storm of controversy surrounding his remark, Summers created two task forces at Harvard, one whose aim was to increase the number of women on the faculty and the other regarding women in science and engineering, both of which were overseen by Faust. Still, Summers could not recover from the damage caused by his comment, and on February 21, 2006 he announced his intention to retire the following June; Derek Bok, Harvard's president from 1971 to 1991, agreed to serve as interim president for one year beginning on July 1, 2006, while the university searched for a new president.

On February 11, 2007 Faust was named the 28th president of Harvard. "This is a great day, and a historic day, for Harvard," James R. Houghton, a senior member of the Harvard Corp. and the chair of the presidential search committee, said in his announcement, according to a Harvard press release. "Drew Faust is an inspiring and accomplished leader, a superb scholar, a dedicated teacher, and a wonderful human being. She combines a powerful, broad-ranging intellect with a demonstrated capacity for strong leadership." In choosing Faust, the search committee consulted more than 150 people via e-mail messages and face-to-face interviews to determine whether she was qualified to make the move from overseeing the Radcliffe Institute (which has 87 employees and a $17 million annual budget) to presiding over all divisions of Harvard University (which has 24,000 employees with a $3 billion annual budget). Faust's appointment was approved by Harvard's two governing boards—the Harvard Corp. and the board of overseers. "Drew wears her extraordinary accomplishments lightly," Houghton said. "Her many admirers know her as both collaborative and decisive, both open-minded and tough-minded, both eloquent and understated, both mindful of tradition and effective in leading innovation." Faust's official inauguration took place on October 12, 2007 at Harvard's Tercentenary Theatre.

Harvard is now the fourth of the eight Ivy League universities to appoint a female president; the presidents of the others—Amy Gutmann of the University of Pennsylvania, Shirley M. Tilghman at Princeton, and Ruth J. Simmons at Brown—all publicly declined consideration for the Harvard presidency. While the appointment of a new Harvard president is always newsworthy, Faust's appointment as the first female president became a media sensation. "Harvard is making a statement at a critical time when we are seeing student bodies that are well over 50 percent women," Claire van Ummersen, the director of the Office of Women in Higher Education at the American Council on Education, told Valerie Strauss and Susan Kinzie for the *Washington Post* (February 10, 2007). "We see women faculty increasing in number, and the place where we have lagged most is in research institutions having women at the executive level. Hopefully, [Faust's appointment] will have some influence on boards of trustees or overseers of other institutions." Some detractors speculated that the choice of Faust rested more on her gender than her qualifications, but everyone involved with the decision to choose Faust denied that suggestion. "All the reports have been 'gender, gender, gender,' and I'm thinking to myself 'isn't that funny? That has not been something we've talked about at all,'" Robert Reischauer, a member of the Harvard Corp., told Jesse Harland Alderman for the Associated Press (February 12, 2007). Faust herself said, as quoted by Richard C. Paddock in the *Los Angeles Times* (February 12, 2007), "Young women have come up to me and said this is really an inspiration. So I think it would be wrong not to acknowledge that this has tremendous symbolic importance. It's not about me Drew Faust. It's about a particular moment at an unparalleled institution and we need to acknowledge that."

Faust is a trustee of the Andrew W. Mellon Foundation, the National Humanities Center, and Bryn Mawr College, where she chaired the trustee committee on student life from 1998 to 2003. She serves on the educational advisory board of the Guggenheim Foundation. She was the vice president of the American Historical Association (1992–96); president of the Southern Historical Association (1999–2000); and an executive board member of both the Organization of American Historians and the Society of American Historians (1999–2002). She was a member of the jury for the Pulitzer Prize in history in 1986, 1990, and 2004; in the last year she chaired that jury. She is also an elected member of the American Academy of Arts and Sciences, the American Philosophical Society, and the Society of American Historians. In 2007 *Time* magazine included her on its list of the world's 100 most influential people.

The five-foot 11-inch Faust and her husband, Charles E. Rosenberg, live in Cambridge. Rosenberg, a leading historian of American medicine, is a professor of the history of science and also the Ernest E. Monrad professor in the social sciences at Harvard. From her union with Rosenberg, Faust has one daughter, Jessica Rosenberg, who graduated summa cum laude from Harvard in 2004 and now works as a fact-checker for the *New Yorker*. She also has one stepdaughter, Leah Rosenberg, a specialist in Caribbean literature who teaches at the University of Florida at Gainesville.

Fenty, Adrian M.

Dec. 7, 1970– Mayor of Washington, D.C.

Address: Office of the Mayor, 1350 Pennsylvania Ave., N.W., Washington, DC 20004

Adrian Fenty's successful 2006 bid to become, at 36, the youngest-ever mayor of Washington, D.C., produced both excitement and uncertainty in the nation's capital. Fenty, a second-term City Council member representing Ward 4, which includes much of Northwest Washington, had previously shown himself to be a dedicated public servant, unusually attuned to individual citizens' needs—from those that surfaced during PTA meetings to those arising from conditions of trees or curbs on specific streets. He nonetheless remained a polarizing figure, initially receiving no endorsements in the mayoral race from his fellow City Council members, who complained that he was primarily an attention-seeker and was not sufficiently involved in the larger decision-making process of the city government. Fenty did indeed attract media attention, with his highly visible, marathon campaigning sessions, in which he went door-to-door through much of the city to meet voters. He presented as his true aim, however, that of tackling problems in Washington that had not been solved during the otherwise largely successful tenure of his predecessor, Mayor Anthony Williams. A two-term mayor who declined to seek a third term, Williams was credited with straightening out the city's finances and with helping Washington to develop an attractive real-estate market. Fenty, for his part, vowed to address issues including education and crime, placing particular emphasis on school reform. In the *Philadelphia Inquirer* (September 10, 2006), Steve Goldstein wrote that the 2006 mayoral election represented "a referendum on the city's rapid gentrification" under Mayor Williams, "a rising tide that did not lift all boats, leaving many of the poorest residents high and dry."

Fenty's chief opponent for the Democratic nomination—and thus, in that mostly Democratic city, for the mayoralty—was a 26-year political veteran, City Council chair Linda W. Cropp. "The difference between the two is that she [Cropp] might try to keep the machinery of government well oiled; Adrian might be inclined to scrap it and try some new ideas," the deputy editor of the *Washington Post*'s editorial page, Colbert King, told Goldstein. The framing of the election as a choice between a safe, predictable veteran and a fresh, energetic newcomer was common in press coverage of the race. The *Post*'s endorsement of Fenty for mayor, on September 5, 2006, proclaimed, "He offers a vision of the city that challenges the best in people." Fenty was sworn in as mayor on January 2, 2007.

Adrian M. Fenty was born on December 7, 1970 in Washington, D.C., the second of the three sons of Phillip Fenty, an African-American, and Jan Fenty, who is white. He was raised in a row house in the working-class neighborhood of Mount Pleasant. His parents, whom Fenty described to Jura Koncius for the *Washington Post* (August 3, 2006) as "former hippies," were active in the civil rights movement; they had moved to Washington from Buffalo in 1968. When Fenty was a small boy, his father—an artist whose work adorned their house—stayed at home with the three boys while Jan Fenty taught school. By the time the boys were in their teens, their parents had opened an athletic-shoe store, Fleet Feet, in the Adams Morgan neighborhood of Washington, and Fenty and his brothers helped out at the store when they were not in school. Fenty attended Wilson Senior High, a public school, before completing his secondary education at the private Mackin Catholic High School. He told Vanessa Williams for the *Washington Post* (August 31, 2006) that he became interested in the process of lawmaking during an 11th-grade civics class. According to Williams, Fenty decided to become a lawyer so that he could "help shape public policy behind the scenes."

At Oberlin College, in Oberlin, Ohio, Fenty was a member of the basketball, cross-country, and track teams. During his college years he served as an intern for U.S. senator Howard Metzenbaum of Ohio; Washington, D.C., congressional delegate Eleanor Holmes Norton; and U.S. representative Joseph P. Kennedy of Massachusetts, all Democrats. Fenty earned a B.A. degree in English and economics from Oberlin in 1992, then studied law at Howard University, in Washington, receiving his J.D. degree in 1996. He met his wife, the former Michelle Cross, at Howard. The two were married in 1997 and settled in Crestwood, a neighborhood in northwest Washington. Fenty began attending meetings of his neighborhood association, which fueled his interest in elective office. He volunteered for the unsuccessful mayoral campaign of former City Council member Kevin Chavous and later served as counsel for the City Council's Committee on Education, Libraries and Recreation, which Chavous chaired. Fenty's first forays into local politics were as commissioner and treasurer of ANC (Advisory Neighborhood Commission) 4C—one of 37 such commissions in the city—and as president of the 16th Street Neighborhood Civic Association. Michelle Fenty told Williams that her husband did not carefully plan but, rather, fell into his political career. "I saw that [politics] was what gave him passion," she said. "He was the happiest when he was on the ANC. He would come home very excited about having talked to all these people and how he was going to help them with their problems."

During that time Fenty also practiced law, serving on probate cases for two law firms and acting as a victims' advocate with the Crime Victims Compensation Program of the D.C. Superior Court. His opponent in the 2006 mayoral race, Linda Cropp, would cite several of those cases in accusing Fenty of incompetence. In the most widely reported episode, Fenty was assigned by the court in 1999 to handle the affairs of an elderly man, William Hardy Sr., who was suffering from dementia and whose relatives were suspected of stealing his money. In the year that Fenty was responsible for the case, $22,500 vanished from Hardy's credit-union account. A judge wrote that Fenty's conduct was "either incompetent or negligent or both." Fenty, the court found, had not stolen from Hardy but had made errors in filing documents and overseeing the elderly man's finances that allowed Hardy's relatives to exploit him. The Office of the Bar Counsel informally admonished Fenty, who repaid $15,000 to Hardy's estate. Though he refused to go into detail when speaking to Williams about the incident, Fenty said, "I learned you have to cross every 't' and dot every 'i,' because one little thing can lead to a big problem."

Fenty was elected to the City Council of the District of Columbia in 2000, defeating the four-term incumbent Charlene Drew Jarvis for the Ward 4 seat and becoming, at 29, the council's youngest member up to that time. Fenty won the election through a relentless campaign of direct contact with voters, which included going door-to-door and listening to individual constituents' complaints. During his one-and-a-half terms on the 12-member council—he was reelected in 2004—Fenty continually addressed individuals' needs. Michael Grunwald suggested in the *Washington Post* (September 10, 2006) that as a City Council member, Fenty had relatively little involvement in the policy-making that led to various overall improvements in the city under Mayor Anthony Williams, such as stabilized finances and a revitalized downtown area. Instead, Fenty focused on such direct actions as getting trees pruned, attending PTA meetings, and "answering e-mail on his omnipresent BlackBerry," as Grunwald wrote. Fenty was chairman of the council's Committee on Human Services, which oversees the city's Department of Youth Rehabilitation Services, Child and Family Services Administration, Department of Human Services, and Office of Aging. During his tenure Ward 4 saw the opening of a number of restaurants and other businesses and the building of new housing units. Fenty opposed Mayor Williams's ultimately successful efforts to close the city's only public hospital, D.C. General. He also opposed public funding for a baseball stadium in the city, on the grounds that the project (which was later approved) would reap few benefits for taxpayers. In 2003 Fenty helped introduce legislation to ban smoking in almost all indoor workplaces, including bars and restaurants.

In 2005, in what was perhaps his most notable move as a council member, Fenty boldly proposed a $1 billion capital-improvement program for the city's ailing public schools, to be financed with proceeds from the local lottery. After persuading two colleagues to introduce the bill with him and five others to sign on as co-sponsors, Fenty began seeking media coverage for the plan. Other council members balked at Fenty's plan, particularly its reliance on lottery revenue, which they felt was untenable. Jack Evans, the chairman of the council's Finance Committee, told Grunwald, "Adrian's plan was absolutely absurd. The financing was hopeless—and the financing was the whole point." But with parents and educators passionately seeking improvements for the schools, Fenty's bill later passed unanimously—though not before Kathy Patterson, the council member who chaired the Education Committee, had changed the funding source to business taxes and Evans had altered the plan to call for $3 billion spent over 15 years on school construction and renovation. Those changes notwithstanding, Fenty's supporters cited the bill's passage as proof of his ability to get results.

In 2005 Fenty announced his mayoral candidacy. He embarked on an aggressive campaign that included eight- to 10-hour days of walking door-to-door, even in harsh weather, and personally asking residents for their votes. "Never has the District seen such intense hand-to-hand contact between a mayoral candidate and the electorate," Williams wrote, citing the candidate's claim that his volunteers had visited every house in Washington and that Fenty had been to more than half of those homes himself. After a July poll showed Fenty leading his opponents, Cropp stepped up her campaign efforts, which came to include negative ads about Fenty. One ad called Fenty "reckless" for voting against a limit on spending by the D.C. government, while another claimed that Fenty's vote against a crime bill "puts our safety at risk." Cropp also pointed to Fenty's mishandling of William Hardy's estate and of another probate case from which Fenty was dismissed; one ad stated that Fenty had "turned his back on the elderly." The ads were not enough to stop Fenty, who won the Democratic primary with an estimated 57 percent of the vote, while Cropp captured 31 percent. As Washington, D.C., is predominantly Democratic, Fenty easily prevailed in the general election on November 7, 2006, receiving 90 percent of the vote. The *Washington Post*'s endorsement of Fenty for mayor applauded his efforts toward improving schools: "At a time when most politicians were thinking small or not at all about the city's dilapidated school buildings, Mr. Fenty drew public attention to the problem with some well-timed media events. With the public mobilized, he introduced legislation with a price tag that prompted his colleagues to scoff. But his perseverance caused his detractors to sign on to the idea and find a way to finance the long-needed changes. Showmanship? We call that leadership." The editorial added that Fenty had "worked hard and without much fanfare to bring positive changes to juvenile justice" and that his "oversight of the agency charged with caring for people with mental retardation has kept public focus on a long-neglected agency."

Fenty, who was sworn into office on January 2, 2007, is the youngest mayor in the city's history and its sixth elected mayor since the establishment of home rule in the district, in 1975. (Prior to that, D.C. was governed by a board of commissioners appointed by the president.) In filling his administration's top Cabinet posts, he chose officials from the Williams administration as well as members of his own campaign staff. His initial priorities as mayor included winning control of the city's school board, so that it would function as a mayoral advisory panel, arguing that he cannot otherwise achieve his goal of improving the city's schools. In its current configuration, the board consists of five elected members and four appointed by the mayor. Fenty's plan echoed New York City mayor Michael Bloomberg's successful 2002 takeover of that city's schools. Although Fenty had voted against a similar move by his predecessor, Williams, he claimed to have been persuaded, both by the apparent success of Bloomberg's model and by the continued poor performance of D.C. schools, to reverse his stance. In June 2007 Fenty fired the school superintendent, Clifford B. Janey, for acting too slowly to bring about reform; he chose as Janey's successor Michelle A. Rhee, a former teacher and the founder and president of the New York City–based New Teacher Project, a nonprofit organization that helps school districts to recruit and train new teachers. Taking another cue from Bloomberg, Fenty remade the mayor's office into a large, open work space called "the bullpen," with Fenty himself sitting in the center of the room. The new mayor dismissed the idea that his aides might feel intimidated by his constant presence. "People will stay more focused," he told David Nakamura for the *Washington Post* (December 3, 2006). "And they have their BlackBerrys if they want to do a personal message with no one seeing them."

Fenty said to Jura Koncius that in his personal life, "the big three for me are work, family and working out." He and his wife, who practices international business law, have twin boys, Matthew and Andrew, born in 2000. Fenty told Koncius that he enjoys swimming and playing football and basketball with his sons. Fenty also participates in triathlons, sometimes with his father, who is now in his mid-60s.

Ferrera, America

Apr. 18, 1984– Actress

Address: c/o Endeavor Agency, 9601 Wilshire Blvd., 10th Fl., Beverly Hills, CA 90212

With her role as Betty Suarez on the hit ABC television show *Ugly Betty*, the actress America Ferrera has helped to redefine beauty in an industry in which waistline measurements often matter more than talent. Prior to her work on the show, Ferrera, as a curvaceous Latina woman, struggled to find acceptance in the Hollywood community; although she knew from an early age that she wanted to pursue acting, she found few parts intended for actresses of her ethnicity and body type and few casting directors willing to look beyond those factors. Those early struggles have frequently found parallels in the lives of the characters Ferrera has since portrayed on screen. Her first feature film, *Real Women Have Curves* (2002), brought Ferrera a Special Jury Award for acting at the Sundance Film Festival. Her next major role, in *The Sisterhood of the Traveling Pants* (2005), was another that echoed her real life; her portrayal of Carmen, a daughter of divorced parents who yearns to be accepted by her father, earned praise from critics who were surprised to find a performance of such depth in what promised to be a superficial teenage drama. As the title character of the comedy *Ugly Betty*, Ferrera—and her refreshing take on beauty and celebrity—has begun to garner national attention. "I'm not a model. I never wanted to be a model. I never wanted to do ads for Neutrogena. That's not what I set out in my life to do," Ferrera told Rick Bentley for the *Fresno (California) Bee* (August 20, 2006). "I set out to tell stories. I set out to represent real people. And to me, Betty is the most beautiful opportunity that's ever come across my path to represent a whole generation of young women who don't recognize themselves in anything they're watching." In her first season of portraying the lovable, braces-clad Betty, Ferrera won a Golden Globe Award, an Emmy Award, and a Screen Actors Guild Award for best actress in a comedy, honors that affirmed her belief that there is a place in film for actors of diverse appearances. As she told Doug Elfman for the *Chicago Sun-Times* (November 2, 2006), "I can't go out there and save the world, but if I can look at the child next to me and make them feel alive and like they are not invisible for a second, that feels like a real reward."

The youngest of six sisters, America Georgina Ferrera was born on April 18, 1984 in Los Angeles, California. Her parents, who are both Honduran, divorced when she was young; her mother, whose name is also America, raised the children. "The way my mother raised me and the values she instilled in me allowed me to be persistent," Ferrera told Claudia Puig for *USA Today* (October 18, 2002). "She taught me you can be whatever you want, no matter what people say." Ferrera, who grew up in a predominantly Jewish neighborhood of the Los Angeles suburb Woodland Hills, has said that her ethnicity was never an issue for her until she ventured into Hollywood for auditions. "Then people saw me as Latina," she recalled to Loren King for the *Boston Globe* (November 10, 2002). "The label was instant." Ferrera started acting at age eight, when she was cast in a junior-high-school production of *Romeo and Juliet*. From then on she was determined to become an actress, despite receiving little encouragement. "It was like saying I wanted to go to the moon," she told Puig. "People would say, 'What are you talking about? You don't look like anything special.'" At 16 Ferrera signed with a small talent agency, working as a waitress to pay for her first acting classes and taking the bus to her first auditions because her mother would not drive her. After she proved to her mother that she was serious about acting, however, the elder America began to drive her daughter to the auditions. Ferrera auditioned for a full year without a single callback, a reaction she attributed to her relatively large physical stature. "I went through a lot of self-doubt," Ferrera told Elizabeth Weitzman for *Interview* (October 1, 2002). "I never turned on the TV and saw a Latina woman with an average body and I thought, I'll never be a Charlie's Angel, because I can't fit into size zero leather pants." Meanwhile, Ferrera attended El Camino Real High School in Woodland Hills, where her interactions with other students did little to help her self-esteem. She found the process of auditioning, however, to be even worse in that regard. "I didn't even know I was fat until I started acting," she said, as quoted by Bentley.

Ferrera's figure, though, would be the key to her breakout role in HBO Films' *Real Women Have Curves.* (Earlier in 2002 she had appeared as a cheerleader in the Disney Channel's original movie *Gotta Kick It Up.*) Playing Ana Garcia, the daughter of an immigrant family who is torn between accepting a scholarship to an Ivy League school and working for the family business, Ferrera was the movie's emotional anchor, representing both the literal and metaphorical curves women face in life. "America came in for seven callbacks. It was such an important role; we knew the movie depended on that," the film's director, Patricia Cardoso, told King. "She's one of the smartest people I've ever met. The crew often forgot she was only 17." Originally intended to be aired solely on HBO, the film received such an overwhelmingly positive reaction after its premiere at the Sundance Film Festival that HBO Films decided to distribute it nationwide. The premiere was the first occasion on which Ferrera saw the movie—indeed, the first on which she saw herself on a movie screen. She left Sundance with a Special Jury Award for acting, which she shared with her co-star, Lupe Ontiveros; she was also subsequently nominated for an Independent Spirit Award. "I got so lucky," Ferrera told Dixie Reid for the *Sacramento (California) Bee* (June 1, 2005) about the role. "But it was not easy. It was hard. It was my first movie, my second project ever, and I had to be in every single frame. And then I had to confront all these things that are very relevant to my life, the whole image thing." Regarding the "image thing," Ferrera said that her character, Ana, was an ideal role model—both for her audience and herself. "I really liked playing this girl because she's so confident," Ferrera told Cindy Pearlman for the *Chicago Sun-Times* (October 25, 2002). "I think her confidence is actually contagious. It's so important to show young girls that you have to be strong to survive in this world." Most important, Ferrera said, was the movie's message: "You leave this movie feeling happy about who you are," she told Weitzman. "And that's something we're all hungry for."

After filming *Real Women* during her senior year of high school, Ferrera, like her character Ana, faced a choice—in Ferrera's case, whether to go to college or pursue her acting career. After graduating first in her high-school class, Ferrera decided to defer for a year from the University of Southern California (USC), where she planned to major in international relations, "because I wanted my life outside of acting to be, you know, a life," as she explained to Cindy Pearlman for the *Chicago Sun-Times* (May 29, 2005). Instead, she took a role in *The Sisterhood of the Traveling Pants*, a movie in which four teenage girls share one pair of jeans, sending them back and forth, during a summer when they are separated from one another. Based on a popular series of books by Ann Brashares, the film seemed at first to Ferrera to be light fare. "That script just sat on my desk for months," the actress told Bob Strauss for the *Daily News of Los Angeles* (May 29, 2005). "My agent was like, 'Have you read it? Have you read it?' I'm like, 'I'll get to it,' and I finally did, begrudgingly so. But halfway through, I thought, 'Wow, this is great.'" The film, which deals with issues ranging from first love to the death of a loved one, appealed to Ferrera in large part because of the complexity of her character, Carmen—the half-Latina daughter of divorced parents who goes to visit her father for a summer and feels left out of his all-white family. A daughter of divorced parents herself, Ferrera said that she could identify with Carmen's struggle. "I wouldn't say my acting in this movie just comes from my life," she told Pearlman, "but I didn't have to stretch too far for the feelings of being isolated, abandoned and out of place." While she co-starred with other up-and-coming actresses, Alexis Bledel and Amber Tamblyn, Ferrera's scenes—helped by a story line considerably more compelling than those of the other actresses' characters—stole the movie. "Ferrera is the star of this show, no doubt about that," Allison Benedikt wrote for the *Chicago Tribune* (June 1, 2005). Many critics, like Ferrera, found the movie to be far more poignant than they had expected.

Later in 2005, while pursuing her degree at USC, Ferrera appeared in a variety of smaller projects. In *Lords of Dogtown*, a dramatized history of competitive skateboarding, she played the small role of Thunder Monkey. She also returned to Sundance for the premiere of *How the Garcia Girls Spent Their Summer*, which garnered her a Movieline Breakthrough of the Year award. In December of that year, Ferrera appeared in the Off-Broadway play *Dog Sees God: Confessions of a Teenage Blockhead.* She also became a spokeswoman for the Dove Campaign for Real Beauty, a series of advertisements for the cosmetics company that featured people without model-like figures. She told Jessie Milligan for the *Fort Worth (Texas) Star-Telegram* (May 31, 2005) that the ads were especially useful for giving young women a better standard of beauty than that usually proferred by the media. "I hope young girls understand the manufactured images around them," Ferrera said, commenting on typical advertisements featuring stick-thin models. "It's those people's job to look like that."

By taking the title role of Betty Suarez in the 2006 breakout hit television show *Ugly Betty*, Ferrera made it her job not to project a typical image of female stardom. Based on the hit *telenovela* (Spanish soap opera) *Yo Soy Betty, la Fea*—which translates as "I am Betty, the Ugly"—the show follows Betty's trials and tribulations as the ugly duckling at a high-profile New York fashion magazine. The distinctly unglamorous role appealed to Ferrera instantly, as she told Mike Parker for the *Sunday Express* (January 7, 2007). "As soon as [executive producer] Salma [Hayek] showed me the script, I knew it mirrored some of the insecurities I had—and still have. There's a vulnerable nakedness to Betty. She's an awkward young woman determined to succeed in a world which seems as though it has been specifically designed for hip people only. I think audiences look at her and say, 'I can recognize my own clumsiness, my own awkwardness, my own insecurity there.' There are times you feel sexy and confident and there are times you feel like Betty." More than 14 million viewers tuned in to watch the show, making it the number-one new TV program in the U.S. Though *Ugly Betty* has a mostly female audience, its viewers are of diverse ethnicities and ages; it is among the top 20 shows among the highly sought-after 18-to-49-year-old demographic, as well as among the top 20 shows with viewers who earn an annual salary of $100,000 or more. Among Latinos, *Ugly Betty* is the highest-rated new English-language show in terms of total number of viewers, as well as the number-one show with viewers between the ages of 18 and 49. Much of the show's appeal is attributed to Ferrera's endearing portrayal of Betty. "Ferrera's performances are small wonders to behold," Tim Goodman wrote for the *San Francisco Chronicle* (September 27, 2006).

Ugly Betty was nominated for a 2007 Golden Globe Award for best comedy, and Ferrera won the award for best performance by an actress in a television series—musical or comedy. In her acceptance speech, Ferrera said that she was grateful for the opportunity to present a body image on television more realistic, and therefore encouraging, than those she grew up watching. As quoted by Susan Abram in the *Daily News of Los Angeles* (January 22, 2007), she said, "It's such an honor to play a role that I hear from young girls on a daily basis how it makes them feel worthy and lovable and that they have more to offer the world than they thought." Responding to Ferrera's earning the Golden Globe Award, the Democratic U.S. congresswoman Hilda L. Solis of California made a statement on the floor of the House of Representatives, as quoted by *US Fed News* (January 17, 2007): "Madame Speaker, I rise today to congratulate America Ferrera for winning the Golden Globe for best actress in a comedy for her work in the ABC show *Ugly Betty*. . . . Through her work, Ms. Ferrera is breaking down barriers for Latinos in prime-time television. I commend America and everyone involved in *Ugly Betty* for helping to break down stereotypes and provide a role model for young Latinas." Ferrera agrees that the role—which requires her to don braces, bright red glasses, and a disheveled, frizzy wig—is about redefining standards of beauty for the public, and she said that it has also helped her to create a new understanding of beauty for herself. She told Bentley that she never feels "more confident, more beautiful and more pretty on the inside" than when she portrays Betty. "I wish that one day, as America, I can feel the way that I feel when I'm Betty. When I'm Betty, there's a light that shines from the inside and it's so wonderful to be her." Ferrera also won a Screen Actors Guild Award and an Emmy Award for outstanding performance by a lead actress in a comedy series for her work on *Ugly Betty*. The second season of *Ugly Betty* began in September 2007.

Ferrera recently starred in and executive-produced the short film *Muertas*, directed by her boyfriend, the filmmaker and fellow USC student Ryan Piers Williams. She starred in and executive-produced the bilingual independent film *Towards Darkness*, released in 2007; the movie is based on the 2004 short film *Darkness Minus 12*, which Ferrera appeared in as well. Also due in 2007 is *Boy, Immigrant*, which features Ferrera in a Spanish-speaking role. As of January 2007, Ferrera had one semester of course work left to complete her degree.

Gates, Robert M.

NOTE: An earlier article about Robert M. Gates appeared in *Current Biography* in 1992.

Sep. 25, 1943– U.S. Secretary of Defense

Address: Office of the Secretary of Defense, 1000
Defense Pentagon, Washington, DC 20301

Robert M. Gates "is not a man who reveals himself," Paul Burka wrote for *Texas Monthly* (November 2006). "He's all business, a man under total self-control. He doesn't fidget. He isn't a backslapper. He doesn't make small talk. He doesn't boast; neither does he engage in false modesty. He is a motivator, not a cheerleader. He is always polite. He wears an air of authority as if it were tailored by Brooks Brothers. He answers questions fully but volunteers little. Most of his laughter comes from a finely developed sense of irony. I would back him to the hilt in a no-limit poker game." Gates has in a sense been backed in such a "game" by President George W. Bush, who appointed him secretary of defense in late 2006, thereby making him one of the most important participants in the high-stakes military operations the U.S. has undertaken in the Middle East in recent years. A career intelligence analyst, Gates served as the 15th director of the Central Intelligence Agency (CIA) from 1991 to 1993 and then spent a number of years in academia, becoming, in 2002, Texas A&M University's 22d president, a position he held until being sworn in as the U.S.'s 22d secretary of defense. Despite an intense love for his work at A&M and an

Robert M. Gates

aversion to returning to Washington, D.C., Gates—who was one of the most popular presidents in A&M's history—accepted Bush's nomination, citing a sense of duty. At an on-campus farewell rally, Gates told the A&M student body, as Matthew Watkins reported for the Bryan, Texas, *Eagle* (December 8, 2006, on-line), "A little less than a month ago, I was worried about beating the hell out of Nebraska. Now, I am worried about beating the hell out of Al Qaeda. I can't tell you how much you all mean to me and how big a part of my life you have become, and I will miss you forever."

Robert Michael Gates was born on September 25, 1943 in Wichita, Kansas. His father sold wholesale auto parts for a living. Raised in a middle-class section of Wichita, Gates was, by all accounts, a model child—a straight-A student and an Eagle Scout. A voracious reader, he tutored underprivileged children in his spare time and took part in activities sponsored by local religious youth groups. After graduating from high school, Gates enrolled at the College of William and Mary, in Williamsburg, Virginia, as a premedical student, but he soon switched his major to history, concentrating in Western Europe. During his college days he worked part-time as a school-bus driver and developed the custom of teaching his riders German and Russian words and phrases. William and Mary granted Gates a B.A. degree with honors in 1965, also naming him the graduate "who has made the greatest contribution to his fellow man," as Dan Goodgame reported for *Time* (May 27, 1991). Gates went on to obtain an M.A. degree in history from Indiana University's Institute on Soviet and East European Studies—now called the Russian and East European Institute—in 1966. While studying at Indiana, Gates was invited by a CIA recruiter to come to Washington, D.C., for an interview. Although he later admitted that he accepted the invitation only for the free trip to Washington, when the agency offered him a position as an analyst, he accepted it. Working for the CIA did not exempt Gates from the draft, and he served in Vietnam from 1967 to 1969 as a commissioned officer in the Strategic Air Command before entering the CIA full-time.

After returning from Vietnam Gates became an intelligence analyst specializing in Soviet affairs and impressed his superiors with his ability to peruse enormous amounts of information quickly and to produce crisply written, coherent reports. In 1971 he was rewarded for his outstanding work with an assignment on the CIA's support staff at the initial negotiations between the United States and the Soviet Union on reducing strategic arms. Although he appeared to be on the fast track at the CIA, Gates was still considering a career as a history professor, and in his off-hours he studied for a doctorate in Russian and Soviet history at Georgetown University, in Washington, D.C. He even refused a CIA offer to finance his studies because he "didn't want to feel obligated to stay," as Goodgame reported, in case an attractive teaching position opened up. Gates received his Ph.D. from Georgetown in 1974, having submitted a 290-page dissertation on Soviet assessments of China that later became known as an authoritative text on Sino-Soviet relations.

That year Gates was assigned to the staff of the National Security Council, where he remained for the next five years, serving under Presidents Richard Nixon, Gerald R. Ford, and Jimmy Carter. By 1979 he longed to return to the CIA, confiding to colleagues that his ambition was to someday be director of the agency. In January 1980 he was reassigned to the CIA as national intelligence officer for the Soviet Union and executive assistant to the director, Stansfield Turner. In 1980 Carter lost the presidency to Ronald Reagan, who appointed a new CIA director, William J. Casey. Casey soon became a mentor for Gates, and promoted him to deputy director for intelligence in January 1982, passing over about 60 other senior-level candidates. In September 1983 Casey appointed Gates to the concurrent position of chairman of the National Intelligence Council, with responsibility for overseeing the preparation of all intelligence estimates. Part of the reason Gates was able to rise to the top of the CIA so quickly was his expertise on the Soviet Union, which was the main focus of United States intelligence efforts in the Cold War–driven 1980s. Even after Mikhail Gorbachev's rise to power in the Soviet Union in 1985 and his introduction of glasnost, a policy of openness, shortly after that, Gates remained a strict cold warrior.

When Gates was promoted to deputy director of central intelligence, on April 18, 1986, succeeding the retiring John McMahon in the agency's number-two position, he received his first exposure to the operations side of espionage. Exactly eight months later, he was named acting director while Casey underwent surgery for the removal of a brain tumor. Casey resigned his post on January 29, 1987, and four days later Reagan nominated Gates to be his successor in what was expected to be a straightforward appointment. Evidence began to surface, however, that Gates had possibly been involved in the Iran-Contra affair—the administration's sale of arms to Iran, with funds illegally directed to anti-Communist rebels in Nicaragua. Republican senator William S. Cohen of Maine interrogated Gates at his confirmation hearing, accusing him of knowing more about the arms sales than he had admitted and describing him as "an ambitious young man, type-A personality, climbing the ladder of success," as Dusko Doder and Walter Pincus reported for the *Washington Post* (February 18, 1987). "You basically didn't want to rock the boat. You were not prepared to lay your career on the line over a matter you did not create. You didn't want to know about it." Gates conceded that he had not done enough to keep Congress fully informed of the administration's activities, but he refuted the charge that he had hesitated to step forward out of fear for his career. "Sycophants can only rise to a certain level," he responded in a rare show of emotion, Stephen Engelberg reported for the *New York Times* (February 19, 1987). "There is an ample supply of them in this town, and they only go so far. Senior officials understand that the most dangerous thing in the world is a yes man, and the people I have worked for felt the candor with which I apprised them was a valuable asset." With his chances for confirmation fading quickly, Gates withdrew his nomination on March 2, 1987. A day later Reagan nominated William H. Webster to be director of central intelligence; Webster was confirmed by the Senate on May 19. At Reagan's request Gates stayed on as deputy director of the agency. When Brent Scowcroft, Gates's former boss in the Ford administration, was named national security adviser by President-elect George H. W. Bush in December 1988, he arranged for Gates's appointment as his deputy.

On May 14, 1991 Gates got a rare second chance at his dream job when Bush named him to succeed as director of central intelligence William H. Webster, who was retiring. Although the Iran-Contra affair no longer dominated the headlines, Gates's peripheral role in it still posed a potential obstacle to his confirmation. He was also widely criticized for being too slow to anticipate the collapse of the Soviet Union. Gates's case was further weakened when Congressman Dave McCurdy of Oklahoma, the chairman of the House Intelligence Committee, recommended, on October 2, that Gates withdraw his nomination. Nevertheless, two weeks later, the committee, after hearing statements from members both in support of and in opposition to Gates, voted 11 to four to recommend his confirmation to the full Senate. On November 5 the Senate voted, 64 to 31, to confirm Gates, as 22 Democrats joined all 42 Republicans present in supporting him. Seven days later Gates was sworn in as the nation's 15th director of central intelligence. (At 48 he was the youngest person ever to assume that prestigious position, and he was the first CIA director to have risen through the agency's analytical branch, where raw intelligence is studied and interpreted, as distinct from the operational branch, which is responsible for the collection of intelligence.) Gates subsequently redirected the CIA's resources away from monitoring the former Soviet Union toward checking the spread of nuclear weapons in the Third World and combating the international drug trade.

Gates retired from the CIA on January 20, 1993. For the next several years he worked as a traveling academic, evaluating theses for the International Studies Program at the University of Washington and lecturing at a number of schools, including Harvard, Yale, Georgetown, and the College of William and Mary. He also published numerous articles on government and foreign policy and was a frequent contributor to the *New York Times*'s op-ed page. In 1996 Gates published a memoir of his time at the CIA, titled *From the Shadows: The Ultimate Insider's Story of Five Presidents and How They Won the Cold War*, to largely positive reviews. While its title seemed to promise a scandalous account, the book proved to be an analysis of policy—and a response to the longstanding criticisms of Gates's tough stance on the Soviet Union—rather than a confessional tell-all.

In 1999 Gates was appointed interim dean of the George Bush School of Government and Public Service at Texas A&M. Though he was initially reluctant to leave his home in Seattle, Washington, he and his wife began spending more and more time on the A&M campus. On August 1, 2002 Gates was appointed the university's 22d president. He explained his decision to take the post to the Associated Press (May 11, 2002): "If I could do one more public service, I should. And I couldn't think of a better place to do it than Texas A&M." During his tenure as president, Gates made marked progress in the school's "Vision 2020" plan, which seeks to turn A&M into one of the country's top 10 public universities by the year 2020.

Throughout his time at Texas A&M, Gates maintained a connection with national politics as a frequent guest on political talk shows. On the afternoon of the September 11, 2001 attacks on the World Trade Center, Gates defended the U.S. intelligence community to Paula Zahn for CNN News (September 11, 2001). "I think we have to bear in mind, even against the background of this catastrophe today, that the FBI and CIA have thwarted some very major terrorist operations against [the] United States in recent years," he said. "So they have had some very important successes and saved a lot of lives." In the years that followed, as the U.S. began its invasion of Iraq, Gates continued to appear frequently on the news-analysis circuit. He also began getting involved with Washington politics again. In January 2004 he co-chaired a Council on Foreign Relations task force on U.S. involvement in Iran, a country with which the United States had not had diplomatic relations since 1979. The task force urged the U.S. to pursue diplomacy over force on the issue of Iran's nuclear weapons, suggesting that Iran be allowed to develop its nuclear program in exchange for committing to use that resource solely for peaceful ends. "Washington should approach Iran with a readiness to explore areas of common interests, while continuing to contest objectionable policies," the task force's July 2004 report stated, according to the *Mideast Files* (on-line). In a press statement, Gates elaborated on the report, again urging diplomatic engagement as the more efficient means to a peaceful end. "It is not in our interest for Iran to have nuclear weapons," he said, as cited by National Public Radio (NPR, November 8, 2006). "It is not in our interest for Iran to oppose the new governments in Afghanistan and Iraq. And if we can engage them and try and bring some progress in those areas, then our interests have been served and that's what it's all about."

In 2005 President George W. Bush offered Gates the newly created post of United States director of national intelligence (DNI). Despite a reluctance to return to Washington, D.C., Gates initially decided to accept the position, feeling that it was his duty to serve the U.S. in a time of war. He scheduled a press conference to announce his decision and wrote an e-mail message to the Texas A&M student body expressing his sadness over leaving the school. Then Gates changed his mind, electing to stay at A&M—both because of how much he felt he could accomplish at the university and how little he felt he could accomplish as director of national intelligence. Even though he remained in Texas, Gates stayed active in the political sphere, and in 2006 Congress appointed him a member of the Iraq Study Group, also called the Baker-Hamilton Commission, a bipartisan panel formed to assess the situation in Iraq and make specific policy recommendations.

On November 8, 2006, one day after the Democrats succeeded in winning a majority in the House of Representatives and the Senate, Secretary of Defense Donald Rumsfeld resigned, and Bush nominated Gates to become the next defense secretary. Most pundits praised Gates's nomination, calling him the "anti-Rumsfeld," because it was widely believed that he would be more pragmatic and more cautious than Rumsfeld regarding military interventions; more apt to hold officials responsible for military disasters, such as the torture of prisoners at Abu Ghraib prison, in Iraq; more realistic regarding events in Iraq and other troublespots; and not defensive, prickly, or confrontational in his dealings with the media or Congress. Gates won even greater approval for the honesty he displayed in his Senate confirmation hearing a few weeks later. When asked by Senator Carl Levin, a Democrat from Michigan, if he believed the United States was winning the war in Iraq, Gates responded with a simple "No, sir." His answer immediately became such big news that he felt the need to clarify his words a few hours later, saying instead, "We are not winning, but we are not losing." When asked if he thought it had been a good idea to invade Iraq, he answered, "I think it's too soon to tell," adding, "I suspect, in hindsight, some of the folks in the administration probably would not make the same decisions that they made." Despite such unexpectedly candid answers, Gates still underwent intense scrutiny from senators concerned that he would simply become a mouthpiece for the administration. Gates strongly asserted that he would act independently. "I am not giving up the presidency of Texas A&M, the job that I probably enjoyed more than any that I've ever had, making considerable personal financial sacrifice, and frankly, going through this process, to come back to Washington to be a bump on a log," Gates told Senator Edward M. Kennedy, as quoted on CNN's *The Situation Room* (December 5, 2006). He further stated, "If I am confirmed, I'll be independent. I intend to draw my own conclusions and I'll make my recommendations. . . . I can assure you that I don't owe anybody anything."

The 23 members of the Armed Services Committee voted unanimously to confirm Gates, and he was sworn in as the United States' 22d secretary of defense on December 18, 2006. During his speech at the swearing-in ceremony, Gates gave a measured analysis of the war in Iraq, refraining from making any concrete statements about plans for the future. "All of us want to find a way to bring America's sons and daughters home again," he said, as quoted by *The World Today* (December 19, 2006), an ABC Australia program. "But as the President has made clear, we simply cannot afford to fail in the Middle East. Failure in Iraq at this juncture would be a calamity that would haunt our nation, impair our credibility and endanger Americans for decades to come." That same day the Pentagon released its quarterly report on the situation in Iraq, which Jim Miklaszewski described for NBC News (December 18, 2006) as "its most devastating report yet." The report stated that the past three months had seen the highest number of attacks by Iraqi insurgents on record, with both American and Iraqi casualties on the rise. Some questioned whether Gates was the right person to handle the situation. "If you're expecting revolution inside the Defense Department, don't hold your breath," Guy Raz reported from the Pentagon on the day of the confirmation for NPR (December 18, 2006). "Robert Gates might very well personify the word technocrat. He's neither sassy like his predecessor, nor is he ideological." Mel Goodman, a colleague of Gates's from the CIA and a longstanding critic of Gates's Soviet policy, told Raz, "He knows who his master is. And he knows who will advance him or who could hurt him. And so he is a windsock." A month earlier, however, when Gates's nomination was first announced, Vago Muradian, the editor of

Defence News (November 10, 2006), told David Mark for ABC News that it was just that kind of insider knowledge that would help Gates to effect change within the Washington system. "With Gates you're getting a completely different kind of an individual who has very strong bipartisan credentials," Muradian said. "Someone who has a reputation for being able to listen. He is somebody who's really been associated with the levers and wheels of power at a very senior level. So he's somebody who's familiar with how this system works and how to get things done."

On December 21, 2006, three days after being sworn in, Gates went to Iraq to talk to the commanders and troops on the ground. At the beginning of 2007, he recommended increasing the U.S. Army's strength in Iraq by 65,000 troops; he has since overseen the addition of some 30,000 soldiers. In February of that year, Gates announced the firings of the secretary of the army, Francis J. Harvey, and the army 's surgeon general, Kevin C. Kiley, following the disclosure in a series of *Washington Post* articles of inadequate medical care, instances of outright neglect, nearly impossible-to-negotiate red tape, and crumbling facilities at the Walter Reed Army Medical Center, in the nation's capital, where many servicemen and -women wounded in Iraq or Afghanistan were brought for treatment. In March 2007, reversing one of Rumsfeld's policies, he met with the directors of U.S. intelligence agencies with the goal of easing tensions between the intelligence community and the Pentagon. His recommendation that month that the detention center at Guantánamo Bay, Cuba, be closed was batted down by Vice President Dick Cheney and President Bush's former chief political strategist, Karl Rove.

In an effort to maintain adequate numbers of troops in Iraq and Afghanistan, Gates announced in April 2007 that the tours of duty for most active army units would increase from 12 to 15 months and that soldiers would to remain at home for one year between tours. "This policy is a difficult but necessary interim step," he said at a news conference, as quoted by David S. Cloud in the *New York Times* (April 12, 2007). "Our forces are stretched, there's no question about that." The following September Gates spoke before the Senate Appropriations Committee regarding the continued involvement of the U.S. in Iraq, suggesting that in the future American forces there would consist of five combat brigades serving as a "long-term presence." "When I speak of a long-term presence, I'm thinking of a very modest U.S. presence with no permanent bases, where we can continue to go after Al Qaeda in Iraq and help the Iraqi forces," he said, according to David S. Cloud in the *New York Times* (September 27, 2007). He also said that, besides the many billions of dollars needed for other war-related expenses, the Pentagon wanted $11 billion for 15,000 additional heavily armored vehicles, to protect American troops from the increasingly sophisticated roadside bombs planted by insurgents in Iraq. Gates has said that he writes personal letters of condolence to the families of all Americans killed in service in there.

Gates has been married for more than 40 years to the former Rebecca Wilkie, whom he met at Indiana University when they were dormitory counselors chaperoning a hayride together. They have two adult children, Eleanor and Bradley. Among the awards Gates has received are the Presidential Citizens Medal, the Intelligence Medal of Merit, and the Arthur S. Flemming Award, which is presented annually to the 10 most outstanding federal employees. In addition, Gates is a two-time recipient of the National Intelligence Distinguished Service Medal and a three-time recipient of the CIA's highest award, the Distinguished Intelligence Medal.

George, Susan

June 29, 1934– Social scientist; activist; writer

Address: Transnational Institute, P.O. Box
14656, 1001 LD Amsterdam, Netherlands

When the political scientist Susan George accepted an honorary doctorate from the Universidad Nacional de Educación a Distancia, in Madrid, Spain, on April 25, 2007, she was characteristically forthright about her disdain for the political establishment, saying, as quoted on the Transnational Institute (TNI) Web site, "I believe that the forces of wealth, power and control are invariably at the root of any problem of social and political economy. The job of the responsible social scientist is first to uncover these forces, second to write about them clearly, without jargon, in order to give ordinary people the right tools for action; and finally—recognising that scholarly neutrality is an illusion—to take an advocacy position in favour of the disadvantaged, the underdogs, the victims of injustice. This is what I think the tools of scholarship are for and this is how I have tried in my own work to use them." Throughout her career, George has been a strident antiwar activist as well as a powerful voice against acts of corporate greed. At a time when women were not often allowed places of power in any organizational hierarchy, George established herself as a leader in the antihunger movement and legitimized her scholarship in the eyes of skeptics by obtaining an advanced degree

Susan George

from the Sorbonne as well as a doctorate from the University of Paris, in her adopted country of France. The author of 10 books, including *How the Other Half Dies: The Real Reasons for World Hunger*, *Ill Fares the Land*, and *The Debt Boomerang*, George is regarded as a preeminent political and economic thinker and activist for human rights.

George was born Susan Vance Akers on June 29, 1934 in Akron, Ohio. She was the only child of Edith and Walter Akers, Episcopalians whose families had been in America for many generations; George's ancestors arrived in Massachusetts in 1632. George's father was an insurance broker, and her mother was a homemaker and a member of the Junior League. Though born during the Great Depression, George was raised in a privileged environment; she had a nursemaid and took dance classes, music lessons, and, at a YMCA, swimming lessons. After attending a public, co-educational primary school, she went on to enroll at all-girls private preparatory academy. She told *Current Biography* that single-sex schooling "made me not a feminist. It was normal that women do whatever anybody did. Women were the sports experts. Women were the brains. You weren't in competition with men. You weren't expected to shut up—on the contrary! Even in my era, I never felt that I was particularly put down as a woman ever." George's father encouraged all her interests, including those outside the realm of traditional femininity, such as science and baseball. When Walter Akers went to serve in World War II, his daughter assisted in planting a victory garden.

As a young student, George was a voracious reader and always ranked first in her class. Around the age of 12, she began to develop a strong passion for the culture, language, and people of France. As a teenager she chose to attend Smith College, in Northampton, Massachusetts, specifically in order to participate in the junior-year-abroad program in France. In Paris during the 1954-55 academic year, she took courses at Sciences Po, a school specializing in social sciences. During that time, at the age of 20, she met a successful French lawyer, Charles-Henry George. In 1956, after obtaining her B.A. degree in government studies and French, she married George, 12 years her senior; she made France her permanent residence that year, but she did not obtain French citizenship until 1994. She told *Current Biography* that in her early years in France she felt homesick "for my women friends, probably, but not for America, per se. I'd made my choice." The couple soon started a family. Once her three children were in school full-time, George attended the Sorbonne, obtaining the French equivalent of a bachelor's degree in philosophy in 1967.

George became a political activist in response to France's war in Algeria and U.S. involvement in Vietnam. She told *Current Biography*, "Vietnam broke my loyal little still-American heart. The atrocities, the [U.S.] government's lies, the betrayal of the country's ideals, all this cried out for justice." In 1967 George joined the Paris-American Committee to Stop War. In 1969 she became the assistant to the director of a nongovernmental organization (NGO), the American Centre for Students and Artists, for which she frequently organized antiwar events. (Her activities did not escape the attention of the FBI or the CIA; years later, taking advantage of the Freedom of Information Act, she discovered hundreds of pages of information about herself that had been obtained through surveillance.)

George told *Current Biography* that the Vietnam War "was this sort of gateway to understanding what America could be, which is to say something quite negative, which I had not understood at all when I lived there. I had accepted the usual propaganda." In 1971 she began working with the Front Solidarité Indochine, a group that organized antiwar lectures and protests in France. Her participation in their activities forced her to overcome her fear of public speaking. She also began volunteering as a translator for American, Cambodian, and Laotian antiwar activists. When the Paris-American Committee to Stop War was forcibly dismantled by the French government (which, according to George, acted at the request of the U.S. government), George collaborated with the directors of the Institute for Policy Studies in Washington, D.C., to form a new NGO devoted to social justice—the Transnational Institute, which opened its doors in Amsterdam, the Netherlands, in 1973. George remains a fellow at TNI and also serves as its board chair.

After the Chilean president Salvador Allende was overthrown in a U.S.-backed coup in September 1973, George helped Chilean political refugees to settle in France. In 1974 she enrolled in a doctoral program in political science at the School of Higher Social Science Studies at the University of Paris, completing her degree in 1978 and receiving highest honors. Meanwhile, in 1974 she traveled to the World Food Conference in Rome, Italy, where she was enraged by the corporate agribusiness representatives who dominated the proceedings. The World Food Conference was organized by the U.N. Food and Agriculture Organization (FAO), an agency designed to lead international efforts against famine and malnutrition; the two largest delegations at the conference were those of the United States and the agriculture industry. George felt that the FAO gave too much power to transnational agribusiness corporations. She told *Current Biography*, "This event was a turning point for me. . . . I was incensed at the level of official cant and the politics played with millions of hungry people's lives." She added that at the conference, "no one who counted took the real reasons for hunger—power and control in the wrong hands—into account."

In 1976 Penguin published George's first book, *How the Other Half Dies: The Real Reasons for World Hunger*. According to the Web site of the Transnational Institute, "Hunger is not a scourge but a scandal. This is the premise of Susan George's classic study of world hunger. Contrary to popular opinion, malnutrition and starvation are not the result of over-population, of poor climate or lack of cultivatable land. The reason why hunger exists on such a vast scale is because world food supplies are controlled by the rich and powerful for the wealthy consumer. . . . Working with local elites, protected by the powerful West, the United States paves the way and is gradually imposing its control over the whole planet. . . . The book's relevance, its ability to shock and its power to enrage have in no measure [diminished]." George told *Current Biography* that the book "launched" her when she was 42. "Everyone has the right to one enormous stroke of luck in life and this was mine. I've never looked back." *How the Other Half Dies* was a critical and financial success. William Diebold Jr. wrote for *Foreign Affairs* (January 1978) that the book was "a lively analysis. . . . The prescription is for change."

Thirty years after the book was published, George remained deeply concerned with issues of famine and food distribution. She attended the Table of Free Voices conference, held in Berlin, Germany, in September 2006 and organized by Dropping Knowledge, a German nonprofit organization dedicated to the promotion of international dialogue, art, and culture; as quoted on the TNI Web site, she said at the conference, "We . . . produce enough food for everyone, but most of this production is in places where people are not going hungry; and where people are going hungry, very often their farmers have been ruined by cheap imports coming from the rich countries. This has happened massively in Mexico. So, there are many more poor Mexicans than there were and many have lost their farms and these people cannot compete. Thai rice farmers have lost their land; Filipino rice farmers have lost their land."

George published her 1978 doctoral dissertation, *Les Stratèges de la faim* (Strategists of Hunger), in Switzerland in 1982. In the following year she published *Food for Beginners*, illustrated by Nigel Paige. She played an active role in organizing the World Food Assembly, a meeting held in Rome, Italy, in 1984 for the purpose of fighting famine and seeking social justice and composed of representatives of nongovernmental organizations from the Northern and Southern Hemispheres. George's book *A Fate Worse Than Debt* appeared in 1987. In her address to the executive committee of the World Alliance of the Young Men's Christian Association (YMCA) in Geneva, Switzerland, on June 19, 1999, George said about her reasons for writing the book, "We identified the fact that debt [owed to wealthy lending nations by poor countries] was the biggest new contributing factor to world hunger. That is why, having worked on world hunger and with a lot of NGOs, I got involved in studying debt. I tried to make a clear explanation of how it was contributing to economic injustice, and the very real effects on human beings: hunger, misery, a much worse life for women in particular, increased crime, riots, conflict, ecological destruction. Debt was involved in all of these issues." In "Rethinking Debt," a paper presented at the nongovernmental organization (NGO) conference North-South Roundtable on Moving Africa into the 21st Century, held in Johannesburg, South Africa, in October 1995, George wrote, "Debt lies at the nexus of a strategic, worldwide reconfiguration of power. . . . It has accelerated transfers of wealth from the poor to the rich both within and between countries. . . . It has downgraded and diminished the importance of the State and the ability of governments to govern; as well as the overall influence and negotiating capacity of the 'third world.' . . . The creditors may not be open to moral arguments, but if Africans speak with one voice, they may, perhaps, convince them that their interest lies in severing the debt noose." At the time of the book's publication, as George told the executive committee of the World Alliance of the YMCA, further explaining her impetus for writing it, "there were . . . a good many campaigns and lots of NGOs . . . interested in this issue, but it was clear that we weren't getting any involvement from the top people, from either governments, or the World Bank and the International Monetary Fund."

In 1990 George published *Ill Fares the Land*. From that year until 1995, she served on the board of the environmental conservation group Greenpeace International and of Greenpeace France. She particularly admired the organization's ability to mobilize its many regional branches to focus on protesting one major issue at a time. In an interview with Caspar Henderson for the Web site OpenDemocracy.org (October 13, 2004), George said, "Greenpeace was quite successful with such campaigns. All its offices across the world would suspend their particular activities and join together."

The Debt Boomerang, George's 1992 volume, continued her analysis of the inequalities between the wealthier nations of the Northern Hemisphere and the poorer countries of the Southern Hemisphere. She told the executive committee of the World Alliance of the YMCA that she wrote the book "with the idea that if the suffering in the South was not enough to move the powers, perhaps it would help if it was explained that the debt was not just a problem for the South, but that in fact it was a boomerang and it was coming back and affecting the rich countries in a great many ways." In *Faith and Credit: the World Bank's Secular Empire* (1994), which she wrote with the anthropologist Fabrizio Sabelli, George expounded her beliefs regarding the negative impact of the World Bank on the worldwide poverty and hunger crisis. The World Bank, founded in July 1944 at the United Nations Monetary and Financial Conference at Bretton Woods, New Hampshire, consists of five organizations responsible for providing funds and advice to countries in order to promote economic development and eliminate poverty. Supporters of the organization argue that the World Bank conducts ethical and transparent business with countries in need of help. Critics, including George, contend that the World Bank is a corrupt institution that provides insufficient assistance to poorer countries. According to the Bretton Woods Project Web site, "With the World Bank, there are concerns about the types of development projects funded . . . Many infrastructural projects financed by the World Bank Group have social and environmental implications for the populations in the affected areas and criticism has centred around the ethical issues of funding such projects. For example, World Bank-funded construction of hydroelectric dams in various countries have resulted in the displacement of indigenous peoples of the area. There are also concerns that the World Bank working in partnership with the private sector may undermine the role of the state as the primary provider of essential goods and services, such as healthcare and education, resulting in the shortfall of such services in countries badly in need of them." George said at the Table of Free Voices conference, "Our wealth does not depend on the Third World being poor, but we have organized everything in the North so that the Third World does remain poor. If the Third World were less poor, we would be selling them more, and we would in fact be richer."

La Suisse aux enchères (whose title translates roughly as "Switzerland Auctioned Off"), another collaboration with Sabelli, appeared in Switzerland in 1997. Two years later George published *The Lugano Report: On Preserving Capitalism in the 21st Century.* The book is a fictional report issued by a group of imaginary pro-capitalist, pro-globalization experts who raise the question of how to preserve capitalism forever. George explained at the Table of Free Voices conference that the book contains a scenario in which "I imagine that there is a report to be directed to Master of the Universe types who are asking pretty much that kind of question. How can we continue with this economic system without having total collapse? What must we do to make this continue to work? And the answer which is given unfortunately by this group of experts which I have invented . . . is, well, you cannot do it with eight billion people on earth as there are going to be in 2020. That's tomorrow in historical terms. So, the long emergency has already started. And, if we try to manage the world as we are doing now with eight billion people on earth, everything is going to collapse."

From 1999 to 2006 George served as vice president of the Association for Taxation of Financial Transactions to Aid Citizens (ATTAC France). During that period she also participated in the Helsinki Process, which she described to *Current Biography* as "a group established by the governments of Finland and Tanzania, with many other governments now acting as 'Friends' of the Process, trying to deal with the problems of globalization." She grew increasingly critical of the World Trade Organization (WTO) in the weeks before its 1999 meeting in Seattle, Washington. The World Trade Organization is responsible for negotiating and implementing new international trade agreements as well as enforcing member countries' adherence to those agreements. Its governing body, the Ministerial Conference, meets every two years. The WTO's advocates argue that the organization is an important intermediary between countries and is a positive force for financial growth in all nations. Detractors such as George argue that the WTO is biased in favor of wealthy countries and multinational corporations and that it harms smaller, less powerful countries. Critics see the WTO as a major force for globalization, the process by which corporations are allowed increasing flexibility with regard to global expansion as well as financial, environmental, and labor practices. The Seattle meeting of the Ministerial Conference of the WTO was disrupted by mass protests on the part of antiglobalization groups. George wrote for the London *Guardian* (November 24, 1999), "Without warning, the WTO has created an international court of 'justice' that is making law and establishing case law in which existing national laws are all 'barriers' to trade, and is sweeping aside all environmental, social or public health concerns." George wrote for *Le Monde diplomatique* (January 2000), "The civic movement's success in Seattle is a mystery only to those who had no part in it. . . . Trade must have no place in areas such as health, education and culture in the broadest sense of the term." George published *Remettre l'OMC a sa Place (Put the WTO in Its Place)* in 2001 and, the next year, *Pour ou Contre la Mondialisation Liberale*, consisting of a debate with Martin Wolf of the *Financial Times.* Offering a critical take on George's work, Mark O'Brien wrote for *International Socialism* (Spring 2000), "The weakness of George's analysis of the economic roots of the crisis of world capitalism leads directly to an uncertainty as to who her audience actually is. Often her writings read as an appeal to opinion formers and practitioners within government or development circles. . . . Her proposals border on an almost utopian belief in the humanitarian good sense of some elements within capitalist governments. . . . There is no sense in George's writings of the revolutionary potential of the working classes of the Third World and of the West."

George's book *Another World Is Possible If . . .* came out in 2004. She told Henderson, "This is at the heart of my book's argument—that Europeans must lead the world. My experience is that there are many people outside the movement who sense that there are a lot of things wrong with the world, but who are hesitant or unclear about what they are able to do. Here, my central argument is that, faced with an America that is going to be immovable . . . Europe has to lead the change. . . . So my plea to Europeans is to recognize who they are, what their achievements have been for the interests of the poor and working people over the last hundred years and say that a welfare model is possible for the entire world—and that it's up to us in Europe to make that happen."

In 2004 George half-heartedly supported the candidacy of U.S. senator John Kerry, Democrat of Massachusetts, for president. While she had canvassed for Kerry in Pennsylvania, she wrote for OpenDemocracy.org (November 3, 2004), "we all thought [Kerry] had a very good chance, even though everyone admitted it was hard to get really enthusiastic about him. . . . The man isn't the most charismatic ever to walk the earth. But at least he's not a proto-fascist or a go-it-aloner, and that's what we seem—apart from a last-minute miracle—to be stuck with now. With four years clear ahead of him and no re-election to worry about, I fear Bush and the ghastly neo-con/neo-liberals around him will now go on the rampage. They can continue with impunity their attacks on the Constitution and on hard-won freedoms; while profound economic inequalities and religious obscurantism spread throughout the country."

George published *Nou, Peuples d'Europe (We, the Peoples of Europe)* in 2005. She received an honorary doctorate in civil law from the University of Newcastle-upon-Tyne in January 2007, and in March of that year, the International Studies Association presented her with its first award for Outstanding Public Scholar at its congress in Chicago, Illinois. Also in 2007 she received an honorary doctorate in political science and sociology from the Universidad Nacional de Educación a Distancia, in Madrid. As of May 2007 George had written and was awaiting the publication of "Culture in Chains: How the Religious and Secular Right Captured America." Publishers in Spain, Brazil, and France swiftly acquired the book. Her work has been translated into French, German, Spanish, Italian, Portuguese, four Scandinavian languages, Estonian, Japanese, Korean, Bengali, and Thai.

In 2002 George's husband, Charles-Henry George, died at their country home in France. She has three adult children—Valerie, Michel, and Stephanie—and is a grandmother. George told *Current Biography*, "Either we achieve together a new level of human emancipation, and do so in a way that preserves the earth, or we shall leave behind us the worst future for our children that capitalism and nature can deal them. No one knows in which direction the balance will tip nor does anyone know which actions, which writings, which alliances may achieve the critical mass that leads us one way or another, backwards or forwards. I am acutely conscious of the precariousness of our moment and my four much-loved grandchildren give me added resolve to address it."

Gomes, Marcelo

(GO-mehz, mahr-SEH-lo)

1979– Ballet dancer

Address: c/o American Ballet Theatre, 890
Broadway, New York, NY 10003

A principal dancer with the New York City–based American Ballet Theatre (ABT), Marcelo Gomes has been hailed for his dramatic interpretation of ballet classics. "Where Gomes distinguishes himself from his exceptional peers is in his acting—not only with his face but his whole body," Apollinaire Scherr wrote for *Newsday* (June 12, 2005). "He joins an actor's acute sense of gesture and timing to a classically pure line and a modern dancer's feel for the gravity and texture of the movement. He combines physical amplitude with emotional clarity." Gomes has credited his success in such parts as Prince Siegfried in *Swan Lake* and Albrecht in *Giselle* to his ability to completely inhabit the char-

Rosalie O'Connor, courtesy of ABT

Marcelo Gomes

acters. "When I'm interpreting a role, that pirouette or jump matters, of course, but I'm someone else. I'm deep into the story and I'm not just doing an acrobatic trick," he told Astrida Woods for *Dance Magazine* (May 1, 2006).

Marcelo Gomes was born in 1979 to Haroldo Gomes, a lawyer, and Maze Mourao, a journalist, in Manaus, Brazil. He was raised in Rio de Janeiro. He has a brother, now a comedy writer, and a sister, now a television journalist. Gomes began studying musical theater as a five-year-old. "My sister was the dancer," he told Paula Durbin for *Américas* (September 1, 2003), "and one day I was waiting for her to finish class. In the same building there was a musical theater class and I went to check it out. I thought I could do it, and I did, even though I had come in the middle. Then I went to my parents and said I wanted to go back, and they said absolutely. I was already dancing around the house anyway, and my mother wanted to get me in a better space—before I broke something."

When Gomes was eight years old, Helena Lobato, a renowned Brazilian ballerina, saw him in a student production and invited him to take a ballet class with her. Gomes was instantly enthralled. "I found it so interesting, how [Lobato] worked with me, and all the steps. She would take me to her house and show me ballet videos, and I started to want to become what I was seeing. After a year with her, I decided to concentrate on ballet, and dropped the other [dance] classes," he told Mary Cargill in an interview for the Ballet Alert Web site (2003). His schedule was grueling. "I went to school in the morning," Gomes explained to Durbin. "I would eat my lunch from a box in the car, change out of my Catholic school uniform, go to ballet class, do my homework so I would do well on the tests—and I was exhausted at night."

After a few years of study at Lobato's school, Gomes joined a new dance studio run by Dalal Achcar, a former manager of the ballet company at Brazil's Teatro Municipal (Municipal Theater). There, he helped a fellow student make an audition tape for the Harid Conservatory, in Boca Raton, Florida. "It turned out Harid wasn't interested in her, but they wanted to know who I was," Gomes told Cargill. "I was only twelve, so I had to wait a year [before enrolling]." At 13 Gomes left Brazil—over the objections of Teatro Municipal administrators—to attend the conservatory. "In Brazil they really don't support dance that much, but once there is someone good, they want to keep them there," he explained to Cargill. "It's just like a soccer player, they don't want them to go play in Spain. So everyone wanted me to stay, but I really wanted to go, to open up my horizons." Gomes, then the only male student at his studio in Brazil, particularly welcomed the chance to study with other boys and to learn English. (English-speaking interviewers often comment on his fluency.)

Harid, founded in 1987, had gained, in its short history, a reputation for the quality and comprehensiveness of its program. "It was really a joy to go there," Gomes told Cargill. "We all took piano, and music theory, and singing. And dance history and art history. These came after ballet class, so we were all very tired! But it was very interesting to me, because I wanted to learn [everything] about the ballets." When he was 16 years old, the conservatory's instructors, most of whom were French, encouraged him to enter the prestigious Prix de Lausanne dance competition, in Switzerland. During the competition he performed a solo number by the choreographer Mark Godden and a piece from *The Nutcracker.* Gomes won the Hope Prize and was awarded a full-year scholarship to the Paris Opera Ballet School. "I wanted to go there because of the great tradition and training," he told Jennifer Dunning for the *New York Times* (June 23, 2000). He joked, "[When I went] I learned French a little bit and ate some cheese."

Before traveling to France, Gomes completed his final semester at the Harid Conservatory, graduating in 1996. He then returned to Brazil for a summer vacation. Coincidentally, ABT was performing there and Gomes, reasoning that it would be a good way to see the shows from the best vantage point, applied for work as a supernumerary (or extra). Once he had gotten that job, he inquired about taking a class with the dancers but was told by David Richardson, the assistant director, that it would be against ABT policy. Richardson relented after Gomes assured him that he was not seeking to join the dance troupe; scheduled to head to the Paris Opera Ballet School right after the summer, he wanted only to experience a single class with a company he admired. At the end of that class, Richardson was so impressed by the young dancer that he offered him an ABT contract. Gomes was wildly excited but, on the advice of his level-headed parents, turned down the offer in order to study in France.

Gomes attended the Paris Opera Ballet School, in Nanterre, a university town near Paris, for a year. "I had the passion, and I think [my instructors] saw the talent, but they wanted to refine everything," he explained to Woods. "At the beginning I was very resistant. I said to myself, 'What is there to revise?' But I quieted down my passion and just concentrated on my technique. Everything had to be precise and nothing tacky like sky-high extensions for boys. And when a foot left the floor it had better be pointed." Although he found the atmosphere of the school more restrictive than that of the conservatory in Florida, he credits his excellent technique, in large part, to his time there. "You definitely come out a French product," he told Durbin. "I was fortunate to be there; not many foreigners get that chance."

In 1997, after his year in France, Gomes approached ABT again. Administrators there remembered him and immediately offered him a contract to join the corps de ballet. (The corps refers to the dancers in a ballet company who perform as a group and have no solo parts.) Gomes remained in the corps for three years. "I wouldn't give up the corps experience for anything," he told Durbin. "In ABT you really feed off the other dancers. It's a very healthy environment. No one is alike, so there isn't a lot of rivalry." He was particularly happy to work with Julio Bocca, a famed principal dancer at ABT: Bocca is originally from Argentina and has been an inspiration to a number of Latin American dancers.

While in the corps, Gomes occasionally took on larger parts, filling in for injured dancers, and in 2000 he was promoted to soloist. Two years later he was named one of the company's principal dancers. He found the variety of roles he was cast in exhilarating. "You can be doing *Giselle* one day and the next you can be working with a choreographer who wants you rolling on the ground. It's such a marvelous [repertory], from *Swan Lake* to Paul Taylor [a modern choreographer]," he told Durbin. "I didn't know I could move as a modern dancer . . . but ABT has awakened another side of me."

While he enjoys performing modern choreography, Gomes has become perhaps most identified with a number of dramatic male roles that include Romeo, in *Romeo and Juliet*; Prince Siegfried and the dark sorcerer von Rothbart, both in *Swan Lake*; Albrecht, in *Giselle*; the title role in *Othello*; and the prince in *Cinderella*. Reviews of his performances in such roles are almost universally glowing. Of a 2002 performance of *Giselle*, for example, Theodore Bale wrote for the *Boston Herald* (November 15, 2002), "Last night's performance of *Giselle* by American Ballet Theatre at the Wang Theatre should have been called *Albrecht* instead, since principal dancer Marcelo Gomes gave such a gripping interpretation of the role that he dominated both acts of this much-loved ballet." Apollinaire Scherr wrote of another of Gomes's signature performances, "In *Swan Lake*, when Prince Siegfried's mother tells him to hurry up and choose a wife, he responds with a private, melancholy solo. Many danseurs [male ballet dancers] don't tell you much when they move slowly. They look stiff and awkward. When Gomes performs this dance, the leg he stretches behind him is so full of yearning that we know how lonely his mother's demand has made him feel." Scherr also applauded Gomes's willingness to play not only noble, romantic roles but to portray villains as well.

Gomes discussed some of his favorite roles with Cargill: "Albrecht is a wonderful role, by far my favorite. There are so many angles to it, and it seems to fit my technique and personality," he said. "And I love Romeo." He is also fond of appearing in *Fancy Free*—a popular modern piece by the choreographer Jerome Robbins, in which he dances the role of a sailor on shore leave.

Gomes is considered one of the strongest partners a ballerina could hope for. "I actually started partnering very early, in Brazil, when I could barely lift, so I have been trying to put girls on their feet for a very long time," he told Cargill. "When I got to ABT, I really developed a joy in presenting the ballerina. . . . I really like to look into someone's eyes and feel like you are making a connection. That's really much more exciting to me than seven thousand pirouettes." Gomes has been partnered with several ABT ballerinas; his work with the Argentinean dancer Paloma Herrera is considered by critics and fans to be of particular note.

The 2007 season was a busy one for Gomes. As of October he had appeared in ABT productions of *Swan Lake, Othello, Fancy Free, Romeo and Juliet, The Sleeping Beauty, Manon, Cinderella, From Here On Out, The Leaves Are Fading, Sinatra Suite, Symphonie Concertante* (a 1947 ballet choreographed by George Balanchine and set to Mozart's Sinfonia Concertante in E-flat major for violin and viola), and *C. to the C.* (or "Close to the Chuck," a production of new works from the choreographer Jorma Elo, in collaboration with the composer Philip Glass and the painter Chuck Close).

Gomes surprised some ballet fans when he appeared on the cover of the gay-themed magazine the *Advocate* (February 4, 2003). In that issue he discussed his homosexuality, telling the interviewer, Joseph Carman, that he had known about his sexual orientation since his early teens and that his family, which included a beloved gay uncle, had always been supportive. He admitted, however, that things had not always been easy for him in his native country. "I had a really hard time dancing in Brazil because I was male," he told Carman. "But I think it is getting better. I've gotten a lot more recognition at home." (Gomes has been awarded the Order of Rio Branco by the Brazilian government, for his accomplishments in the field of dance.)

Gomes lives in New York City and in his free time enjoys Broadway shows, movies, and the city's many restaurants. He has stated that he may retire to Brazil one day. He hopes to purchase a beach house there and teach, choreograph, or direct his own troupe.

Gondry, Michel

(mee-shell)

May 8, 1963– Filmmaker

Address: c/o Creative Artsists Agency, 2000 Ave. of the Stars, Los Angeles, CA 90067

"For me, when you produce art, you're trying to be in touch with who you were as a child, that purity of happiness," the filmmaker Michel Gondry told Margy Rochlin for the *New York Times* (April 7, 2002). Known for his whimsical concepts and arresting visual effects, Gondry has demonstrated his trademark style (several publications describe his work as "Gondrian") in a number of artistic mediums. He first gained widespread attention with a music video for the Icelandic singer Björk, in 1993, and has since worked with a wide variety of popular musicians—from the indie rocker Beck to the Australian pop star Kylie Minogue. At the same time Gondry also established a reputation as an innovative director of commercials; "Drugstore," his 1994 television spot for Levi's jeans, is listed in the *Guinness Book of World Records* as the most highly awarded commercial of all time. Though he got off to a shaky start in feature films, with the flop *Human Nature* (2001), Gondry has now solidified his niche—as the director of quirky, fantastical stories of romantic longing—with the films *Eternal Sunshine of the Spotless Mind* (2004) and *The Science of Sleep* (2006).

While Gondry's films capture a sense of childlike wonder, they also exhibit both intellectual and technical sophistication. "Crammed with fairytale images mined from dreams and childhood memories, the playfully faux-naif tone of Gondry's work often belies its stunning originality and technical complexity," Stephen Dalton wrote for the London *Times* (June 22, 2006). Chris Vognar, writing for the *Dallas Morning News* (September 29, 2006), described the director as "a contradictory conjurer, an alchemist whose interests and skills would seem to clash at every turn. He's among the most inventive filmmakers around, but he proudly employs low-tech methods and technology. His stories are willfully bizarre and brainy, but they're also achingly romantic fables that could come only from one who believes in true love." Gondry's unique vision is a large part of his appeal: he is as frequently described as a magician as he is a director—one who can take the often clichéd and overdone subject of true love and give it a new sheen. "I always thought of Michel as part illusionist and part film-maker," Gondry's friend and fellow music-video director Chris Cunningham told Dalton. "When I watch his videos I always feel like a seven-year-old being shown a trick."

Michel Gondry was born on May 8, 1963 in Versailles, France, where he grew up in a middle-class, creatively inclined family. Gondry's grandfather, Constant Martin, invented the clavioline, a forerunner of the analog synthesizer; Gondry's father was a musician and a computer programmer, and his mother was an accomplished pianist. The director's one sibling, his older brother, Olivier, also followed a creative path; he has designed special-effects software and directs television commercials and music videos. When the brothers were children, their father gave Michel a drum kit and Olivier a bass guitar, with which they formed their own punk band. Around age 12 Gondry also became particularly interested in photography—a hobby that served as an outlet for his frustrations over unrequited or problematic love. "I was hiding from reality," Gondry told Lynn Hirschberg for the *New York Times Magazine* (September 17, 2006). "I took pictures of one girl over and over. I was not even dating her, although I wished I was dating her. She ended up dating my older brother." Given that he is often described as "childlike," it is not surprising that the adult Gondry bears significant similarities to his childhood self. "As a kid, Michel was the same as he is today: losing things, angry not to find them, anxious at night," Olivier Gondry wrote for *Creative Review* (October 1, 2004). "But when he was interested in something, he did it with lots of energy: drawing, photography, drums."

Gondry put that considerable energy to work when he left Versailles for art school in Paris. He thought of himself as an aspiring painter and illustrator while also studying weaving and tapestry. He disliked, however, the institutionalization of the creative process, which often forced him to tailor his vision to fit those of his instructors. "My final project was cheesy," he told Hirschberg wryly. "Books becoming birds, which was something I knew they would like." At 22 Gondry took a job with a company that printed calendars. Bored by his tedious work, he bought a 16 mm camera at a flea market and began to make short films. He was also drumming in a band, Oui Oui, and produced the band's videos—often animated works of detailed fantasy sequences. Film soon became his primary passion, overtaking the musical pursuit that was its initial inspiration. "As a film-maker I am using 200 times more brain cells than as a drummer," he told Dalton.

In 1993 Björk, who is known for her eccentric musical and personal styles, saw one of Gondry's videos for Oui Oui on television. Attracted to his quirky sensibility, she hired him to direct a video for her song "Human Behaviour." The video, which featured Björk being chased and ultimately devoured by a giant teddy bear, caught the attention of a fellow video auteur, Spike Jonze, who would later prove instrumental in Gondry's transition to the big screen. In 1994 Gondry moved to London, England, where he worked for the advertising agency Partizan. He directed a slew of extremely successful advertising campaigns, most notably for Nike, Air France, and the Gap. In addition to "Drugstore," Gondry directed the "Mermaids" and "Swap" ads for Levi's jeans, as well as the famous "Bellybutton" (2001) commercial, which featured various girls' belly buttons singing Diana Ross's hit song "I'm Coming Out." Another of Gondry's standout commercials is "Smarienburg" (sometimes spelled "Smarienberg"), a 1997 spot for Smirnoff vodka, which pioneered the frozen-in-time technique that was later made famous by the blockbuster feature *The Matrix* (1999). Despite his success, Gondry told Hirschberg, he was restless. "London is the Hollywood of advertising," he said. "But advertising is dangerous for a director: the point of view in a commercial has to be expressed in 20 seconds, which is too simplistic for any other form. And the money is too good in commercials—you are always in luxury. I always knew that it wouldn't be wise to get used to those conditions."

Gondry continued directing music videos, working with such artists as Sinéad O'Connor, the Black Crowes, Massive Attack, and the Rolling Stones. His 1996 video for Cibo Matto's "Sugar Water" remains one of his most acclaimed works; using a split screen, it simultaneously follows the bandmates Yuka Honda and Miho Hatori—one woman moving forward through her day, while the other moves backward. He was also still directing many of Björk's videos—following "Human Behaviour" with "Isobel" and "Army of Me" in 1995; "Hyperballad" in 1996; and "Jóga" and "Bachelorette" in 1997. His successful collaborations with Björk encouraged him to try feature films. "When I was making commercials and videos in London, it was not in my mind that I would ever do a film in my life," Gondry recalled to Hirschberg. "But then we screened the Björk videos in a theater, and I realized how magical it was to see the work big."

In 1997 Gondry moved to the U.S. and settled in Los Angeles, California, where he wrote a script for an adaptation of the classic radio show *The Green Hornet* with Edward Neumeier, who had written the screenplays for *RoboCop* (1987) and *Starship Troopers* (1997). (The studio shelved the project after the writers had worked on it for two years.) Gondry also directed videos for Beck's "Dead Weight"—in which the sock-footed singer follows the path of his shoes, which walk on their own in front of him—and the Foo Fighters' "Everlong," which culminates with the lead singer, Dave Grohl, growing a pair of monstrous hands to defend his wife from a nightmare she is having. In 1998 Gondry released his first short film, *La Lettre* ("The Letter"), about a young boy's unrequited love.

By the time Gondry shot his first feature-length film, *Human Nature* (2001), he had become a critics' darling for his effective use of flights of fancy to convey earthly emotions. The movie—which follows a love triangle involving a controlling scientist (Tim Robbins), a woman covered in hair (Patricia Arquette), and the ape-man they try to civilize (Rhys Ifans)—was based on a script by Charlie Kaufman, who is often celebrated for his quirky, cerebral concepts. In 1999 Jonze, who had been working on *Being John Malkovich* with Kaufman, introduced him to Gondry. Upon meeting the screenwriter, Gondry proposed an idea for a movie that came from one his friends, the French artist Pierre Bismuth. Gondry suggested that he and Kaufman develop the idea—that of erasing the memory of a former lover from one's mind—into a feature-length film. The film would eventually become *Eternal Sunshine of the Spotless Mind* (2004), but Kaufman had to finish *Being John Malkovich* before he could begin writing the new script. In the meantime he gave Gondry—who was impatient to begin working on feature-length pictures—the script for *Human Nature*, which bombed both commercially and critically. Afterward, Gondry was discouraged almost to the point of artistic paralysis.

Gondry was at an all-time low in 2001 after the trying experience of directing the video for Radiohead's "Knives Out," which featured a plot that was even more autobiographical than his usual storylines; the lead singer, Thom Yorke, played Gondry in a story about one of Gondry's past girlfriends, who developed leukemia. Though Gondry considered "Knives Out" one of his best videos, he and the band parted on bad terms. "It really makes me cry to think about it," Gondry told Donald Clarke for the *Irish Times* (May 1, 2004). "Suddenly he [Yorke] decided he didn't like it. And, number two, he said: 'Why do I have to pay for Michel Gondry's therapy?' He then refused to let me put it on my own DVD." Then, in 2002, Gondry began what would become one of his most successful collaborations. For the video of "Fell in Love with a Girl," the White Stripes' 2002 breakout hit, Gondry painstakingly re-created the bandmates Meg and Jack White as Lego figures. With the success of that video, "I found I could be creative again," Gondry told Mottram. He went on to direct the band's videos for "Dead Leaves and the Dirty Ground" in 2002, "The Hardest Button to Button" in 2003, and "The Denial Twist" in 2005. In 2003 Palm Pictures collected a number of Gondry's most outstanding music videos for the DVD *Director's Series, Vol. 3—The Work of Michel Gondry.*

Gondry's return to music videos reinvigorated his creativity in time for him to film *Eternal Sunshine of the Spotless Mind*, which was released in 2004. His most successful film to date, *Eternal Sunshine* was received with unequivocally positive critical reviews, which credited Gondry with not only creating a visual masterpiece but also eliciting surprisingly powerful performances from the film's leads, Jim Carrey and Kate Winslet. One of Gondry's favorite directorial techniques was to leave the camera rolling continuously, leaving the actors unsure of whether or not they needed to be in character. The spontaneity of Gondry's style often led to confusion on the set but also a greater feeling of authenticity—for which Gondry happily sacrificed perfect consistency. "It's good, because life is so complex and unpredictable and non-justified than the story that you generally show in a movie," he told Cassie Carpenter for BPI Entertainment News Wire (March 31, 2004). "Sometimes the character is a little bit out of character, because sometimes we are out of character." In an interview with Carpenter, Kaufman, himself given to idiosyncratic touches, praised Gondry's unusual approach to directing: "Michel allowed stuff to happen in a very organic way. What I like about Michel is that he's got this technical brilliance, and yet there's this human stuff going on. That's a really unusual combination." That combination did not go unnoticed by critics. "Gondry's virtuosity lifts the film far past science fiction into cinematic efflorescence," Stanley Kauffmann wrote for the *New Republic* (April 5, 2004). "He shows us, more seductively than other directors have done, how freehand use of film can capture the flashes in our minds that slip between words." The film received numerous awards, and in 2005 Kaufman, Gondry, and Bismuth shared the Academy Award for best original screenplay. But while Gondry and Bismuth received credit for their contribution to the core idea of the film, it was Kaufman who gained widespread notice for his execution of the script, overshadowing the attention Gondry received for his directorial prowess—which the director reportedly took as a small but nonetheless hurtful slight.

By the time *Eternal Sunshine* premiered, Gondry already had a new project in the works—a film titled *The Science of Sleep*—which he wrote and was slated to direct. First, though, he took a pause from the love stories that were becoming his niche for a surprising side project, that of documenting the efforts of the comedian Dave Chappelle to put together a free concert in New York City featuring such artists as Kanye West, the Fugees, Mos Def, Talib Kweli, and the Roots. For *Dave Chappelle's Block Party* (2005), Gondry followed the concert from its conception to its execution on September 18, 2004. At Gondry's insistence, the concert took place in Bedford-Stuyvesant, a once notoriously disadvantaged neighborhood in the borough of Brooklyn, rather than in Manhattan's Central Park. "I said we should bring it to people for whom it means more," he told Jen Chaney for the *Washington Post* (March 3, 2006, on-line). Gondry also pushed for Chappelle to release the film in theaters, instead of having it go straight to DVD, so as to let audience members experience the film as if they, too, were at the concert. In an effort to further replicate the feel of a concert, Gondry gave up his usual special effects, knowing that they would only distract from the live performances. "All the concert films that have made it down to history were shot in a simple way . . . ," he explained to Chaney. "Otherwise they would distance you from experiencing the concert." Though the film seemed an unusual choice following *Eternal Sunshine*, it was in many ways a natural extension of Gondry's work in music videos. "It's very good to keep in touch with music," Gondry told Chaney. "It's moving faster than the film world. It's more in touch with reality." He later made more elaborate—and more typically "Gondrian"—videos for two of *Block Party*'s featured artists. In 2005 he directed a Christmas-themed video for the hip-hop star Kanye West's "Heard 'Em Say"; in 2006 he filmed the video for the Roots frontman Cody ChesnuTT's "King of the Game," which featured Gondry's animated drawings.

In the months before *Block Party*'s release, Gondry screened *The Science of Sleep* (which he had been filming almost simultaneously) at the Sundance Film Festival, setting off a bidding war for distribution rights, which were eventually won by Warner Independent Pictures for $6 million. Written and directed by Gondry, the autobiographical film centers on the character Stephane (Gael García Bernal), who has difficulty distinguishing his dreams from reality. Stephane falls in love with his neighbor, Stephanie (Charlotte Gainsbourg), who shares his eccentric, artistic nature; it is precisely their similarities, however, that end up driving the two apart, as Stephanie finds she would rather be with someone a little more grounded than Stephane. "I think dreams and real life are more interesting as inspirations than the movies themselves, because they are about us," Gondry explained to Carpenter.

Reactions to Gondry's first attempt at both writing and directing were mixed; while *The Science of Sleep*, like *Eternal Sunshine*, boasted a rich visual style, many reviewers felt that the script suffered without Kaufman's craftsmanship. "Other than being called childlike, the criticism that I most often receive is that I can't really tell a story. That while I have a strong sense of the visual, my narrative skills are weak," Gondry told Hirschberg before the film was released, anticipating the potential response. "I would like to think, instead, that my movies are more like real life. In a relationship, so much goes unsaid, but that doesn't mean the emotion is not felt. In my films, I want to show all the abstract ways that people can affect us when we are in love."

For the most part, critics seemed to appreciate the idea and effort behind the film, even while pointing out its sometimes flawed execution. "*The Science of Sleep*, Michel Gondry's beguiling new film, is so profoundly idiosyncratic, and so confident in its oddity, that any attempt to describe it is bound to be misleading . . . ," A. O. Scott wrote for the *New York Times* (September 22, 2006). "But its fugitive, ephemeral quality is part of its point: dreams, after all, are hard to remember, and perhaps don't hold the meanings they seem to. Without them, though, our minds would be emptier and our lives much smaller. So while *The Science of Sleep* may not, in the end, be terribly deep, it is undoubtedly—and deeply—refreshing." Gondry concurrently put on a show of props from the film and mementos of his failed relationships, called *The Science of Sleep: an exhibition of sculpture and creepy pathological little gifts*, at the Jeffrey Deitch Gallery, in Manhattan. While appreciating the public's interest in his props (which for *The Science of Sleep*, as for the video "Everlong," included a pair of giant hands), Gondry told Dalton that he wanted people to see beyond their fantastical nature. "I hope I am not only a technician," he said. "I always visualize the way I shoot on a horizontal axis, not looking down on people. What interests me most is to find a sort of intimacy, to converse with the people I shoot, to make them equal with the audience and the audience equal with them."

Gondry continues to direct music videos. In 2006 he reunited with Beck for "Cell Phone's Dead," and in 2007 he directed the video for the Paul McCartney single "Dance Tonight," featuring the actress Natalie Portman. His next film, again written by Kaufman, "Be Kind Rewind," stars Jack Black as a junkyard worker whose brain becomes magnetized and destroys the merchandise in his friend's video store. "Be Kind Rewind" is due for release in early 2008.

Gondry served as an artist in residence at the Massachusetts Institute of Technology in 2005 and 2006. He lives in Manhattan's East Village with his teenage son.

Gopnik, Alison

June 16, 1955– Psychologist; author; educator

Address: Dept. of Psychology, University of
California at Berkeley, 3317 Tolman, Berkeley,
CA 94720

"It is remarkable how much little children know and how much they learn in a short time. If you combine the psychological and neurological evidence, it is hard to avoid concluding that babies are just plain smarter than we are, at least if being smart means being able to learn something new." Those observations appear in the book *The Scientist in the Crib: Minds, Brains, and How Children Learn* (1999), co-written by Alison Gopnik, a pioneer in the field of cognitive psychology and a professor at the University of California at Berkeley (UC-Berkeley), and Andrew N. Meltzoff and Patricia K. Kuhl, co-directors of the University of Washington Institute for Learning and Brain Sciences. During the past three decades, Gopnik has made fundamental discoveries about the way infants' thinking processes develop and change as they compile a rapidly expanding body of knowledge about their worlds. Babies, Gopnik told an interviewer for *New Scientist* (May 17, 2003), "have ideas about other human beings, about objects and about the world—right from the time they are born. And these are fairly complex ideas, not just reflexes or responses to sensations." Starting at birth, according to Gopnik's "theory theory," developed in collaboration with Meltzoff and Henry M. Wellman, "children develop and change intuitive theories of the world in much the way that scientists do," as she put it on the Web site of the Institute of Human Development at UC-Berkeley. Thus, from the moment of birth, "extremely powerful learning capacities of several different kinds are . . . in place," as Gopnik explained to the *New Scientist* reporter. "Newborn babies have an initial 'theory' about the world and [have] the inferential learning capacities to revise, change and rework those initial ideas on the evidence they experience from the very beginning of their lives. Those capacities are much more powerful than can be explained by traditional ideas about learning: they involve much more than association and conditioning. Thanks to ideas from developmental psychology, computing and cognitive science, we are just starting to explain what those inferential learning mechanisms might be like."

Gopnik has been a faculty member of the Department of Psychology at UC-Berkeley since 1988. Earlier, among other institutions, she taught at the University of London, in England, and the University of Toronto, in Canada. Her extensive list of publications, the earliest of which appeared in 1981, includes chapters in such books as *Developing Theories of Mind*, *Chomsky and His Critics*, and *Explanation and Cognition*. Her articles have appeared in such professional journals as the *Journal of Child Language*, *Child Development*, *Psychological Review*, *Developmental Psychology*, *Behavioral and Brain Sciences*, and *Philosophy of Science*. She has also written for the *New York Times*, the *New York Review of Books*, and the *Times Literary Supplement*. With Meltzoff, whose expertise is cognition, personality, and brain development in young children, Gopnik wrote the book *Words, Thoughts, and Theories* (1998). In 2000 *The Scientist in the Crib* was reissued in paperback with the subtitle *What Early Learning Tells Us About the Mind*; in the British edition, the title was changed to *How Babies Think*. Gopnik's forthcoming book is entitled *How Children Change the World*.

The first of the six children of Irwin and Myrna Gopnik, Alison Gopnik was born on June 16, 1955 in Philadelphia, Pennsylvania, when her parents were both graduate students. One of her brothers, Adam Gopnik, writes essays and art criticism for the *New Yorker*; another, Blake Gopnik, is an art critic for the *Washington Post*. During Alison Gopnik's childhood her family moved to Montreal, Canada, where both of her parents joined the faculty of McGill University—her mother as a professor of linguistics and her father as a professor of English; Irwin Gopnik also served as the school's dean of students. Myrna Gopnik founded the Cognitive Sciences Group at McGill and became well-known in her field for her work on the genetic basis for a speech disorder known as dysphasia. Together, Myrna and Irwin Gopnik edited the book *From Models to Modules* (1986), which contains papers presented at workshops held at McGill on such topics as language acquisition and development, language comprehension, and scientific reasoning and problem solving.

After her high-school graduation, in 1970, Alison Gopnik entered McGill University. The school was "a wonderful place to be" at that time, she told Simon Hanson in 2000 for *Brain Connection* (online), in part because although the term "cognitive science" had not yet been coined, "that was what they were teaching at McGill. I got a wonderful education there." In a conversation with Katherine MacKlem for the Canadian magazine *Macleon's* (March 27, 2006), Gopnik recalled that during her freshman year, as an experiment, McGill began to discourage the use of the lecture system, in which, often, little or no interaction occurs between instructors and students. In the introductory linguistics course in which Gopnik enrolled at McGill in 1970, students were given "files that covered modules of learning," listing material that they were expected to read by themselves. The students could then gain a better or broader understanding of what they had learned by going to a designated campus lounge, where a faculty member or a graduate student connected with the course was always present. The lounge "became a hangout," as Gopnik told MacKlem; "students would talk to each other, faculty would talk to the students. It was enormously sensible and very successful. For the students, it was challenging to be in a situation in which we couldn't say to ourselves, 'I've learned something, because I went and sat in the lecture room.' We had to have actually learned something."

Although there is some dispute as to precisely when the first university came into existence, such schools certainly originated centuries before the printing press was invented, in the mid-1400s; since books were extremely scarce before then, the only way to impart information to large groups of students was by having a knowledgeable person lecture to them. However, as Gopnik explained to MacKlem, "the way people learn best is by effectively interacting with their environment." Ideally, in every field of discipline, a student would undergo a "guided apprenticeship," which would resemble training in a sport or craft or the playing of a musical instrument, in which an expert continually observes performance and assesses it; in addition, the student would have a laboratory and a library to "hang out in," as Gopnik put it, and then have a site where he or she could talk to peers or others about the subject. "People—including young children—seem to be designed to want to explore and experiment and interact with the things around them," Gopnik explained. "That kind of teaching is much closer to the natural way we learn." The lecture system, she said, "is, literally, a medieval form of learning."

Gopnik earned a B.A. degree in philosophy and psychology, with great distinction, in 1975. She next enrolled at Oxford University, in England. Having recognized there, as she told Hanson, that "the philosophical questions I was interested in were ones that you could answer empirically," she planned to continue to study both psychology and philosophy. She recalled to Hanson that as a first-year graduate student, she found herself spending her time with "two communities of people," one of which consisted of philosophy students and professors, the other of wives and babies of Oxford students and faculty. (Gopnik herself gave birth to her first and second sons during her graduate-school years.) In her interview with Hanson, she described one of those two communities as "a group of completely determined, disinterested, seekers of truth who spent all their waking hours trying to figure out deep important problems about the world" and the other as "these egocentric narcissistic characters who constantly demanded attention and care-taking. And, of course, the first group are the babies and the second group are the philosophers. So I decided if I was going to spend the rest of my life with a group of people, I would rather spend it with the babies than the philosophers."

For her doctoral research, Gopnik spent two years studying nine British babies, beginning when each was a year-and-a-half old. In particular, she recorded every word spoken by each child, except for common nouns and proper nouns. Referring to the renowned linguist Noam Chomsky, she told Hanson, "When I started out at Oxford I was an absolute rabid Chomskian of the most aggressive sort." She was "pretty much convinced," she said, that, as Chomsky theorized, all children are born with an innate knowledge of the universal grammar that is common to all languages. The question of how people gain language and other knowledge has engaged philosophers for thousands of years. According to one school of thought, the minds of newborns are "blank slates," completely empty of knowledge until exposed to it through experience or other outside mechanisms. Another school holds that all knowledge is inborn, placed there by a higher power or acquired during evolution or by chance, and that it becomes conscious with the proper stimulation. Chomsky, as Gopnik wrote in an essay for the book *Chomsky and His Critics* (2003), as reprinted on the Web site of the Institute of Human Development at UC-Berkeley, "made two very important contributions to this debate. The first was to cast it as an empirical, scientific, psychological question, rather than simply as a philosophical question. . . . The second . . . was to present a particular, rationalist hypothesis, the innateness hypothesis, as the empirical answer to the problem of knowledge." According to that thesis, in Gopnik's words, "Human minds are highly constrained innately. We can only formulate a very small set of possible representations and rules. Information from the outside world may trigger the development of those representations, and may narrow the set of possibilities even further by processes like parameter-setting, but the constraints remain unchanged throughout life. Representations and rules are not inferred or derived from the input."

Gopnik's observations of the nine babies as they gained competence in language, as she told Hanson, led her to reject Chomsky's theory as a faulty explanation "of what was going on." Instead, her thinking moved in the direction taken by the 20th-century philosophers Willard Quine and Rudolf Carnap, who, as she summarized their ideas for Hanson, maintained that "the way science works is that we never start from scratch, we always have some sort of theory about what the world is like. But we also have enormous degrees of freedom in terms of how we can modify and revise and change our theories in the light of new evidence." Babies, too, she came to believe, "are born with innate theories about how the world works," and thus their brains at birth are not "blank slates." However, unlike the way they are portrayed in the "Chomskian picture," as she explained to Hanson, babies "can and do revise pretty much anything in those theories in fundamental ways as they interact with the world and get more information and knowledge." As humans approach adulthood, she said, we lose the enormous mental flexibility that we had in our early years, but we gain something that is also invaluable: the ability to apply automatically and efficiently what we have learned.

Gopnik earned a Ph.D. in experimental psychology from Oxford in 1980. During the 1980–81 academic year, she worked as a lecturer in the Department of Applied Linguistics at Birkbeck College, a division of the University of London; she also taught courses offered by the Department of Design Research at the Royal College of Art, in London. In 1981, having won a postdoctoral fellowship from the Social Sciences and Engineering Research Council of Canada, she joined the Department of Applied Psychology at the Ontario Institute for Studies in Education, in Canada, where she remained until 1983. Concurrently, in 1982–83, she lectured in linguistics at Scarborough College, a part of the University of Toronto. That college promoted her to assistant professor in the Departments of Psychology and Linguistics in 1983. Also in 1983 she won a three-year research grant from the Natural Sciences and Engineering Research Council (NSERC) of Canada, and the following year she won an additional three-year NSERC grant; since then her work has also been supported by various U.S. foundations and government agencies, including the National Science Foundation. As a member of the faculty of UC-Berkeley's Department of Psychology, she has held the positions of assistant professor (1988–91), associate professor (1991–96), and, since 1996, professor in the Department of Psychology.

In the 1990s, in one illustration of how babies' understanding of other people changes with time, Gopnik and a graduate student of hers, Betty M. Repacholi, devised an experiment centering on food preferences. In the experiment, Repacholi offered a succession of 14-month-olds a choice of raw broccoli florets or Goldfish crackers. Invariably, each baby chose the latter. In the baby's presence, Repacholi then tasted each food, displaying expressions of disgust and unhappiness while chewing one and expressions of delight and happiness with the other. When Repacholi then asked the baby for something to eat and held out her hand, each child would offer a cracker, not only after the researcher had indicated that she liked the crackers but also after she had shown an aversion to the crackers and a fancy for the broccoli; the baby evidently assumed, egocentrically, that the other person must share his or her preference. When exposed to the same experimental situation at 18 months, the babies would offer Repacholi the broccoli after she had expressed her dislike of Goldfish crackers but fondness for broccoli; the babies thus indicated that they now understood that others may like something that they themselves dislike. "These data constitute the first empirical evidence that 18-month-olds are able to engage in some form of desire reasoning," Gopnik and Repacholi wrote in the abstract of their article "Early Understanding of Desires," published in *Developmental Psychology* (January 1997). "Children not only inferred that another person held a desire, but also recognized how desires are related to emotions and understood something about the subjectivity of these desires."

In another experiment carried out under Gopnik's direction at UC-Berkeley, children ages two to four played with a machine-like toy consisting of "different combinations of gears and switches that make other gears go," as Gopnik wrote for the *New York Times* Education Life Supplement (January 16, 2005), and they also watched adults manipulate the same toy. Nearly all of the children quickly figured out which gears and switches did what, thus demonstrating a sophisticated understanding of cause-and-effect relationships—an ability that the 20th-century psychologist Jean Piaget, a pioneer in the study of cognitive development in children, and many of his successors maintained was absent in preschoolers.

Researchers have shown that in a typical three-year-old's brain, the number of synapses, or connections, per neuron (brain cell) greatly surpasses the number in adults, indicating that a child's brain is far more active than an adult's. "Human children in the first three years of life are consumed by a desire to explore and experiment with objects," Gopnik and her co-authors wrote in *The Scientist in the Crib.* "They are like scientists. The crib, the house and the backyard are excellent laboratories." Gopnik told Patricia McBroom for a UC-Berkeley news release (August 10, 1999, on-line) that toddlers "think, draw conclusions, make predictions, look for explanations and even do experiments." Their fierce desire to learn about the world, Gopnik believes, triggers the willful disobedience commonly associated with the "terrible twos," a developmental stage that often begins when a child is about two years old. "Toddlers are systematically testing the dimensions on which their desires and the desires of others may be in conflict," according to *The Scientist in the Crib.* Gopnik said to Malcolm Gladwell for the *New Yorker* (January 10, 2000), "They may stare gravely at you while they head for a forbidden object, because your reaction is the really interesting thing. The child is a budding psychologist. We parents are the laboratory rats."

Gopnik has drawn comparisons between imaginative play and the scientific method and has suggested that the history of humans' discoveries, inventions, and alterations of the environment are inseparable from both. In her essay "The Real Reason Children Love Fantasy," for example, published in *Slate* (December 20, 2005, on-line), she wrote that "theorizing and fantasizing have a lot in common." "A theory, in science or in everyday life," she continued, "doesn't just describe one particular way the world happens to be at the moment. Instead, having a theory tells you about the ways the world could have been in the past or might be in the future. What's more, a theory can tell you that some of those ways the world can be are more likely than others. A theory lays out a map of possible worlds and tells you how probable each possibility is. And a theory provides a kind of logic for getting to conclusions from premises—if the theory is correct, and if you accept certain premises, then certain conclusions and not others will follow. . . . This is why theories are so profoundly powerful and adaptive. A theory not only explains the world we see, it lets us imagine other worlds, and, even more significantly, lets us act to create those worlds. Developing everyday theories, like scientific theories, has allowed human beings to change the world. . . . The uniquely human evolutionary gift is to combine imagination and logic to articulate possible worlds and then make them real. . . . A human being who learns about the real world is also simultaneously learning about all the possible worlds that stem from that world." At the annual convention of the Association for Psychological Science (APS) in 2006, which focused on the brain as a flexible "learning machine" that can "change throughout life," Gopnik gave a talk titled "The Logic of Imagination: How Children Change the World." In it she said that thanks to both inborn assumptions about the world and the ability to "very rapidly use data to learn," children can "imagine new things in the world, and they can use that new information to do new things in the world"—in other words, "change the world." "Everything [made by humans] in the environment we live in now was completely imaginary at one point in time," she noted. "The deepest part of our human nature is that we are trying to escape human nature." In summarizing Gopnik's talk for the APS publication *Observer* (August 2006, on-line), Leah Nelson wrote that young children's "ability to reshape their assumptions according to reality and then reshape reality based on their imaginings reflects the course of human evolution as a whole. It is the capacity for plasticity that makes it possible for children to learn and for the species to evolve, build, change, and grow."

Gopnik's many years of research have led her to suggest that for babies, such nonnatural stimulants as flashcards and Baby Einstein audiotapes are of dubious value; much more worthwhile, she believes, is prolonged daily interaction between a baby and a devoted caregiver, involving such activities as speech, play, and naturally occurring demonstrations of basic skills—the sorts of interactions that have become far too scarce in the lives of many children, whose caregivers have little time to spend with them one on one or, in some cases, little inclination to do so. Gopnik has also sharply criticized the recent, renewed emphasis on rote learning in many schools, a consequence of the passage of the No Child Left Behind Act, signed into law by President George W. Bush in January 2002. In an attempt to make primary and secondary schools more accountable for the academic performance of students, the law requires state departments of education to rely on standardized-test results, which forces teachers to spend what Gopnik and other critics consider an inordinate amount of time preparing students for such tests, which ignore creative thinking. "From a developmental point of view, this is the worst thing that we could imagine . . . ," Gopnik said to Nancy Cook for *Instructor* (March 2006). "At the very least, we need to persuade the authorities that testing for children's conceptual understanding and inductive reasoning is more effective than testing for information retention."

Among many other professional activities, Gopnik has served as treasurer of the International Association for the Study of Child Language (1984–87), president of the Society for Philosophy and Psychology (1994–95), associate editor of the *British Journal of Developmental Psychology* (1993–95) and *Child Development* (1997–2000), a reviewer of research-grant applications, and guest lecturer at universities and other institutions. In the late 1970s she married George Lewinski, an instructor of radio reporting at UC-Berkeley's Graduate School of Journalism and a senior producer of *Pacific Time*, a program on the public radio station KQED; earlier, Lewinski spent 10 years as the foreign editor of the public-radio program *Marketplace*. Gopnik has three sons—Alexei, Nicholas, and Andres Gopnik-Lewinski.

Guarente, Leonard P.

(gwar-EN-tee)

June 6, 1952– Molecular geneticist; educator

Address: MIT Dept. of Biology, 31 Ames St., 68-280, Cambridge, MA 02139

Laboratory rats and mice fed very low-calorie but nutritious diets often live as much as 50 percent longer than their weightier peers in research labs and remain vigorous and healthy well into their old age. Scientists have recorded examples of similarly lengthened life spans among worms, spiders, fish, monkeys, dogs, and other animals whose diets contain far fewer calories than those of control groups. What accounts for such significant differences in life span? The work of the molecular geneticist Leonard P. Guarente has provided some answers. Guarente, who has held the title Novartis professor of biology at the Massachusetts Institute of Technology (MIT), in Cambridge, since 2000, has investigated the processes of aging since 1991, and he was among the first to do so from the perspective of the molecular components and inner workings of the cell. He and his co-workers made the pathbreaking discovery that a family of genes known by the acronym SIR (silent information regulator), or SIRT in humans, affect longevity. When caloric intake is severely restricted, such genes produce enzymes known as sirtuins (the name is derived from the gene SIR2, also spelled sir2). Writing for the *New York Times* (November 17, 2006), Nicholas Wade, who has followed Guarente's scientific progress since 1998, explained that according to the theory Guarente has helped to develop, "sirtuins sense the level of energy expenditure in living cells and switch the body's resources from reproduction to tissue maintenance when food is low." From the standpoint of evolution, the main function of every animal is to reproduce; during periods of food scarcity, the likelihood of producing healthy babies that would themselves reach adulthood (and get the opportunity to reproduce) is greatly diminished. Temporary suspension of the ability to reproduce (that is, postponement of breeding) thus makes sense, as it would enable cells to concentrate on survival (tissue maintenance) until food became more abundant. "There are people out there claiming science will allow people to live thousands of years," Guarente said to David Rotman for *Technology Review* (December/January 2005). "I tend to believe that is a lot of bunk. But the opportunity we do have is nothing to sneeze at. I think it is the major opportunity that Mother Nature has given us to intervene in the aging process. And by intervene I mean not just to promote longevity but to fight diseases." Guarente, who has taught at MIT since 1981, explained to Rotman, "The big idea here is that there is a close connection between aging itself and diseases of aging," among them cancer, heart disease, diabetes, and senile dementia and other degenerative diseases of the brain—"really major diseases," in Guarente's words. Thus, if a drug could delay aging by triggering the activation of the SIRT genes, and do so by a chemical process normally triggered by caloric restriction, "diseases of aging would also be forestalled." Such a drug, as David Stipp wrote for the *Wall Street Journal* (October 30, 2006), would be tantamount to a "gerontological grail or a crucial part of it." Guarente (writing as Lenny Guarente) described his research in *Ageless Quest: One Scientist's Search for Genes that Prolong Youth* (2003), a scientific memoir. In 2000, with the geneticist Cynthia Kenyon of the University of California at San Francisco and the virologist Cindy Bayley, a founder of DeCode Genetics, Guarente launched the company Elixir Pharmaceuticals, whose mission, according to its Web site, is to develop drugs "that slow aging, reduce the disease and disability that accompany aging, and extend youthful health, vigor and productivity."

The son of Leonard Guarente and his wife, Norma, Leonard P. Guarente was born on June 6, 1952 in Chelsea, Massachusetts, and grew up in Revere, near Boston, Massachusetts. His grandparents were Italian immigrants. As a child he was "precocious by local standards," as he wrote in *Ageless Quest.* In high school Guarente was drawn more toward physics and chemistry than biology, a science that seemed to him to be "purely descriptive," as Wade wrote for the *New York Times* (September 26, 2000). What he heard about recent discoveries in molecular biology during his freshman year at MIT (1970–71) contributed to his decision to major in biology; he earned a B.S. degree in that subject in 1974. He then enrolled at Harvard University, also in Cambridge, where he conducted research in molecular genetics under the supervision of Jon Beckwith, a pioneer in developing techniques for isolating and cloning genes. Guarente received a Ph.D. from Harvard in 1978. His dissertation was entitled "Genetics of Transcription Termination"—transcription being the process in which cells make copies of the genes on their chromosomes.

For three years beginning in 1978, as the Jane Coffin Childs Postdoctoral Fellow at Harvard, Guarente worked under Mark Ptashne, a molecular biologist who specialized then, as now, in the actions of genetic switches, which activate and deactivate genes. In 1981 Guarente joined MIT's faculty as an assistant professor of biology; he became an associate professor in 1985 and a professor in 1991. During those years he headed a laboratory that concentrated on gene transcription. He also began to consider other areas of research, among them memory and learning, involving "some riskier subject, one where if he could make any headway at all he would have an impact," as Wade put it (September 26, 2000). He chose to study aging because, as he explained to Wade for the same article, he would have few competitors in that field, "partly because it's less clear what to do."

Although at that time little was known about molecular and genetic mechanisms of aging, scientists had established decades earlier that most rats whose diets have adequate nutrition but few calories live longer than rats that consume more calories. Prolonged life spans had also been recorded in other species fed extremely low-calorie diets. It thus seemed possible that caloric restriction would have a similar effect on humans. Currently in the U.S., the average woman consumes more than 1,800 calories a day, and the average man, more than 2,600. With very few exceptions, people unused to a drastically smaller caloric intake—say, 40 percent lower—cannot tolerate such diets; they suffer not only from fierce hunger pangs but from irritability, decreased sex drive, and an inability to concentrate or stay warm. (Countless people in many countries have no choice but to subsist on such diets, but since they suffer from insufficient nutrition as well, their potential life spans are shortened rather than lengthened.) Before Guarente began his studies, researchers had attributed longevity induced by caloric reduction to a genetic "starvation response," in which cells stop growing and reproducing in order to conserve energy. The energy instead goes to "cellular systems that limit damage from harmful 'free radical' molecules and other toxins produced as metabolic byproducts," as David Stipp wrote for the *Wall Street Journal* (October 30, 2006). Such damage, according to that theory, is what ages the cell. A crude analogy to negative effects of metabolism might be made with motor oil in a car, which, in addition to its other functions, acts as a detergent, keeping the moving parts clean. With use, the oil gets increasingly dirty, and its efficiency as a detergent diminishes; the dirtier it is, the less effectively it cleans. In time, it becomes useless, and may cause the engine to seize, or "die."

To find genes that control aging and get results as quickly as possible, Guarente had to study organisms with extremely short life spans. Mice did not qualify, as they live two to two and a half years, on average. Guarente chose to work with yeast, of which about 1,500 species have been identified (a small fraction of the number believed to exist); classified as fungi, yeast are eukaryotes—one-celled microorganisms with nuclei. Guarente told Rotman, "The question we wanted to answer was, Do yeast cells age? And if they do, are there one or a small number of genes that are particularly important in dictating the life span of these cells?" He added, "For four or five years we published nothing because we were just banging away at the problem." In 1995 two of Guarente's graduate students—Brian Kennedy (now at the University of Washington) and Nicanor Austriaco (now at Providence College)—found a species of yeast that lived longer than others. (Yeast reproduce asexually, by budding. When the parent—the so-called mother cell—undergoes division, it produces a bud, a smaller, so-called daughter cell, which separates from the mother cell. The life span of the mother cell is defined as the number of daughter cells that it produces.) Its longevity, Kennedy and Austriaco discovered, was due to the activity of a set of genes—the silent information regulator or SIR genes—that repressed the activity of other genes, by producing proteins that traveled to the tips of the yeast cell's chromosomes.

The SIR2 gene is crucial in that process. "We found that the sir-2 gene determines the life span of both yeast cells and roundworms," Guarente wrote for the *Scientist* (April 26, 2004). "In both organisms, if we add an extra copy of this gene, the life span is extended. Conversely, if we delete sir-2, life span is shortened." SIR2 was also shown to promote longevity in fruit flies. In a further discovery, David Sinclair, an Australian postdoctoral student in Guarente's lab, found evidence that as yeast cells age, their "machinery for copying chromosomes"—a process necessary for growth and reproduction—"runs amok," as Stipp put it, which leads to the cells' deaths. Armed with that knowledge, Guarente determined that SIR2 activation depends on the level in the cell of a particular chemical, which in turn reflects whether the cell's metabolism—the performance of its myriad functions—is proceeding at a normal rate or at a reduced rate because of insufficient nutrients, which usually would also indicate a reduced number of calories, or caloric restriction. As Wade explained in the *Times* (November 7, 2006), Guarente "proposed that sir-2 and its counterpart genes in animals were the mediators of caloric restriction: the genes sense when the body is running low on nutrients and direct a wide range of metabolic adjustments, from preserving tissues to burning off fat reserves." Mammals, Guarente found, possess the gene SIRT1, which corresponds to SIR2 in yeast. SIRT1 "makes a protein that Drs. Guarente and Sinclair believe triggers the slowed-aging mode in mammals when calorie intake is low," as Stipp wrote. Guarente believes that a cell's longevity under conditions of caloric restrictions depends not on the reduced production of harmful byproducts of metabolism, as the "starvation response" theory maintained, but on the deployment of SIRT1 and its protein—as well as six close relatives of SIRT1 and their proteins, which Guarente and his team later identified. The seven SIRTs would presumably be a key in the creation of a drug that fooled cells into operating as if they were grappling with caloric restriction.

Another promising development was the news—reported by Sinclair, after he had formed his own lab—that resveratrol, a plant compound present in red wine, had been found to activate the SIRT genes in worms and flies. Earlier studies had indicated that resveratrol lowers the probability that an organism will develop cancer, heart disease, and other maladies that accompany aging—"just what a substance that slows aging should do," as Stipp pointed out. When Sinclair and his team conducted the same experiments with SIR2 eliminated, the life spans of the worms and flies were not extended. "Sir2 is the key," Guarente told William Hathaway for the *Hartford (Connecticut) Courant* (July 14, 2004). "All roads go through Sir2." Moreover, he said to Hathaway, another substance or substances, yet to be identified, may prove to be better than resveratrol at activating SIR2.

In a review of *Ageless Quest* for *Science* (February 28, 2003), Daniel Promislow of the University of Georgia summarized Guarente's findings and also challenged his conclusions. "The real star of Guarente's narrative is . . . Sir2 . . . ," Promislow wrote. "Guarente argues that this single gene may . . . be a universal regulator of aging. He knows that a reader like me (an evolutionary biologist interested in aging) will question such a claim. Evolutionary theories of aging rest on the recognition that the strength of selection against deleterious genes declines as we age. As a result, natural selection is unable to remove a potentially very large number of deleterious alleles [different versions of a gene] that increase mortality rates late in life. Therefore, evolutionary models suggest that there should be a very large number of genes involved in the aging process. Guarente argues, however, that evolution may favor a single gene such as SIR2 if it enables an organism to survive hard times, albeit without reproducing. Given that just one gene can influence so many age-related processes, Guarente goes on to argue that, counter to evolutionary predictions, 'the causes of aging must not be infinitely complex and varied.' I applaud Guarente's attempts to reconcile the molecular aim of understanding how we age with the evolutionary aim of understanding why we age. . . . Nonetheless, I remain unconvinced that an understanding of how laboratory organisms slow aging during stressful times will necessarily tell us much about how organisms age in natural populations." Promislow noted that Guarente possesses "boundless enthusiasm" for his work and that "his excitement about his discoveries is tempered with a refreshing modesty. He spends far more time giving credit to his students and post-docs than to his own role in the discoveries he describes here. His book thus becomes more than simply a story about the genetics of aging: it also informs us about the mechanisms by which scientific discovery occurs."

In 2007 Guarente and his postdoctoral associate Nicholas A. Bishop found what they believed to be a connection between calorie-related longevity and the endocrine system of a species of worm: in *Nature* (May 31, 2007), they reported that after two particular neurons in the heads of the worms were removed, caloric restriction no longer affected longevity. In an article by Deborah Halber for MIT's Web page (June 18, 2007), Guarente was quoted as saying, "We suspect that the two neurons sense dietary restriction and secrete a hormone that increases metabolism—and life span—in the animal."

Guarente has published more than 150 journal articles. He has served on the editorial boards of several professional publications, among them the *Journal of Anti-Aging Medicine, Trends in Genetics, Experimental Gerontology*, and *Developmental Cell.* He served as associate editor of *Nucleic Acids Research* (1983–88) and of *Molecular and Cellular Biology.* He is a member of the scientific advisory boards of the National Institutes of Health (NIH), the Buck Center for Research in Aging, and the Maximum Life Foundation. His honors include a Presidential Young Investigator Award from the National Science Foundation (1984–89) and the Thomas D. and Virginia W. Cabot Career Development Professorship (1989–92).

When Guarente's four-year marriage to Barbara Weiffenbach, a geneticist, ended in divorce, in 1985, he won joint custody of their son, Jeffrey, who is now in his mid-20s.

Gygax, Gary

(GUY-gaks)

July 27, 1938– Game designer; co-creator of Dungeons & Dragons*; writer; entrepreneur*

Address: c/o Author Mail, Troll Lord Games,
P.O. Box 251171, Little Rock, AR 72225

Games, according to Gary Gygax, who has designed them, are "an interesting diversion from everyday life. Games give you a chance to excel, and if you're playing in good company, you don't even mind if you lose because you had the enjoyment of the company during the course of the game." Gygax, who made that observation during an interview with Allen Rausch for PC.GameSpy.com (August 16, 2004), is a creator of the immensely popular—and, for a while, highly controversial—role-playing game *Dungeons & Dragons.* Inspired by war-strategy games and the many fantasy novels Gygax has read since childhood, *Dungeons & Dragons* differs from children's usual make-believe (when they play house or cops and robbers, for example) in that each participant takes on the role of a specific character in ongoing stories, most involving military-like campaigns, searches for treasure, and hazards that must be avoided or overcome, with complex rules guiding the action. A "dungeon master" or "game master" interprets those rules, which describe the characters' powers, the equipment each character should have, ways in which the characters interact, and many other aspects of the game. Unlike board games, card games, athletic contests, and games of chance, *Dungeons & Dragons* produces neither winners nor losers. Materials required to play are the *Dungeons & Dragons* rule books, sheets of paper on which the characters' traits are listed, pencils, and dice. *Dungeons & Dragons* is acknowledged as the first role-playing game of modern times and as the precursor to the flourishing industry built on multiuser, online role-playing games. The influence of *Dungeons & Dragons* on popular culture has been vast. As Malcolm Kelly wrote for the Canadian newspaper the *National Post* (August 24, 2005), "You can arguably trace so many movies, television shows, arcade, console, PC and board games, collectible figures, miniatures, toys, books, magazines and yes, even perhaps the adventures of Harry Potter, to January, 1974, when *Dungeons & Dragons* first hit the market in a box filled with three books, a unique set of dice and a lot of imagination."

Since 1985, when Gygax ended his association—not amicably—with Tactical Studies Rules (TSR), the company that he had co-founded to market *Dungeons & Dragons*, he has invented, alone or with others, additional role-playing games. Among them are *Dangerous Journeys* and *Lejendary Adventures*, table-top battle games, board games, and a three-layered form of chess. He has also written two series of fantasy novels, known as the *Greyhawk Adventures* and *Gord the Rogue Adventures*; many short stories; and a series of reference books, collectively called Gygaxian Fantasy Worlds, which offer instructions on how to create such worlds with the goal of constructing role-playing games. In his conversation with Allen Rausch, Gygax said, "I do stuff that I like. The books I write because I want to read them, the games because I want to play them, and stories I tell because I find them exciting personally. When you finish one you feel great." He also said, "I would like the world to remember me as the guy who really enjoyed playing games and sharing his knowledge and his fun pastimes with everybody else."

The son of Ernest Gygax and his wife, Ernest Gary Gygax was born on July 27, 1938 in Chicago, Illinois, where he grew up. (In some credits his name appears as E. Gary Gygax.) His father had immigrated to the U.S. from Switzerland or Germany, according to various sources; there is also disagreement about his mother's origins, some sources reporting that she was a native-born American and others that she was a German immigrant. Gygax began playing card games at age five and chess at age six. In his youth he enjoyed reading science-fiction and fantasy novels, including works by Jack Vance, Ray Bradbury, and Robert E. Howard. He has also named the fantasy writers L. Sprague DeCamp, Michael Moorcock, Roger Zelazny, H. P. Lovecraft, and Fritz Lieber among his major influences. According to a profile of him on the BBC Web site, he dropped out of high school and spent just over a year at the University of Minnesota.

In about 1966, while working as an insurance underwriter in Lake Geneva, Wisconsin, Gygax helped to set up the International Federation of Wargamers (IFW). In "wargaming," which began as a military training tool, possibly in early–19th-century Prussia, players use maps and figurines to enact battles, with outcomes decided by the rolling of dice. Members of the IFW met regularly in Gygax's and other members' houses. Before it disbanded, in 1974, the group had between 600 and 700 members, mostly in the U.S. Midwest. Many IFW members formed branches, to enable them to focus on games specific to their particular interests. Gygax, a medieval-history enthusiast, launched the Castle and Crusade Society; its members played Dark Ages–themed variants of war games, with rules linked to their figurines' possessions (horses or shields, for example). When Castle and Crusade players started to grow bored, Gygax and his friend Jeff Perrin added such features as wizards who had the power to throw fireballs. Those changes proved popular, and the game, called *Chainmail*, attracted many players, as well as the attention of Don Lowry, the owner of a mail-order business called Lowry's Hobbies. At about that time Lowry had launched a publishing imprint, Guidon Games, with the idea of offering a book series about wargaming with miniatures, and he recruited Gygax as an editor. In 1971 Guidon Games published Gygax and Perrin's manual *Chainmail: Rules for Medieval Miniatures*. That same year Guidon published rules for a naval simulation called *Don't Give Up the Ship!*, developed by Gygax and Dave Arneson, an IFW member whom Gygax had met at the 1970 GenCon gathering. Gygax had organized the first GenCon—or Geneva Convention, as it is formally known—in 1968; held at his home in Lake Geneva, it attracted about 100 gamers that year. The annual GenCon is currently among the world's major role-playing-game forums. Its conclaves take place at sites in Anaheim, California; Indianapolis, Indiana; Barcelona, Spain; Paris, France; and the United Kingdom. About 25,000 people attended the Indianapolis convention in 2006.

At GenCon 1971 Arneson introduced a gaming scenario in which each figurine represented one person rather than the traditional 20. According to Rausch in a five-part history of *Dungeons & Dragons* for PC.GameSpy.com (August 16–20, 2004), "While there had always been an element of 'role-playing' in wargames, the feeling of really 'being' a medieval warrior in Arneson's game was almost unprecedented." Encouraged by the enthusiastic response of gamers, Arneson and Gygax created additional fantasy scenarios, while adhering to the original *Chainmail* rulebook. Greyhawk, a mystical world of Gygax's invention, would endure as the setting for *Dungeons & Dragons*. Over the next two or three years, both Gygax and Arneson made further adjustments to what had come to be known as the Fantasy Game. Arneson abandoned the *Chainmail* guidelines and introduced more elaborate settings, such as underground sites with dragons and treasures, while Gygax drew up new rules for the game, borrowing thematic elements wholesale from fantasy writers; among them was the Vancian magic system (named for Jack Vance), also known as "fire and forget," in which, as Gygax explained to Rausch, "the energy you draw when you memorize the spell energizes your brain. When you speak the words, the energy drains from your mind." Gygax also started using a 20-sided die (the Platonic solid known as an icosahedron), which he had seen advertised in a school-supply catalog. One day, while listening to him and Arneson speaking about dragons while they were occupied in Gygax's basement, Gygax's wife suggested that they call their game *Dungeons & Dragons*.

In 1973, after trying unsuccessfully to interest publishers in *Dungeons & Dragons* (among them Avalon Hill, which produced many war games and board games and rejected *Dungeons & Dragons* on the grounds that there was no clear way for players to win), Gygax and a longtime friend of his, Don Kaye, decided to publish the game themselves. With that end in mind, they formed the company Tactical Studies Rules (TSR, named after another gaming group Gygax had co-founded, with Kaye, Mike Reese and Leon Tucke—the Lake Geneva Tactical Studies Associaton). Another game enthusiast, Brian Blume, contributed most of the company's start-up funds. In January 1974 TSR placed *Dungeons & Dragons* on the market, and within 10 months, 1,000 copies had been purchased—a large number by wargaming-industry standards. The next thousand copies sold out in three months. In the next few years, spurred largely by word of mouth, nationwide sales steadily increased. Gygax would get phone calls, sometimes in the middle of the night, from players who had questions about rules. "*Dungeons & Dragons* was exposing thousands of people to the joys of gaming, fantasy, [and] history, and was creating new social networks around the hobby shops that sold the products," Rausch wrote. In 1977 TSR published a second version of *Dungeons & Dragons*, with far more complex rules; it became known as *Advanced Dungeons & Dragons*. During an interview with Harvey Smith for *Game Developer* (November 2002), Gygax said, "I do not, and I stress not, believe that the RPG [role-playing game] is 'storytelling' in the way that is usually presented. If there is a story to be told, it comes from the interaction of all participants, not merely the Game Master—who should not be a storyteller, but a narrator and co-player. The players are not acting out roles designed for them by the GM, they are acting in character to create the story, and the tale is told as the game unfolds, and as directed by their actions, with random factors that even the GM can't predict altering the course of things. Storytelling is what novelists, screenwriters, and playwrights do. It has little or no connection to the RPG, which differs in all aspects from the entertainment forms such authors create for."

By 1978 *Dungeons & Dragons* had become extremely popular among college students and teenagers. One day during the next year, James Dallas Egbert, a troubled Michigan State University student, disappeared in the steam tunnels under the school's campus. A rumor began circulating that just before he vanished, he had been playing *Dungeons & Dragons*. Egbert's disappearance triggered a wave of negative publicity surrounding *Dungeons & Dragons*. (In truth, Egbert had entered the tunnels determined to commit suicide. When his attempt failed, he hid at a friend's home for a month. He later left Michigan and in 1980 died of a self-inflicted gunshot wound.) In 1981, three years before the truth about Egbert's fate became public, Rona Jaffe published a roman à clef, called *Mazes and Monsters*, about the Egbert case; a cautionary novel about the supposed evils of RPGs, *Mazes and Monsters* was made into a television film starring Tom Hanks in 1981. During the next few years, Christian fundamentalist groups and coalitions of parents across the U.S. blamed the suicides of several teenagers on the alleged destructive effects of *Dungeons & Dragons*. Some condemned *Dungeons & Dragons* as having harmful spiritual and psychological effects and for promoting satanism, witchcraft, and other objectionable beliefs and practices. In Connecticut, for example, a spokesman for a group calling itself the Christian Information Council charged, "Playing these games can desensitize players to murder, suicide, rape, torture, robbery, the occult or any other immoral or illegal act," as quoted by James Brooke in the *New York Times* (August 22, 1985). Many reporters in the print and broadcast media presented stories concerning *Dungeons & Dragons* and its critics in a sensationalistic manner and likened players of the game to followers of a cult. In the opinions of many *Dungeons & Dragons* aficionados, Ed Bradley egregiously emulated such journalists when he interviewed Gygax for the CBS-TV news magazine *60 Minutes* in the mid-1980s. Gygax told Rausch, "In many ways I still resent the wretched yellow journalism that was clearly evident in [the media's] treatment of the game—*60 Minutes* in particular. I've never watched that show after Ed Bradley's interview with me because they rearranged my answers. When I sent some copies of letters from mothers of those two children who had committed suicide who said the game had nothing to do with it, they refused to do a retraction or even mention it on air." Gygax told Rausch that he had received deaths threats over the phone and in the mail. "I was a little nervous. I had a bodyguard for a while," he said. Although many observers noted that passionate *Dungeons & Dragons* players often immersed themselves thoroughly in the worlds created during games, no scientific studies ever found evidence of a link between *Dungeons & Dragons* and suicide or any other seriously antisocial behaviors. Ironically, the controversy surrounding the game helped greatly to boost its sales. In 1981 TSR, which then employed some 300 people, boasted gross earnings of $16.5 million, with $4.25 million in profits. In addition to glossy *Dungeons & Dragons* manuals, merchandise included beach balls, toys, and a book series launched as part of a campaign to educate parents and teachers about the game as a means of strengthening reading, mathematical, social, and imaginative skills.

Meanwhile, despite its success, TSR was beset by internal woes: Arneson left the company after a falling-out with Gygax over credit for the game's creation (a dispute that was settled out of court), and after Kaye's death, in 1975, contractual disputes with Kaye's wife forced Gygax to incorporate and rename the company TSR Hobbies Inc. In doing so Gygax—who, according to most accounts, lacked business savvy—overextended himself financially, and he could afford to retain only a minority share of TSR Hobbies. Brian Blume and Kevin Blume (variously identified as Brian's brother or father) gained majority control, with Brian as chief executive officer (CEO), and Gygax had limited say in the company's direction. In 1982, when the Blumes suggested that he develop *Dungeons & Dragons* products for television and film, Gygax moved to California; there, he set up a new company, called Dungeons & Dragons Entertainment, with himself as president but with the Blumes in control. "It took a long time and a lot of hard work to get to be recognized [on the West Coast] as someone who was for real and not just a civilian, shall we say, in entertainment," he recalled to Rausch. His efforts bore fruit when he negotiated with CBS the licensing of a *Dungeons & Dragons* cartoon spin-off. Co-produced by Marvel Productions and TSR, the *Dungeons & Dragons* cartoon series aired for three seasons beginning in 1983. According to Edward Power, writing for the *Irish Times* (December 16, 2000), "Despite its twee execution, the show exuded an otherworldliness approaching the haunting grandeur of Gygax's original vision."

While Gygax was in California, TSR's financial health deteriorated. Large sums were spent on company cars and frivolous office items, and according to Rausch, "nepotism under the Blumes' administration was rampant, with estimates that at least 90 relatives of the family had somehow ended up on the company payroll." When Gygax returned to Lake Geneva, as he told Rausch, "the bank was foreclosing and we were a million and a half [dollars] in debt." Gygax advised TSR's board of directors to remove Brian Blume as CEO, among other measures. His recommendations proved effective, but, not surprisingly, they angered the Blume family. In response, the Blumes then sold their shares in TSR to Lorraine Williams, a TSR board member who had inherited the rights to the *Buck Rogers* franchise. Gygax had little faith in Williams's potential as a manager for TSR (her disdain for TSR's audience of gamers had been widely noted), and he tried in vain, through legal means, to prevent her from gaining control of the company. At the end of 1985, he sold his remaining interest in TSR. (In 1997, with TSR deep in debt, Williams sold the company to the games publisher Wizards of the Coast.)

The year 1985 also saw the publication of *Saga of Old City*, the first of Gygax's two Greyhawk novels to bear the TSR imprint; the second, *Artifact of Evil*, followed a year later. The main character in both novels is Gord the Rogue, whose further adventures Gygax described in five additional novels, published in 1987 and 1988 by New Infinities Productions. In the early 1990s, after several years' preparation, Gygax and Dave Newton published the first installment of a new role-playing game, *Dangerous Journeys*, which came with an extremely complicated set of rules. Charging that the game bore too close a resemblance to *Dungeons & Dragons*, TSR sued Gygax for copyright infringement. Although Gygax contended that the accusation lacked merit, he agreed to settle the case by selling the rights to *Dangerous Journeys* to TSR, which agreed to pay his legal costs. His next role-playing game, created partly in collaboration with Chris Clark, is *Lejendary Adventures*. "Rules light and skill-bundle based," as Gygax described it to Rausch, the series was launched in 1999, with *Lejendary Rules for All Players*. As of early 2007, the series included two additional rule books, three "world setting" or "campaign world" source books, half a dozen adventure scenarios, and several boxed sets with "expansions." Gygax's publications also include *Role-Playing Mastery* (1987) and the reference manuals in his series Gygaxian Fantasy Worlds, which he described to Rausch as "generic books on how to construct a fantasy world"; the five volumes published since 2003 include *Gary Gygax's Nation Builder* and *Gary Gygax's Extraordinary Book of Names*.

Gygax had no direct involvement with the production of the film *Dungeons & Dragons* (2001), which was widely panned. In 2006 he lent his voice to Dungeons & Dragons Online, produced by Turbine Inc. Designed to replicate "that classic, sitting-around-the-kitchen-table Dungeons & Dragons experience," as Turbine's head, Jeff Anderson, told Seth Schiesel for the *New York Times* (February 27, 2006), that on-line game allows players to speak to one another via microphones on their computers, and a 20-sided die is displayed on screen. Contrasting the traditional Dungeons & Dragons with the Internet version, Gygax said to Schiesel, "The analogy I make is that pen-and-paper role-playing is live theater and computer games are television. People want the convenience and instant gratification of turning on the TV rather than . . . going out to see a live play. In some way, the computer is a more immediately accessible way to play games."

After he suffered a minor stroke and heart attack in 2004, Gygax quit his 50-year smoking habit and cut down on his workload. In 2006 he revealed on dragonsfoot.org that he had an inoperable, potentially fatal abdominal aortic aneurysm. (As of late 2007 he had provided no further information about the state of his health.) His first marriage, which ended in divorce, produced two sons and three daughters (Ernest Jr., Mary Elise, Heidi Jo, Cindy Lee, and Lucion Paul). A grandfather of seven, Gygax lives in Lake Geneva with his second wife, the former Gail Carpenter, whom he married in 1987; the couple have one son, Alexander Hugh Hamilton. Gygax's personal library holds thousands of books (both fiction and nonfiction), magazines, and maps. His leisure activities include reading and fishing.

Hewitt, Angela

July 26, 1958– Classical pianist

Address: c/o Seldy Cramer Artists, 3436
Springhill Rd., LaFayette, CA 94549

"What draws the listener to Angela Hewitt . . . has to do with contact," the music critic Bernard Holland wrote in a review of a concert by the pianist for the *New York Times* (February 17, 2007). "Most piano performances arrive in translation: the inner musician making a decision, then issuing a command that makes its way through the body onto the keyboard and into the ear. The process alters the results. Ms. Hewitt is one of those rare musicians who seem to get something into their heads and hearts and find it at their fingertips instantaneously. To fuel this leap must require a fund of psychic energy beyond the average capacity. Good musicians are good athletes, not in the muscular sense but in the staying power of their imaginations. This pianist's resolve to imbue every musical moment with an unrelenting sense of theater would exhaust most of us in 10 minutes." A child prodigy, the Canadian-born Hewitt made her orchestral debut with the Ottawa Civic Symphony at the age of 10, in 1968. She captured the top prize in eight international piano competitions, the first when she was 17; the last, at the International Bach Piano Competition, in Toronto in 1985, earned her the opportunity to make her first recording, for Deutsche Grammophon. She made her New York City debut in 1984, at Alice Tully Hall, and her London, England, debut the next year, at Wigmore Hall. She has since performed in many other prestigious concert halls, both in solo recitals and alongside many highly regarded orchestras, among them the Japan, Cleveland, and BBC Philharmonic Orchestras and the Montreal, Toronto, Vancouver, Bournemouth, Philadelphia, San Francisco, and Baltimore Symphony Orchestras. She has toured extensively worldwide, in North America, Europe, the Middle East, Asia, and Australia; as a member of a six-member pianists' collective called Piano Six, she has also given many recitals in remote areas of Canada, for schoolchildren and others who had seldom if ever heard classical music. Currently, she maintains a schedule of about 100 concert dates each year. A recital of hers in London in 2003 inspired the music critic Paul Driver to write for the London *Sunday Times* (September 21, 2003) that Hewitt "is one of the reliably mesmerising musicians of the day. . . . She seems to me the complete performer, gifted not only with fingers that imprint each note with a svelte newness and a mind that is not deflected by such precision work from calmly surmising the larger structure, but also with the ability to convey a spiritual seriousness that nonetheless does not exclude an utter charm."

Hewitt's repertoire includes several hundred solo piano pieces and works for piano and orchestra—many hundreds of pages of music that she has memorized. They include music by composers from the Baroque period, which extended from the last decades of the 16th century to the middle of the 18th (among them François Couperin, Domenico Scarlatti, Jean-Philippe Rameau, and George Frideric Handel); the latter half of the 18th century and the 19th (among them Haydn, Mozart, Beethoven, Schubert, Schumann, Chopin, Brahms, Grieg, Mendelssohn, Liszt, Mussorgsky, and Chabrier); and the 20th century (among them de Falla, Ravel, Prokofiev, Rachmaninoff, Honegger, Barber, Copland, and Messiaen, and six contemporary Canadian composers who wrote works especially for her). In the classical-music world, she is widely considered the foremost living interpreter of the works of Bach. In a project that began in 1994 and continued for 11 years, she recorded, on 18 CDs, all of Bach's major keyboard compositions, among them the Well-Tempered Clavier (Books I and II), the Goldberg Variations, the Two- and Three-Part Inventions, the Partitas, the French Suites, the English Suites, the Toccatas, the Italian Concerto, the Keyboard Concertos, the Brandenburg Concerto no. 5, and the Triple Concerto in A minor; a scholar of music as well, she wrote the liner notes for all of those CDs (as well as her other albums). "This series is one of the record glories of our age," a London *Sunday Times* (January 21, 2001) reviewer enthused, after writing that "Hewitt's playing radiates joy, wit and profound understanding of the composer's keyboard style." Hewitt has also recorded all the solo piano music of Ravel and all of Chopin's nocturnes as well as albums devoted to music by Couperin, Beethoven, Messiaen, Chabrier, and Granados. "I like playing a wide variety of stuff," she told Richard Todd for the *Ottawa Citizen* (November 28, 1996), "but, to tell the truth, when I'm playing Bach, and that's the hardest to do well, I ask myself, 'Why do I ever play anything else when I could be playing this?'"

In 2006 Hewitt was named the Artist of the Year by *Gramophone* magazine. Each of her two albums of Bach's Keyboard Concertos (2005) was named the Recording of the Month by *Gramophone*; others among her recordings were named the *Gramophone* Editor's Choice, including the disc containing three Beethoven sonatas (2006), or *Gramophone* Critics' Choice, among them her rendering of Bach's Well-Tempered Clavier, Book I (1998). That recording was also named the *BBC Music Magazine* Best Album of the Year and won a 1999 Juno Award (equivalent to a Grammy) as best classical album, from the Canadian Academy of Recording Arts and Sciences. Hewitt won another Juno Award in 2002, for her album of Bach arrangements—transcriptions of works that Bach wrote for other instruments, orchestra, or voice. Hewitt was named an Officer of the Order of Canada in 2000 and received the first annual BBC Radio 3 Listeners' Award/Royal Philharmonic Society Award in 2003. In a ceremony at Buckingham Palace, in London, on March 1, 2007, Queen Elizabeth II presented her with the Order of the British Empire.

The second of the two children and only daughter of Geoffrey and Marion Hewitt, Angela Hewitt was born on July 26, 1958 in Ottawa, Ontario, Canada. Her father, a native of England, gained some renown as the organist and choirmaster at the Christ Church Cathedral in Ottawa from 1931 to 1980; her mother was a high-school teacher of English and music. "My mother used to tie me into my playpen and I'd spend hours undoing the knots," Hewitt told Geoffrey Norris for the London *Daily Telegraph* (November 3, 2003), after noting that she has "always liked to unravel complicated things." Her parents played a vital role in shaping her musical development. On Sundays beginning early in her childhood, Hewitt would listen to her father play the organ in church. He "always performed Bach with great colour and drama, and the right sense of timing . . . ," as she recalled to Linda Scales for the University of Ottawa magazine *Tabaret* (Fall 2005, on-line). "My father was a perfectionist and I think he passed that onto me." As a toddler Hewitt played a toy piano; when she was three she began to study piano and classical ballet. "I was always responding to music by dancing around the room," she told Geoffrey Norris. Her pianistic gifts were apparent immediately. "My mother saw that I easily picked out tunes on the piano and had a really good ear," Hewitt told a writer for the *Toronto Star* (April 11, 2002). Her parents, who were her first music teachers, introduced her to the keyboard compositions of Bach "right away," as she told Norris. "Bach is the basis of all technique . . . ," she told Arthur Kaptainis for the *Montreal Gazette* (March 11, 1998). "For fingering, for articulation, for phrasing, for the acquisition of a beautiful singing tone." Hewitt was strongly influenced by the idiosyncratic recordings of the Canadian pianist Glenn Gould (1932–82), whose prodigious technique and many personal eccentricities were legendary. When she listened to Gould's radical interpretations of Bach's Inventions and other pieces, as she recalled to Norris, she would think, "That piece should surely go slowly. Why's he playing it so fast?" or "That piece is obviously a fast one. Why's he playing it so slowly?" "I knew from the beginning that there was something a bit strange in his character that meant that we could listen to him but would never imitate him," she said. During her youth Hewitt also took violin lessons (for 10 years), played the recorder, and sang in her father's choir.

Hewitt gave her first public performance at age four, at the Christ Church Cathedral. At five she won her first piano competition, in Rimouski, Quebec. The next year she won a scholarship to the Royal Conservatory of Music in Toronto, where she studied for nine years. She made her first appearance with an orchestra—the Ottawa Civic Symphony (now the Ottawa Symphony)—in 1968. At 15 Hewitt entered the University of Ottawa as a "special student." Her piano teacher there was Jean-Paul Sevilla, whom she described to Linda Scales as "fabulous from the first lesson. I never met anyone who taught like him. He just gave it his all; such joie de vivre!" Under Sevilla's tutelage Hewitt expanded her musical repertoire, studying, in addition to compositions by Bach, pieces by the 19th–20th-century French composers Paul Dukas, Maurice Ravel, and Olivier Messiaen. Sevilla taught her "more than just the piano," she said to Bob Clark for the *Calgary Herald* (February 9, 2002). "During his summer courses at Aix-en-Provence [in France] we'd have lessons every day, go to all the concerts and then go to the beach on weekends. So he made us enjoy life, too." In 1975 she won a top prize in a Bach competition held in Washington, D.C., and the Chopin Young Pianists' Competition, held in Buffalo, New York; she took the first prize in a Bach competition held in Leipzig, in what was then East Germany, in 1976, and a Schumann competition, in Zwickau, also in East Germany, in 1977. That year, at age 18, Hewitt graduated from the University of Ottawa with a bachelor's degree in music. The following year she moved to Paris, France. Also in 1978 she was victorious in the piano category in the Gian Battista Viotti Competition, in Italy, and in the piano competition of the CBC Talent Festival; in 1979 and 1980 she captured first prize at the Casadesus piano competition in Cleveland, Ohio, and the Dino Ciani Competition held at La Scala, in Milan, Italy, respectively. At around that time, having decided to focus on solo piano performance, she regretfully gave up her ballet training. Her ballet studies, she told a writer for the *Toronto Star* (April 11, 2002), had helped her to become disciplined. In addition, as a dancer, she said, "you learned stage presence and it even helps with how to play the piano, using your whole body rather than playing from the shoulders."

At her New York City debut, in 1984 at Alice Tully Hall, Hewitt played Ravel's *Tombeau de Couperin*, Bach's Toccata in C minor, Brahms's Piano Sonata no. 3, and, in a world premiere, Fantasia on a Theme of Robert Schumann, by the Canadian composer Steven Gellman. In 1985 she achieved a professional breakthrough, by winning the first prize at the International Bach Piano Competition, in Toronto, in a contest against 32 other pianists, whittled down from 166 applicants. (Olivier Messiaen was among the judges, and Hewitt played one of his pieces during the competition.) Hewitt's performance earned her a recording contract with the Deutsche Grammophon label and 20 concert engagements in Canada and Europe. Also in 1985 Hewitt moved to London and made her debut in that city, at Wigmore Hall. Her first recording, for Deutsche Grammophon, which went on sale in 1986, offered renditions of Bach's Italian Concerto in F major, Toccata in C minor, Four Duets (two-part inventions), and the English Suite no. 6 in D minor. Though it was well received, Deutsche Grammophon executives decided that Bach piano recordings would never sell well, and Hewitt's album remained her only recording until the early 1990s, when, after years of concertizing worldwide, Hewitt devised an ambitious undertaking: to record all of Bach's major works written for keyboard. The existence of highly regarded recordings of the same music made earlier by two famous interpreters of Bach—Gould and the American pianist Rosalyn Tureck—did not give her pause. "I thought there was room for another . . . ," she told Bob Clark for the *Calgary Herald* (February 9, 2002). "I'm very different from both [Tureck and Gould]. I just felt I had my own way and that people were eager to hear it." For Hewitt, the primary challenge that the project presented lay in the preparation rather than the recording process itself. "Playing, for example, his preludes and fugues, you've got four or five voices going at once, each of which has to be as clearly defined as the other and perfectly balanced," she told David Prince for the *Santa Fe New Mexican* (September 23, 2005). "Also, there is the musical knowledge you need to play Bach because, of course, in his time, nothing was written in the score. . . . You have the odd indication of tempo but hardly at all in all of his keyboard output. You have to know what the dances of the time were like, their characteristics, so as to play and apply those to the music. And often it's not written that such-and-such dance is a minuet or a gigue or a bourrée—you have to recognize it just from the music." Commenting on the technical complexity of Bach's music, she said, "From memory, it's the hardest music you can play. You put one finger wrong and you're off, and it's very hard to improvise a Bach fugue. It takes enormous concentration. It takes a lot of preparation before you can even play it the way you can sort of muff your way through a Beethoven sonata. In Bach, there's no place to hide." After an extensive search for the most suitable instrument, Hewitt and her producer, Otto Ernst Wohlert, chose a Steinway piano on which the great 20th-century German pianist Wilhelm Kempff made many recordings.

"Bach wrote most of his music for pedagogical purposes, and there is a progression to be followed if you want to understand them correctly," Hewitt wrote in an article for the *Ottawa Citizen* (September 6, 2004). She began her recording project with the Fantasia in C Minor and Two-Part Inventions (1994). Next came Six Partitas (1997); The Well-Tempered Clavier, Book I (1998) and Book II (1999); and 48 preludes and fugues—"the Everest of the piano repertoire," in Hewitt's words. During five days in 2000, the year that marked the 250th anniversary of Bach's death, Hewitt recorded his Goldberg Variations at the Henry Wood Hall, in London, a famous rehearsal and recording studio, in what she judged to be "the best performance I had given in 24 years," as she wrote for the *Ottawa Citizen.* Hewitt completed her Bach project in 2005. Bearing the Hyperion label, the Bach cycle was universally hailed by classical-music aficionados and critics. Richard Todd, writing for the *Ottawa Citizen* (October 7, 2003), called it one of the most "distinguished achievements in the history of recording." According to Vivien Schweitzer, writing for the *New York Times* (February 14, 2007), "The greatest compliment for Ms. Hewitt came from her father, who after listening to one of her recordings, said, 'I didn't hear you. I only heard Bach.'"

Hewitt's recent albums include a 2002 two-disc recording of solo piano compositions by Ravel, whose music she has described as "dance inspired," according to Steve Mazey in the *Ottawa Citizen* (April 27, 2002); a 2005 album containing Chopin's 21 nocturnes and four impromptus; three volumes (2003–05) of Couperin's piano pieces; and a disc (2006) with 18 of Chabrier's 26 solo piano pieces. Her renditions of Bach's three sonatas for viola de gamba, recorded with the cellist Daniel Mueller-Schott and released in 2007, was named *Gramaphane*'s Editor's Choice in October of that year.

After Hewitt repeatedly noticed, while giving master classes, that "students (and their teachers) often seem to have so little idea how to study Bach," as Vivien Schweitzer reported, Hewitt made a DVD in which she talked about and demonstrated her approach to Bach's keyboard music, stressing, as Schweitzer wrote, "that you must adhere to period conventions." The DVD arrived in stores in September 2007. That month Hewitt embarked on an international tour, during which she performed the Well-Tempered Clavier in its entirety at venues including the Royal Festival Hall, in London, and Carnegie Hall, in New York City.

In addition to her other honors, Hewitt was named Artist of the Year by the Canadian Music Council in 1986, and she received the National Arts Centre Award from the Governor General of Canada in 2000. Hewitt maintains homes in Ottawa, London, and near the city of Perugia, in Umbria, Italy, in a house that overlooks Lake Trasimeno. In July 2005 Hewitt, who is fluent in Italian, launched the Trasimeno Music Festival, an annual, weeklong event in Italy, in which she and guest musicians perform alone, in chamber ensembles, or with an orchestra assembled just for the festival. "Of course, I am international," Hewitt told Arthur Kaptainis for the Montreal *Gazette* (March 11, 1998). "Especially considering where I live and how much I travel. But deep down, I am Canadian."

Hickey, Dave

Dec. 5, 1940– Cultural critic; educator; writer; curatar af exhibitians

Address: UNLV English Dept., Bax 455011, Las Vegas, NV 89154-5011

"I know how to look and I remember what I see," the cultural critic Dave Hickey wrote in 2000 for the Web site of the arts organization SITE Santa Fe, whose 2001 biennial exhibition he organized. "I have seen a lot of art and my enthusiasms are catholic. . . . I believe that one's aim, when working as a curator in a public space, is to *create* art lovers, not to impress one's fellow professionals with expertise." Labeled "the philosopher king of American art criticism" by the *New Yarker* art critic Peter Schjeldahl, Hickey is among the most revered and influential figures in that field—and also one of the most outspoken and controversial. Hickey has advised museumgoers, for instance, to look attentively at paintings or sculptures but to ignore the little signs posted next to them, because he believes that information about what the artists felt or intended during the act of creation, or what others believe is the "meaning" of their work, is immaterial. "I care about what the art *does*," he told Michael Hall for *Texas Monthly* (February 2000). "I'm interested in consequences." In an interview for *Art Press* (June 2000), Hickey told Eleanor Heartney, "Public museums in my view should provide citizens with a refuge from commerce, fashion, relevance, and education." In another example of his unorthodox views, he said to Hall, "There's no difference between the highest art and the lowest art, except for the audience it appeals to."

Hickey has taught graduate courses in creative writing at the University of Nevada at Las Vegas (UNLV) since 2001; currently, he is the Schaeffer Professor of Modern Letters there. During the preceding decade, he was a professor of art theory and criticism at UNLV. Earlier, after he dropped out of graduate school, in the 1960s, midway through his work toward a doctoral degree, he held a series of nonteaching jobs, among them art-gallery manager, magazine editor, freelance writer, songwriter, and performer. Articles by Hickey have appeared in many publications, among them *Art News*, *Art in America*, *ArtForum*, *Interview*, *Harper's Magazine*, *Vanity Fair*, *Rolling Stone*, the *New York Times*, and the *Los Angeles Times*. His book *The Invisible Dragon: Four Essays on Beauty* (1993) catalyzed "the much heralded 'return' to beauty in art making and art criticism," as Grant H. Kester wrote for *Art Journal* (Spring 1997); his second nonfiction collection, *Air Guitar: Essays on Art and Democracy* (1997), was described by Deborah Solomon, writing for the *New York Times Magazine* (January 24, 1999), as "an elegant, lushly personal volume that gives equal attention to Renaissance portraits and female professional wrestling." "It's a breath of smoke-filled air," Solomon continued. "Instead of issuing lofty judgments, Hickey gives over to a nostalgic affection for the whole messy, pell-mell lot that is American culture, from the lyrics of Johnny Mercer songs to the television lawyer Perry Mason to—of course—Norman Rockwell, whose work, Hickey writes, shares with the fiction of Charles Dickens 'a luminous devotion to the possibility of domestic kindness and social accord.'"

In 2001 the MacArthur Foundation awarded Hickey one of its $500,000 fellowships, commonly referred to as "genius" grants. Hickey, the foundation declared on its Web site at the time, "reveals entirely original perspectives on contemporary art in essays that engage academic and general audiences equally. He conveys his interpretations and analyses, based on an encyclopedic knowledge of art history, through commonly shared experiences and metaphors. The accessibility of his writing in no way diminishes his intellectual influence; scholars have formally debated the merits of his sometimes quite contrarian arguments. His free-spirited and occasionally irreverent musings reflect his passion for the wonders of artistic expression and his disdain for those who obscure it. . . . Writing with grace, precision, and humor, and absent of any pretension, Hickey invites his readers to experience art on its own terms. . . . His wisdom and unusual viewpoints provide fresh and provocative counterpoints to the traditional world of art criticism."

David C. Hickey was born on December 5, 1940 in Fort Worth, Texas, and grew up in a dozen places in Texas and California. His mother, who reportedly had Marxist leanings, taught economics at Texas Christian University, in Fort Worth, and ran the family's flower shop. As quoted by Jed Perl in the New *Republic* (September 24, 2001), Hickey has described his mother as "serious, high-strung, and fiercely ironic, like [the actress] Joan Crawford, always bustling around: painting bad paintings in the back bedroom and reading books while she cooked dinner." His father worked for General Motors—his job involved setting up distribution warehouses—and, avocationally, played jazz saxophone and clarinet. As an eight-year-old, Hickey witnessed a "Texas jam session that included his father, his father's redneck buddy, a Latino bongo player, two black beboppers, and a Jewish neighbor who had fled the Nazis," as Michael Hall wrote for *Texas Monthly* (February 2000). "I kept that musical afternoon as a talisman of memory," Hickey recalled in *Air Guitar*. "I handled it carefully, so as not to knock the edges off, keeping it as plain and unembellished as I could, so I could test the world against it, because it was the best, concrete emblem I had of America as a successful society and remains so." When Hickey was 11 his father committed suicide.

After he completed high school, at 15, Hickey entered Southern Methodist University (SMU), in Dallas, Texas, where he studied engineering. He changed his major to English when, after three years at SMU, he transferred to Texas Christian University. His extracurricular activities included writing short stories and editing articles for the campus literary and humor magazines. He earned a B.A. degree in 1961. In 1963 he earned a master's degree in linguistics from the University of Texas at Austin. He remained in graduate school to pursue a doctorate until he realized that the "optimal positive outcome" of his getting a Ph.D. degree—"a little job at a big university in a place where it snows—and a six-year battle for tenure," as he wrote in an essay in *Air Guitar*—held no appeal for him. "What I was doing was telling myself that I was a serious graduate student and what I was really doing was not being drafted," he recalled to Todd S. Purdum for the *New York Times* (September 4, 1999). "The day that I turned 26 and was ineligible for the draft, I was totally amazed at the way my enthusiasm for an academic career seemed to dissolve." By that time Hickey had married and become friendly with several local artists.

Earlier, in 1964, Hickey had visited Europe and New York City, where his interest in painting strengthened through his exposure to the work of artists including Andy Warhol, Edward Ruscha, and Roy Lichtenstein. In 1967, with a loan of $10,000, he and his first wife, Mary Jane Taylor, rented the ground floor of an old private house in Austin and converted it into an art gallery. Calling it a Clean, Well-Lighted Place (the title of a short story by Ernest Hemingway), Hickey and his wife opened the gallery with an exhibition of works by the cartoonist Jim Franklin. In time Hickey promoted the work of many other area artists at his gallery—Barry Buxkamper, George Green, Luis Jimenez, Peter Plagens, Juergan Strunck, Willard Midgett, and, after moving the gallery to another site, in 1969, Harry Geffert, Jim Schinder, and Richard Mock, to name some. According to Kendall Curlee, writing for the *Handbook of Texas Online*, the gallery "remained distinct from Austin's counterculture by advocating a pop sensibility reminiscent of Andy Warhol's Factory studio in New York City." In 1970 Hickey organized what Curlee described as "perhaps [his] most successful" exhibition in Austin; called South Texas Sweet Funk, it was mounted at St. Edward's University. While in Austin Hickey also wrote songs, played in rock bands, and experimented with drugs.

In 1971 Hickey moved with his wife to New York City, where he became the director of the Reese Palley Gallery, in the SoHo district. He soon started socializing with Andy Warhol and the artists and others who had gravitated toward Warhol. For one year Hickey worked as an editor for *Art in America*. Afterward, as a freelance writer, he wrote about rock and roll and country music for *Rolling Stone*, the *Village Voice*, and *Country Music*; he was among the writers who chronicled the burgeoning punk scene at the music club CBGB's, in New York City. In the late 1970s Hickey moved to Nashville, Tennessee, to work as a staff songwriter for Glaser Publications. Sometimes, he sang in public.

During the 1980s Hickey contributed essays to the book *Works of Edward Ruscha* (1982); two books about the artwork of Terry Allen—*Rooms and Stories* (1983) and *Terry Allen's "Ohio"* (1986); and *Pasadena Armory Show, 1989* (1989). His collection *Prior Convictions: Stories from the Sixties (Southwest Life and Letters)*, written in the 1960s, was published by Southern Methodist University Press in 1989. Hickey later wrote stories illustrated by John DeFazio for the 88-page graphic novel *Stardumb* (1999); published by Artspace Books, in San Francisco, the book pokes fun at real and imagined art-world figures.

In 1987, "faced with the unavailability of health insurance," as he wrote in *Air Guitar*, Hickey took the first of a series of teaching jobs at the college level. In 1992 he joined the faculty of the Art Department of the University of Nevada at Las Vegas, as a teacher of art criticism and theory. Prominent in his theory of art is his conviction that, in his words, "Nothing redeems but beauty." As Michael Hall wrote, "While many modernists celebrate form and concept, Hickey seeks out the beautiful—and finds it where another finds banality (Norman Rockwell), phoniness (Liberace), or sordid pornography (Robert Mapplethorpe)." "I characterize visual beauty reflexively as the involuntary positive responses to an arrangement of the visible world," Hickey told Eleanor Heartney. "Visual beauty in art may be construed as an involuntary, positive response to an artificial stimulus. Every time we have such a response, we learn something about the extent to which our own idea of beauty dissents from the culture's idea of 'the beautiful.' Further, since the attribute of beauty elicits the involuntary approval of secular citizens, it may be construed as an instrument of real political power—all the more so since beautiful objects create constituencies around them and represent for us, not who we are, but what we want. In a free society, the question of what a constituency of citizens wants, what it lacks, is always in some sense political. Understanding this you will understand that I never intended to propose beauty as the end of art, but as its beginning—as the first condition of art's political independence and the primary occasion for writing about it."

Hickey's book *The Invisible Dragon: Four Essays on Beauty* was published by Art Issues Press/Foundation for Advanced Critical Studies in 1993. In its 64 pages of wide-ranging discussions about the nature and meaning of beauty in art in late-20th-century America, Hickey considered the artwork of Warhol, the photographer Robert Mapplethorpe, the illustrator Norman Rockwell, and the Italian painters Raphael and Caravaggio as well as the sonnets of Shakespeare; he also explored the ideas of other thinkers, among them theories of the French philosopher and historian Michel Foucault, which Hickey had chosen, along with ideas of another French philosopher, Jacques Derrida, as the subject of his never-completed Ph.D. dissertation. He argued against the prevailing view that art appreciation is inextricably linked with "sophistication, taste and learning—the property of the learned elite, the rich and famous," according to a writer for *Publishers Weekly* (1994, on-line), and he attacked public institutions—museums, universities, government agencies, and foundations, among others—"that in his eyes seek to turn art into a social good," as Christopher Knight wrote for *Art Journal* (Fall 1996). According to Eleanor Heartney, *The Invisible Dragon* won for Hickey "legions of followers and the disdain of more conventionally-minded readers." The book earned the College Art Association's 1994 Frank Jewett Mather Award for distinction in art criticism.

Air Guitar: Essays on Art and Democracy, published three years later, contains a mixture of narrative, memoir, and commentary. An examination of the effects of 20th-century highbrow and lowbrow art on the U.S., it ranges in subject matter from such musicians or music groups as Hank Williams, Chet Baker, and the Rolling Stones to the wrestler Lady Godiva, the TV series *Perry Mason*, Julius Erving's remarkable basket during the 1980 National Basketball Association Finals, and Las Vegas celebrities including Siegfried and Roy. "Obliged to theorize his impolite tastes, judgments, and ideas, Hickey lays his prejudices a little barer than altogether becomes them," the music journalist Robert Christgau wrote for the *Los Angeles Times Book Review* (October 17, 1997). "Even caught in that old trap, however, he's as good as it gets, starting with his prose. Although his diction is often highfalutin . . . , his rhythms aren't, and he's more than fluent in colloquial English—I mean, the guy can flat-out write." In a reference to the title of Hickey's collection, Margaret Juhae Lee, in a review for the *Nation* (December 1, 1997), wrote, "Hickey describes his chosen profession as 'the weakest thing you can do in writing. It is the written equivalent of air guitar—flurries of silent, sympathetic gestures with nothing at their heart but the memory of the music.' But however derivative criticism might be, Hickey creates music of his own with the style of a good short-fiction writer and the insights of a first-rate thinker. Like the 'cool economy and intellectual athletics' of Chet Baker's slightly off-key yet sensuous crooning, Hickey's musings point the way to 'a new ethos of living in the world.'" "What a treasure!" Sarah Vowell wrote for *Salon* (October 17, 1997, on-line). "The world is crammed with pages of cultural criticism that give us facts and thoughts and opinions and insights, but this book delivers love: love for the country, love for what its citizens can do."

Hickey has organized exhibitions for several museums and universities. In 2000 he accepted an invitation from the nonprofit arts organization SITE Santa Fe to curate its fourth biennial exhibition, which he named Beau Monde: Toward a Redeemed Cosmopolitanism. The exhibition ran for six months, beginning in mid-2001. In the blurb for the SITE Santa Fe Web site that he prepared before it opened, Hickey wrote, "I began the project without any preconceived notion of what a beau monde, or a 'beautiful world,' might be, only with a confirmed confidence that most artists have their own ideas about it—their own vision of how a beau monde might look—and that this vision is somehow embodied in their work. My task in mounting this exhibition will be to create" an environment "in which works of art from around the world, experienced in relation to one another, . . . will invest the elusive idea of a beau monde with new specificity and complexity, new meaning and resonance. The exhibition will come first, in other words. Meanings will arise as a consequence, since what I have in mind is not an ideological point that I wish to prove, but an exhibition that I want to *see*, and hope that others might, as well." His selections for the show, he continued, would be "singular works of art, which . . . celebrate the global field of overlapping and interfused idiomatic expression—the virtuoso accommodation of one cultural idiom to another that constitutes the very definition of cosmopolitanism." The works, he wrote, would represent artists "from as many generations as possible, working in a variety of modern and postmodern styles . . . to reflect the actual circumstances of day-to-day contemporary art-making." The show revealed Hickey's "trademark passions," as Katy Siegel wrote in an article about the show for *ArtForum* (May 2001): "cool classics" (works by Ellsworth Kelly, Jo Baer, Bridget Riley, and Ed Ruscha, for example); "upbeat California color" (Ken Price and Jorge Pardo), "sex & drugs and rock 'n' roll" (Kenneth Anger, Jeff Burton, Stephen Prina), "and the just plain eccentric" (Darryl Montana). Beau Monde was widely praised and was named best show, alternative space, 2001–02, by the Association of International Critics of Art. By most accounts, the exhibit achieved what Hickey hoped it would. In a representative review, Deborah Rindge wrote for *Art Papers* (November/December 2001), "On the whole, 'Beau Monde' is a delightful dim sum. Unlike exhaustive biennials elsewhere, the viewer departs stimulated and refreshed, inspired to learn more and return again."

In September 2001 Hickey learned from the chairman of the UNLV Art Department that "the prevailing opinion in the department was that I 'would be happier' in another department or another school or another university," as he wrote in a letter to the *Chronicle of Higher Education* (April 26, 2003). (His letter was sent in response to an earlier article about the problems he and his second wife, the art historian Libby Lumpkin, who was also teaching at UNLV, were having there.) Soon afterward Hickey joined the UNLV English Department. On the department's Web site in mid-2007, his specialty was listed as creative writing, including fiction, intellectual journalism and cultural criticism, and nonfiction and the essay. In an interview for the *Las Vegas Sun* (September 28, 2007), Kristen Peterson asked Hickey if he was "sad about not teaching art." Hickey replied, "Damn right. At this time in my life, it is what I was born to do." Peterson's article also discussed the then-upcoming art show Las Vegas Diaspora: The Emergence of Contemporary Art from the Neon Homeland; organized by Hickey and held from September 30 to December 30, 2007 at the Las Vegas Art Museum, it featured works by two dozen artists who had studied with Hickey from 1990 to 2001. "What I wanted to prove [with the show] is that intellectual capital is real capital . . . ," Hickey told Peterson. "It pays off. That's why I'm doing this. If you take it seriously, people take it seriously. This is what the real thing looks like."

Hickey has been a visiting professor at other schools, among them the University of Texas at Austin; the Graduate School of Design at Harvard University; the University of California at Santa Barbara; and the Otis Parsons Institute, in Los Angeles. In the past decade he has written or co-written many monographs (some for exhibition catalogs) on contemporary artists, among them Peter Alexander, Terry Allen, Anthony Caro, Vija Celmins, Gajiin Fujita, Sol Lewitt, Helen Lundeberg, Lari Pittman, Robert Rauschenberg, Gerhard Richter, Susan Rothenberg, and Richard Serra; the fashion designer Todd Oldham; and the photographers Jeff Burton and Michael Childers. Hickey appeared in Ric Burns's four-hour documentary *Andy Warhol*, which aired on PBS television stations in 2006. According to the *Time Out NY* writer Tom Beer, as quoted on filmforum.org, his commentary was "virtuosic." Hickey's two-volume work *Feint of Heart: Essays on Individual Artists* is scheduled to be published in 2008 by the University of Chicago Press.

After attending a lecture by Hickey, Thomas McGovern wrote for *Afterimage* (November/December 2003) that Hickey's "slightly grumpy demeanor and ruffled appearance belie an infectious charm that easily overpowered the audience." Readily available sources do not indicate how his first marriage ended. Hickey and Libby Lumpkin have lived in Las Vegas since the early 1990s. Lumpkin teaches at California State University at Long Beach and directs the Museum Studies Program there. She was the founding curator of the Bellagio Gallery of Fine Arts, in Las Vegas, and directs the Las Vegas Art Museum. She is the author *of Deep Design: Nine Little Art Histories* (1999).

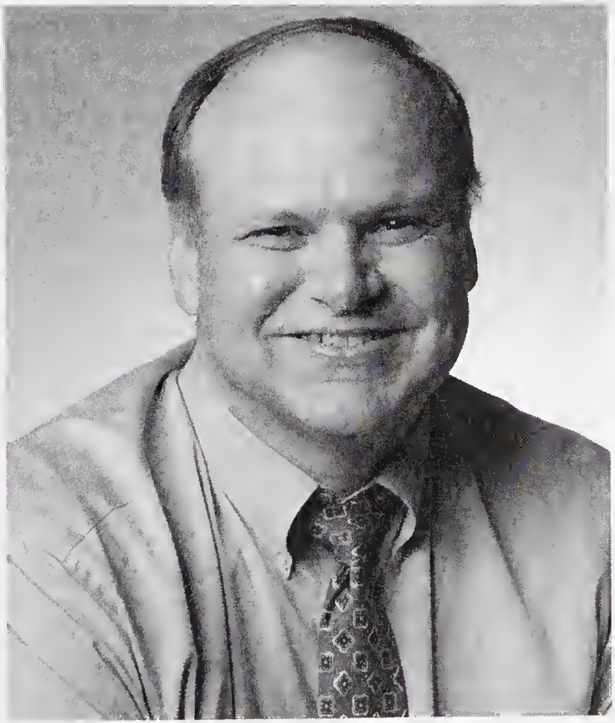
Higgins, Jack

Aug. 19, 1954– Editorial cartoonist

Address: Chicago Sun-Times, *350 N. Orleans,*
Chicago, IL 60654



Jim Frost, courtesy of Universal Press Syndicate

If one of Jack Higgins's editorial cartoons "offends [people] or makes them angry, it makes the cartoon memorable and it will make them think about it," as Higgins told Mike Moore for the *Quill* (June 1989). "As long as they remember it, I think I've had an impact on their thinking." Higgins's illustrated comments on and impressions of events and issues in Chicago, Illinois, his hometown, and elsewhere in the United States and beyond its borders have appeared since 1980 in the *Chicago Sun-Times*. His work, which skewers office-holders and -seekers from all parts of the political spectrum, is disseminated by Universal Press Syndicate to publications including *U.S. News & World Report*; the *Jewish World Review*; *Slate*; the *Washington Post* (on-line); *Buffalo (New York) News*; the *Modesto (California) Bee*; the *Indianapolis (Indiana) Business Journal*; the Glens Falls, New York, *Post-Star;* the Tokyo, Japan, *Seikei Jippon*; and the *Korea Herald*; it has also been reprinted in the *New York Times*, the *Washington Times*, *Newsweek*, *Salon.com*, and the *National Review*. "I can vent my anger through my drawings and have an effect where I can belittle the pompous guy by shrinking him to a size that makes him more manageable," Higgins has said, as quoted by Brenda Warner Rotzoll in the *Chicago Sun-Times* (April 14, 1999). But his favorites among his cartoons depict "good guys," according to Rotzoll, such as Joseph Cardinal Bernardin and the sportscaster Harry Caray, whom he memorialized after their deaths. Higgins's many honors include the 1989 Pulitzer Prize for editorial cartooning. In May 2007, in recognition of his work on the subject of political corruption, Higgins won top honors for editorial cartooning at the Herman Kogan Media Awards ceremony, hosted by the Chicago Bar Association.

A member of a large Irish-American, Roman Catholic family, John J. Higgins was born on August 19, 1954 in Chicago, to Maurice James Higgins and the former Helen Marie Egan. His maternal grandfather, John Egan, was Chicago's chief of detectives in the 1920s, during the Prohibition era; his father was a police captain in the same city. In an interview with Bob Herguth for the *Chicago Sun-Times* (September 15, 1996), Higgins described his mother (who is deceased) as "the artist in the family." He also told Herguth that his six siblings earned degrees from such prestigious schools as Harvard University, Cambridge University, the London School of Economics, the University of Virginia School of Law, and the University of Chicago Graduate School of Business; two of his brothers and sisters are scientists and another two are lawyers. Higgins, who remains a practicing Roman Catholic, attended St. Ignatius College Preparatory School, a Jesuit institution in Chicago that is known for its high academic standards; its mission includes "promot[ing] social justice for the greater glory of God," according to its Web site. After he graduated from high school, Higgins attended another Jesuit school—the College of the Holy Cross, in Worcester, Massachusetts. While on the staff of the campus literary magazine, he drew portraits of the former U.S. president John F. Kennedy; some of those drawings were later acquired for the permanent collection of the John F. Kennedy Presidential Library and Museum, in Boston. Higgins earned a B.A. degree in economics in 1976.

Higgins spent the next two years working with the Jesuit Volunteer Corps (JVC), whose members help people in need in the U.S. and overseas (among them, those who are homeless and unemployed, refugees, victims of AIDS, the elderly, abused women and children, and the mentally ill or physically handicapped). As explained on its Web site, the JVC emphasizes four values that "provide the cornerstone for living out a commitment to faith and justice": social justice, simple living, community, and spirituality. From 1978 to 1981 Higgins served as the editorial cartoonist for the *Daily Northwestern*, the campus newspaper of Northwestern University, in Evanston, Illinois. He was paid $5 for each of the four or five cartoons he produced weekly; he supplemented his income from the newspaper by bartending and loading trucks. The *Daily Northwestern* was where the journalist Bob Greene "first saw Higgins' cartoons, and was knocked out by them," as Greene wrote in a column for the *Chicago Tribune* (August 24, 1980). After describing Higgins as "already brilliant at what he does," Greene quoted from a letter in which Norman A. Cherniss, the executive editor of the Riverside, California, *Press-Enterprise*, told Higgins, "for whatever encouragement or consolation this may afford you," that although he had not won the award for editorial cartoonist that year, his cartoons were among the small number of those that Cherniss and other members of the Pulitzer Prize jury had considered most worthy of the prize. From 1980 to 1984 Higgins worked for the *Chicago Sun-Times* as a freelance editorial cartoonist. In 1984 he became a full-time *Chicago Sun-Times* employee. His job has occasionally taken him overseas, to Cuba, Hungary, Ireland, and—before its dismantling—the Soviet Union.

According to an article in the *St. Louis Post-Dispatch* (March 31, 1989) about the 1989 Pulitzer Prize winners, Higgins took courses in fine art at the College of the Holy Cross; most other sources, however, characterize him as a self-taught illustrator. In describing his workday routine to Bob Herguth in 1996, he said that he arose at 4:00 a.m. because his "thinking is really sharp" in the hours before dawn. In addition, being awake so early "gives me the same sort of feelings I had when I was a little kid and I was a paperboy: that you're up before everybody else; you've got a jump on the world." Before arriving at his office, between 8:15 a.m. and 9:00 a.m., he absorbed as much news as possible and jotted down ideas. "I think it's important to use everything there is out there at your disposal . . . reading, listening to the radio, watching television, talking to people. . . . It's important to free yourself to look at things in a different way," he said. He also declared, "The name of the game for cartooning is preparation." He told Mike Moore that he particularly enjoyed "the reading and thinking part" of his craft. "It's what takes the most labor," he added. "And that's what people respond to anyway. The drawing is very nice, but a good drawing is never going to carry a bad idea. Just like purple prose does not make a good editorial." He also told Moore, "I try to put in the cartoon the very picture I have in my mind's eye. I try to go with what my immediate reaction is once I've digested all the details. I try to be honest about it."

The first of Higgins's many professional honors came in 1984, when he won the Peter Lisagor Award (named for a renowned *Chicago Daily News* reporter and bureau chief), given by the Chicago Headline Club to recognize outstanding work by Chicago-area journalists. (Higgins won the Lisagor Award 10 additional times: in 1987, 1991, 1994, every year from 1996 through 2001, and 2003.) In 1988 he won both the first prize in the International Salon of Cartoons, in Montreal, Canada, and the Society of Professional Journalists' Sigma Delta Chi Award (also called the Distinguished Service Award); he won the latter in 1998 as well. In 1989 he won the Pulitzer Prize for editorial cartooning, three years after being named a finalist for that honor. The subject of one of the cartoons that captured the Pulitzer for him was Dan Quayle, at that time the U.S. vice president under President George H. W. Bush. During the Vietnam War Quayle had joined the Indiana National Guard, by his own admission as way of avoiding a two-year commitment to active duty overseas. Moreover, he gained acceptance in the guard not through normal channels but thanks to the clout of his father (a Republican newspaper publisher), the intercession of a former major general in the guard, and the willingness of another officer to bypass the unit's commanding officer. As a U.S. senator, Quayle had angered active and former soldiers by sponsoring legislation calling for the imposition of a tax on disability payments to veterans. In Higgins's cartoon Quayle, an avid golfer, is shown holding a set of golf clubs while standing on the side of a road on which Vietnamese children are fleeing aerial bombardments of napalm. Quayle is asking, "Mind if I play through?"

Northern Illinois University named Higgins the Illinois Journalist of the Year in 1996, and he earned an Illinois Press Association Award in 1997. He took top honors in the 1998 Fischetti Editorial Cartoon Competition, sponsored by Columbia College in Chicago and named for a Pulitzer Prize–winning *Chicago Daily News* and *Chicago Sun-Times* editorial cartoonist. Higgins's winning cartoon in the Fischetti contest showed a statue standing midway between the Washington Monument and the Lincoln Memorial, in Washington, D.C., in which, in poses like those of the lovers in Auguste Rodin's famous sculpture *The Kiss*, President Bill Clinton embraces Monica Lewinsky, a one-time White House intern with whom Clinton had an extramarital sexual encounter. (The affair led to Clinton's impeachment; he was later acquitted by the U.S. Senate.) The statue is identified as the Clinton Memorial.

"There can be a very fine line between what is truly slicing right to the heart of any issue and going overboard," Higgins said to Mike Moore. "I have to just settle with the feeling that not everybody has the same standard for what is tasteful, and I just have to go with my own feeling that this is the best interpretation that I have." Among the most controversial of Higgins's cartoons are those that express his opposition to abortion. One such cartoon was published in 2004, after a California judge ruled unconstitutional the federal law banning certain types of abortions (colloquially known as "partial-birth abortions"). The cartoon depicts a statue of a pregnant Lady Justice thrusting a sword (labeled "partial birth ruling") into her swollen belly. Others of Higgins's cartoons have sparked accusations that he harbors anti-Muslim prejudice. In a letter published in the *Sun-Times* on September 26, 2006, Ahmed Rehab, the executive director of the Chicago chapter of the Council on American-Islamic Relations (CAIR), condemned as an "impudent display of reductionism" a cartoon, published six days earlier, in which Higgins had commented on an uproar among members of the Islamic community. The uproar concerned a lecture in which, on September 12, 2006, the Roman Catholic supreme pontiff, Pope Benedict XVI, had quoted lines from a 14th-century book in which a Byzantine emperor called the Prophet Muhammad's teachings "evil and inhuman, such as his command to spread by the sword the faith he preached." Although the words were not the pope's, many Islamic leaders and others condemned him for giving voice to a description that they considered highly insulting and a mischaracterization of Islam. In Higgins's cartoon, Muhammad, wearing an expression of rage and brandishing an upraised sword, screams to the pope, "Islam violent?! How dare you!!!"; the pope, referring to the mountain of skulls behind Muhammad and to the proverb "If the mountain won't come to Muhammad, Muhammad must go to the mountain," is saying calmly, "Well . . . the mountain came with Muhammad." Rehab's letter of protest notwithstanding, Higgins produced another, two-paneled cartoon, published in the *Sun-Times* on October 1, 2006, in which, in the first panel, an Arab man insists that Islam means "peace," while a second Arab maintains that it means "submission"; in the second panel, the two men face an immense man-made explosion, and one says to the other, "I wonder how many lives were lost in the translation." That cartoon led Ahmed Rehab, in a message posted on the CAIR Chicago Web site, to label Higgins a "bigot" and to write, "Higgins' cartoons are classic examples of a logical fallacy that is all-too-common in post 9/11 America. Rather than direct his anger at terrorists and violent radicals, . . . he projects his wrath unto Islam and Muslims."

Higgins aroused much anger among *Sun-Times* readers with another cartoon, published in early June 2006, which shows several corpses, one with the word "Haditha" printed on its back, and beside them the words "We will be greeted as liberators"—a prediction uttered by Vice President Richard B. ("Dick") Cheney in 2003, three days before U.S. troops invaded Iraq. Haditha is an Iraqi village where, on November 19, 2005, members of the U.S. Marine Corps allegedly murdered 24 unarmed Iraqi civilians, among them at least 10 women and children and an elderly man in a wheelchair, after a roadside bomb killed a marine from the accused men's company. Higgins had based his drawing on a photo (originally published in the London *Guardian*) posted on the Web site of MSNBC/*Newsweek* near an image of a *Newsweek* cover bearing the headline "The Haditha Question," and he had mistakenly assumed that the photo showed victims of the Haditha massacre; in reality, the photo showed Shiite fishermen and Iraqi national guards who had been murdered by people identified as Iraqi insurgents. That mistake, combined with reports that the U.S. soldiers had acted in self-defense, caused anger among many who saw Higgins's cartoon. On June 8, 2006, after the *Sun-Times* received vehement complaints from readers, the newspaper apologized in print for its "egregious error" in fact-checking. "Jack Higgins and the *Sun-Times* deeply regret the mistake and apologize to the U.S. servicemen, especially those in the Marine Corps, and to our readers who were understandably offended by this cartoon," the apology stated. (In December 2006, in an ironic twist, U.S. military prosecutors announced that four marines associated with the Haditha killings had been charged with murder, and four Marine Corps officers had been charged with "dereliction of duty and failure to ensure that accurate information about the killings was delivered up the Marine Corps' chain of command," as Paul von Zielbauer and Carolyn Marshall wrote for the December 2, 2006 edition of the *New York Times*.)

In a cartoon published in the latter half of 2006, Higgins showed President George W. Bush speaking at that year's convention of the NAACP, having previously rejected—five years in a row—the organization's invitations to address its annual meeting. The cartoon shows Bush holding a basketball; referring to the National Collegiate Athletic Association, the man seated to Bush's left is saying to the person next to him, "Yes, this is truly a first. He wants us to sign his NCAA basketball." A second cartoon poked fun at the Democratic U.S. senators Hillary Rodham Clinton of New York and Barack Obama of Illinois, both of whom were considering a run for the presidency in 2008. Referring to Clinton's book *It Takes a Village*, Obama's book *The Audacity of Hope*, and the latter's middle name, Higgins depicted people lined up to get Clinton's signature on a book called "It Takes a Hussein to Tick Off My Campaign" and Obama's on a volume entitled "The Politics of Book." "And on page 383 you'll learn that I, too, have black roots," Clinton is saying; Obama, sitting a few feet away, is saying, "Who knew but her hairdresser?" In a third cartoon Higgins commented on the proposal by the new majority leader of the House, Democratic representative Steny Hoyer of Maryland, that, most weeks, members of Congress devote more time to their duties in the nation's capital than in their own districts. The drawing shows a family of seven at the breakfast table; the father, reading the newspaper, is saying, "Some congressman wants the House to spend 5 workdays a week in D.C. instead of 3!," and the mother, feeding the youngest of her five children, responds, "That spending part scares me." The subject of a fourth cartoon is the board of commissioners of Cook County, Illinois. In March 2006, a week before that year's primary election, John Stroger, the board's president, was incapacitated by a stroke, and the name of his son, Todd Stroger, replaced his on the ballot. Todd Stroger won the primary and, in November, was elected president; he was sworn into office on December 4, 2006. Meanwhile, Bobbie Steele, a longtime board member, had been named John Stroger's temporary successor as president. Steele won reelection in November, but she was still the nominal president of the board when, shortly after Election Day, she announced that she was retiring. Since she still held the title of president, she retired with a far larger pension than she would have had she remained a commissioner. (In addition, the board approved the appointment of her son Robert to succeed her.) Higgins's cartoon shows five Christmas stocking hanging from the mantel of a fireplace. The toe of the middle one, which bears the name "Bobbie Steele," has torn from the pressure of all the cash that has been stuffed into the stocking; bills pouring from the hole are landing atop a growing pile of cash. Next to the mound of money is a message that reads, "Merry Christmas! From your friends at the Cook County Board."

In addition to his other honors, Higgins was a finalist for the 2000 and 2004 Scripps-Howard Award in editorial cartooning. He won the Chicago Bar Association's Herman Kogan Media Award for best editorial cartooning in 1993, 1995, and 2007. Higgins has appeared as a guest on such television programs as *Good Morning America*, *The Today Show*, *CNN Headline News*, *NBC Nightly News with Tom Brokaw*, and broadcasts of the Chicago affiliates of NBC, PBS, and CBS. In 1997 he married the former Mary Elizabeth Irving; the couple have five children. Higgins's avocational interests include painting and bicycling.

Howard, Ryan

Nov. 19, 1979– Baseball player

Address: Philadelphia Phillies, Citizens Bank Park, One Citizens Bank Way, Philadelphia, PA 19148

Ryan Howard, the first baseman for the Philadelphia Phillies of Major League Baseball (MLB), won the National League's 2006 Most Valuable Player Award and that year's Hank Aaron Award as the league's top slugger. A left-hander who combines prodigious power with an ability to send the ball to any part of the field, Howard has established himself as one of the sport's most capable home-run hitters, producing 58 in 2006—his first full season in the majors. "Besides being superstrong, Ryan is fearless at bat," the Baseball Hall of Fame inductee Mike Schmidt told Dave Kindred for the *Sporting News* (October 6, 2006). "I have a high regard for today's athlete, and he's an example of that regard. He has a wonderful temperament. He's a smart young man who's able to adapt, as we see when he's using the entire ballpark. He's a great example of how hitting has evolved into an art where even power hitters can spray the ball." With the number of African-American players declining in Major League Baseball, and with the sport plagued by allegations of steroid abuse and resulting congressional inquiries, Howard's presence has bolstered MLB's image in terms of both diversity and respectability. Lee Jenkins, writing for the *New York Times* (June 30, 2005), described Howard as the ideal star for baseball, which "has long been looking for the kind of power hitter who can take pitches and hit to the opposite field, who has been to college and been seasoned in the minor leagues, who can prove to young African-American athletes that basketball and football are not the only marquee options." In Philadelphia, one of the last National League teams to sign a black baseball player, Howard—one of three African-American position players on the current team—has "completely transformed" fans' attitudes, Rob Holiday, assistant director of scouting for the Phillies, told Derrick Goold for the *St. Louis Post-Dispatch* (September 29, 2006). "What we have here is, we are witnessing a superstar in the making. He has galvanized this city like it hasn't been before."

Ryan James Howard was born on November 19, 1979 to Cheryl and Ron Howard and grew up in the suburbs of St. Louis, Missouri. He has an older brother, Chris; an older sister, Roni Karen; and a fraternal twin brother, Corey. Ryan, who is six foot four inches tall, is the shortest of the brothers. Howard's parents were both born in Birmingham, Alabama, and were active in civil rights demonstrations in the 1960s. Their experiences led them to adopt the attitude that any achievement was possible, which they instilled in their children. "Don't focus on the blockers, on the challenges, if you have a chance to be what you want to be, be the best, be the pinnacle," Ron Howard told his children, according to Derrick Goold, writing for the *St. Louis Post-Dispatch* (January 15, 2006). "The door opens a little bit, you push it all the way open." Chris Howard told Goold for the same article that their father "prepared us for the world, telling us, 'I will not allow you to be mediocre.' The pressure we had in our home to succeed in our father's eyes, nothing can match that. Not the corporate world, not Major League Baseball. Nothing." Ryan's mother, now retired, worked in marketing, and his father is an engineer and a manager at IBM. Howard's upbringing combined "old-time Southern values" and "middle-class aspiration," as Michael Sokolove put it in the *New York Times* (March 4, 2007). "All our kids were taught to say 'Yes, sir,' 'Yes, ma'am' and so on," Ron Howard told Sokolove. "We valued hard work and taught them: believe in oneself, believe in each other and believe in the Almighty." Howard told Rich Hofmann for the *Philadelphia Daily News* (August 27, 2006) that he learned from his mother "common sense, being courteous," and that from his father he got his "aggressiveness, that fire to want to be the best."

Howard's parents insisted that their children develop well-rounded interests. Ron Howard urged his children, who were athletic, to find interests outside sports as well, "to give them an appreciation for the fact that you have people in the world that do different things," as he said to Hofmann. Accordingly, Howard, who competed in both high-school and American Legion baseball as well as basketball, football, and soccer, also played trombone in Lafayette High School's marching band. "Football and the marching band are pretty mutually exclusive for most people, but he wanted to do both," Phil Milligan, the Lafayette band director during Howard's years there, told Hofmann. He added that Howard "could communicate well with his peers and with adults. He could carry on a conversation with an adult—not sounding like a high school kid. But I'd see him in situations with the other kids and see how he could have fun too."

Baseball became Ryan's primary sport as he progressed through high school. (His mother had decided that football was too dangerous.) With the help of a batting cage his father installed in the basement of their home, he developed into a good but not outstanding player at Lafayette, earning all-conference honors but just honorable mention in the all-metro selections. He nonetheless believed that someday he could play professional baseball. He began to think seriously about that goal during a game in high school, at which a number of professional scouts were present to see another player on Ryan's team. During the game Ryan hit a home run, which "put me on the scout map," as he recalled to Hofmann. In Ryan's senior year he set school records in home runs for a season (eight) and a career (17). A number of four-year universities showed interest in him, but some were farther from his home than he wanted to go, and he rejected others because they placed limits on playing time for freshmen. Howard considered playing at a junior college or trying to get drafted by a professional baseball team. Then, late in the summer following his high-school graduation, he received an offer to play for Keith Guttin, who coached at Southwest Missouri State (now Missouri State) University, in Springfield. Guttin, a friend of Howard's high-school coach, could not offer Howard a scholarship but guaranteed that he could earn playing time his freshman year—and that if he was successful, he would get a scholarship in each of the following three years. "College was important for me," Ryan told Rich Hofmann. "My parents are both very big on education, so there was that. But college allowed me to mature, not only as a baseball player but also as a person. I was glad I went to college. Without the maturity I gained, I don't think I'd be the player that I am today."

Howard easily earned the first-base position at Southwest Missouri State (SMS) and earned Missouri Valley Conference Freshman of the Year honors on the strength of his .355 batting average, 19 home runs, and 66 runs batted in (RBIs). After a similarly successful sophomore campaign, Howard won a position on the U.S. Junior National Team, which had been represented in the past by many players currently in the major leagues. Playing on the international stage also introduced Howard to many professional scouts, some of whom came to regard the slugger highly. Howard had a disappointing junior season, however, batting a comparatively low .271, and though his SMS career statistics brought him impressive rankings of fifth all-time in home runs (50) and sixth in RBIs (183) at the school, his draft prospects suffered. The beneficiaries of that perceived decline in value were the Philadelphia Phillies, who drafted Howard in the fifth round. "I think where we [drafted] him, we thought he was a very good gamble," Mike Arbuckle, the Phillies' assistant general manager, told a reporter for the *Philadelphia Inquirer* (July 8, 2002). "There was nothing physically wrong. It just looked like he was [trying too hard]. This kid is kind of a perfectionist." Howard left college after his junior season, three semesters shy of graduating with a degree in communications; he promised his parents that he would eventually complete his eduation.

Howard made his professional debut in the summer of 2001 for the Batavia, New York, Muckdogs of the New York–Pennsylvania League. The following year he played for the Class A Lakewood, New Jersey, BlueClaws, leading all Phillies minor-leaguers in home runs, with 19, and making the South Atlantic League All-Star team. He still holds the BlueClaws' single-season RBI record, with 87. Howard had one glaring deficiency, however—strikeouts (he had 145 in 135 games in 2002)—and also needed improvement at first base. Although the strikeouts soured Howard's reputation among some talent evaluators, the BlueClaws' manager, Jeff Manto, believed that Howard's approach to hitting and his work ethic would help him overcome that shortcoming. "The strikeouts don't even bother me . . . ," Manto told the reporter for the *Philadelphia Inquirer*. "He has a good idea of the strike zone. He'll take curveballs and he's not afraid of lefthanders. His defense has gotten better." Manto also said, "This guy really believes in himself. . . . He's a flat-out joy to work with. He doesn't even know how to really hit yet and he's already hitting well. It will be exciting to watch him as he gets more repetitions and learns more and more about how to hit." Howard wanted to prove wrong the scouts who thought that he would not succeed as a major-league player. "A lot of people, I think gave up on me after my junior year [at SMS]," Howard told Derrick Goold for the January 15, 2006 *St. Louis Post-Dispatch* article. "My first year in pro ball was all about me getting myself back on that track, just because a lot of people I felt backed off. It bothered me. I knew what I was capable of doing, and those first two years were about showing that." In 2003 Howard was promoted to the single-A Clearwater, Florida, team, on which he hit .304 with 23 home runs and 82 RBIs and earned the Florida State League's most-valuable-player honors. He was also invited to participate in the 2003 Futures All-Star Game, which pits the best American-born minor-league prospects against those from other nations. As part of the MLB All-Star weekend, that event allows up-and-coming players to meet current big-league stars.

Prior to the 2003 season, the Phillies signed the first baseman Jim Thome to a six-year contract, the most lucrative in franchise history. With Thome entrenched at first base, Howard's chances of rising soon to the majors seemed slim. Unlike many players in his position, though, Howard was not in a rush to get to the big leagues; he was content to work on his deficiencies and wait for an opportunity to arise. "You've got to . . . make sure you're ready when you get [to the majors]," Howard told Scott Puryear for the *Springfield (Missouri) News-Leader* (July 1, 2003), "so when you do get there, you don't have to come back down."

Howard was invited to Major League Spring Training in 2004. Although his fellow left-hander Thome was blocking his path to earning a place on the team, Howard used the experience to learn as much from Thome as he could during his few weeks with the major-league team. Thome, for his part, was committed to helping Howard become a better player. Once the regular season began, Howard was assigned to the double-A Reading, Pennsylvania, Phillies, for whom he hit .297 with 37 home runs—breaking the team's single-season home-run record—and 102 RBIs, thereby establishing himself solidly as a top major-league prospect. He was promoted to the triple-A team in Scranton/Wilkes-Barre, Pennsylvania, for 29 games before reaching the majors in September, when MLB teams expand their rosters. The Scranton/Wilkes-Barre manager, Gene Lamont, was impressed by Howard's power, telling Lee Jenkins for the *New York Times* (June 30, 2005), "I've managed in the minor leagues a long time, and Ryan is the best power hitter I've ever had." Howard concluded the 2004 season in the Arizona Fall League, playing for the Phoenix Desert Dogs. The young slugger's combined statistics for the four leagues in which he played that season were a .298 batting average, 50 home runs, and 160 RBIs. Howard won the Paul Owens Award as the Phillies' top minor-league position player, and *USA Today Sports Weekly* named him the minor-league player of the year for 2004. Because Thome continued to play well at the major-league level, many believed that the Phillies would do well to trade Howard, both to help the current Phillies team, because they could trade him for a good player at another position, and to give Howard, who had little left to prove in the minor leagues, an opportunity to fulfill his dream of playing in the major leagues. But while the Phillies did not have an opening for Howard at the major-league level, they did not want to see him develop into a superstar for another MLB team; and though Howard wanted to play in the major leagues, he had also grown attached to the Phillies organization. During his stint with the Arizona Fall League, as a way of gaining other opportunities to enter the majors, Howard tried a different position—left field. Though he possessed surprising speed for a 260-pound player, his performance in the outfield was not impressive, and it became obvious that his path to the majors would be as a first baseman.

Howard performed well at the following year's spring training, but the Phillies decided that it would be better for him to play every day for the triple-A Scranton/Wilkes-Barre team than to serve sporadically as Thome's backup. Howard was frustrated by that decision, and his agent asked the team to consider trading him, since, at 25, he was getting old to be a rookie. The Phillies did not want to do so. Then, early in the 2005 season, Thome was slowed by injuries, and in May he was placed on the disabled list. As a result Howard was promoted to the majors, where he struggled, with a .214 batting average and just one home run in 28 at-bats. When Thome was ready to play, Howard was again assigned to triple-A ball, becoming one of the top players in the Eastern League. In July 2005 Thome was again stricken by injuries, and Howard was given another opportunity with the Phillies; this time he outperformed expectations, batting .288 with 22 home runs and 63 RBIs in 88 games. Howard proved able to perform well under pressure, often hitting the winning home run in close games, and was particularly vital to the team in the season's final month, when he was instrumental in leading the Phillies to within one game of a play-off berth. Howard hit 10 home runs in September, leading the majors in that category for the month. His performance brought Howard praise on a national scale—as well as the National League Rookie of the Year Award. He also gained immense popularity among fans in Philadelphia, a city notorious for its brutal treatment of black baseball players. Jackie Robinson, the first black MLB player, famously wrote that he came to associate Philadelphia with the Deep South because of the way he was received there as a visiting player. Before Howard, the Phillies had had only one African-American superstar, Dick Allen—who was reduced to wearing a batting helmet when he took the field at home games because fans threw batteries, fruit, and refuse at him. Howard, by contrast, was beloved by fans, and his success and acceptance went a long way toward changing the image of the franchise.

Howard's surge in production and popularity with the fans gave the Phillies little choice but to trade either him or Thome. In the off-season the team's general manager, Pat Gillick, traded Thome to the Chicago White Sox of the American League in exchange for Aaron Rowand and two minor-league pitchers. Howard was officially installed as the permanent first baseman of the Phillies. He rose to that responsibility in a sensational 2006 season, in which he won the National League Most Valuable Player Award and earned his first All-Star selection. That year Howard batted .313 and hit 58 home runs, a single-season total exceeded by only five men in baseball history—Barry Bonds, Mark McGwire, Sammy Sosa, Roger Maris, and Babe Ruth. Howard also knocked in a major-league-leading 149 RBIs, including 42 in August, the highest number by a player in a single month in 34 years. He was only the second player in MLB history (the first was Cal Ripkin Jr.) to win the Rookie of the Year Award and Most Valuable Player Award in back-to-back seasons, obliterating the notion of a sophomore slump. Howard also won the Home Run Derby at the 2006 All-Star competition. As the season progressed, Howard's home-run production was limited by opposing managers, who were so wary of his power that he was intentionally walked 37 times, the second-highest number of intentional walks received by a batter in the major leagues that season. In the Phillies' last 21 games, Howard walked 28 times and hit only two home runs. For the second consecutive year, he kept the Phillies in contention for postseason play, but they lost their bid for the play-offs in the last week of the regular season. Howard continued to perform his best in the most pressured circumstances, with 28 of his home runs either tying a game or putting the Phillies ahead. Howard's achievements rank among the best ever for a second-year player; no sophomore has ever hit as many home runs, and only Joe DiMaggio had more RBIs: 167 in 1937.

On June 27, 2007 Howard set a record by hitting 100 home runs faster than any other player, achieving the milestone in 325 games. (It took the previous record holder, Ralph Kiner, 385 games.) Howard finished the 2007 season with a .268 batting average, hitting 47 home runs, driving in 136 runs, and helping the Phillies win the National League East division and earn their first play-off berth since 1993. On a negative note, he struck out 199 times, setting a new MLB single-season record. In the National League Division Series against the Colorado Rockies, Howard batted .250 and hit one home run. The Rockies swept the Phillies in the best-of-five series.

Michael Sokolove described Howard as being "big all over. He has biceps that it would take two large hands to fully encircle, thick-muscled forearms and—more noticeable in the locker room than on the field, where he wears a baggy uniform top—a surprisingly ample midsection. Howard is Ruthian, only bigger. Even his round, expressive face—quick to break into a smile, more open and inviting than the typical impassive countenance of the big-time pro athlete—seems extra large."

Howard lives in Philadelphia.

Howard, Terrence

Mar. 11, 1969– Actor

Address: c/o Flavor Unit Management, 155
Morgan St., Jersey City, NJ 07302

After Terrence Howard's highly lauded portrayal of Cameron, an emasculated television director, in Paul Haggis's film *Crash*, and his Oscar-nominated depiction of DJay, a pimp turned rapper, in Craig Brewer's *Hustle & Flow*, both released in 2005, "people went from calling me 'that actor' to 'Terrence Howard' to 'Mr. Howard.'" In the 12 years before he made that remark, during an interview with Neil Drumming for *Entertainment Weekly* (March 23, 2007), Howard had failed to make much of a mark in Hollywood. He had, however, appeared in three dozen feature films; another handful of made-for-television movies, among them *Muhammad Ali: King of the World*, in which he played the title role; and episodes of a bevy of TV series, including *Family Matters*, *Picket Fences*, *NYPD Blue*, and the sitcom *Sparks*, in which he had a leading role. Moreover, he had received an impressive number of positive reviews for his work, in motion pictures including *Mr. Holland's Opus*, *The Best Man*, and *Hart's War*, and several industry awards. His distinctive qualities as an actor, aside from his unusual hazel eyes, include the ability to convey a mixture of emotions all at once. Paul Haggis, for instance, told Carrie Rickey for the *Philadelphia Inquirer* (July 17, 2005) that during some scenes in *Crash*, Howard was "both admirably strong and completely defenseless—in the same moment." In another example, in a review of *Hustle & Flow* for the *Washington Post* (July 22, 2005), Ann Hornaday wrote that as DJay, Howard "simultaneously radiates a hypnotic blend of determination, danger and soul." "There's little doubt that Howard is the archetypal driven character-actor," Phil Hoad wrote for the London *Independent* (November 18, 2005); "hence the constant expansive, conflicted performances that transcend whatever labels are slapped on them." Most recently Howard appeared in Richard Shepard's *The Hunting Party*, Neil Jordan's *The Brave One*, and Kirsten Sheriden's *August Rush*, all released in 2007. *The Perfect Holiday*, scheduled to arrive in theaters in December 2007, stars Howard alongside Queen Latifah, Morris Chestnut, and others in what comingsoon.net described as "the first African American ensemble comedy for the Christmas season."

The second of the four sons of Tyrone Howard and Anita Howard, Terrence Dashon Howard was born on March 11, 1969 in Chicago, Illinois. He has often used his full name professionally. From his parents' other marriages, he has seven half-brothers and -sisters. His father, a sometime insurance agent and building contractor, and his mother are of mixed white and black parentage. One of his uncles is the blues guitarist Nathan Hawkins. Soon after Terrence's birth the Howards moved to Cleveland, Ohio. In December 1971 Howard witnessed his father fatally stab a man during an altercation in a department store, where the man, his family, and the Howards had been waiting in line for a visit with a Santa Claus. Accounts of what triggered the tragedy, among them the recollections of members of both families, differ markedly. The killing made headlines, and in 1972 Howard's father was convicted of manslaughter; after serving less than a year in prison, he was freed on parole. After his incarceration his wife and children moved into a Cleveland housing project and went on welfare. A few years later Howard's parents divorced. Howard and his brothers were forbidden to play with the tough kids in their neighborhood, and largely for that reason, he has said, they stayed out of trouble. Some summers Howard lived with his father in Los Angeles.

Howard's great-grandmother Minnie Gentry was a singer and actress whose credits included roles on Broadway, Off-Broadway, television, and the silver screen. During his childhood and youth, Terrence sometimes spent summer vacations with her in Manhattan and would attend rehearsals with her; as time passed he began to memorize her lines and those of others. He told Cherie Saunders for the *Jacksonville (Florida) Free Press* (March 6, 2002) that one day when he was 15, he watched her in a one-woman play: "She walked out on stage with nothing but a chair. She sat down and opened up this imaginary bag, and had an imaginary cigarette sitting on an imaginary table, and started picking imaginary string beans and talking about having to commit her son into a mental hospital. . . . I was spellbound." He added, "I knew at that moment, that I wanted to have that ability." During his teens, according to the Cincinnati, Ohio, *Call and Post* (September 5, 1996), Howard appeared in *A Raisin in the Sun* and other productions mounted at the Karamu House Performing Arts Center, in Cleveland. When he was 16 he moved with his father and siblings into a ramshackle house in that city. To earn money for his family, Howard sometimes played hooky and did odd jobs, including shoveling snow for neighbors. During that period he spent time with a local pimp, a friend of his father's nicknamed Tweety Bird. "Tweety would come in my room and say, 'Stop crying. . . . You gotta be a man.' I know it sounds strange," Howard recalled to Cindy Pearlman for the *Chicago Sun-Times* (July 17, 2005), "but he was a mentor in a way."

Howard has said that his high-school grade-point average was far below the norm and that he gained acceptance to Pratt Institute, a college in the New York City borough of Brooklyn, and scholarship aid through false pretenses. Some reports state that he had declared himself to be independent of his parents by then. As an undergraduate he persuaded the casting director of *The Cosby Show* to give him a chance to audition. After his second audition he was given a role, but the scenes in which he appeared were cut. "I was angry," he recalled to Lynn Hirschberg. "I banged on Cosby's dressing-room door, and amazingly, he answered. I told him, 'I'm a man just like you.' He didn't like it, and the casting agent never took my calls again." He added, "That's the mold for the rest of my professional life. I say the hell with it, and I suffer the consequences." He earned a B.S. degree in chemical engineering from Pratt. Earlier, in 1989, he had married Lori McCommas.

Thanks to his efforts to "mak[e] friends in the business," as he put it to the film critic Carrie Rickey, in 1992 Howard won the part of Jackie, the oldest member of the legendary singing group the Jackson 5, in the Emmy Award–winning ABC miniseries *The Jacksons: An American Dream* (1992). He next appeared in small roles in the Hollywood comedy *Who's The Man* (1993) and in a few episodes of several television series. In 1995, he told Lynn Hirschberg, he moved to Los Angeles and then "worked regularly." That year Howard appeared in the small parts of Cowboy, a sadistic Vietnam War veteran, in Albert and Allen Hughes's film *Dead Presidents*, and Louis, a student whose athletic talents dwarf his musical aptitude, in Stephen Herek's *Mr. Holland's Opus*. In the UPN television network sitcom *Sparks*, which aired from mid-1996 to early 1998, he performed the role of Greg Sparks, an attorney in a law firm whose other partners are his father and two siblings (James Avery, Miguel A. Nunez Jr., and Robin Givens, respectively). Nonetheless, according to Stephen Galloway in the *Hollywood Reporter* (December 12, 2005), in 1997 Howard "nearly abandoned Hollywood in despair, moving to Philadelphia and taking a job as a carpet cleaner for $7.50 an hour."

"Before I got *The Best Man*," Howard told Hirschberg, "I was ready to quit the business. I was minutes away from suicide. My wife had left me. And she had good reason." As Quentin in Malcolm D. Lee's *The Best Man* (1999), made with an ensemble cast including Taye Diggs, Morris Chestnut, and Nia Long, "Terrence Howard doesn't miss a thing as a guitar-playing truth-teller," Bob Graham wrote for the *San Francisco Chronicle* (March 3, 2000), in one of many admiring reviews of both the film and its actors. Speaking of his role, Howard—an accomplished, self-taught guitarist and pianist—told Walter Dawkins for *Savoymag.com* (April 2002), "Most of the time we all like to be truthful, but it's hard to deal with the consequences of being brutally honest. My character in *The Best Man* always said what he felt, and I actually learned a lot from him." For his depiction of Quentin, Howard was nominated for Independent Spirit and Chicago Film Critics Association Awards for best supporting male actor and most promising actor, respectively, and he won an Image Award from the NAACP (National Association for the Advancement of Colored People) as outstanding supporting actor in a motion picture. In 2000 he portrayed the boxer Cassius Clay (before he changed his name) in the ABC made-for-television movie *Muhammad Ali: King of the World* (based on a biography by David Remnick) and a murderous escapee from prison in Martin Lawrence's film *Big Momma's House* (2000). In a representative, lukewarm assessment of the latter movie, Elvis Mitchell wrote for the *New York Times* (June 2, 2000), "Flittering on the periphery is Mr. Howard, who acts as if he is in a substantial movie, which makes a difference. With his movie-star concentration, in his few scenes he gives *Big Momma's House* weight."

In an assessment of Howard's work in the widely panned *Glitter* (2001), starring Mariah Carey, Paul Clinton wrote for CNN.com (September 25, 2001) that the actor had "once again turn[ed] in a believable, strong performance" as "an underhanded record producer who takes advantage of the talents of others." Also in 2001 Howard appeared in the HBO film *Boycott*, as the civil rights leader Ralph Abernathy, and in *Angel Eyes*, starring Jennifer Lopez. For his work in the latter, he received a Black Reel Award, in the supporting-actor category, from the Foundation for the Advancement of

African-Americans in Film. In the World War II drama *Hart's War* (2002), directed by Gregory Hoblit, Howard portrayed Lincoln Scott, a fictional member of the famous Tuskegee Airmen fighter pilots, who is accused of murdering a racist American sergeant while in a German prisoner-of-war camp. In a review for the *Chicago Sun-Times* (February 15, 2002) of the picture, which also starred Bruce Willis and Colin Farrell, Roger Ebert wrote, "*Hart's War* would be just another military courtroom drama if it were not for the work by Terrence Howard," and in *Rolling Stone* (March 14, 2002), Peter Travers declared Howard's portrayal of Scott to be "outstanding." Howard played the guitarist Gossie McKee in the highly acclaimed motion picture *Ray* (2004), about the legendary singer/songwriter Ray Charles (Jamie Foxx, in an Academy Award–winning performance).

In what might be considered a breakthrough performance, in terms of the amount of attention it attracted, Howard portrayed Cameron, an outwardly successful television director, in *Crash*, which was shown in 2004 at the Toronto Film Festival and was released internationally in the late spring of 2005. Written and directed by Paul Haggis and set in contemporary Los Angeles, *Crash* offers overlapping stories dealing with race, class, and crime as it follows a diverse group of characters, played by an ensemble cast (Don Cheadle, Brendan Fraser, Sandra Bullock, Ryan Philippe, Chris "Ludacris" Smith, Michael Peña, and Jennifer Esposito, among others). When a white police officer (Matt Dillon) molests Cameron's wife (Thandie Newton) during an arrest, Cameron is too fearful to attempt to protect her, and afterward he is forced to question his image of himself and his assumptions about his role as a black man in a white-dominated world. "Cameron had made so many compromises in his life leading up to that moment, that he'd long since lost his self-confidence, because he didn't have anything true to draw on," Howard said in an interview with Kam Williams for the African American Literature Book Club Web site. "So, I think it's just something that naturally occurs when you're in a place of conflict with self and dignity." "If an actor is talented . . . , then it is very difficult to tell where the man starts and the actor begins," Haggis told Carrie Rickey. "Terrence opens his eyes and lets you right into his soul." For his depiction of Cameron, Howard won an NAACP Image Award and a Screen Actors Guild Award.

Howard accepted the role of DJay, the character he brought to life in *Hustle & Flow*, after turning it down twice. "I was afraid that instead of trying to kill a stereotype, they were trying to propagate a stereotype," he told Phil Hoad. "Blaxploitation, glorification of pimps, glorification of the gangsta life. I didn't want to participate in anything like that." DJay is a small-time Memphis, Tennessee, pimp who is experiencing a midlife crisis when he learns that a rap superstar (played by Ludacris) who had his beginnings in Memphis is returning to the city; eager to earn more money and move out of the slums, DJay makes an all-out effort to break into the music industry as a rapper. To prepare for the role, over a two-year period Howard interviewed more than 75 prostitutes, spent a month living in a bordello, talked to 120 pimps, and lived with some of them briefly as well; he also watched many pornographic movies. "The thing about it was how do you make an unlikable person, an antihero, into a hero of a human spirit," he said to Janice Rhoshalle Littlejohn for the Associated Press (July 18, 2005). "Because that's the true hero of this movie, the human spirit and its resilience and determination to do more and more." "The complexity—one might less charitably say the incoherence—of DJay's character requires a lot from an actor, and Mr. Brewer's good fortune in casting Mr. Howard can hardly be overstated," A. O. Scott wrote in a review of the movie for the *New York Times* (July 22, 2005). The *Los Angeles Times* (July 22, 2005) reviewer, Kevin Thomas, wrote, "*Hustle & Flow* places Howard front and center as a man with little education but much street wisdom. . . . DJay seems a world apart from Howard's sophisticated, uptight Hollywood director in *Crash*, but Howard makes them equally indelible." Howard won the Audience Award at the 2005 Sundance Film Festival and the Los Angeles Film Critics Association's New Generation Award for his performance, and he also earned Academy Award and Golden Globe Award nominations in the best-actor category. His other screen credits in 2005 include his roles in Mark Brown's *The Salon*, John Singleton's *Four Brothers*, and Jim Sheridan's *Get Rich or Die Tryin'*. He also appeared in the ABC made-for-TV drama *Their Eyes Were Watching God*, whose screenplay, by Suzan-Lori Parks, was based on the same-titled novel by Zora Neale Hurston, and the HBO Films production of *Lackawanna Blues*, directed by George C. Wolfe from Ruben Santiago-Hudson's teleplay.

Craig Brewer told Donna Freydkin for *USA Today* (February 22, 2006) that in conversation, Howard often quickly shifts from talking about "the crunk to the cosmic." The actor, who swam 150 to 200 laps a day to prepare for his portrayal of the real-life inner-city swimming coach Jim Ellis in the film *Pride*—Ellis himself helped Howard improve his technique—has said that every morning he does hundreds of push-ups and sit-ups and runs three miles on his treadmill. Howard lives in a suburb of Philadelphia, Pennsylvania, near the house where his daughters (Aubrey and Heavenly) and son (Hunter) live with their mother, Lori McCommas. Howard and McCommas divorced and then, in 2005, remarried; currently, they are separated. Howard owns a contracting business and has restored what he has described as "historical houses." He currently hosts the Public Broadcasting System weekly series *Independent Lens*, about independent films.

Howland, Ben

May 28, 1957– Men's head basketball coach of the UCLA Bruins

Address: UCLA Athletic Dept., J.D. Morgan Center, P.O. Box 24044, Los Angeles, CA 90024

"When you think of college athletics, there's Notre Dame football and UCLA basketball. That's always the way it's been." Ben Howland made that remark to Gerry Dulac for the *Pittsburgh (Pennsylvania) Post-Gazette* (February 11, 2004) during his first season as the head coach of the Bruins, the men's basketball team at UCLA—the University of California at Los Angeles—a job that he had dreamed of filling for much of his life. Although he had excelled as a player in his high school and college, Howland "wasn't good enough" to play with the Bruins, as he told Dulac. "But the opportunity to coach here is even better," he said. "You know, as a player you only get to stay for four years. I hope to stay a lot longer than that." Except for one year in the beginning of his professional life, Howland has always earned his living as an assistant or head coach, and he has distinguished himself with his uncommon skill at transforming losing teams into winners. He accomplished that feat as the head coach at Northern Arizona University, for five years beginning in 1994, and at the University of Pittsburgh for four. When he arrived at UCLA, in April 2003, the Bruins had just ended their first losing season since 1948, with their worst record since 1942. Howland is the eighth person to serve as UCLA's men's basketball coach since the retirement of the legendary John R. Wooden, who guided the squad from 1948 through 1975. During Wooden's 27 seasons there, UCLA won 10 National Collegiate Athletic Association (NCAA) championships, lost no games in four seasons, and from 1971 to 1974 won 88 consecutive games—a record that remains unbroken. Commenting on the pressure on him to succeed at UCLA, Howland said to John Blanchette for the Spokane, Washington, *Spokesman Review* (January 7, 2004, on-line), "Fear of failure is a driving motivation, but I heard it said once that if you're afraid to fail, you'll never experience success. It's a job that comes with high expectations and I understand that, but I'm not going to be afraid of that, either." In Howland's first season with the Bruins, the team won 11 games and lost 17; since then, the team has accrued win–loss records during the regular season of 18–11, 27–6, and 26–5, and in both 2006 and 2007, UCLA made appearances at the Final Four of the NCAA championships. Jerry Pimm, whom Howland served as an assistant for 12 years when Pimm was head coach of the men's basketball team at the University of California at Santa Barbara, told Todd Harmonson for the *Orange County (California) Register* (March 20, 2006) that Howland is "an intense, passionate, dogmatic worker. He's got great energy. He's got great passion for the game. He prepares for every detail. It definitely was easy to see that he would make a great coach."

One of the four children of Bob Howland, a Presbyterian minister, and Mary Howland, a college English teacher, Ben Howland was born on May 28, 1957 in Lebanon, Oregon. His siblings are all teachers. As an adult Howland described his father (who died in 2003) as his best friend. Howland grew up in Goleta, California, a suburb of Santa Barbara. As a youngster he was an avid fan of the UCLA Bruins and would watch broadcasts of Bruins games on television. UCLA had won a record 10 NCAA championships in the 1960s and 1970s and captured seven consecutive (1967–73) national titles under John R. Wooden. With such players as the future NBA stars Kareem Abdul-Jabbar, Bill Walton, and Lucius Allen, UCLA had set the gold standard in college basketball with its precision offense, sound discipline, and impeccable teamwork. Howland himself began to hone his playing skills in summer pickup games at the Goleta Boys Club. To some extent his scrappiness and tenacity made up for what he lacked in athletic talent.

Howland attended Dos Pueblos High School, in Santa Barbara, before transferring to Cerritos High School, in Los Angeles, after his father accepted a post at a church in nearby Norwalk. At Cerritos Howland became a standout defender and long-range shooter, earning two Suburban League Most Valuable Player honors. He also won All-California Interscholastic Federation honors twice. He spent two years at Santa Barbara City College, serving as team captain and guard for the men's basketball team, the Vaqueros, and then completed his junior and senior years at Weber State University, in Ogden, Utah. As a guard for the Weber State Wildcats, he led the Wildcats to two Big Sky conference championships and consecutive berths in the NCAA Tournament and was named the team's Most Valuable Defensive Player after the 1978–79 and 1979–80 seasons. At Weber, according to Pete Thamel in the *New York Times* (March 4, 2007), "Howland had a reputation for nervous excitability—he typically vomited 10 minutes before every game." Howland graduated from college in 1979 with a B.A. degree in physical education. In 1980 he played with a professional basketball team in Uruguay. Back in the U.S., in 1981 he entered Gonzaga University, in Spokane, Washington, where he earned an M.S. degree in administration and physical education. Concurrently, and continuing into 1982, he served as a graduate assistant to Jay Hillock, the head coach of the Bulldogs, the Gonzaga men's basketball team.

In 1982 Howland joined the staff of the University of California at Santa Barbara (UCSB) as an assistant to the men's basketball team's head coach, a position filled the next year by Jerry Pimm. During his 12 years in that post, Howland was credited with nurturing the future NBA players Brian Shaw and Connor Henry. Between 1987 and 1994 he helped lead UCSB's Gauchos to five postseason appearances. Though he remained behind the scenes, his reputation as a program builder, astute recruiter, and developer of talent became widely known. In 1994 he left UCSB to join Northern Arizona University (NAU), in Flagstaff, as the coach of its men's basketball team, the Lumberjacks. The team had had four straight losing seasons, resulting in a record of 34–76 and a ranking of 280 out of 290 Division I-A programs. Howland regarded the job as being "one of the worst" in the whole country, as he told Bill Modoono for *Pitt Magazine* (Winter 2003), but also a great opportunity. "I got a one-year contract for $60,000 a year, and I couldn't wait to sign up," he told Jim Derry for the New Orleans, Louisiana, *Times-Picayune* (March 31, 2006).

Having made recruitment his top priority, Howland adopted the motto "Recruit to shoot" and set about luring athletes with superior shooting skills. He then fashioned an offensive scheme that was so effective that the Lumberjacks soon topped most other college teams in shooting accuracy. In three of Howland's five years as coach, the Lumberjacks led the nation in three-point shooting percentage, and in 1998–99 they became the only team in NCAA history to lead the nation in both field-goal percentage and three-point field-goal percentage in the same season. Beginning in 1996, in Howland's third season as head coach, NAU won at least 20 games in three consecutive seasons, gained two Big Sky conference titles, and made two appearances in postseason play: in the National Invitation Tournament, in 1997, and, for the first time, the NCAA Tournament, in 1998. Although, in the latter contest, the Lumberjacks fell to the Cincinnati Bearcats in the first round, their performance attracted national attention. In 1997 Howland was named Big Sky Conference Coach of the Year. He remained at NAU for one more season.

After Ralph Willard, the men's coach of the University of Pittsburgh Panthers, announced that he would retire at the end of the 1999 season (which Pitt finished with a 14–16 record), Steve Pederson, the school's athletic director, interviewed Howland for the job. "It was like I knew exactly what he was trying to do and he knew exactly what I was trying to do," Pederson said to Bob Smizik for the *Pittsburgh Post-Gazette* (February 24, 2002, online). Referring to Howland's accomplishments at NAU, Pederson told Bill Modoono, "He had already done this once. There's something to be said for being through this before and succeeding." Howland assumed the head-coach position at Pitt on March 8, 1999, inheriting what Pederson described to Smizik as a program in "bad, bad shape." Again focusing on recruitment, at Pitt—which belonged to a conference known for its gritty, punishing games—Howland sought disciplined, physical players who would create a bruising defense. "If you look at all sports, whether you're talking about the Pittsburgh Steelers or the New England Patriots or baseball, it all starts and ends with defense," Howland told David Wharton for the *Los Angeles Times* (March 31, 2006). "You need to play defense to have a chance to win championships." He also dismissed players for disciplinary reasons. "You've got to get good kids," he told Bill Modoono. "No kid's perfect, no kid's not going to make mistakes. But if you have really good kids and you put them around other good kids, the peer group determines a lot." In 1999–2000, Howland's first season with the Panthers, the team won 13 games and lost 15; in the next season they advanced to the second round of the National Invitation Tournament. In 2001–02, led by the All-American junior point guard Brandin Knight, Pitt won 29 games—a school record—and lost only six to capture the Big East regular-season title, the team's first such title in 14 years. They then advanced to the "Sweet 16" (a contest among the top 16 teams in the 64-team NCAA Men's Division I Basketball Championship), which they lost to the Kent State University Golden Flashes, 78–73. Howland was named the Naismith College Coach of the Year by the Atlanta Tipoff Club's board of selectors (made up of eminent basketball journalists, coaches, and administrators), and he was chosen as the National Coach of the Year by the Associated Press, *ESPN Magazine*, the U.S. Basketball Writers Association, and the *Sporting News*. In addition, he won three Big East Coach of the Year honors. In 2002–03 Pitt finished the season with 28 wins and five losses, gaining another Big East conference title and "Sweet 16" appearance, where they lost to the Marquette University Golden Eagles, 77–74. Speaking of Howland, Barry Rohrssen, who joined Pitt as an assistant coach in 1999, told Gerry Dulac, "Every game for four years, before we walked out on the court, I never felt we would lose a game with him. He had such a thorough understanding of the opponent. The first time I watched tape with him, he took something from the tape I had never seen before. He was a master of being able to do that. It would be like giving someone a brush and can of paint and giving Michelangelo a brush and a can of paint and tell them to go paint a ceiling. You're going to see two different things. Ben sees a whole different game."

In March 2003, after the Bruins ended the season with a record of 10–19, UCLA fired the team's head coach, Steve Lavin, and rumors grew that Howland was eyeing the vacancy. The following month UCLA's athletic director, Dan Guerrero, hired Howland to fill the position. During Lavin's seven years as head coach, UCLA had amassed a record of 145–78; the Bruins had won at least 20 games every season except the last, and they had reached the Sweet 16 of the NCAA tournaments five times in six years (a feat matched by only one other college coach, Mike Krzyzewski of Duke University). Nevertheless, attendance at Bruins games had steadily decreased as fan dissatisfaction grew, with criticism that the team was unpredictable and inconsistent and made up of undisciplined underachievers. Gerry Dulac, writing in early 2004, described the team as "shockingly devoid of skill" and as "soft and non-aggressive," while the former Bruins coach John Wooden told Dulac that he did not think that the players were "the type of material [Howland] works with best. He wants a more physical team. Every place he's been, when he gets his material, he does a good job."

Howland set about creating a team that embodied the "spirit of what [Wooden] is all about, which is teamwork, which is unselfish play, which is team defense, which is giving yourself up for your teammates," as he recalled to Ed Graney for SignOnSanDiego.com (March 31, 2006). Although his first season at UCLA ended with an 11–17 record, observers noted improvements in defense and signs of greater intensity and cohesion among the players. He acquired for the Bruins two star high-school players from Southern California—Jordan Farmar and Arron Afflalo. "All he did was talk about defense," Farmar told a writer for *USA Today* (April 3, 2006). "There's no big secret to this . . . ," Howland explained to Malcolm Moran for *USA Today* (April 4, 2006). "The best players in the world are players that play both ends of the floor, starting with Michael Jordan. . . . It's not a hard sell because all players want to be great. Be like Mike." Remaining true to form, Howland also emphasized the importance of executing every move meticulously. During practices, according to Bruins players, as Marc Carig reported for the *Washington Post* (March 24, 2007), "it's not uncommon to run plays over and over again, until [they are] completed with precision." "Just when we're doing walk-throughs, [Howland] wants everybody to be in the precise spots," the guard and forward Josh Shipp told Carig. "I mean, we try to shortcut things just to save time. He stops us and points it out and says we need [to] get in the right spots. That's how precise it is." The point guard Darren Collison told Pete Thamel that each practice session is "exactly like a class." Howland also stresses to the team the importance of pride in the UCLA basketball tradition. "They need to understand this is a unique fraternity and it is truly an honor to be part of it," he told Ed Graney. Howland told Thamel that every week he devotes about 15 to 20 hours to studying videos of games; after one of the Bruins' losses in 2005–06, Thamel reported, he watched the video of the game nine times, and after another defeat, he watched the video of the game three times that same night.

The Bruins finished the 2004–05 season with 18 wins and 11 losses and made their first NCAA Tournament appearance since 2002; there, they lost to the Texas Tech Raiders in the first round. In 2005–06, after a loss to the University of Southern California Trojans, the Bruins won 12 games in a row, finishing with a conference record of 14–4 (giving them a rank of seven nationally) and winning the Pacific 10 (Pac-10) regular-season and end-of-season tournament titles. After securing the number-two seed in the Oakland regional bracket of the NCAA Tournament, the Bruins advanced past the Gonzaga Bulldogs, the University of Memphis Tigers, and the Louisiana State University Tigers, averaging 56.2 points per game, before losing to the number-one–ranked University of Florida Gators, 73–57, in the National Championship game. Howland's achievements that year earned him more than half a dozen honors, among them the Jim Phelan Award as National Coach of the Year and selection as Conference Coach of the Year by CBSSportsline.com, SI [Sports Illustrated].com, and CollegeInsider.com.

In November 2006, in the preseason Maui Invitational, a tournament hosted by Chaminade University of Honolulu, in Hawaii, the Bruins captured the championship by defeating the Chaminade, University of Kentucky, and Georgia Tech teams. The Bruins were also victorious at the John R. Wooden Classic, in December, vanquishing Texas A&M, 65–62. The Bruins started their 2006–07 campaign with 13 wins and no losses, and that winter an Associated Press poll ranked the team number one for six weeks in succession. UCLA was seeded second in the Pac-10 going into the 2007 NCAA Tournament, where the team lost to the Florida Gators, 76–66, in the national semifinals, held on March 31.

In 2007 Howland signed a seven-year contract with UCLA at a base salary of $1.5 million annually, with potential yearly additions of up to a half-million dollars. He told Diane Pucin for the *Los Angeles Times* (October 4, 2007), "I'm very lucky. I've got my dream job . . . and I know how lucky and blessed I am."

According to Thamel, Howland is "an ever-revving engine of obsessive energy." He and his wife, the former Kim Zahnow, have two children—Meredith and Adam, both of whom are college students. In his leisure time Howland enjoys fly-fishing.

Hudson, Jennifer

Sep. 12, 1981– Singer; actress

Address: c/o William Morris Agency, 1325 Ave. of the Americas, New York, NY 10019

Since 2002, when the televised singing contest *American Idol* began airing on the Fox network, the winners of the competition have gone on to varying degrees of success, with some selling millions of albums and earning multiple music-industry awards. Even the runners-up have achieved a considerable measure of acclaim, perhaps none more so than Jennifer Hudson, who competed in 2004, during the third season of Fox's ratings juggernaut. Hudson, whose gospel-tinged, five-octave performances made her a formidable contender, finished the competition in a dismal seventh place, sparking rumors of racism and vote tampering. She was vindicated, however, when she earned a Golden Globe Award, a Screen Actors Guild Award, and an Academy Award for her portrayal of Effie White, a talented but troubled singer in a 1960s-era Motown-style girl group, in the long-awaited film version of *Dreamgirls* (2006). (The stage version of *Dreamgirls*, starring Jennifer Holliday as White, ran on Broadway in the early 1980s.) To get the role, Hudson beat out almost 800 other women who had also auditioned, including, ironically, Fantasia Barrino, the season-three *American Idol* winner.

Roberto Schmidt/AFP/Getty Images

Jennifer Kate Hudson was born on September 12, 1981. Accounts of her youth vary, with some sources stating that she was raised, along with her older brother, Jason, and her older sister, Julia, by a single mother. It is unclear how long her mother, Darnell Hudson, who worked as a secretary, remained single. She eventually married Samuel

Simpson, a bus driver, and some sources make reference to Hudson's having either two stepsiblings or two half-siblings.

Hudson grew up in Englewood, a predominately black neighborhood on the South Side of Chicago, Illinois. She told Nick Curtis for the London *Evening Standard* (January 25, 2007), "It was a decent neighborhood. We were poor but we weren't that poor. . . . We had everything we needed." Hudson modeled for a Sears catalog as a five-year-old and, thanks to Darnell's belief that her children should be exposed to enriching extracurricular activities, also took ballet lessons as a child.

The family belonged to the Pleasant Gift Missionary Baptist Church, and Hudson attended twice a week—on Sundays for worship and Tuesdays to practice for the choir, which she joined at age seven. "Church is where I'm from," she told Dave Hoekstra for the *Chicago Sun-Times* (December 17, 2006). "It will always be my favorite place to sing."

In her teens Hudson also began performing in such secular venues as local talent shows, community musicals, and wedding receptions. She attended Dunbar Vocational Career Academy, which had previously produced such performers as Cleotha and Pervis Staples of the Staple Singers and Lou Rawls. There, she impressed the school's music faculty and was voted most talented female musician by her peers. "She exuded confidence," her former choral director, Richard Nunley, told *Us Weekly* (March 5, 2007). "She always told me she'd be as successful as [the singer] Whitney Houston."

Hudson's grandmother died in 1998, and the following year, shortly after Hudson's graduation from Dunbar, Samuel Simpson succumbed to cancer. While the deaths of two beloved relatives in so short a period proved wrenching for Hudson, she took great consolation in her faith. Determined to continue her education, she briefly attended Langston University, in Langston, Oklahoma, but was unhappy at being so far from her remaining family members. She then transferred to Kennedy-King College, one of the institutions in Chicago's City Colleges system. While studying music at Kennedy-King, in 2001 Hudson earned a singing part in a local production of *Big River*, a musical based on Mark Twain's 1884 novel *The Adventures of Huckleberry Finn*. "Quite honestly I will never forget Jennifer Hudson coming in and singing for us," Rick Boynton, the show's artistic director, told Mark Caro for the *Chicago Tribune* (December 18, 2006). "She just came into the room and opened her mouth, and it was something I had never heard [before]. It was incredible."

In the fall of 2002, after *Big River* closed, Hudson, confident that she could earn a living by singing, auditioned for the chance to perform on a Disney cruise ship. In February 2003 she began appearing in the shipboard production *Hercules: The Musical* as the head muse, Calliope. Despite her attachment to her family and her hometown, she told Caro, "From the moment I stepped on that ship, I was like, I will never be at home for good ever again."

Although she was invited to renew her contract with Disney, Hudson decided instead to audition for the third season of *American Idol*, a show that had proven exceedingly popular and that had launched the careers of its first two winners, Kelly Clarkson and Ruben Studdard, as well as that of Studdard's close season-two runner-up, Clay Aiken.

On the show the contestants' singing is critiqued—sometimes harshly—by the judges: Simon Cowell, Paula Abdul, and Randy Jackson. The judges are advised by a series of celebrity guest judges, who included, during season three, the pop stars Barry Manilow and Elton John. At the end of each weekly telecast, viewers are invited to vote for their favorites by calling in or sending text messages; the contestant with the fewest votes in a given week is eliminated and does not compete the following week. During the early rounds of the competition, Hudson sang such popular numbers as "Baby I Love You," an Aretha Franklin number, and "I Have Nothing," originally performed by Whitney Houston. She was sometimes compared to those two stars by the judges, who generally praised Hudson's vocal abilities—if not some of her more outlandish costume choices. (One pink dress, made for her by a friend, an aspiring designer, was widely described in the tabloid press as "cringe-inducing.")

Hudson, while inarguably one of the most talented competitors, was voted off the show in seventh place. Cowell, Abdul, and Jackson expressed shock at that outcome—Jackson, for example, described it as "insane," according to Sarah Rodman in an article for the *Boston Herald* (April 27, 2004). Various theories explaining her ouster were put forth by journalists, music-industry figures, and distressed fans. A phone outage in Hudson's native Chicago, which prevented many of her supporters from voting, was blamed by some, while others suggested that because Hudson was so good, many of her fans thought their votes would be superfluous.

Hudson's competitors on *American Idol* included LaToya London and Fantasia Barrino, two black women with gospel-inspired singing styles; Hudson, London, and Barrino were often referred to collectively by the judges and the show's host, Ryan Seacrest, as "the three divas." Some felt that the three singers had ended up splitting the vote—to the detriment of each. (Barrino and London were also in the bottom three the week Hudson was eliminated.)

Elton John, who had been deeply impressed by Hudson's rendition of his song "Circle of Life" when he served as a celebrity judge, described the viewers' decision as racially motivated. Many immediately disputed that conjecture, since Ruben Studdard, the previous season's winner, was black, and George Huff, a charismatic black competitor, had fared well that week. Later, Barrino was named the season-three victor.

The Fox network received so many angry phone calls and letters regarding Hudson's loss that the *American Idol* producers released a statement confirming that the decision had been based solely on viewer voting. Hudson expressed her view that fans of the show ignored singing skill when deciding their favorites. "If we're going to base [the contest] on talent, I know I was robbed," she told Janet Zimmerman for the *Riverside (California) Press Enterprise* (April 27, 2004). "I think people need to reconsider and think what this competition is supposed to be, rather than what such-and-such is wearing." Otherwise, she responded philosophically to being eliminated in what was then the closest vote in the show's history. "It was meant to be and that's fine with me," she explained to Zimmerman. "It was God's will." Similarly, she told Faridul Anwar Farinordin for the Malaysia *New Straits Times* (December 11, 2004), "I'm thankful for being in the final round and I respect the voters' choice. What's important is that the show has opened new doors for me to pursue my career in music." Hudson also defended her fellow contestant John Stevens, a young, white singer whom many voters believed should have been dismissed instead of her. "[Stevens] deserves to be there as much as me and anybody else," Hudson told Zimmerman. "He has fans just like we do and obviously they're voting." (Stevens was voted off the show the week after Hudson.)

After *American Idol* Hudson was inundated with invitations to perform. Rather than jumping into an ill-conceived project—a pitfall that she believed some of her *American Idol* predecessors had encountered—Hudson carefully considered her options. She was first obliged to participate in the 50-date *American Idol: Season Three* tour, in the summer of 2004, which featured the top 10 contestants of the show. Hudson followed up that group tour by performing concerts around the Midwest and singing at a charity event on Broadway, at which she was introduced to theater executives who urged her to consider moving to New York to pursue a stage career.

Hollywood, however, beckoned; Hudson, after a grueling series of auditions, earned the part of Effie White in the film *Dreamgirls*, which premiered on December 4, 2006 and was released nationwide on Christmas Day of that year. "Effie is such a hugely complex role," the director and writer Bill Condon told Susan Wloszczyna for *USA Today* (November 17, 2005). "She is at once exasperating and heartbreaking. Jennifer emerged as the person who captured both sides."

The Dreamettes, the fictional singers featured in *Dreamgirls*, were loosely patterned on the phenomenally popular Motown trio known as the Supremes, and Effie was based in part on the late Florence Ballard, who had been marginalized by the thinner, lighter-skinned singer Diana Ross. "I've had a similar journey as Effie," Hudson told Hoekstra. "Me being a part of *Idol*, her being part of the group. I was kicked off the talent show. She was [originally] the lead singer of the group and [was] kicked off to the background. We both go through our journeys, trying to hold on to our dream and achieve our goal. We have hardships but we prevail at the end."

When the stage version of *Dreamgirls* appeared on Broadway, playing the role of White made Jennifer Holliday a star and earned her a Tony Award. Holliday's rendition of the show-stopping song "And I Am Telling You I'm Not Going" became legendary among theater aficionados. Hudson, who had grown up idolizing Holliday, described the part to Wloszczyna as "the ultimate, the greatest role in theater history." The movie also starred Beyoncé Knowles, Anika Noni Rose, Jamie Foxx, and Eddie Murphy. At the start of *Dreamgirls*, Effie White is the confident lead singer of an aspiring girl group. At a talent show they impress an ambitious salesman, Curtis Taylor Jr., played by Foxx, who becomes their manager (and White's boyfriend). The group soon secures a spot singing back-up for James "Thunder" Early, played by Murphy. In an effort to improve the group's appeal to white audiences, Taylor makes the slimmer, lighter-skinned Deena Jones (Knowles) the lead singer, sending Hudson's character into a self-destructive tailspin. As she is forced from the group, White sings the powerful anthem "And I Am Telling You I'm Not Going." Hudson had first heard the song as a 12-year-old and had occasionally performed it at talent shows. She was initially intimidated at the thought of following in Holliday's footsteps, but she told Joey Guerra for the *Houston Chronicle* (December 21, 2006), "The first thing I had to do was just realize the character is Effie White and not Jennifer Holliday. Just like [Holliday] put her stamp on it and created her own Effie White, I have to put my Jennifer Hudson mark on it and show why I'm here."

Hudson's work in the film was almost universally acclaimed. It was reported that film audiences across the country were on their feet screaming and applauding during the scene in which Hudson sings "And I Am Telling You I'm Not Going." The *Los Angeles Times* reporter Tom O'Neil wrote on his newspaper-sponsored Web log that Hudson "not only owns the movie, she rides it like a rocket to instant stardom." A. O. Scott wrote for the *New York Times* (December 15, 2006, on-line), "The dramatic and musical peak of *Dreamgirls*—the showstopper, the main reason to see the movie—comes around midpoint, when Jennifer Hudson, playing Effie White, sings 'And I Am Telling You I'm Not Going.' That song has been this musical's calling card since the first Broadway production 25 years ago, but to see Ms. Hudson tear into it on screen nonetheless brings the goose-bumped thrill of witnessing something new, even historic." Scott continued, "It's not often you go to the movies and see a big-boned, sexually assertive, self-confident black woman—not played for laughs or impersonated by a male comedian in drag—holding the middle of the screen. And when was the last time you saw a first-time film actress upstage an Oscar winner [Foxx], a pop diva [Knowles] and a movie star [Murphy] of long standing? Ms. Hudson is not going anywhere. She has arrived." (Scott was alluding to the fact that Hudson, already more curvaceous than the typical actress, had gained an additional 20 pounds to play the role.) For *Variety* (November 30, 2006, on-line), David Rooney wrote, "The emotional intensity [of the film] is immediately pushed several notches higher with Hudson's raw, devastating delivery of 'And I Am Telling You I'm Not Going.' The anthem of proud desperation is forever linked to Jennifer Holliday's defining original interpretation but Hudson makes it her own, singing it on a bare stage backed by mirrors. . . . An *American Idol* finalist without prior screen experience, Hudson comes fully-formed to film."

For her work in *Dreamgirls*, Hudson earned awards in the category of best supporting actress from the African-American Film Critics Association and the Screen Actors Guild. In addition, she took home both a Golden Globe and an Academy Award for best supporting actress. At the Academy Awards ceremony, Hudson joined her co-stars Knowles and Rose for a medley of songs from the movie.

During the awards season, the press widely reported on Hudson's fashion choices, and most observers agreed that Hudson, who had accepted the help of several designers and stylists, including André Leon Talley, an editor at large for the American edition of *Vogue*, had the potential to become a style icon and an inspiration for other full-figured women. Hudson appeared on the cover of the March 2007 edition of *Vogue*, becoming one of only a handful of African-American women whose images have graced the front of that magazine. Anna Wintour, the magazine's famed editor, wrote in her column that month, "[Hudson's] happiness in her own skin is something we can draw strength from. The question of body image is a current one, and I can't think of a more compelling and beautiful argument for the proposition that great fashion looks great on women of all sizes than the sight of Hudson in a Vera Wang [designer] dress on the red carpet."

Despite such adulation, Hudson does have detractors. She was widely quoted as referring to *American Idol* as a "stepping stone," raising the ire of Simon Cowell, who deemed her ungrateful for the opportunities the show had brought her. Additionally, some journalists questioned what they saw as her intolerance of homosexuality; after a flood of such criticism, she wrote on her Web site, "In a recent interview, I was asked how I reconciled being a Christian with performing at events for my gay fans. I find it upsetting that some folks equate being a Christian with being intolerant of gay people. That may, unfortunately, be true for some, but it is not true for me. I have talked often of my love and support of the gay community. I have said again and again that it was the gay community that supported me long before and long after *American Idol*, and kept me working and motivated. It is the gay community that celebrated my voice and my size and my personality long before *Dreamgirls*. Yes, I was raised Baptist. Yes, I was taught that the Bible has certain views on homosexuality. The Bible also teaches us not to judge."

In late 2006 Hudson signed a recording contract with Arista Records, and she is currently working on an album scheduled for release in 2008. She was to appear in two upcoming films. The first, "Winged Creatures," based on a novel of the same name by Roy Freirich, is about a group of strangers who form unique relationships after surviving a random shooting at a Los Angeles diner. That film also stars Kate Beckinsale and Dakota Fanning. In the second motion picture, "Sex and the City: The Movie," Hudson was cast with Sarah Jessica Parker, Kim Cattrell, Cynthia Nixon, Kristin Davis, and others associated with the hit HBO comedy series *Sex and the City*. Hudson was to play Louise, the assistant to Parker's character, Carrie Bradshaw. In June 2007 Hudson was one of 115 actors, filmmakers, studio executives, and others invited to join the Academy of Motion Picture Arts and Sciences, which manages the Oscar-selection system each year.

Hudson, who currently lives in the Hyde Park neighborhood of Chicago, has hinted jokingly that if her film and music career does not work out, her love of drawing may lead her to become a tattoo artist.

Hunter, Charlie

May 23, 1967– Jazz guitarist

Address: c/o Leslie DeHaven Spire Artist
Management, 5290 College Ave., Oakland, CA
94618

Over the past several decades, musical genres and subgenres have increased seemingly exponentially, and the work of numerous musicians has reflected the influences of those new forms, singly or in combination. As to be expected with any type of experimentation, there have been grand failures and spectacular successes. Responsible for some of

Charlie Hunter

the latter is the jazz guitarist Charlie Hunter. In his late teens Hunter discovered the music of jazz greats including Charlie Parker, John Coltrane, and Thelonious Monk; afterward he began composing songs that used jazz as a foundation while mirroring the various other musical styles he had absorbed—sounds that ranged from Motown, soul, funk, and gospel to reggae, punk, and rockabilly. Playing unique music on his custom-made eight-string guitar, Hunter started leading groups whose fans were as varied as the influences on his style. Since the appearance of his first album, *The Charlie Hunter Trio*, in 1994, Hunter has released or contributed to dozens of records, the size and memberships of his ensembles changing with almost each one, in keeping with his constant striving for innovation.

Charlie Hunter was born on May 23, 1967 in Providence, Rhode Island, where he lived with his mother and sister. When he was four years old, after his mother had transformed a school bus into a mobile home, the trio set out on a four-year exploration of the United States. Ultimately, his mother decided to settle in Berkeley, California, where she found work as a luthier—a builder and repairer of stringed instruments. "That's how I got my start in playing music, just being surrounded by musicians all the time," Hunter told Chris Kelsey for *Onstage* (January 2001). At first he was interested in playing the drums, but after neighbors complained about the noise, he turned to the guitar.

During Hunter's teen years, in the 1980s, the San Francisco Bay Area was a hotbed of musical activity. Hunter told Jesse Hamlin for the *San Francisco Chronicle* (October 16, 1994) that where he grew up, "there were actual Jamaicans playing reggae, people playing funk, people playing jazz, real blues and country musicians, actual Africans playing African music. I had the opportunity to delve into all these different kinds of music. I'd get really into one thing, have a nervous reaction to it and go onto the next, as if they were incompatible. The reality is that all music is convergent. My focus is the jazz idiom. That's where I take off from. But I listen to everything and cop whatever I can." Listening to his AM radio, Hunter also knew the popular songs of the day.

Meanwhile, Hunter—like other future music stars, including Kirk Hammett of the band Metallica and David Bryson of Counting Crows—had the good fortune to study with Joe Satriani before that master guitarist gained fame. As a high-school student, Hunter began playing rock and blues in gigs around the Bay Area. Then, at 18, at the suggestion of friends, he began exploring jazz. He told Kelsey, "I heard [the guitarist] Charlie Christian, and my ears were really ready for that. It blew me away and I understood it, and from there I got into the whole bebop thing." Describing his self-education in jazz, he added, "I did it chronologically. I figured out the Charlie Christian stuff and some Tony Grimes solos. From there I went on to learning a few Lester Young things, Coleman Hawkins solos, and then Charlie Parker and on to Coltrane. After that, I got into jazz guitar players like Joe Pass and Wes Montgomery."

At Berkeley High School, renowned for its music program, Hunter struggled, as the traditional environment there clashed with his improvisational style. For a brief period after high school, he studied music theory at a community college, with similar results. He moved to New York City for a short time, then decided to visit a friend in Europe and sharpen his skills by busking on the streets. "I'd play for 12 hours a day . . . ," Hunter recalled to Munson Kyle for the *Des Moines (Iowa) Register* (April 29, 1999). "It's not about introspection. . . . It taught the value of having a show, trying to play for people as opposed to making the people feel like what you're doing is a private thing you're allowing them the privilege of watching." For a few years he returned to Europe each summer.

At one point Hunter decided to play backup for singers, since they drew larger crowds than instrumentalists; that, in turn, led him to add a stronger bass line to his sound. In 1992 Hunter approached a Bay Area luthier, Ralph Novak, about creating a variation on the traditional eight-string guitar. The result was a guitar whose top five strings were tuned to A, D, G, B, and E, while the bottom three were tuned to E, A, and D, like those found on a bass. The most innovative features of the design, now patented by Novak, were the fanned frets: on a normal guitar the frets are perpendicular to the neck, but on Novak and Hunter's creation, the frets fan out, thus allowing for a greater depth of tone. Since then the two have continued to modify Novak's design. Hunter commented to Jeff Niesel for the *Dallas (Texas) Observer* (August 31, 2000) about playing his new instrument, "It's so difficult, I can't even explain it. Imagine pushing a van up the hill with the brake on, and there's a time constraint, and you have to push it with a certain rhythm. While juggling. I'm not interested in just being another guitar player. There's millions of them, so what's the point? What service would I be providing? I'm glad they're doing it, but it's not the road for me, and I'm glad to be doing something different." Fellow musicians have often marveled at Hunter's ability to play bass lines while soloing. Hunter's new instrument would allow him to emulate his jazz-organ heroes, Larry Young and Jimmy Smith, who were able to provide bass lines while performing solos.

In the 1990s Hunter became a prominent figure in a new jazz-fusion scene in the Bay Area, to which critics attached such labels as "hip-hop jazz," "grunge jazz," "avant-rock jazz," "punk-jazz," and, most popularly, "acid jazz." The last-named term soon became an umbrella description for any instrumental music that had jazz riffs but could not be classified as traditional jazz. From the beginning Hunter resisted such labels—he jokingly referred to his sound as "antacid jazz"—while defending the music itself, which he described to Hamlin as being "a lot of fun." Hunter wanted his style to be accessible to his and subsequent generations whose members might not be familiar with many classic jazz tunes. "We know the lineage of jazz, and we're completely in debt to it. We've built the foundation of our music on John Coltrane, on Charlie Parker, on Art Tatum and Thelonious Monk, all the way back through Louis Armstrong and Jelly Roll Morton to the turn of the century," Hunter told Bill Kohlhaase for the *Los Angeles Times* (May 5, 1996). "We want people to know that this is the music that means the most to us. But we also want our audience to know that we're from the twenty something generation, that we share the same experiences as a lot of people our age. That's what we want to communicate; that's what inspires us."

For a time Hunter performed in a duo with Michael Franti, a local poet and rapper. When Franti formed the Disposable Heroes of Hiphoprisy, a politically minded hip-hop group, he asked Hunter to join him on tour. After that ended, Hunter decided that performing before large crowds was not conducive to his musical intentions, and he returned to the Bay Area to participate in a more intimate jazz scene. He soon started the Charlie Hunter Trio with the tenor saxophonist Dave Ellis, an old schoolmate of his, and Jay Lane, the original drummer for Primus. After a series of gigs around the Bay Area, they secured a weekly Tuesday-night engagement at the Elbo Room in San Francisco. As they played together more regularly, the group began to develop their signature sound, and soon Les Claypool, the bass player and leader of Primus, asked them to record an album for his label, Prawn Song. In 1994 the Charlie Hunter Trio released their eponymous first album, recorded on an eight-track tape for $100.

The shows at the Elbo Room and another venue, the Up and Down Club, grew in popularity as word spread about the musical amalgamation driven by an eight-string guitar. The trio also attracted the attention of Blue Note Records, whose president, Bruce Lundvall, recognizing their crossover appeal, offered them a contract in 1994. In the following year they released their first major-label record, *Bing, Bing, Bing!* Hunter stated for his Web site, "I think our music is an alternative to the suit-and-tie club that says you have to be well-to-do and super-intellectual to understand jazz music. We don't have that attitude." *Bing, Bing, Bing!* sold more than 50,000 copies in its first year, a significant figure for a jazz recording. The record drew a positive response from fans and most critics.

Meanwhile, Hunter also worked on his other project, T. J. Kirk. (That group had originally called itself James T. Kirk, the name of the iconic lead character of the first *Star Trek* TV series, played by William Shatner; in the group's case, "James" was inspired by the soul legend James Brown, "T" by Thelonious Monk, and "Kirk" by the jazz multi-instrumentalist Rahsaan Roland Kirk. The name change came about after *Star Trek* representatives threatened a lawsuit.) The band was made up of Hunter, the drummer Scott Amendola, and two more guitarists, John Schott and Will Bernard. They focused solely on the work of the three musicians who made up their namesake, often deconstructing the songs, sometimes melding them. T. J. Kirk was signed by Warner Bros. and released two albums: a self-titled debut (1994) and *If Four Was One* (1996). They reunited in 2003 and released a live album, *Talking Only Makes It Worse*, in 2005.

Soon after the release of the Charlie Hunter Trio's major-label debut, Jay Lane left the group in order to play more rock-oriented music, and Hunter brought in Amendola from T. J. Kirk. Then, having grown weary of the limitations of the trio, Hunter added an alto saxophonist—an old friend from his days of busking in Europe, Calder Spanier. The quartet released the Blue Note album *Ready, Set . . . Shango!* The word "shango," an invention of Hunter's, was inspired by—and meant to confuse—critics who constantly sought to label his work. "It's a total gag," Hunter commented to Jesse Hamlin for the *San Francisco Chronicle* (June 2, 1996). "We invented a new trend to hoodwink the public and give the press something to hang onto."

Hunter's musical interests, like the personnel of his albums and bands, continued to change. A few months after the release of *Shango!*, Dave Ellis left the group to pursue a solo career, and Hunter brought in the tenor-sax player Kenny Brooks from a local Bay Area hip-hop jazz outfit, Alphabet Soup. Meanwhile, Blue Note asked the new version of the Charlie Hunter Quartet to participate in their Cover Series, comprising fresh takes on other artists' music. The result was *Natty Dread* (1997), a new version of the classic, same-titled 1974 reggae album by Bob Marley. The new record received universal praise. "Hunter is the perfect musician for the project [*Natty Dread*] because his musical reach is as expansive as his talent," Michael Point wrote for the *Austin (Texas) American-Statesman* (June 7, 1997). "He's equally at home in a neo-bop jazz mode as he is when locking into the backsliding reggae riddim, and everything he plays is infused with a modern rock attitude." Numerous observers have credited Hunter's rise in popularity to the success of that third Blue Note release.

More innovations followed. "I had worked with horns so long I felt it was time for a change," Hunter told Jay Miller for the Quincy, Massachusetts, *Patriot Ledger* (April 2, 1998). "I've been able to see and hear a lot of different stuff, and I found myself really getting into bands like Dave Holland's, with Steve Nelson on [vibraphones]. And of course I loved the older stuff with vibes, like Cal Tjader, Bobby Hutcherson and Milt Jackson." Hunter formed Pound for Pound, with Amendola on drums, John Santos—the leader of the Machete Ensemble—on other percussion, and Stefon Harris on vibraphone. The new group released *Return of the Candyman*, another departure from Hunter's previous sound. "The philosophy of this whole record is kind of inspired by a hip-hop record," Hunter revealed to Kenn Rodriguez for the *Albuquerque (New Mexico) Journal* (May 15, 1998). "I was inspired by the way hip hop-guys like Tribe Called Quest and Wu-Tang make records. They kinda make these whole theatre pieces with little snippets interspersed here and there. I didn't want [this record] to be just a jazz record. I wanted it to be people with jazz sensibilities trying to make an organic hip-hop record."

Return of the Candyman received mixed reviews. "The varied directions Hunter moves in are what makes *Return of the Candyman* the deep-grooved, rhythmic treat that it is," Kevin Rodriguez wrote. "Using the new line-up and his guitar . . . Hunter is free to make the aural experimentation and shortened songwriting that make the 12-song CD the tasty treat it is, from the funky, odd-timed workout 'Enter the Dragon' to the catchy, soulful 'Pound for Pound' to Hunter's smooth take on Steve Miller's cheese-pop classic 'Fly Like an Eagle.'" Kevin Le Gendre, while praising Hunter's abilities, was less favorably impressed by *Candyman*, writing for the *Journal* (April 3, 1998), "Hunter's playing is superlative—the guy can get low-down and dirty with the best of 'em but he's let down by the material and production. The basic approach to *Candyman* is very much 'heads down, groove hard' which is all well and good but the problem is that the very fine playing is undercut by the lack of edge in the arrangements."

In late 1997, shortly after the release of *Candyman*, Hunter decided that after more than 20 years in the Bay Area, he needed a change of locale. He felt that New York City was the logical place to move, because the caliber and number of musicians there would offer him a new challenge. Continuing to play with the members of Pound for Pound after the move involved increasingly difficult coast-to-coast travel, so Hunter adjusted the band's roster. "I'm playing with these two badass New York guys," Hunter told Adam Levy for *Guitar Player* (August 1998). "Willard Dyson on drums and Monte Croft on vibes [who toured with Hunter after the release of *Candyman*]. . . . It's atrocious how much better they are than I am. They destroy me every single night, but it's great. They're seasoned New York jazz professionals, they're great musicians, and they're men, not kids. . . . Playing with guys like this is how you grow."

For the next couple of years, Hunter toured extensively, performing with Pound for Pound and in some impromptu ensembles. Then, in 1999, he relaxed his touring schedule in order to work with just one other person, the drummer Leon Parker. "I ran into Leon on the street one day. We talked for quite a while about music in general and then what I had in mind," Hunter stated for his Web site. "He wasn't very familiar with my albums, which was a good thing because we developed a style of playing together that wasn't built on preconceived notions." Later that year the two released the album *Duo*. A reviewer for *Guitar Player* (June 1, 1999) praised the record: "Charlie Hunter's penchant for exploring fresh jazz territory reaches a climax on his fifth release *Duo*. . . . Hunter improvises with uncanny skill—his silky guitar melodies and fat, groovatious bass lines ebb and flow harmoniously, yet remain completely independent. Quite a feat, indeed! Always the pioneer, what Hunter brings to the table this time around is perhaps his most challenging and inspiring album to date." The two-person live performances received similar praise, even after Parker's former roommate and fellow drummer, Adam Cruz, replaced him on the road.

In 2000 Hunter released two albums: *Charlie Hunter* and *Charlie Hunter: Solo Eight-String Guitar*. On the former he worked with Parker again, rounding out the album's personnel with Peter Apfelbaum on tenor saxophone, Josh Roseman on trombone, Stephen Chopek on drums, and Robert Perkins on other percussion. For his next album Hunter decided to include vocalists. While he had worked with singers during his summers in Europe and in a few early gigs in the Bay Area, he found recording with vocalists to be a new experience. Hunter told Andrew Gilbert for the *San Jose (California) Mercury News* (December 14, 2001), "On instrumental things, you have a lot more leeway as far as where the improvisations can go. With singers, you're trying to make three-and four-minute tunes that really work, and you have to come up with arrangements that support the singing, that tie the vocals and the band together." The release, *Songs from the Analog Playground* (2001), included work by the rapper Mos Def, a then-obscure Norah Jones, the jazz crooner Kurt Elling, and Theryl "Houseman" de Clouet, from the New Orleans funk outfit Galactic; those performers were backed up by Hunter's relatively new quartet, with Chopek returning to play drums alongside Chris

Lovejoy on other percussion and John Ellis on tenor saxophone. Numerous critics found the album's songs to be innovative and stimulating, especially those on which Jones performed.

Analog Playground was Hunter's last release of new material on Blue Note Records, as he felt that the label's corporate mission was not a good match with his music. He next signed with a small New York label, Rope-a-Dope Records. In mid-2003 Hunter and Rope-A-Dope released *Right Now Move*, for which Hunter performed with a quintet. "This time I wanted to put together a quintet with a nutty horn section," Hunter remarked to Jay Miller for the *Patriot Ledger* (February 21, 2003). "We have Derek Phillips on drums, Curtis Fowlkes on trombone, John Ellis on tenor sax, and Gregoire Maret on chromatic harmonica. . . . It's been great writing music for this band, this revolving cast of characters." The release received universally good reviews.

Concurrently, Hunter worked on a number of other projects, most notably performing as part of Garage a Trois, whose other members were the drummer Stanton Moore, the vibraphonist/percussionist Mike Dillon, and the saxophonist Skerik. "My thing is always about trying to find the middle ground, that balance between the intellectual and the visceral, and I just feel like New Orleans is what that's about . . . ," Hunter said to Richard Harrington for the *Washington Post* (May 30, 2003). "Stanton is from New Orleans, and he just has that New Orleans feel in everything he plays, whether it's a Brazilian groove, jazz or a shuffle. We just put the group together for fun and played one time at the New Orleans Jazz and Heritage Fest. It was so much fun we decided to keep doing it." Garage a Trois has released three albums: *Mysteryfunk* (1999), *Emphasizer* (2003), and a movie soundtrack, *Outre Mer* (2005). Also, Hunter released two albums, *Longitude* and *Latitude*, with another group, Groundtruther, with Bobby Previte on drums and electronics and DJ Login on turntables.

Ellis and Phillips stayed with Hunter for the releases *Friends Seen and Unseen* (2004) and *Copperopolis* (2006), the latter of which, with its rock influence, marked an even further departure from Hunter's previous recordings. "For the new trio, I wanted to write tunes that weren't as jazzy," Hunter said to Andrew Gilbert for the *San Diego Union-Tribune* (December 7, 2006). "I write these tunes and they're melodic and there's counter melodies, but the player is free to do them when he wants. It's a much looser kind of approach. Improvisation isn't always one person taking a solo while the others are comping behind him. A lot of the time we're trying to improvise as a group." "Hunter is never predictable, and even in his most rock-influenced moments on *Copperopolis*, he avoids recycling tired rock riffs. His ability to play bass and guitar lines simultaneously is just short of amazing, suggesting a fluency approaching Stevie Ray Vaughn levels. 'Cueball Bobbin,' a killer track that opens the disc, rocks out the most, but as Hunter and company move through the material, their approach changes," Tim Blangger observed for the Pennsylvania *Morning Call* (June 10, 2006). "By the time the musicians arrive at the Thelonious Monk tune, 'Think Of One,' they are playing ephemeral, intriguing stuff, a sea change from 'Cueball.'" As of early 2007, Hunter was playing with a trio that was completed by Erik Deutsch on keyboard and Simon Lott on drums. In the summer of 2007, the trio released *Mistico*, another album that defies categorization.

Charlie Hunter lives in New Jersey with his wife and two children.

Iyengar, B. K. S.

Dec. 14, 1918– Yogi

Address: RIMYI, 1107 B/1 Hare Krishna Mandir
Rd., Model Colony, Shivaji Nagar, Pune–411 015,
Maharashtra, India

The yoga guru B. K. S. Iyengar was born in a small Indian village during the 1918 influenza pandemic and subsequently fell victim to malaria and tuberculosis. Doctors did not expect him to live past the age of 20. But Iyengar, who turned 89 in 2007, made a dramatic recovery, one he attributes to the physical and spiritual healing powers of the yogic

B. K. S. Iyengar

practice he began when he was 15. Iyengar—whom the BBC has called "the Michelangelo of yoga"—went on to become one of the most famous yogis in the world, widely credited with bringing the approximately 3,000-year-old practice to the West. Described by Stacy Stukin for the *Los Angeles Times* (October 10, 2005) as a man with "wild eyebrows, infectious charisma and notoriety for a ferocious teaching style that includes whacks on the head and slaps on the bum," Iyengar developed his own style of yoga, known for its emphasis on precision and alignment and its use of props such as blocks and ropes to make the yoga positions easier to attain. Iyengar yoga, as the practice is called, now has approximately four million practitioners around the world and is taught at 534 institutes. Over the course of his almost 75 years of practice, Iyengar has given an estimated 10,000 lecture/demonstrations and authored 18 books. Speaking to Iyengar during the guru's most recent visit to the United States, the Reverend Thomas J. Mikelson, a Harvard Divinity School professor, praised his wide-reaching influence. "Because of you, our breath is stronger. Our posture is straighter," Mikelson said, as quoted by Elizabeth Gudrais in the *Providence (Rhode Island) Journal* (October 13, 2005). "We dance more lightly on the earth." The yogi has become such an institution that the word "Iyengar" was recently added to the *Oxford English Dictionary*. "Iyengar means yoga," he told Amy Waldman for the *New York Times* (December 14, 2002). "Yoga means Iyengar. They are synonymous terms."

Yoga, one of the six schools of Hindu philosophy, combines meditation with physical poses—which can range in difficulty from a simple lunge to an elaborate headstand—as a way of achieving mental clarity, self-knowledge, and eventual enlightenment. Iyengar told Waldman that the practice also gives him "emotional stability" and "spiritual delight." "I can remain thoughtfully thoughtless," Iyengar explained to Waldman. "It is not an empty mind." Today, more than 17 million Americans regularly practice yoga, making it a multibillion-dollar-per-year industry. As yoga has grown in popularity it has also, perhaps inevitably, undergone some distortion. And while Iyengar is consistently praised for bringing yoga to the West, he is also often criticized for his emphasis on physicality and accused of competitiveness with other forms of yoga and other gurus. Iyengar dismisses such criticisms, asserting that his spiritual connection to yoga has freed him from such earthly concerns. "I have not been to school or college. I had no teacher to guide me. Yet I've written books and addressed universities. Is that not enlightenment?" Iyengar told Suma Varughese for *Life Positive* (February 1999). "Yoga gave me the ability to see my body as my small self, and my soul as my infinite self." Speaking with Charlie Rose on *The Charlie Rose Show* (October 14, 2005), Iyengar again attributed the positive developments in his life to his practice. Helping others discover the benefits of yoga—which he credits with saving his life—is his driving purpose, he said. He explained to Rose, "From the years I started yoga up until now, I have lived a contented, happy, healthy life, physically, mentally, intellectually and spiritually."

The 13th child of a poor family, Bellur Krishnamachar Sundararaja Iyengar was born on December 14, 1918 in the village of Bellur, in the Indian state of Karnataka. Iyengar's early life was difficult. The influenza pandemic left both him and his mother sick and weak; his father, Sri Krishnamachar, a schoolteacher, died when Iyengar was nine. Afterward Iyengar left Bellur to live with one of his brothers in Bangalore. Throughout his childhood and adolescence, he was plagued by malaria, tuberculosis, and typhoid fever. "I was an anti-advertisement for yoga," he told Colleen O'Connor for the *Denver Post* (October 9, 2005), adding that he twice considered committing suicide to escape the physical pain of his day-to-day existence. At 15 Iyengar went to live with a sister and her husband, Sri Tirumalai Krishnamacharya, on his brother-in-law's invitation. There, he began to learn yoga under Krishnamacharya's strict instruction. Practicing for 10 hours each day, Iyengar tolerated his teacher's frequent abuse for the sake of improvement. As Iyengar's yogic practice improved, so did his health—a confluence of events he believed was not coincidental. "Health is a dynamic endeavor that requires tremendous intellectual attention," he reflected to Stukin. "You can't walk into the pharmaceutical shop and buy health. It has to be earned with persistence and sweat." Many of Krishnamacharya's other students were scared off by his harsh teaching style; the day before an important demonstration, Krishnamacharya's favorite student ran away, and Iyengar filled in, performing flawlessly.

Iyengar's formal education ended when, at about age 16, he failed his matriculation exam in English by three points. With few other skills, he continued pursuing yoga, in the hope of making a living. Nearly recovered from his illnesses, in 1937 he moved to the city of Pune, in the Indian state of Maharashtra, to teach yoga. But finding students was not always easy, and he often spent days wandering from village to village to teach, sometimes living on just rice and water. "I had tenacity," he told Waldman. "That is a fact." In 1943 his brothers introduced him to a woman named Ramamani, and though he was reluctant to get married, because he felt he could not support a family, he married her that year. He trained Ramamani in the basic yoga poses so that she could supervise him, helping him to perfect his practice. In 1948 Swami Sivananda, the Indian spiritual leader and founder of the Divine Life Society, conferred the title "Yoga Raja" on Iyengar, but despite his success within the practice, the couple lived in poverty for the first several years of their marriage. Still, Iyengar persisted in his attempts to spread the practice of yoga. "Yoga saved me," he explained to Rose. "And I took it as a . . . mission to serve other people who may be suffering like me."

After years of anonymity, Iyengar suddenly rose to fame in 1952, when he took a trip often credited with first exposing the West to the practice of yoga. While still a struggling yogi in India, he was summoned to Bombay for what was supposed to be a five-minute interview with the famous violinist Yehudi Menuhin. Iyengar reluctantly took the seven-hour train ride to the city; the seven a.m. meeting turned into a three-and-a-half-hour yoga session, and Menuhin was instantly taken with yoga. Menuhin arranged for Iyengar to travel to England, France, Switzerland, and other Western European countries to teach. In 1956 the Standard Oil heiress Rebekah Harkness invited Iyengar to travel to the United States, where he was shocked by American life and its incompatibility with the teachings of yoga. "I saw Americans were interested in the three W's—wealth, women and wine," he recalled to O'Connor. "I was taken aback to see how the way of life here conflicted with my own country. I thought twice about coming back." He continued to tour, primarily in Western Europe. Largely through Iyengar's efforts, yoga was increasingly seen as a legitimate practice, as perhaps best indicated by Iyengar's teaching the 85-year-old queen mother of Belgium in 1958 to stand on her head. In 1962 Iyengar's guru, Krishnamacharya, gave him a gold medal inscribed with the words *Yoganga Sikshaka Chakravarti*, which translate as "king among yoga teachers."

Iyengar cemented yoga's influence in the West—as well as his own fame—with his 1966 book, *Light on Yoga*, an illustrated guide to more than 200 *asanas*, or poses. Now translated into 19 languages, the book has sold more than three million copies. Iyengar told Varughese that he knew from the start that he could reach the largest number of people with an illustrated book. One day, he recalled, he saw a book on yoga whose drawings of poses were incorrect. "I decided: 'Here I will hit . . . ,'" he told Varughese. "I decided to show alignment of body, mind and intelligence." The thoroughness and clarity of *Light on Yoga* made it an instant classic—it is often described as "the Bible of yoga"—and made yoga a well-known option among those seeking both physical training and spiritual healing. "*Light on Yoga* is the yoga canon of this century," Joseph S. Alter, the author of *Yoga in Modern India: The Body Between Science and Philosophy*, told Stukin. "It is the most detailed, systematic and precise book out there about yoga [poses and techniques]."

With the success of *Light on Yoga*, Iyengar was able to realize his goal of opening his own yoga studio, the foundation for which was laid on January 26, 1973. Soon afterward, his wife died suddenly, and when the building was dedicated, on January 19, 1975, Iyengar named it the Ramamani Iyengar Memorial Yoga Institute (RIMYI). The institute currently has a three-year waiting list for international students; to attend, an applicant must have eight years of training from an Iyengar school. In 1981 Iyengar published *Light on Pranayama*, a guide to breathing patterns. Three years later he officially retired from teaching yoga, though he continued to publish books and lead special courses. In 1988 he published *The Tree of Yoga*, which compares the eight strains of yoga to the growth of a tree from a seed. A collection of essays on aspects of yoga, the book urges readers to maintain a distinction between their mental and physical properties. "When my body is tired, I say my body is tired," Iyengar wrote, as quoted by Sonja Carberry in *Investor's Business Daily* (January 4, 2007). "I never say I am tired." He also emphasized the utmost importance of self-control and willpower. "So the mind is the maker and the mind is the destroyer. On one side the mind is making you and on the other side it is destroying you. You must tell the destructive side of the mind to keep quiet—then you will learn," he wrote. In 1993 Iyengar published *The Art of Yoga*, a photograph-heavy volume examining the details of each move. He taught an 800-student workshop for a week in Pune to celebrate his 80th birthday, in 1998. The next year he published *Light on Astanga Yoga*, explaining a type of yoga that, according to Iyengar, concerns both the microcosm of man and the macrocosm of the universe. In 2000 he again led a special yoga course, this time for senior Iyengar teachers from 40 countries. Iyengar's book *Yoga: The Path to Holistic Health* appeared in 2001; Susan Salter Reynolds described it for the *Los Angeles Times* (August 5, 2001) as having a "unique look, marrying very clear photos, bright colors and a lot of white space with Iyengar's clear-minded descriptions of the asanas or positions of yoga." She added that the volume is, "essentially, a coffee table book," calling it "completely unintimidating, very Western-looking, very non-mysterious," the last a quality that she felt "has pros and cons"—as it puts an emphasis on the accessibility of a physical understanding of yoga, rather than on the more difficult spiritual underpinnings of the practice. Iyengar, who is frequently criticized for his focus on the physical, defended his method to Kim Lawton for *Religion & Ethics NewsWeekly* (August 4, 2006): "Can a musician play the violin without body?" he asked. "Then you say, 'He played beautifully. It was spiritual.' How can you say spiritual when he has used his body, holding the instrument? So we are also using the body as an instrument to tune the inner mind and the consciousness."

For his role in bringing yoga to the West, *Time* named Iyengar one of its "100 Most Influential People of 2004." Even at an advanced age, Iyengar maintained a reputation for being a demanding teacher, whose predilection for hitting his students until they achieved the correct position led to the joke that his initials—B.K.S.—actually stand for "beat, kick, slap." "People brand me as a tough teacher," he told Tom Dunkel for the *Baltimore Sun* (October 14, 2005). "Unfortunately, this is a wrong word. I am an 'intense' teacher. A tough teacher has a quality of roughness, and an intense teacher has the qualities of keenness, softness, smoothness and rhythm." In 2004 the journalist and yoga practitioner Elizabeth Kadetsky published her memoir, *First There Is a Mountain: A Yoga Romance*, which contains a controversial profile of Iyengar. Kadetsky told Stukin that she set out to show him as "a fascinating, complicated genius with all the convoluted character particularities any genius has"; those "particularities" included a decided competitiveness between Iyengar and teachers of other forms of yoga.

In 2005 Iyengar published his most recent book, *Light on Life*, which he promoted with a five-city U.S. tour—his last U.S. visit, he said. Since he retired, Iyengar has continued to practice yoga privately between five and six hours a day. "I can't say, 'I'm old, so I don't want to do it,'' he explained to Waldman. "The escapism of other people, I don't want." In 2005, at age 86, he told Dunkel that he was still able to do the majority of the yoga poses he could do in his youth, but emphasized that the focus of his practice is the present and his present capabilities. "What I do today is important, and I do not brood about my past practices," he said. "But what I do at this age, I do it to the maximum. I do not make any concessions, but I work harder with the wisdom that I gained."

Iyengar lives in Pune. He holds honorary doctorates from the University of Pennsylvania and the University of Mysore and has won state and national awards in India. He also oversees a charitable foundation working to alleviate poverty in his home village of Bellur.

Iyengar did not remarry after Ramamani's death. From their marriage he has five daughters—Geeta, Vinita, Suchita, Sunita, and Savita—and one son, Prashant. Both Geeta and Prashant—who were instructed by their father and mother—teach at RIMYI. Iyengar explained to Stukin the significance of that legacy: "I have to give them the secrets so they can help humanity and carry on."

Jacobs, Paul E.

Oct. 30, 1962– Telecommunications executive

Address: Qualcomm, 5775 Morehouse Dr., San Diego, CA 92121

In 2005 Paul E. Jacobs became the CEO of Qualcomm, the company his father, Irwin Jacobs, had founded two decades earlier. Upon taking the reins of the firm, which is at the forefront of Code Division Multiple Access (CDMA) technology for wireless voice and data products, the younger Jacobs came under intense scrutiny. "If the company is successful under me, it's because I'm carrying on what Irwin put into place," he told David Whelan for *Forbes* (November 28, 2005). "If there's a glitch, it's because I'm his dumb kid." While it may be possible to characterize the new CEO as a kid (at age 42, he was considered young to be placed at the helm of a Fortune 500 company), it is unlikely that anyone would ever call him dumb: Jacobs has a doctoral degree in electrical engineering and holds more than 30 patents in the area of wireless technology. "I firmly believe the wireless Internet is going to have a bigger impact on the world than the wired Internet," Jacobs told Julie Schlosser for *Fortune* (April 18, 2005). "In a lot of the world people don't have PCs [personal computers] or wired connections. Their only connection to the Internet will be through their phone. As you fold all these technologies into the phone, it will become the main personal device that people use."

Paul Eric Jacobs, the third of four sons, was born on October 30, 1962 in Cambridge, Massachusetts, to Irwin M. and Joan Jacobs. His father was an electrical engineer and a professor at the Massachusetts Institute of Technology. When Paul was four years old, the family moved from Massachusetts to Southern California, and his father took a job in one of the engineering departments at the University of California–San Diego. Paul Jacobs, a *Star Trek* enthusiast, shared his father's scientific bent. While growing up he "discussed antennas and data transmission rates with his father the way many of his friends and their fathers talked balls and strikes," as Matt Richtel wrote for the *New York Times* (April 14, 2003, on-line). (Jacobs did have some interest in sports, however; he and his brothers were avid basketball players and sometimes broke bones during their spirited competitions on the court.)

While Jacobs was in high school, he spent his summer vacations working in the drafting department of his father's first company, Linkabit, a defense contractor that the elder Jacobs had founded in the late 1960s, and that designed software for satellites. The father and son "would talk about all the angles sitting at dinner, driving everyone else crazy," as he told Richtel. At La Jolla High School, Jacobs showed an early knack for entrepreneurial ventures, teaming with his friend Jeff Belk, who later joined Qualcomm, to form J&B Enterprises; the two friends sold skateboards to fellow students—using some of their profits to obtain the best boards for themselves.

In 1984 Jacobs graduated from the University of California–Berkeley, with a B.S. degree in electrical engineering. He continued at the school and earned a master's degree, in 1986, and a doctoral degree, in 1989. (His dissertation was on the subject of robotic path planning.) Jacobs was a popular figure around the Berkeley campus during his years there; he once started an intramural volleyball team—primarily to meet women. From that point of view, the undertaking was a success: he met his future wife, Stacy, as a result. A skilled networker, he often helped his friends secure jobs at Qualcomm, which his father had founded in 1985. (Qualcomm's earliest consumer products were Eudora, an e-mail program, and OmniTRACS, a satellite-communications technology that enabled companies to track freight.) Besides his prowess in the social arena, Jacobs was considered a stellar student. A former professor of his, John Canny, told Jennifer Davies for the *San Diego Union-Tribune* (November 4, 2001), "Paul has all the attributes of a great researcher. Most importantly, he is a prolific generator of ideas. He backs this up with patience and attention to detail." Upon completing his Ph.D. program, Jacobs moved to Toulouse, France, for postdoctoral work at a robotics laboratory. He returned to California in 1990 and joined Qualcomm as a full-time development engineer. (As he had done at Linkabit, Jacobs had worked at the company during school breaks, designing chips and assembling circuit boards.) His mother made it clear to him that she was not happy about his career choice; she had expected him to become a professor. "I just wasn't that excited by the idea of doing research and then presenting a paper," Jacobs told Davies. "I really like the idea of building products, getting things out there that everyone can use." Jacobs's brother Jeff started at the company on the same day, in the finance department; he is now the company's president of global development.

As often happens in the private sector, other Qualcomm workers complained that Jacobs owed his job entirely to nepotism. "People thought Irwin did the homework for him at night and gave him the answers," Allen Salmasi, Jacobs's first boss at Qualcomm, told Whelan. Jacobs worked hard, however, and his colleagues quickly began to acknowledge him as a valuable member of the team. Whelan wrote, "[Jacobs] soon came to be regarded as a brilliant and intense competitor, much like his father but marked by a macho, I'll-show-you attitude of someone who has something to prove." Jacobs developed many of the patents he now holds during those early years at Qualcomm, when his work focused on speech-coding technology for cell phones. Once, when his father demanded that he design a speech synthesizer (called a vocoder) of low quality in order to preserve valuable radio-wave spectrum, Jacobs, without the consent of his supervisors, covertly developed a high-quality product that offered improved voice clarity; with that invention, the company entered lucrative Asian markets, in which such clarity is especially prized.

CDMA, which enables more subscribers of a cell-phone network to make connections simultaneously than would otherwise be possible, remains among the most profitable of Qualcomm's technologies. By 1995 the potential of CDMA had become obvious to those at Qualcomm, but finding a manufacturer willing to distribute CDMA–based cell phones proved to be difficult. Most mobile-phone manufacturers at the time were basing their products on Global System for Mobile (GSM), then the industry standard. In order to prove the superiority of their new technology, Qualcomm joined with the Sony Corp. to create a new handset-manufacturing business that would build mobile phones based on CDMA. Jacobs was appointed vice president and general manager of the fledgling concern; at the time he was 33 years old. He was pleased with the promotion yet occasionally awed by the added responsibility of his new position. "I could come in on any given day and be presented with a problem that could cost the company . . . $100 million," he told Davies. There were many such problems: manufacturing bugs were frequently discovered in Qualcomm's early phone models, and on one occasion Jacobs shut the factory down. "We had two products come out that had very bad quality," he told Davies. Greg Heinzinger, who is now a vice president at Qualcomm, recalled to Davies, "We stopped building phones for basically three months while we fixed our problems. It cost a lot of money in the short run. But we got respect from our customers."

As the market for CDMA technology increased, revenue from Qualcomm mobile phones soared, reaching a peak of nearly $1.5 billion in 1999. Still, Jacobs was unable to turn a profit, and the handset division was deemed unsuccessful. (Most observers blame Jacobs's insistence on manufacturing in La Jolla rather than in a cheaper labor market.) In 2000 Qualcomm sold the handset business to Kyocera of Japan for $242 million, recouping most of the firm's losses, and in 2001 Jacobs was appointed group president of Qualcomm Wireless & Internet (QWI). By that time Qualcomm had proven the viability of CDMA, which it began licensing to other manufacturers for use in their mobile phones.

While group president of QWI, Jacobs initiated many innovative programs. One of his most substantial contributions to the company's fortunes was the development of the software and the business plan for BREW (Binary Runtime Environment for Wireless). BREW is a software application that allowed users to download and run small programs for playing games, sending messages, and sharing photos on mobile handsets. It is now used by more than 50 carriers and almost that many phone manufacturers. Jacobs had less success with other ideas, however. Wingcast, his attempt to partner with Ford to put a wireless communications system in certain automobile models, lost $25 million. Digital Cinema, his venture to transmit film digitally instead of using movie reels, had a similar fate, as did a planned project with Microsoft. Jacobs, Whelan wrote, "racked up a reputation for combining high intelligence with a low success rate for business decisions." Nevertheless, Qualcomm insiders quietly acknowledged that Jacobs was the likely successor to his father.

In June 2005 Qualcomm celebrated its 20th anniversary with a massive party held at Qualcomm Stadium, home of the San Diego Chargers football team. (In 1997 the company had donated $18 million to the city for use in renovating the venue, in exchange for naming rights.) By July 2005, when Jacobs officially took over as CEO of Qualcomm, the company had 9,000 employees and was earning nearly $6 billion in annual revenues. Some within the industry believed that Jacobs lacked the requisite experience and business acumen to run a company that size, but because the decision of the board of directors was perceived as a foregone conclusion, no serious candidates—internally or externally—emerged to challenge Jacobs. The board dismissed accusations of nepotism, assuring stockholders that there had indeed been a formal search process and that Jacobs had been the strongest candidate.When Qualcomm's board announced the appointment, its director Marc Stern explained the choice to Bruce Bigelow for the *San Diego Union-Tribune* (March 9, 2005): "The perfect CEO would have a technical background. We thought that was important. We wanted someone experienced in the industry. We wanted someone, who if we could find them, had been at Qualcomm for a long time and who was part of the unique culture at Qualcomm." Jan Dehesh, a former Qualcomm executive, told Bigelow, "You can be assured that Paul has been groomed in every way for this position. He started at the bottom, and he's worked in engineering in numerous places. So he's seen all levels. He's worked at all levels. I think he is respected internally because he is a Ph.D., and Qualcomm is an engineering company."

Because a large percentage of Qualcomm's revenues came from licensed technologies, and the wireless telecommunications business was booming, Jacobs stepped into a position in which simply maintaining the status quo would mean financial success for the company. (Qualcomm receives royalties estimated at 5 percent of the sales price of wireless handsets using its chips or CDMA technology.) At the end of the 2005 fiscal year, Qualcomm had $2.1 billion in net revenues—a 25 percent increase from the previous year—but Jacobs was not content to see the company compete in a quickly developing field by relying on existing technologies. One of his first actions as CEO was to increase Qualcomm's $1 billion annual research and development budget by 40 percent, in an effort to develop lower-cost phones, new wireless technology, and integrated circuit products. Qualcomm-designed chips and technologies were used in the majority of cell phones in the U.S. and a growing number in Europe, particularly in high-end cell phones, but Jacobs saw a greater potential in developing markets. "The next 1 billion subscribers will come from markets with low per capita GDP [gross domestic product]," Jacobs told Mike Allen for the *San Diego Business Journal* (July 25, 2005). Jacobs also expanded OmniTRACS, with an eye toward increased homeland security, establishing initiatives to track hazardous materials and implementing technology that would allow emergency personnel to be contacted instantly in the event of an accident.

As CEO Jacobs orchestrated the purchase of Flarion Technologies, a wireless technology company that specialized in transmitting large amounts of data to mobile devices, and in 2006 Qualcomm introduced MediaFLO, a technology designed to reduce significantly the cost of delivering multimedia content to mobile handsets. (Jacobs has pointed out that mobile handsets will be an effective way of delivering vital information to subscribers in the event of a natural disaster or war.) Also in 2006 Jacobs, after earlier failing to do so, reached an agreement with Microsoft to create Windows-based phones. Industry observers have noted that Microsoft brings credibility to Qualcomm's attempt to extend beyond CDMA and that the agreement positions Qualcomm to be a potential leader in the emerging mobile-content industry. Jacobs tries always to keep his father's vision in mind. "The transition from Irwin Jacobs to me went smoothly because I was not looking to change the entire direction of the company," he told a reporter for *Business 2.0*, posted on CNN.com. "I wanted to push even harder toward what he started: turning the phone into much more than a device for making calls."

The still-athletic Jacobs once swung down more than 30 feet from the rafters of an auditorium in a ninja costume during a company meeting. (He had arranged for an ambulance to park outside the building in case the stunt failed.) He and his wife, Stacy, live in Southern California with their three children. The couple recently endowed an engineering chair at the University of California, Berkeley. Jacobs serves on several boards, including those of San Diego's Museum of Contemporary Art, the Salk Institute for Biological Studies, and the Jacobs School of Engineering—an institution named after his father at the University of California–San Diego. He enjoys downhill skiing in Colorado and loves to eat the French dishes that Stacy learned to prepare while they were living in France. He carries two cell phones, one of which is said to be a Motorola prototype.

John, Daymond

Feb. 3, 1969– Fashion designer

*Address: c/o W & W Public Relations Inc., 476
Union Ave., Second Fl., Middlesex, NJ 08846*

In the 1990s the apparel company FUBU emerged as a standard-bearer for urban fashion. The company's signature bright colors and logo—the letters "FUBU" in a modern font—won over a broad array of devotees, from African-American youth in the New York City borough of Queens, where the brand was born, to teenagers in South Korea. In just a few years, FUBU's founder, Daymond John-Aurum, commonly known as Daymond John, went from waiting tables at a Red Lobster restaurant to overseeing a company worth hundreds of millions of dollars. While his three closest friends have played a large part in FUBU's success since its earliest days, it was John's vision that catapulted FUBU from a cramped workshop in his mother's basement in Hollis, Queens, to its current headquarters, on the 66th floor of the Empire State Building, in Manhattan. FUBU has 60 stores around the world, and its clothing is carried in a variety of outlets and department stores, most notably Macy's. According to the FUBU Web site, FUBU is sold in 17 countries on six continents. The line sells particularly well overseas, especially in France and South Korea.

David Klein/Getty Images

Daymond John was born in the New York City borough of Brooklyn on February 3, 1969 to Margot John, an African-American, and Garfield John, an immigrant from Trinidad. Margot John had competed in the first Miss Black America pageant and in the Miss New York pageant; she was also one of the first black women to work as a hostess at the Playboy Club in New York. Daymond John has recalled that his mother kept on their kitchen wall a two-foot-long can opener emblazoned with the words "Think Big." She taught her son to cook his own meals and sew his own clothing. Her sewing lessons were to have a great influence on her son's future career.

John's family moved to Farmers Boulevard in the borough of Queens when he was a child. When John was 10 his father moved out, and his mother filed for divorce. Soon, Margot and Daymond John were living on food stamps and struggling from month to month to pay the bills. At 12 John chose to stop speaking to his father, and he has not gone back on that decision since. After his father left, John's mother worked two jobs—or three, during particularly tough times—in order to support herself and her son. John told *People* (March 17, 1997), "I owe my success to my mom, who instilled in me the fact that I could do anything I wanted to do."

John was entrepreneurial from a very early age. At the private, Catholic St. Gerard Magellan School, he picked up or stole all the pencils he could find, shaved the yellow paint off the sides with a pen knife, put his own designs on them, and sold them for a quarter each. He rebuilt old bicycles salvaged from the trash with the assistance of his mother's boyfriend, Steve, who replaced Garfield John as the boy's father figure. When he was 12 his mother gave him a supply of condoms to take with him to YMCA summer camp for his own use; John sold the condoms to other campers. When he was 14 he became a junior counselor at the same camp, hustling campers and fellow counselors at pool for money. According to his memoir, *Display of Power: How FUBU Changed a World of Fashion, Branding and Lifestyle* (2007, co-written by Daniel Paisner), John used the money—despite minimum-age requirements—to buy cigarettes and beer in the nearest town, returning to camp to sell the items at a high markup. He also sold marijuana that he had brought with him from Queens. He told Mitchell S. Jackson for *Smooth* magazine (March 2007), "Not that I'm trying to portray myself as a big drug dealer, but I was trying to scramble for a nickel and a dime one way or another." He made approximately $1,800 on top of his $200 camp salary.

When John entered high school, his mother took out an $80,000 mortgage on their house so that she could stop working and keep a close eye on him. She also sent him away each summer, for trips to visit family and friends in California, Hawaii, Bermuda, Canada, and Trinidad so that he could witness ways of life different from that in his tough neighborhood and stay out of trouble. During the school year he had jobs at fast-food restaurants or retail stores. He also became acquainted with the future rap star LL Cool J, then known as James Todd Smith III, whose assistance would be as important to John's success as his mother's sewing lessons.

After he graduated from high school, John's mother took a full-time job at American Airlines, and the family no longer needed to depend on food stamps. John started a commuter van service in South Jamaica, Queens, and became a waiter at a Red Lobster restaurant. He told Danielle Stolich for the *Source* (March 2007), "At 20, I was very confused and felt it was time to be a man. You have this idea of 'making it' but when you fall short of that you tend to go towards making quick, easy money. No matter who you are, it's never easy money; it's just borrowed time you're on. Watching a lot of my friends die or go to jail made me feel that I could end up that way too. I then decided to do something that was fulfilling, not just in a monetary aspect but that I wouldn't have to watch my back."

In 1992 John saw a music video starring the pioneering hip-hop group De La Soul and noticed that one of the group members wore a tie-top hat. He embarked on a day-long quest to find a similar hat. In *Display of Power*, as quoted by *King-Mag.com* (February 8, 2007), John wrote, "This was really the first time I was consciously aware of the subliminal power of music videos as a marketing tool, and I was a textbook case. . . . And when I finally found [a hat like the one in the video], I was disappointed. They were charging like thirty dollars for it, and the thing was so poorly constructed it looked like it wouldn't last but a week . . . and soon as I got home with the thing I got out my mother's sewing machine and started sewing a couple knock-offs. . . . Soon, a couple friends wanted to know if I could make a hat for them, so I turned out a few more."

John began making hats in his mother's basement to sell at concerts and neighborhood festivals. He told *People* (March 17, 1997) about a day he spent at a Queens shopping mall, where he and a friend "sold about $800 worth of hats, and I was hooked." While keeping his full-time job at Red Lobster, he set out to build a fashion business on the side. He told *People,* "I would get up at 8, go buy fabrics, make some hats until 2 p.m., call stores or go try and sell them until 4 or 5 o'clock, go to work the dinner shift, get home about 12 and make hats until around 5 in the morning." He recruited his childhood friends Alexander Martin, Carl Brown, and Keith Perrin to work with him. Brown had a job loading and unloading trucks; Perrin worked as an apartment-building supervisor; and Martin, a Gulf War veteran, was attending the Fashion Institute of Technology, in the borough of Manhattan. Martin frequently consulted his professors for advice on how to expand the friends' business. John said on the program *CNN Movers with Jan Hopkins* (January 8, 2000) that Martin "definitely [had] a vision for fashion. We had a hunger for money. So you know, that put it together."

John, Martin, Brown, and Perrin chose as the name of the business the acronym FUBU (For Us, By Us), which referred to their identities as friends and as young African-American men. John told Tavis Smiley for National Public Radio (October 21, 2002), "We were frustrated because around 1990 . . . a lot of articles came out where designers were saying that they didn't make things cut for black people, they didn't sell boots to black people because we were all drug dealers and none of their money came from us . . . we were saying, you know, 'We know [black people are] starting all the trends. When is anybody going to acknowledge it, or is it that, you know, we're just like a sickness or a disease that nobody wants to acknowledge?'"

Within half a year FUBU sold $10,000 worth of hats. John and his partners used the profits to start a line of shirts. Soon the company fell victim to its own success: by the end of 1993, FUBU had received $60,000 worth of orders but lacked the funds for material to fill them. Meanwhile, the urban sportswear market was exploding, with the multimillionaire fashion designers Tommy Hilfiger and Ralph Lauren attracting scores of young black male customers—exactly the demographic that FUBU wished to court. Recognizing that he could not match the other designers' advertising power, John embarked on an innovative grassroots marketing campaign, offering free merchandise to rappers and singers if they agreed to wear the apparel in their music videos. He said on *CNN Movers with Jan Hopkins*, "It was persistence, because I went to video sets where I got doors slammed in my face. Stylists would not talk to me, or the artist would say, wait here, I'm going to wear it. I wait there for 12 hours and then they don't wear it, and they tell me, go home."

John approached his childhood acquaintance LL Cool J about wearing FUBU hats in his videos. Reluctant initially, the rapper began to do so, and eventually other celebrities, including the singer Mariah Carey and the actor and rapper Will Smith, did the same. In 1994 Team FUBU, as John and his partners called themselves, traveled to Las Vegas, Nevada, to attend the MAGIC trade show, the world's largest industry event for designers, textile manufacturers, and corporate buyers. Unable to pay for a booth at the convention, the young men rented a hotel room and invited people to view the new, expanded FUBU line of apparel. They garnered $400,000 worth of clothing orders—a triumph that, ironically, only added to their troubles, multiplying the number of orders they could not afford to fill. John approached several banks for funding and was turned down by all of them. He told Charles Molineaux on the TV program *CNN Business Unusual* (May 30, 1998), "I decided, 'It's either do or die right now, and we need the capital, and nobody else really cares about what we're doing or actually believes in us.'"

Guided by those realizations, John, along with his mother, took out a $100,000 mortgage on his mother's home. Margot John moved out, and Perrin, Brown, and Martin moved in. John bought 10 sewing machines and hired four professional sewers. Still unable to keep up with the mounting orders, Team FUBU grew despondent and, according to John, nearly gave up, until his mother urged them to seek outside financing once again. Without her son's knowledge, Margot John placed a classified ad in the *New York Times*. Daymond John wrote in *Display of Power*, "The ad said something like, 'One million dollars in orders, need financing.' And we got a couple dozen calls on it." Finally, in 1995 the South Korea–based electronics manufacturer Samsung Corp. agreed to invest $2 million in FUBU through its U.S. branch, Samsung America. The corporate backing lent Team FUBU the credibility they needed to attract the interest of major department-store chains.

In 1996 FUBU became the first design company owned by African-Americans to have its own display window in Macy's flagship store in Manhattan. That same year LL Cool J became the company's first paid spokesman. He famously wore a FUBU cap in a commercial for The GAP clothing company. As a result of those developments and support from other corners, "you couldn't turn on the TV without seeing" FUBU clothing, as John told Smiley. "So it was like an explosion onto the scene. And that kicked open a lot of doors where a lot of these huge retailers started buying our product. . . . The younger African-Americans were feeling, 'These brothers look like me and they understand me. Whether I want to support them or not, I can't resist. These guys live like me.' And as in anything in this country, African-Americans set the trends for a lot of things, and after that everything else fell into place." John noted to Smiley that FUBU's "first huge markets" were in Japan and Seattle, Washington, "where there are very few African-Americans. But, you know, those were niche markets."

In 1997 sales of FUBU apparel reached $70 million. Team FUBU created the FUBU Foundation, which they endow with $1 million annually; the foundation contributes money to food drives, organizations for the homeless, and other projects and groups. In 1998 FUBU grew into a $200 million empire thanks to expanded distribution in the retail chains Nordstrom, Foot Locker, and Champs and in thousands of independent shops and boutiques. With FUBU's success came complaints that its clothes cost too much. According to Diane Seo, writing for the *Los Angeles Times* (July 8, 1998), John argued that FUBU products were less expensive than those bearing the Tommy Hilfiger or Polo labels, "with quality that is just as high." John said to Seo, "The assumption is because we're black designers, we shouldn't sell expensive clothes." Also as a result of dramatically widened distribution, FUBU reached a new market: white suburban teenagers. Some critics felt that white teenagers' wearing FUBU fashions weakened the brand's street credibility as a homegrown African-American clothing line. John told Ryon Horne for the *Atlanta Journal-Constitution* (October 22, 2000), "To be real with you, it has never been just for African-Americans. . . . We won't deny that blacks are the majority who buy it, and it's energized by blacks. But it's here for everyone to enjoy."

FUBU's ubiquity in malls across the nation also meant that the line was subject to wider scrutiny by the American public. In several well-publicized instances, public schools banned students from wearing the brand on the grounds that it had become associated with gangs and crime. John told Horne, "We know they did this to Tommy [Hilfiger], and they did it to Starter, saying it was gang-related. They're always going to pick on somebody, but we understand that our label is not created out of hate. Clothes don't hurt anyone. We're just trying to make it hot for everyone."

In 1999 FUBU joined with the National Basketball Association to create a line of sports apparel called FUBU NBA. The next year Team FUBU founded FB Entertainment, a company designed to create and produce entertainment in various media. FB Entertainment soon signed a development deal with Artists Television Group (ATG) that enabled Team FUBU members to serve as executive producers on any entertainment properties acquired through the partnership. The following year FB Entertainment released an album, *FB Entertainment Presents the Good Life*, with tracks by various artists. The album spawned a radio hit, "Fatty Girl," featuring the rappers Keith Murray, Ludacris, and LL Cool J. In February 2001 Senator Hillary Rodham Clinton of New York honored John for his charitable efforts in New York City. That year *Crain's New York* ranked FUBU second on its list of the top minority-owned companies in New York City. By 2002 more than 5,000 retail stores in 26 countries carried FUBU clothing, which now included suits, children's wear, a women's line, loungewear, accessories, shoes, watches, bedding and bath items, clothes for infants, a "plus-size" women's clothing line, and a fragrance, Plush.

In February 2005 LL Cool J filed suit with the New York County Supreme Court claiming that Team FUBU had failed to compensate him adequately for endorsing the clothing line. (Easily accessible sources do not yield information on the status of the lawsuit.) The lawsuit came on the heels of a period in which FUBU had seen its popularity decline in the United States, while remaining strong overseas. FUBU also saw part of its market share eaten away by competing urban streetwear lines including the Sean John line, started by the rapper, actor, and producer Sean "P. Diddy" Combs; the rapper Jay-Z's Rocawear line; and the hip-hop mogul Russell Simmons's Phat Farm label.

In the fall of 2005, the FUBU Foundation donated $1 million in clothing to victims of Hurricane Katrina in Baton Rouge, Louisiana. John, Perrin, the talk-show host Montel Williams, and members of the nonprofit Christian relief and development group World Vision Inc. traveled to the city to distribute the clothing.

Over the years John and Team FUBU have received many awards, among them, in 1999, the Congressional Achievement Award for Entrepreneurship, the New York African American Business Award for Outstanding Business Achievement, *Brandweek*'s Marketer of the Year Award, the NAACP Entrepreneurs of the Year Award, a Citation of Honor from the Borough of Queens in the City of New York, and the *Essence* Award, the last marking the first time that *Essence* presented its highest honor to a company; in 2000, the Black Alumni of Pratt Creative Spirit Award; in 2001, the *Source* Foundation's Hip Hop Cares Award; and in 2003, Ernst & Young's New York Entrepreneur of the Year Award.

In 2007 John published *Display of Power: How FUBU Changed a World of Fashion, Branding and Lifestyle.* He became the first-ever retailer to sell a book at the MAGIC apparel convention in Las Vegas. A reviewer for *Publishers Weekly* (January 29, 2007, on-line) called the book "informative and well written . . . this is a worthwhile read for aspiring businessmen, fashionistas and laymen alike." John told Claire Sulmers for *King-Mag.com* (February 8, 2007) that he decided to write the book because "the corporate world thinks that people like us [African-Americans] are just hanging out, smoking weed, [wearing] baggy pants, and drinking Cristal. I want them to understand that we are strategic thinkers, there's a method to our madness, and that our market is a strong, educated and disciplined market in some regards." In 2006 FUBU opened its 60th store, in Beijing, China.

John serves as CEO of FUBU and of an independent marketing company, Stealth Branding Group, through which he engages in work as a motivational speaker, marketing and corporate consultant, and life coach. He also oversees the FUBU brands Coogi, Heatherette, Kappa USA, Drunkn Munky, and Ether. He has two daughters, Destiny and Yasmeen, with his ex-wife, Maria. He resides in New York City. When asked by Jackson, "What do you want your peers to say about you?" John responded, "He was morally correct. He was always straight up with you, whether he liked you or not. And he uplifted a lot of young people and helped better our culture."

Johnson, Avery

Mar. 25, 1965– Basketball coach

Address: Dallas Mavericks, The Pavilion, 2909
Taylor St., Dallas, TX 75226

Avery Johnson has made a name for himself in the National Basketball Association (NBA) by proving his doubters wrong. Considered to be undersized for an NBA player, at five feet 11 inches tall, Johnson joined the Seattle Supersonics in 1988 after being passed over earlier that year for the NBA draft. In 16 seasons in the league, he became a career journeyman, calling six cities home over the years and playing in more than 1,000 regular-season games, making him only the second NBA player under six feet to pass that mark. As a player he will always be most celebrated for sinking a jump shot in the waning seconds of Game Five of the 1999 NBA finals, clinching the San Antonio Spurs' championship victory over the New York Knicks and quieting the many coaches, players, and fans who, at every point in his playing career, had questioned Johnson's ability to make such medium-range field-goal attempts. By the end of his first full season as head coach of the Dallas Mavericks, in 2006, Johnson had helped squash the team's reputation for having a superior offense but a weak defense: he led the Mavericks to a 60–22 regular-season record, which matched a franchise high for wins in one season. In postseason play Johnson directed the team to basketball's most coveted stage, the NBA finals, a level the franchise had never reached since it joined the league for the 1980–81 season. Although Dallas lost the series to the Miami Heat, most observers judged the Mavericks' 2005–06 season, buoyed by their new defensive skills, to be a significant step forward, and in April 2006 Johnson was named the NBA's coach of the year. In just over one season as an NBA head coach, Johnson had reached the 50-win mark faster than any other coach and earned the best record for a starting coach in the first 82 games of his career.

Known as the "Little General" even before he officially became a coach, Johnson is considered a hard-driving motivator, and his players welcome his instruction. "If there was a wall there and Avery said to go through it, if he's telling me to do it, in my mind I'm thinking there is a soft spot in there somewhere because everything he's told me up to this point has been real and has helped me," Jerry Stackhouse, a vital reserve on the Mavericks' roster, told Michael Lee for the *Washington Post* (June 11, 2006). Johnson is likewise regarded as genuinely kindhearted by fellow coaches and former teammates alike. "He's such a fun-loving, good guy," one of Johnson's teammates from his days with the Spurs, Tim Duncan, told Oscar Dixon for *USA Today* (February 19, 2006, on-line). "He's one of the greatest in the NBA, period. I don't think you can find anyone who would say a bad word about him. You love to root for people like that."

The ninth of 10 children and the youngest of six sons, Avery Johnson was born on March 25, 1965 in New Orleans, Louisiana, to Jim and Inez Johnson. His father, a carpenter, strongly shaped Johnson's work ethic. "I look up to my father because every time I went to sleep, he was up," Johnson told John Peoples for the *Seattle Times* (October 23, 1990). "Whenever I woke up, he was already up. My dad never set bad examples for me. He was always working. That's the kind of person I wanted to be. A hard-working person." Raised in the Lafitte housing projects, in the neighborhood known as Tremé, near the city's French Quarter, Johnson was shielded from the area's rougher elements by his parents, and those close to him at the time describe Johnson as an energetic and ebullient young person. "He always seemed to be the smallest person in the room," Andrea Johnson, Avery's younger sister, said to Barry Horn for the *Dallas Morning News* (May 7, 2006). "But he always had the biggest heart. Everyone could see that."

Media profiles of Johnson often portray his emergence as a reliable NBA performer as a "small miracle." Beginning in high school and carrying over to each subsequent stage of his playing career, Johnson's athletic abilities were routinely questioned because of his small stature. As a senior on the basketball team at St. Augustine High School, Johnson never even reached five and a half feet in height, and he spent virtually the entire regular season on the bench. "I was the 14th man on a 14-member team," he recalled to Lars Anderson for *Sports Illustrated* (July 7, 1999), adding: "I was the backup to the backup's backup." In postseason play in 1983, however, the team lost its starting point guard, and Johnson stepped in, contributing to his high school's win at the Louisiana state championships.

On the heels of his postseason work, Johnson received an offer to play basketball for New Mexico Junior College, in Hobbs. Taking his only opportunity for a scholarship, Johnson spent one season in New Mexico before transferring to Cameron University, in Lawton, Oklahoma. His play improved during his one season in Oklahoma, leading to his recruitment and subsequent signing with Southern University, in Baton Rouge, Louisiana, in 1985. National Collegiate Athletic Association (NCAA) rules governing transfer students stipulated that Johnson was not allowed to play right away at Southern University, so he officially joined the team the next year, at the beginning of the 1986–87 season. Johnson proved to be an "impact player" for Southern, leading all NCAA Division I players in assists, with an average of 10.7. In the 1987–88 season, his senior year, he surpassed his own record, averaging 13.3 assists for the season and claiming the NCAA Division I record for the highest single-season assists average. He also holds the NCAA Division I record for the highest career-assists average (12) and is tied with two other players for the record for assists in a single game, having made 22 for Southern against Texas Southern on January 25, 1988. In addition to the leadership qualities he exhibited on the court, Johnson helped his teammates stay out of trouble in their off hours as well. "AJ kept all the kids straight," Ben Jobe, Johnson's coach in Baton Rouge, told Anderson, referring to Johnson by his other nickname. "When I had AJ, we never had guys breaking into Coke machines, breaking curfew. AJ is what you need if you want a guy who has character."

Johnson graduated from Southern University with a bachelor's degree in 1988. Though ignored in the June NBA draft that year, he was determined to have a professional basketball career and passed a summer season in Florida with the Palm Beach Stingrays, a short-lived franchise in the developmental U.S. Basketball League. "I just wasn't ready to stop playing," he told Phil Taylor for *Sports Illustrated* (June 14, 1999). "If I wasn't good enough to be a pro, so be it, but I was going to find out for myself." Johnson also had what he described to Chad Bonham for the magazine *Breakaway* (online) as "a Plan B": earning a master's degree from Tulane University, in New Orleans. "I think the pressure of making it [into the NBA] wasn't on me as great as some other players that had no other options," Johnson told Bonham. "I was going to do something special in life and I wanted to play in the NBA. I had a backup plan but I went full speed ahead."

On August 2, 1988 the Seattle Supersonics signed Johnson to a free-agent contract, and over the next two seasons, he played in 96 games for the franchise, making 10 starts, all of them in his second season. The Supersonics traded him to the Denver Nuggets for a second-round draft choice on October 24, 1990. On December 23, 1990, after appearing in 21 games for the Nuggets, Johnson was informed by the team's then-coach, Paul Westhead, that effective the following day he would be cut from the roster. Less than a month later, the San Antonio Spurs signed him. Although his playing time and points-per-game average increased in San Antonio, Johnson was deemed expendable, and in December 1991 the Spurs waived him. After signing on with the Houston Rockets, in January 1992, Johnson finished the season there but was not re-signed. Instead, he went back to the Spurs for the 1992–93 season and then joined the Golden State Warriors at the beginning of the following fall. He appeared in all 82 regular-season games that year for the Warriors, averaging 10.9 points and 5.3 assists per game.

In the summer of 1994, Johnson, having spent time with five teams in six seasons, signed with the Spurs for a third—and final—time, and he remained in San Antonio through the end of the 2000–01 season. Regarding the difficulty he encountered in remaining with one franchise for an extended period, the devoutly Christian Johnson told Anderson, "When those things happen, the human part of you sometimes gets you discouraged. But then your faith kicks in and says to keep on going." One of the aspects of Johnson's game that especially concerned NBA team executives and decision-makers was the lack of "touch" he showed when shooting the ball, particularly his failure to convert some jump shots into field goals. "We all made the same mistake with Johnson, the same mistake we make all the time in the NBA. Instead of seeing what he was, we were worried about what he wasn't," Bernie Bickerstaff, a former Denver Nuggets coach, told Mark Kiszla for the *Denver Post* (April 30, 1995). "The rap on him was always, 'Johnson doesn't have a jumper.' But some guys are born to have a basketball in their hands."

In the 1994–95 season, Johnson enjoyed career high averages of 13.4 points and 8.2 assists per game and started in all 82 of the Spurs' regular-season games. His 670 assists were the fourth-highest total in the NBA that season; in the 1995–96 season, his 789 assists placed him second in the league. As Phil Taylor observed, "What no one seemed to notice was that Johnson had been quietly but steadily getting better." Indeed, Johnson's scoring average increased in each of his first seven seasons in the NBA. His shooting percentage also improved steadily. Of particular value to Gregg Popovich, who took over as the Spurs' head coach in 1996, was the sense that, with Johnson running the team as its point guard, the Spurs in many ways had a coach on the court. "Avery is kind of like the head of a snake," Popovich said to Anderson. "No Avery, no team. He's got a heart bigger than the Alamodome. His work ethic is scary, and he's personable enough to be a leader. When a guy has all those elements, that's who you want to work with."

Johnson worked both on and off the court to secure the 1999 NBA championship for the Spurs. He served as a role model for the team's emerging star center, Tim Duncan, and also forged a close-knit relationship with David Robinson, another center and, like Johnson, a born-again Christian. The three were instrumental in leading the Spurs through the play-offs, past the Minnesota Timberwolves, the Los Angeles Lakers, the Portland Trailblazers, and, finally, the Knicks. Yet it was Johnson's final jump shot that gave the Spurs the game-winning points. "For all those years, to have people tell him you're no good, you can't do this, to the way they didn't even guard him when he played—and then to have him make the championship shot in '99, now to be the coach," Bill Walton, an NBA analyst and former player, told Oscar Dixon. "And the way he does it with such class and humility, with such dignity and pride, he is a fantastic human being." Johnson finished his tenure with San Antonio at the end of the 2000–01 season, rounding out his time there with 4,474 assists, the most in the franchise's history. In the summer of 2001, he signed a free-agent contract with the Denver Nuggets, valued at some $14.4 million over three years. The Nuggets traded him, in 2002, in a seven-player deal to the Mavericks. The following year the Mavericks moved Johnson to the Warriors in a trade involving nine players.

Although Johnson rejoined the Mavericks in September 2004, Don Nelson, the Mavericks' head coach since 1997, and Mark Cuban, the Mavericks' owner, persuaded Johnson to end his playing career and join the team's coaching staff. (Johnson finished his career with an average of 8.4 points, 5.5 assists, 1.7 rebounds, and 25.3 minutes per game. He also had an impressive 3.34 assist-to-turnover ratio.) The understanding was that Nelson would groom Johnson to succeed him as head coach. Within months Johnson was organizing the team's practices, and when Nelson needed a replacement midway through the season, Johnson took over the interim duties. Then, on March 19, 2005, with 18 games remaining in the season, Nelson permanently handed over the reins to Johnson. The team responded positively to their new head coach, winning all but two of their remaining contests.

In recent years the franchise, which included a core of such versatile young players as the German-born forward Dirk Nowitzki, the guard Jason Terry, and the swingman Josh Howard, had earned a reputation for having an impressive offense that was often undercut by a weak defense. Johnson set about changing that perception in the short time he was at the helm at the end of the 2005–06 season, and in the first round of play-offs, the Mavericks dispatched the Houston Rockets in seven games, before being eliminated by the Phoenix Suns in six. Before the start of the 2005–06 NBA season, Johnson continued to emphasize to his players the value of slowing down opponents, and during the regular season the team reached previously unattained heights, holding the opposition to an average of 93.1 points per game, a record for the franchise. Michael Finley, currently of the San Antonio Spurs and a guard with the Mavericks from 1997 to 2005, told Sean Deveney for *Sporting News* (May 6, 2005), "Getting more physical, pushing people first instead of letting other people push. [Johnson] is trying to get us to take on that mentality." The Mavericks finished with a 60–22 record, tying a franchise mark that was set in the 2002–03 season under Nelson. In February 2006, with the Mavericks commanding the conference's best record at that point in the season, Johnson was tapped to coach the Western Conference All-Star Team. The Spurs later edged the Mavericks out of their topmost position, and the Mavericks entered the play-offs as their conference's fourth seed, despite having the second-best record in the West.

Heavily favored in the first round of the 2006 NBA play-offs, the Mavericks quickly dispatched their opponents, the Memphis Grizzlies, in the first four of the series' seven games. That victory set up a much-anticipated showdown between the Mavericks and Johnson's former team—and the reigning 2005 NBA champs—the Spurs. After the teams split the first two games in San Antonio, the Mavericks, using their quickness and scoring depth, came away with victories on their home court in the third and fourth games, to take a commanding 3–1 lead. The series then shifted back to San Antonio, where the Spurs won Game Five by a single point. The day after that pivotal game, the NBA suspended the Mavericks' Jason Terry from the next game, which was to be played in Dallas, after footage from the game revealed that Terry, in the final moments of Game Five, had punched the Spurs' Michael Finley. Without Terry in the lineup, the Mavericks lost to the Spurs in the next game by five points, setting up a decisive final game in San Antonio. Billed as an epic clash of two of the NBA's best teams, the taut, seesaw affair went into overtime, during which the Mavericks scored their way to a 119–111 win.

In the Western Conference finals, the Mavericks faced the NBA's highest-scoring team, the Phoenix Suns, known for their uptempo style of play and led by the point guard Steve Nash, the NBA's most valuable player in 2004–05 and 2005–06. After losing the first game in the series, the Mavericks rebounded to win four of the next five games, taking the best-of-seven series and advancing to the NBA finals to face the Miami Heat, another team that, like the Mavericks, had never before reached that last stage of postseason play.

The 2006 NBA championships featured a mix of vibrant young stars and veterans, exemplified by the Heat's exceptionally talented third-year guard Dwyane Wade and aging superstar center Shaquille O'Neal. The teams were closely matched, but one notable difference between them was in the levels of experience of their respective head coaches. One of the NBA's most successful coaches, the Heat's Pat Riley had led the Los Angeles Lakers to four championships in the 1980s and later took the Knicks to the 1994 NBA finals. Despite Riley's greater experience, Johnson led the Mavericks past the Heat for the first two games of the series, both played in Dallas; so impressive, in fact, were the

Mavericks' two series-opening victories that many sportswriters dismissed the possibility of a turnaround. In Game Three, however, the Mavericks raced to a commanding second-half lead only to watch Miami erase a 13-point deficit in the fourth quarter and win the game, 98–96. When the series was later tied at two games each, Johnson moved his players from a luxurious hotel in downtown Miami to a more modest spot some 45 minutes away. He had hoped that the change of scenery would break what he referred to as his team's "vacation mentality" and also unify his players, who were ordered to share rooms rather than take private rooms. In Game Five Wade commanded the court, shooting 43 points to lead the Heat to a 101–100 victory, Miami defeated Dallas 95–92 to take Game Six—and win its first championship. After beginning the 2006–07 season with four losses, the Mavericks won 50 of the next 55 games, and Johnson set a record as the coach who reached 100 wins fastest. The regular season ended with the Mavericks posting the sixth-best record, 67–15, in NBA history. As the number-one seed in the Western Conference and with the league's best record, they were heavily favored to win the NBA Championship. Nevertheless, they did not make it past the first round. In one of the NBA's greatest upsets, the Mavericks were defeated by the number-eight Golden State Warriors, who were coached by Don Nelson.

Johnson prepares his team relentlessly, both in practice and in the film room. Before most Mavericks' practices Johnson devises a script aimed at smoothing over a particular aspect of the team's execution. "Avery is very organized," Shawn Bradley, who played for the Mavericks through the end of the 2004–05 season, told Deveney. "He has a good grasp on what he wants, he has a good idea of the structure he wants." Johnson, known for speaking in a high-pitched Louisiana accent, does not hesitate to pull a player from a game if he is ignoring defensive responsibility or is not hustling, and the coach is not shy about making disparaging remarks about players to the press. Riley told Michael Lee: "I used to hear him [as a player] when I coached against him, he would be barking . . . those high-pitched orders telling everybody where to go and admonishing David Robinson and Tim Duncan and they would say, 'Yes, sir.' It's great to see a young coach come along that has gained in a short period of time the ultimate respect of his players." Describing his coaching philosophy to Bonham, Johnson said, "You want to be a man of integrity and you want the players to know that you care about them. Whether they still like you or not is a whole other deal."

Johnson lives in Houston, Texas, with his wife, Cassandra (Merricks) Johnson, whom he married in 1991; they have two children, Christianne and Avery Jr. Johnson reportedly reads the Bible every day. "I take [being a role model] very seriously because I'm trying to be an example as a Christian, as a man," he told Chad Bonham. "I've got a lot of people who are looking up to me." When Hurricane Katrina battered New Orleans, in late August 2005, Johnson and his wife transformed their Houston home into a refuge for family members and others who had fled the city; they also organized a charity basketball game in Houston that raised more than $1 million to help victims of the disaster. Johnson hired Bernard Griffith, his high-school coach, as a Mavericks' assistant coach after St. Augustine High School was devastated by the hurricane. Johnson told Barry Horn: "I know I will be judged ultimately not for what I did as the Dallas Mavericks' basketball coach, but I will be judged for what I did in times of need by others." His avocational interests include golfing and tennis. At the end of 1997–98 regular-season play, Johnson received the NBA's Sportsmanship Award.

Johnson, Sheila Crump

Jan. 25, 1949– Co-founder of Black Entertainment Television; co-owner and president of the Washington Mystics

Address: Salamander Hospitality, 100 W.
Washington St., Middleburg, VA 20118

"I always had a drive in me that desired to be the best that I could be," Sheila Crump Johnson said at a college commencement address a few years ago, as quoted by Karen W. Arenson in the *New York Times* (May 8, 2003). In 1979 Johnson and Robert L. Johnson, whom she had married 10 years earlier, founded Black Entertainment Television (BET), the first cable network to offer programming created specifically by and for African-Americans. A dozen years later BET Holdings Inc., which the Johnsons had set up as BET's parent company, became the first African-American–controlled firm to be listed on the New York Stock Exchange. By that time BET had grown into one of the main sources of news and entertainment for nearly 30 million subscribers throughout the United States, and Sheila Johnson was working as BET's executive vice president of corporate affairs. She held that post until 1999, when, after years of discord between the Johnsons regarding the network's programming, Robert Johnson fired her. In 2000 Viacom Inc. acquired BET Holdings in a stock deal valued at $3 billion, and two years later, when the Johnsons' marriage ended in divorce, Sheila Johnson became the nation's first black female billionaire.

Sheila Crump Johnson

Sheila Johnson is an accomplished violinist and trained music educator, and during the first half of her marriage to Robert Johnson, she taught music in schools in the Washington, D.C., metropolitan area; she also formed an orchestra for young violinists and other players of stringed instruments. As a cultural representative of the United States Information Agency in the Middle East for five years in the 1980s, she helped Jordan establish a national music conservatory and was honored by King Hussein, the country's monarch, for her efforts. Since 1989, when she set up the Sheila C. Johnson Foundation, she has been a major benefactor of schools, her biggest monetary gift so far being a donation of $7 million to the Parsons School of Design, in New York City. A resident of Virginia since 2002, she has become a community leader in Washington, D.C., and its environs. Johnson is a co-owner of the Washington Mystics, who belong to the Women's National Basketball Association (WNBA), and she holds the titles of team president, managing partner, and governor. "I'm a firm believer in not looking back," Johnson told Dionne Walker for the Associated Press (January 8, 2006). "I've been through a lot of fire and still come out alive."

The elder of two siblings, Johnson was born Sheila Crump on January 25, 1949 in McKeesport, Pennsylvania. She has one brother. At that time her father was one of fewer than a dozen African-American neurosurgeons in the U.S.; her mother was a homemaker. Because her father "could not practice in white hospitals," as Johnson told Kristen A. Nelson for the *Washingtonian* (November 2003), the family relocated often as he was transferred to a series of veterans' hospitals. After some years the Crumps settled in Maywood, a suburb of Chicago, Illinois. By her own account, Johnson had a privileged upbringing—a rarity among African-Americans during the 1950s and 1960s—but she was not unaware of racism. Once, she recalled to Walker, a friend's father referred to her as a "blackie." Her own father, an amateur pianist, instilled in her a passion for classical music. At the age of five, Johnson began studying the violin. She attended the Irving Elementary School and Proviso East High School, both in Maywood. In high school Johnson served as the student orchestra's concertmistress (traditionally, a post held by the first, or lead, violinist), and she was elected class vice president and captain of the cheerleading squad. To ensure that the cheerleaders learned their routines without the distraction of boyfriends, she would lock the doors of their room during practice sessions. She also chaired an Illinois state youth orchestra.

Johnson attended the University of Illinois School of Music at Urbana-Champaign on a scholarship. There, she studied under Paul Rolland, a renowned violin teacher, and took classes in performance, conducting, and music education. She became the school's first African-American cheerleader and a member of the Mortar Board, a women's honor society. In 1969 she married Robert L. Johnson, who had graduated from the university the previous year. After she earned a bachelor's degree, in music performance and education, in 1970, she moved with her husband to Princeton, New Jersey, where Robert Johnson earned a master's degree in international affairs from Princeton University in 1972. They then set up house in Washington D.C., where Sheila Johnson worked briefly as a research analyst for U.S. senator Jacob K. Javits of New York.

In 1973 Johnson began teaching music at several local schools, among them the Sidwell Friends School, the Lab School of Washington, and the Levine School of Music. Johnson also gave private violin lessons, and in 1975 she formed a touring, 140-member orchestra called Youth Strings in Action. (She described her teaching methods, which were based on Paul Rolland's, in a manual called *Youth Strings in Action.*) Queen Noor of Jordan attended one of the group's performances, and later, at her invitation, the ensemble performed at the Jerash Festival of Culture and Arts, in Jordan. That event led to Johnson's appointment as the United States Information Agency cultural liaison in the Middle East. In that position she had a major role in the establishment of Jordan's national conservatory of music. For her contributions to the country's educational system, Johnson was awarded Jordan's highest civilian honor.

Earlier, one day in 1979, while Robert Johnson was working as a lobbyist for the National Cable Television Association, he had met a businessman who expressed the desire to create a television network that would cater to the interests and needs of the elderly. The Johnsons had often bemoaned the absence of "the black perspective" or black voices on the major TV networks, as Sheila Johnson told Michael Shelden for the London *Daily Telegraph* (October 11, 2004), and during Robert Johnson's conversation with the businessman, the idea of setting up a network for African-Americans came to him. Using some of their savings along with loans and lines of credit totaling $500,000, the Johnsons launched BET in 1980. "I worked hard for him," Sheila Johnson said of her husband to Shelden. "I loved him, I adored him, I was proud of him. And I put 100 percent into helping him build up the network and his public image." In 1989 BET entered the publishing business, with the debut of *Emerge*, a news and general-interest magazine aimed at black readers; the magazine *YSB* (Young Sisters and Brothers) followed in 1991. BET also bought Arabesque Books, which publishes black-themed romance novels, and *Heart and Soul* magazine, possibly the first health-and-fitness magazine for black women in the U.S.

By 1990 Sheila Johnson had stopped teaching and was serving BET full-time as executive vice president of corporate affairs, becoming the "conscience" of the company, as she told Ann Gerhart for the *Washington Post* (May 26, 2002). In an effort to counteract the influence of the music videos carried by BET, which increasingly emphasized materialistic lifestyles, sex, and sexist references to women, Johnson had pushed for socially conscious programming. Toward that end she had overseen the creation of *Teen Summit*, which was launched in 1989 and featured young people discussing such issues as drugs use, the spread of AIDS, and teen pregnancy. She and her husband "bickered constantly over programming," as she told Shelden. "I wanted us to cover news and important social issues, especially for our young audiences. Unfortunately, those kind of shows don't bring in the ratings." She also told Shelden about BET, "It's now just a black MTV, really. But it all comes down to economics. You can't fight that. It just wasn't profitable to do more serious things, and my husband moved the business in a different direction." Even more destructive to the couple's relationship were Robert Johnson's dalliances with other women. In 1999 Robert Johnson, who then held the titles of chairman, president, and CEO of BET Holdings, fired Sheila Johnson, ending their two-decade-long business partnership. The following year the media conglomerate Viacom Inc. acquired BET for $3 billion. In 2002 the Johnsons divorced; the couple split their assets, and Sheila Johnson and her former husband became billionaires.

During that period Sheila Johnson purchased a $7 million, 350-acre property outside Middleburg, Virginia, a Washington, D.C., suburb, and converted part of it into a horse ranch that she named Salamander Farm. (According to myth, salamanders can emerge from fire unscathed.) She set up a company called Salamander Hospitality and, in Middleburg in 2004, opened a take-out gourmet-foods shop, the Market Salamander. Overcoming objections from some people in the community, who opposed bringing more foot and vehicular traffic to Middleburg, she obtained approval to construct a vacation facility, the Salamander Inn and Spa, on her land; it is scheduled to open in 2008.

Johnson has also continued to devote herself to philanthropic activities, underwriting fund-raising events on behalf of the Loudoun (County) Hospital Center's health vans, which service low-income residents of the area, and the Piedmont Environmental Council's conservation programs. She has donated millions of dollars to the United Negro College Fund and educational institutions including, in addition to the Parsons School of Design (a division of the New School), the Hill School, a Middleburg private school (which is now the site of the Sheila C. Johnson Performing Arts Center); the Curry School of Education at the University of Virginia; Bennett College for Women, in Greensboro, North Carolina; Howard University, in Washington, D.C.; and the State University of New York (SUNY) at Morrisville. "I studied wealthy people—this was before I had money—and saw the confidence in their kids because the world is their oyster," she explained to Nicole Lewis for the *Chronicle of Philanthropy* (June 12, 2006). "We need to give all . . . kids that same kind of entitlement. They may not have monetary entitlement, but let them feel entitled, because that is the only way they are going to grow socially and morally, and that is really the reason I give money away." SUNY-Morrisville houses the Sheila Crump Johnson Institute, which awards scholarships and fellowships and aims to build character and leadership skills among college students and promote diversity. "In educating young people, it is imperative to address the whole person," Johnson told a writer for *Black Issues in Higher Education* (November 21, 2002). "Focusing on character and leadership in addition to academics will serve to prepare students well for their roles as employees, employers, parents and leaders."

In May 2005 Johnson acquired a partnership in Lincoln Holdings LLC, a sports and entertainment company co-founded by Theodore J. "Ted" Leonsis, a vice chairman of America Online Inc. Lincoln Holdings owns the Washington Mystics and the Washington Capitals, a team in the National Hockey League, among other companies and properties. Johnson is the first African-American female owner of a professional sports franchise. "She's making history," Donna Lopiano said to Miki Turner for ESPN.com (February 22, 2007). "Unless your team was in the family and your father died and left it to you, you didn't get to be an owner. She's the first generation of women, who in their own right . . . are team owners and who are going to shape a franchise in their own image as opposed to letting the guys do it." As team president, Johnson has promised to do everything possible to reverse the decline in attendance at Mystics games and those of other WNBA teams. "We have a long climb on our hands as far as the perception and value of women in the sports world," she said to Mark Berman for the *Roanoke* (*Virginia*) *Times* (August 9, 2005). "It's still very much a male-dominated arena. We as women have got to start being a lot more aggressive as far as marketing ourselves and getting ourselves out there so that the general public can see us as the athletes that we are and really show that we can be valued just as much as any of these NBA [National Basketball Association] players or any of these other male sports teams." "To have someone like [Johnson], someone who has been so successful at whatever she's done, come in and say she believes in us and she still loves us like that, it was special . . . ," the Mystics' point guard Temeka Johnson said to Ivan Carter for the *Washington Post* (August 26, 2005). "I think it gives us motivation to go out there and perform because we want to make her look good." The Mystics finished the 2005 season with a 16–18 record. Their 18 wins and 16 losses the next season earned them a berth in the play-offs, where they lost to the Connecticut Sun in the first round.

Johnson has served as the president of the Washington International Horse Show and is currently the chair of its board of directors. She is a member of the boards of trustees of the United States Equestrian Team, the American Horse Show Association, the Pennsylvania National Horse Show, and the Equestrian Alliance; a member of the Community and Friends Board of the Kentucky Center for the Performing Arts; co-chair of Carnegie Hall's Educational Advisory Council; and a member of the national advisory board of the Salvation Army. In news releases her name appears as Dr. Sheila C. Johnson, in recognition of her two honorary doctoral degrees, from SUNY-Middleton and Bennett College. Her photographs, mostly landscapes, have been exhibited at the Byrne Gallery, in Middleburg, and have been used in some of her fund-raising efforts. In 2006 Sheila Johnson was named Woman of the Year by Women in Sports and Events, and in 2007 she was honored by the Jackie Robinson Foundation for her "commitment to social progress."

When Lynn Norment interviewed her for *Ebony* (September 2003), Johnson owned 18 show horses. She also owns a horse farm in Wellington, Florida. Johnson's children from her marriage to Robert L. Johnson are a daughter, Paige, a champion equestrian, who is now 21, and a son, Brett, 17. In 2005 about 700 people attended her wedding to William T. Newman, the Arlington County Circuit Court chief judge. "Money can be a blessing or a curse," she told Ann Gerhart. "I have seen money destroy people, athletes and entertainers who really came up from nothing and used their money for all the wrong reasons, whether it went up their nose or into 50 cars or spent on houses that even 5,000 people can't begin to live in. In the end, it means nothing. They got what they wanted, but they lost what they had, and that is their soul."

Jones, George L.

Oct. 25, 1950– President and CEO of Borders Group Inc.

Address: Borders Group Inc., 100 Phoenix Drive,
Ann Arbor, MI 48108

"I'm very competitive, and if I wasn't gunning for No.1, I shouldn't be here," George L. Jones, the chief executive officer and president of the Borders Group Inc. since July 2006, told Sheena Harrison for *Crain's Detroit Business* (September 25, 2006). Borders is the second-largest bookstore chain in the United States, after Barnes & Noble. "What we want to do," Jones said to Harrison, "is create something that's powerful enough that a good number of customers would drive past the competitor's store to get to ours." Jones began his retail career when he was fresh out of college, in one of a series of jobs with department-store chains based in Tennessee, Arkansas, and Arizona. In 1985 he joined Target Stores, in Minneapolis, Minnesota, as vice president of the ready-to-wear division; later, he was promoted to senior vice president of merchandising and then executive vice president of operations, overseeing the management of more than 450 stores nationwide. After half a dozen years with Target, Jones headed another retail chain, Rose's Stores Inc., headquartered in Henderson, North Carolina, from 1991 to 1994. He next joined Warner Brothers (WB) Consumer Products, a division of the Time Warner Entertainment Company, where he served as president of worldwide licensing and retail merchandising (1994–2001); he also managed five additional divisions. While with WB he acquired the film rights to J. K. Rowling's immensely popular fantasy novel *Harry Potter and the Sorcerer's Stone* and negotiated highly profitable licensing deals for Harry Potter–related products. From 2001 to 2005 he held the positions of president and CEO of the Saks Department Store Group, a Birmingham, Alabama–based chain of some 250 department stores (not including those bearing the Saks Fifth Avenue name). Jones is "a solid, professional merchant," Ken Gassman, a retail analyst at Davenport & Co., told Ted Pratt for the *Birmingham (Alabama) News* (January 30, 2001). "He's a good mix of merchandiser and administrator." In a press release (July 13, 2006, online) distributed by the executive search firm Korn/Ferry International that announced his appointment to Borders, Jones was quoted as saying, "For many years, I have been a devoted Borders customer, enjoying countless hours in the stores. I am passionate about books, music and movies and truly honored to lead this fine company."

George L. Jones was born on October 25, 1950 in Little Rock, Arkansas, to George L. Jones Sr. and the former Gwendolyn Grissom. He attended Henderson State College, in Arkadelphia, Arkansas, where he majored in both marketing and economics. He also played guitar for a rhythm-and-blues band called Merging Traffic; he harbored aspirations of making music his career until he realized that he was "a mediocre guitar player who doesn't sing very well or write very well," as he told Ted Pratt for the *Birmingham News* (May 6, 2001). Jones earned B.A. and B.S. degrees in 1972 and then, after declining invitations to enter the management-trainee programs of Procter & Gamble and Merrill Lynch & Co., became an executive trainee with Gus Mayer, a Memphis, Tennessee–based department-store chain. "People on campus asked me how could I have turned down those other two primo offers to take [Mayer's]," Jones told Pratt. "I said this is what I thought I would like to do. If I wasn't going to be doing music, I was going to be doing something that I liked." After three years with Gus Mayer, Jones took jobs with a series of other department-store chains: Gold's, based in Little Rock, where he served as general manager (1975–78); Dillard's, also headquartered in Little Rock, where he worked first as a buyer (1978–80) and then as the manager of divisional merchandise (1980–82); and Diamond's, based in Phoenix, Arizona, where his title was manager of general merchandise (1982–84). Jones next moved to Minneapolis and joined Target Stores (then a division of the Dayton Hudson Corp.) as the vice president of ready-to-wear apparel (1985–86); he was promoted to senior vice president of merchandising (1986–87) and then executive vice president of operations (1988–91), which placed him over 90,000 employees in 450 stores that generated annual sales exceeding $9 billion. As executive vice president Jones played a key role in differentiating the Target brand from its rivals Wal-Mart and Kmart, by promoting a more upscale look in Target stores. As David Moin wrote for the Harrisonburg, Virginia, *Daily News-Record* (March 15, 1989), Target stores were considered "the best-looking of the three discounters, [with] more expensive fixturing, including color graphics and carpeting to complement the better apparel, wider aisles and a brighter appearance." Concurrently, from 1987–88, while he was with Target, Jones served as the chairman and CEO of Monica Scott Inc., a chain of specialty stores.

In 1991 Jones left Target to become the president and chief executive officer of Rose's Stores Inc., a struggling Henderson, North Carolina–based retail chain, which had experienced a $23 million loss on $1.4 billion in revenues during the fiscal year prior to Jones's arrival. Ken Gassman told Kelly Greene for the *Charlotte (North Carolina) Business Journal* (September 5, 1994) that Jones took on the challenge that Rose's presented because "he knew he'd never have the opportunity to be president at Target." The first nonmember of the Rose family to run the chain in its 76-year history, Jones "kept Rose's from falling apart," as Gassman told Ted Pratt (May 6, 2001). Over the next three years, Jones steered Rose's through bankruptcy reorganization and led it to profitability. He also helped the retailer withstand the growing competition from Wal-Mart stores in the Henderson area. In mid-1994 Jones asserted, "Rose's is at the highest point it's seen in several years in terms of optimistic outlook for the company," according to a *Greensboro (North Carolina) News & Record* (August 19, 1994) reporter.

Soon afterward Jones left Rose's to join Warner Brothers (WB) Consumer Products, a division of the Time Warner Entertainment Co., as president of worldwide licensing and retail merchandising. He also managed WB worldwide publishing, Kids WB Music, WB Interactive Entertainment, WB Sports, and the WB Studio Stores. Among his chief responsibilities at WB, Jones oversaw a vast archive of WB brands, logos, and characters for such film and television franchises as Looney Tunes, Batman, and Superman, for all of which there were more than 3,700 active licensees. In 1998, in one of his more noteworthy achievements, Jones revived public interest in the Scooby-Doo franchise—connected with one of the longest-running animated series in television history and featuring the talking Great Dane Scooby-Doo and his friends. He did so by licensing the Scooby-Doo brand to Equity Marketing Inc., a global marketing-services company, for the production and distribution of Scooby Doo–related figurines and other toys. "We thought of it as an unmined gem," Jones told Laura Petrecca for *Advertising Age* (February 14, 2000). "We really stepped back and looked at the opportunity to build Scooby-Doo as a brand." In 1999 Jones acquired the film rights to the first of J. K. Rowling's series of fantasy novels—*Harry Potter and the Philosopher's Stone* (1997), retitled *Harry Potter and the Sorcerer's Stone* for the U.S. market. "I acted like I had read the book," Jones confessed to Betsy Butgereit for the *Birmingham News* (November 17, 2001). "[Rowling] knew I hadn't. She gave me a copy of the book. I read it and later loved it." Jones championed Rowling's involvement in the early phases of film production (with Jones's support, for example, Rowling created mock-ups for the book's characters). He also spearheaded the merchandising effort for Harry Potter products, orchestrating some four dozen licensing deals with manufacturers, among them the toy company Mattel Inc. and the pharmaceutical-products company Johnson & Johnson. In November 2001 the film adaptation of *Harry Potter and the Sorcerer's Stone* opened in more than 5,000 theaters nationwide, and it went on to earn gross sales worldwide of nearly $1 billion, making it the fourth-highest-grossing film of all time. During Jones's eight-year tenure at WB Consumer Products, the annual retail sales of the licensing division increased to $7 billion, second in revenues only to those of the Walt Disney Co. (which grossed $13 billion).

In March 2001 Jones returned to the retail sector, succeeding Robert Mosco as chief executive officer of the regional department-stores division of the Birmingham, Alabama–based Saks Department Store Group (SDSG). SDSG was then operating about 250 stores in 24 states, bearing the names Parisian, Proffitt's, McRae's, Younkers, Herberger's Carson Pirit Scott, Bergner's, and Boston Store. (Fred Wilson, the CEO of SDSG's umbrella company, Saks Inc., was in charge of the Saks Fifth Avenue chain.) At that time SDSG had begun to see stagnant sales, a situation that many observers traced to the mid-1990s consolidation that had tied the upscale Saks Fifth Avenue stores with regional department stores, creating a "fashion misstep" through attempts to "blend two widely different merchandising cultures," according to Doris Hajewski in the *Milwaukee (Wisconsin) Journal Sentinel* (April 8, 2001). The task of stimulating sales and increasing profits, as Jones saw it, did "not require a massive overhaul. This is not turnaround. This is an opportunity. There is a difference," as he told Pratt for the *Birmingham News* (May 6, 2001). Jones told David Moin for *Women's Wear Daily* (May 2, 2001), "Customers have a loyalty to brands carried only in department stores in cosmetics, home and apparel, and we have terrific real estate. Saks Inc. has 28 million square feet of department store space. We're in the right malls, we have favorable long-term leases and good real estate. . . . We ought to be able to sell a heck of a lot of something. We can have very meaningful growth by improving productivity in existing stores." "Department stores are built around brand-consciousness, and the vast majority of sales come from branded vendor goods, not private-label merchandise," Jones told Matthew Haeberle for *Chain Store Age* (October 2002). Ultimately, he said to Jean E. Palmieri for the Harrisonburg, Virginia, *Daily News-Record* (February 11, 2002), "it comes down to product, price and service" as well as "picking certain categories of merchandise to build dominance in."

Jones identified "differentiated merchandise" as the key to sparking SDSG's financial renewal, as he told a writer for the *Birmingham Business Journal* (October 4, 2002). He told Palmieri, "I don't think I'm the only one recognizing this problem, but there's just way too much sameness. . . . Right now, if you plop customers into our stores or most of our competitors', there's so much sameness in terms of the offerings, the ambience, the service experience—everything. They're not distinguishable enough." In one of his early initiatives at SDSG, Jones revitalized the Parisian specialty stores, capitalizing on the chain's history, decor, and upscale fashions to "achieve something very special," as he told David Moin for *WWD* (May 2, 2001)."Parisian is an institution in Birmingham. There are beautiful stores in Birmingham and Charleston [South Carolina], and in a number of other cities too. It feels like a better department store. . . . The key part of the strategy is to return that specialty feeling to Parisian." Jones enhanced the consumer experience at SDSG stores by increasing sales staff, making shopping carts available, and offering gift-wrapping services during holiday periods. "Everything he says is customer-driven, and that's different from what department store executives talked about in the past," Robert Robicheaux, a retailing professor at the University of Alabama, told the *Birmingham Business Journal* reporter. "Gift wrap stations and shopping carts are designed to appeal to customers. It doesn't make vendors feel better, but it draws customers into the store." Jones also secured partnerships with WB Consumer Products and the Cartoon Network to create special areas in the children's sections of 31 department stores with merchandise related to Scooby-Doo and the Powerpuff Girls. In other partnerships, he set aside spaces in SDSG stores to display products from Smith & Hawken, an upscale lawn-and-garden retailer; the outdoor and athletic apparel company Roots Canada Ltd.; and Ruff Hewn apparel, accessories, and home products. On another front, Jones tried to revive sales by introducing technological features and amenities in stores; additions to a Younkers store in Des Moines, Iowa, for example, included a wine bar, a spa, and outdoor lighting displays. Under Jones's leadership, SDSG posted $58.5 million in operating income (income before deductions of interest payments and taxes), up from $55.4 million the previous year.

In July 2005 Saks Inc. sold the Proffitt's and McRae's chains to Belk Inc. and revealed plans to divest itself of all of its regional stores except those in the Parisian chain. Meanwhile, in August 2005

Jones had announced his resignation, effective on September 30 of that year. "For the middle market, he made some good choices," one of his colleagues told David Moin for *WWD* (August 25, 2005). "But there was never enough money to advertise and market the products."

In July 2006, after a six-month search, the Borders Group Inc. chose Jones to succeed Greg Josefowicz as the firm's president and CEO. (The chairman's post was filled by Larry Pollock, a member of the Borders board of directors.) Borders began as a single bookstore, opened by two brothers, Tom and Louis Borders, in Ann Arbor, Michigan, in 1971. In 1992 the Kmart Corp., which earlier had acquired Waldenbooks and Brentano's, bought Borders, at that time consisting of 21 large stores in the Midwest and Northeast. In 1995, by means of a stock buyout, Borders and Waldenbrooks formed their own corporation, called the Borders-Walden Group, which was renamed Borders Group Inc. three years later. In 2001 Borders agreed to use the services of the Internet bookseller Amazon.com for Internet sales of books listed on the Borders and Waldenbooks Web sites. In 2004 Borders signed a contract with Seattle's Best Coffee, a subsidiary of the Starbucks Corp., stipulating that that coffee would be served in cafés in all Borders superstores. That same year the Borders Group gained a controlling interest in Paperchase Products Ltd., a British chain specializing in stationery, gift wrap, and greeting cards; Paperchase products are sold in special sections of all British Borders superstores and a small number of Borders superstores in the U.S. Currently, there are about 1,300 Borders and Waldenbooks outlets in the U.S. (including three in Puerto Rico, one of which is the highest-grossing Borders superstore on U.S. territory) and overseas (in Ireland, England, New Zealand, Australia, Malaysia, and Singapore).

Earlier, during the 2005 fiscal year (which ended on January 28, 2006), Borders's profits had dropped 23 percent, and sales had trailed those of Barnes & Noble, its chief rival, by nearly $1 billion. Jones vowed to revive the bookseller by "differentiating" Borders's products and consumer experiences from those of its rivals. "If we think of ourselves as more than just selling books or music or movies but as being a provider of information and entertainment, then there are a lot of things we can do," he told Greta Guest, who interviewed him for the *Detroit Free Press* (July 20, 2006). "I have a ton of ideas of things I can do with the relationships I built over those years in Hollywood that I think I can tap into that could help differentiate us as a company and make us stand out." In a gesture of solidarity with Borders's 35,000-employee workforce, Jones promised not to cut jobs. "I don't think the answer to Borders becoming an even better company lies in the new guy coming in and taking out tons of expenses," he told Guest. "I think our road to greatness comes more from increasing sales and a more compelling offering for our customers. That's what it's all about." One of Jones's early goals was to persuade browsers to spend more money per visit. "Our customers on average spend a lot longer in a store than what I've been used to . . . they like our stores; they're staying there, but they're not spending as much as they could," he told Motoko Rich for the *New York Times* (July 19, 2006).

Jones served for two years (1999–2001) on the board of directors of Liz Claiborne Inc. He has one daughter, Keeshan, from his first marriage (1972–78), to Marion A. Hartwick, which ended in divorce. He and his second wife, Judy M. Cowan, whom he married in 1988, have two sons, Dylan and Bailey.

Josefowicz, Leila

(Joe-SEF-oh-wits, LAY-la)

Oct. 20, 1977– Violinist

Address: c/o Linda Marder, CM Artists New York, 127 W. 96th St., Rm. 13B, New York, NY 10025

Leila Josefowicz, Lynne Walker observed for the London *Independent* (April 19, 2005), "is a gifted communicator, a musician with no airs or graces" who seems to be, Walker went on to write, "unfazed by the media spotlight" that often surrounds her. A child prodigy, Josefowicz began performing regularly at the age of 10, and since she released her first CD, *Tchaikovsky: Violin Concerto in D/Sibelius: Violin Concerto in D*, at 17, she has performed with many of the world's most prestigious orchestras—the Boston and Chicago Symphonies, the Cleveland and Philadelphia Orchestras, and the London Philharmonic, among others—and collaborated with several leading modern composers, including John Adams and Mark Grey. Having successfully made the transition from prodigy to adult performer, Josefowicz has taken control of her career, avoiding the safety of building her repertoire around old masters and actively seeking to play the work of her contemporaries. "It's very, very exciting, working with composers and being part of the creative process. That's another thing that I find inspiring—that you can share ideas, share what the strong points are of my playing, and they can cater to the way I play, as opposed to just being handed the score," Josefowicz told Rebecca C. Howard for the Salt Lake City *Desert Morning News* (February 25, 2007). Howard went on to report, "Josefowicz said that she wants to be a messenger to new composers that there is a performer who is willing to give their music the same attention, study and performance they would a piece by Bach."

Leila Bronia Josefowicz was born outside Toronto in Mississauga, Ontario, on October 20, 1977 to Wendy and Jack Josefowicz. Her mother is a former geneticist, and her father is a physicist and university professor. When Leila was three her family moved to a suburb north of Los Angeles, California, and she took up the violin, learning to play through the Suzuki method, an approach to teaching children to play instruments based on the way parents teach them language. "I didn't want to practice much," she told *People* (March 7, 1988). "I was only a baby, and you know how babies are." Two years later, while her father was vacuuming, Josefowicz's parents discovered that she had perfect pitch. "Out of the blue she said, 'Daddy, that's F sharp!'" her father recalled to R. Daniel Foster for the *Los Angeles Times* (March 25, 1988). "I said, 'What's F sharp?' and she said, 'The vacuum!'" Foster went on to note that Josefowicz's father "later tested his daughter by playing on the piano random notes that she identified perfectly." Thereafter, practicing ceased to be optional for Josefowicz, and at the age of eight, she began studying with Robert Lipsett, one of the most respected violin teachers on the West Coast. "He really taught me a lot about the technique of the instrument, how to practice, what to practice, ways that you can practice things, and it really did me a lot of good," she told Peter Wynne for the Bergen County, New Jersey, *Record* (May 1, 1998). She also earned her first professional credit when she was eight, playing the German composer Max Bruch's Violin Concerto no. 1 with a local orchestra.

Despite the fact that her talent set her apart from other children, Josefowicz was sent to public schools, "because my parents thought it would be better for my social life," she explained to Andrew Palmer for *Strings* (May/June 2000, on-line). The school accommodated her need to focus on the violin, arranging with her parents for her to study core subjects during free periods so that she could leave school by 1:30 each day and go to lessons or practice at home. When she was 10 Josefowicz's career began in earnest: she was featured on NBC's television tribute to the comedian Bob Hope, an event that marked the opening of the Bob Hope Cultural Center, in Palm Desert, California. Lucille Ball introduced Josefowicz's segment, during which the young violinist performed the Polish composer Henri Wieniawski's Scherzo-Tarantelle. "I was in amazing company and received an enormous amount of media coverage. But I didn't have any idea at the time just what it all meant," she told Palmer. The appearance led to a contract with the talent agency and production company IMG Management, and she began performing at Hollywood parties, in serious concerts, and on television programs such as the *Smothers Brothers Comedy Hour*.

When Josefowicz was 13, her family moved to Philadelphia, Pennsylvania, so that she could attend the Curtis Institute of Music, one of the most prestigious music schools in the world. She took classes there part-time for several years, studying under the renowned violinists Jascha Brodsky and Jaime Laredo, before entering the bachelor-of-music program full-time. All the while she continued performing in concerts, and at the age of 16, she made her debut at New York City's Carnegie Hall, accompanied by the Academy of St. Martin in the Fields chamber orchestra. Shortly thereafter, having signed a five-year contract with the prestigious record label Philips Classics, she recorded her first CD, playing concertos by Tchaikovsky and Sibelius, again with the Academy of St. Martin in the Fields orchestra. Released in 1995, the CD was well received. Scott Duncan wrote for the *Orange County Register* (August 27, 1995): "Josefowicz plays with a musical maturity and an individuality of expression that escapes most of the current crop of violin prodigies." The following year, Josefowicz released her second disc, *Solo* (1996), tackling "a collection of unaccompanied works that make sustained demands and require coloristic breadth and flexibility," Allan Kozinn observed for the *New York Times* (November 7, 1996). "In her gripping account of the Bartok Sonata, for example, she produces an acidic sound that serves this tempestuous score well; yet she also captures the warm, deep hues of Ysaye's Third and Fourth Sonatas. Kreisler's 'Recitativo and Scherzo-Caprice,' Paganini's variations on a Paisiello aria and Ernst's sizzling 'Grand Caprice,' based on Schubert's 'Erlkonig,' offer opportunities for unalloyed virtuosity, and in these Ms. Josefowicz's musicality is as dazzling as her technique."

After graduating from Curtis, in 1997, Josefowicz moved to New York City and released *Bohemian Rhapsodies*, a collection of violin pieces, and *Violin for Anne Rice* to honor Rice's novel *Violin* (1997), a book for which Josefowicz was reportedly the inspiration. "I'm nearly 20 and people don't talk about me as a cute little prodigy any more. They listen differently now, to an adult performer, and I like that," she told Joanna Pitman for the London *Times* (May 24, 1997). The following year she released *For the End of Time* (1998), a recording on which she was accompanied by the pianist John Novacek, with whom she has worked throughout her adult career. She also became one of the faces for Chanel's Allure perfume campaign. "They wanted faces, not models," she told Rita Zekas for the *Toronto Star* (April 1, 2006). "There was me, a sculptor and a women's rights activist from Kenya."

In 2000 she released *Mendelssohn & Glazunov: Violin Concertos* and *Americana*. For the latter CD Josefowicz turned to composers who are taken less seriously than figures such as Tchaikovsky, Brahms, and Beethoven, performing pieces by Stephen Foster, Scott Joplin, and George Gershwin, among others. She wanted, she told Ellen Pfeifer for the *Boston Globe* (November 8, 2000), "to let the emotions fly. We wanted to forget about tradition and start from scratch, from our hearts and souls." She added that those composers' music "came from the gut. If you listen from that point of view, then probably this music is the deepest you can get. After all, music from the dawn of time has always been intended to sort of celebrate our emotions." The following year, further exploring her interest in newer music, Josefowicz released a CD that featured the music of the 20th-century composer Sergei Prokofiev as well as that of Tchaikovsky, called *Prokofiev: Violin Concertos 1 & 2. Tchaikovsky: Serenade Melancholique*. "Leila has a great interest in learning new music, and this has added depth to everything she plays," the conductor with the Rochester Philharmonic Orchestra, Christopher Seaman, remarked to John Pitcher for the *Rochester (New York) Democrat and Chronicle* (November 14, 2001) about Josefowicz's progression from child prodigy to adult performer. "The public can be very fickle when it comes to former prodigies, but Leila is a probing interpreter, so I think her career is going to last."

Josefowicz continued to show interest in exploring new music, particularly the work of the California-based minimalist composer John Adams, and for a while she "made a mini-career of interpreting" his work, as David Mermelstein observed for the *New York Times* (May 29, 2005). In January 2002 she played Adams's Violin Concerto with the BBC Symphony for a televised concert at the John Adams Festival. Conducted by Adams, the performance was taken on tour to Paris, France, and Brussels, Belgium. In the following few years, Josefowicz stayed focused on Adams, releasing *John Adams: Tromba Lontana; Violin Concerto; The Wound-Dresser* in 2003 and *John Adams: Road Movies* in 2004 and developing a personal relationship with him. "I'm in awe of the fact that he's a living composer and I have a friendship with him—and we can talk about stuff like the Supremes or Cream or *The Simpsons*. I'd dreamed from a very young age of having this kind of relationship with a living composer, rather than just being in awe of dead composers' work," Josefowicz told the London *Guardian* (July 22, 2002). Other contemporary composers Josefowicz has worked with include Oliver Knussen, John Harbison, Esa-Pekka Salonen, and John Zorn. "I don't know about everyone else, but I am so bored with CDs where the same repertoire is repeated again and again," she told Peter Culshaw for the London *Daily Telegraph* (April 5, 2005), adding, "Most people haven't realized just how lyrical so much of this new music is."

For her next recording, a self-titled two-CD set that was released in 2005, Josefowicz, showing the freedom that her success had brought her, performed a mixture of old and new music, playing pieces by Brahms, Beethoven, and Ravel and contemporary works by Esa-Pekka Salonen and Mark Grey. (One piece, San Andreas Suite, was written by Grey specifically for Josefowicz.) "It can be so refreshing when a musician abandons the record industry's penchant for completism and puts together a disc that presents a number of different works and composers as if it were a live recital," Matthew Rye wrote for the London *Daily Telegraph* (May 14, 2005). "And that is the case with Leila Josefowicz's latest release, a studio recording of repertoire that she has indeed played regularly in concert with pianist John Novacek." Other critics were also impressed. Mark Stryker, writing for the *Detroit Free Press* (June 14, 2005), argued that the collection illustrated "the maturation of [a] former prodigy" and went on to note that "rather than fall prey to Great Masterpiece Syndrome, [Josefowicz is] applying her virtuosity, expressive musicianship and hot-and-sweet style to a striking range."

Josefowicz's next release, in 2006, was a live performance of the Russian composer Dmitri Shostakovich's Violin Concerto no. 1, recorded with the City of Birmingham Symphony Orchestra. She told Christopher Blank for the Memphis, Tennessee, *Commercial Appeal* (September 15, 2006) that she chose the piece, which Terry Grimley described for the *Birmingham Post* (May 16, 2006) as "great but grim," because it spoke to the trials of her personal life: "Sometimes there is that challenge to stay afloat in life. And that's my concept of the violin concerto. When you take into consideration what Shostakovich went through when he wrote it, if your own life has been roses, you're going to miss the message." (Shostakovich, who was born in 1906 and died in 1975, was denounced multiple times by the Soviet leader Joseph Stalin's regime and forced to write in a less avant-garde, more accessible style. Many of his pieces were banned by the government, and he hid some of his more personal compositions. He joined the Communist Party in 1960, a move some viewed as "selling out," according to Blank, who also observed: "Many musicologists divide his vast musical output into two categories: that written to glorify the regime, and a number of darker pieces said to be encoded with dissident messages.") His Violin Concerto no. 1 is "more than a violin concerto, it's a kind of a confession. It's more than just music because what he was writing about at the time was really about life. He was really restricted in those years and this concerto was 'anti-people' music. I think all the pent-up emotion he felt at that time was put into this piece," Josefowicz said.

Josefowicz has one son, Lukas, from her marriage at 21 to the conductor Kristjan Järvi, which ended in divorce. Difficulties such as her divorce, she believes, have given her music a sense of perspective. "There's not a single day that I regret anything [that has] happened with me, and the more that you live, the more there is to play about; it's very simple. So I have a lot to play about these days," she told Eugenia Zukerman on CBS's program *Sunday Morning* (August 10, 2003, on-line).

July, Miranda

Feb. 15, 1974– Writer; filmmaker; performance artist; musician

Address: P.O. Box 26596, Los Angeles, CA 90026

Pascal Le Segretain/Getty Images

Miranda July's quirky style of narrative and signature themes, developed over the past decade, have infused her performance pieces, feature-film work, video art, Internet projects, and even seven-inch recordings. Indeed, despite the multitude of forms her work has taken, some things about July's projects—which have been called both self-consciously adorable and borderline creepy—are remarkably the same. As she explained to Rachel Kushner for *Bomb* magazine (Summer 2005), "I was (and am) interested in seeing different kinds of people together, unusual pairs in terms of age and gender and race." Kushner summed up the predominating themes in July's work as "people hoping for miraculous events to intervene in their lives, children cultivating their own private and idiosyncratic longings, everyone improvising ways to communicate with one another." July's recent endeavors, the feature film *Me and You and Everyone We Know* (2005) and a collection of short stories called *No One Belongs Here More Than You* (2007), have significantly expanded her audience and celebrity.

Miranda July was born Miranda Grossinger on February 15, 1974 in Barre, Vermont, and raised in Berkeley, California. She has an older brother, Robin Grossinger, a biologist with the San Francisco Estuary Institute. Her parents, Lindy Hough and Richard Grossinger, are the founders and publishers of North Atlantic Books, whose mission, according to its Web site, is to "develop new ideas, nurture practical education, spread timeless wisdom, and help turn destructive energies into positive forces." Books published by the company include *Healing with Whole Foods* and *Your Inner Physician and You*. In an interview with Kimberly Cutter for *New York Magazine* (May 21, 2007), July recalled that during her childhood, her parents talked with her about their personal—even marital—problems. "I wasn't neglected at all," she told Cutter, "but my parents didn't have the best boundaries in the world." She added that her parents' openness contributed to her own "desire to be the one who understands." The environment proved to be a nurturing one for the young girl's talents. At age seven she began recording herself holding one end of a conversation and then playing it back, so she could "chat with herself," as Karen Durbin reported for the *New York Times* (June 19, 2005). A precocious and creative teen, she created, with a friend, a "girlzine" called "Snarla," in which she wrote about her experiences. That activity generated a character called July, whose name she adopted as her own—marking the first of many instances of self-reinvention in her career. She began writing plays and staging them at the 924 Gilman Street Project, also known as the Alternative Music Foundation, an all-ages club in North Berkeley.

July attended the University of California at Santa Cruz, where she studied film. She dropped out at age 20, disenchanted with a course that was "all guys" and in which "every project had a gun or a dog in it," as she told Durbin. Within a year she was living in Portland, Oregon, where she fell in with a group of musicians called the CeBe Barnes Band. She contributed vocals to a seven-inch punk record called *The CeBe Barnes Band*, released on the Horse Kitty label. Next, she collaborated with a band called the Need, providing vocals for a second seven-inch record, *Margie Ruskie Stops Time* (1996), released on the Kill Rock Stars label. At music venues she was paired with alternative-rock acts, among them Sleater-Kinney, Chicks on Speed, and Dub Narcotic.

In 1996 July also began making short videos and creating performance pieces, quickly gaining attention and funding. Within a year she had received grants from organizations including the Andrea Frank Foundation, Art Bridge Association, and the Regional Arts and Culture Council. The character-oriented performances July produced during that period, including *Atlanta* (1996), *The Amateurist* (1998), and *Love Diamond* (1998–2000), often involved her playing many or all of the roles (she portrayed, for example, both a woman and the woman's mother); the works also featured slide and video projection and music. Her videos were screened in a wide variety of venues, among them the Chicago Underground Film Festival, the Whitney Museum of Art, in New York, and the Barbara Gross Gallery in Munich, Germany. As a result of that exposure, July won additional awards and grants as well as guest-artist positions at the University of California, Swarthmore College, and Bryn Mawr College.

As July continued to portray characters in her films, videos, and performance pieces, her roster of characters grew. In *Nests of Tens*, for example, a teenage boy performs an elaborate cleaning ritual on a baby in an empty house, creating an atmosphere that is at once nonsexual and unnerving. The notions of striking juxtapositions and of disparate but functioning communities are present in other projects, such as *Learning to Love You More* (begun in 2002), in which July and a fellow artist, Harrell Fletcher, brought together segments of the public through art assignments, whose results are shared via the Internet. Assignments range from finding art in the everyday ("Draw a constellation from someone's freckles"), to pursuing meaningful experiences ("Spend time with a dying person"), to creating self-reflective art ("Make a Learning to Love You More assignment"). Other, more performance-oriented works, including *How I Learned to Draw* (2002–04) as well as *Things We Don't Understand and Definitely Are Not Going To Talk About* (2006–), also rely in part on viewer participation. In *Draw*, the collective title for July's performances from 2002 to 2004, she chose by intuition the audience members who could potentially be good friends with each other, then introduced them to one another before casting them, on the spot, in roles in her live performances. *How I Learned to Draw*, like *Learning to Love You More*, was—according to July's Web site—"primarily concerned with drawing attention to the present moment."

July next explored the world of narrative film. *Me and You and Everyone We Know* (2005) is a visually lush, 90-minute work described on its Web site, meandyoumovie.com, as "a poetic and penetrating observation of how people struggle to connect with one another in an isolating and contemporary world." The film centers on Christine (played by July), a struggling video artist who sets her sights on Richard (John Hawkes), a recently divorced shoe salesman. The story includes other unusual matchups: a gallery director and a seven-year-old who are in contact through the Internet and a teenage boy and younger girl who lie on the carpet of the girl's bedroom, talking about her fantasies of marriage. The soundtrack, created by Michael Andrews, full of "winsome beep-and-buzz keyboards" (according to the Summer 2005 edition of *Sight and Sound*), underscores the melodic dissonance of the central, interrelated characters. Some felt that July had shied away from the reality of her awkward cinematic couplings once their humorous or startling effects had been achieved. Many others, however, celebrated July's first feature film, which won the Originality of Vision award at the Sundance Film Festival, the Camera d'Or prize at the Cannes Film Festival, and an Independent Spirit Award nomination. In the *New York Times* (June 17, 2005), A. O. Scott declared, "I like [the film] very much, and I hope you will, too."

July has attributed her forays into fiction to encouragement from the fiction writer and essayist Rick Moody. In 2003 her stories had begun to appear in journals including the prestigious *Paris Review* as well as the *Harvard Review* and *Tin House*. In those stories July continued to explore unsettling sexual dynamics and atypical pairings in intimate situations. Some of the pieces, among them

"Making Love in 2003," were collected for the 2007 volume *No One Belongs Here More Than You.* Discussing the book with August Brown for the *Los Angeles Times* (May 6, 2007), July explained that the year-long press tour for her first film had left her exhausted, self-conscious, and strapped for funds. "I was trying to pull myself together creatively . . . ," she recalled. "I was very broke. I thought, 'Well, if I can finish this book and write a bunch more stories, I bet I can sell it now that I have a little bit of an audience.' I was happy to have something to do, a task at hand." July described the writing process to Kimberly Cutter as being difficult, explaining that she forced herself to continue even though "everything I wrote seemed terrible." She also said, "The stories aren't technically autobiographical, but in an emotional sense, they are."

Some critics heralded the collection as marking a new phase in July's work, a more mature period that would see her refrain from what her detractors saw as posturing—or, as Cutter phrased it, "serv[ing] up preciousness in place of thoughtfulness, trafficking in . . . faux-earnest indulgences." The book's effervescent tales feature sexual idiosyncrasy (stemming in part, once again, from unlikely, uncomfortable pairings) as well as a wide variety of odd subjects and details, including a little dog named Potato, earthquake awareness, and Prince William of Great Britain. Such seemingly random references, which become entrances into her characters' complicated emotional lives, are a signature part of July's creative voice, regardless of medium. The uniformity of her narrative voice, in fact, is perhaps the most frequently cited aspect of *No One Belongs Here More Than You.* Josh Lacey wrote for the London *Guardian* (June 30, 2007), "Whether the narrators are men or women, young or old, gay or straight, they all tend to speak in a very similar tone." Lacey also called the book's 16 stories "blisteringly good." David Wiegand, reviewing the collection for the *San Francisco Chronicle* (June 28, 2007), agreed, exclaiming, "July's stories startle us at every turn . . . sometimes by passages of impossibly lush eloquence that rise from their post-minimal settings like great adagios, and very often, by their sheer inventiveness."

Though the critical and commercial success of her more recent projects, her most mainstream works to date, has attracted the attention of dealmakers in the entertainment industry, July has chosen to stick to her own—not necessarily mainstream—agenda. As she told the *New York Sun* (February 27, 2007), her response to "brand new fancy movie agents" attempting to capitalize on her newfound celebrity and success was, "Oh, by the way, just don't even talk to me for a year because you're not going to care what I'm doing." While working on the screenplay for her next feature film, July has also devoted time to playing the typewriter in a Los Angeles, California, band, hiking in the Hollywood Hills with her boyfriend, and working on smaller-scale projects, such as an art book related to the *Learning to Love You More* Web site. Discussing future projects, July said to Rachel Kushner, "I have a gigantic plan . . . and it involves performance, and fiction, and radio, and the [World Wide Web], and TV and features that are both 'conventional' and totally not. And when I am done with my plan, when I am very old, hopefully there will be a little more space for people living with profound doubt to tell their stories in all different mediums. Also Hollywood won't be so sexist. . . . But one thing at a time."

July lives in Los Angeles with her boyfriend, the graphic artist and film director Mike Mills, whose recent releases include *Thumbsucker* (2005).

Kagan, Elena

Apr. 28, 1960– Dean of Harvard Law School

Address: Harvard Law School, 1563
Massachusetts Ave., Cambridge, MA 02138

In 2003, 50 years after the graduation of Harvard Law School's first class to include women, Elena Kagan was appointed the school's first female dean. "For many of our women graduates, this was a not very hospitable place for many years," Kagan, who earned a law degree at Harvard in 1986, told Beth Potier for the *Harvard University Gazette* (September 16, 2004). One example of the ways in which female students were made to feel unwanted was a 1960s tradition called Ladies' Day; while at all other times, certain professors refused to call on any of their few female students, who sat scattered among their male classmates, on that day the women were forced to sit together and submit to a barrage of questions from the professors and male students. "For those graduates, it does have real meaning that the place is being led by a woman," Kagan continued. "In the wider world, it does send a message that Harvard Law School is today a very inclusive institution, and I think that's a great message to send." Kagan held the title Charles Hamilton Houston professor of law at Harvard when she was appointed dean. In that post, among other measures, Kagan has increased the diversity of the law school's faculty and taken steps to strengthen its curriculum, in an effort to keep Harvard at the

Elena Kagan

forefront of legal education, and she has made the nonacademic needs of students one of her priorities. Kagan taught at the University of Chicago Law School before she joined the faculty of Harvard. She also has experience in government, having worked with President Bill Clinton at the White House. "There are some people who are good at the big visions of the future . . . and there are other people who are better at the here and now, have incredible interpersonal skills, and can really make the moment much better than it was," Carol Steiker, a Harvard law professor who attended law school with Kagan, told Potier. "[Kagan] really can do both."

Elena Kagan was born on April 28, 1960 in New York City. Her mother, an elementary-school teacher, and her father, a lawyer, were both the first in their families to attend college. Kagan graduated from Hunter College High School, in Manhattan, in 1977 and then entered Princeton University, in New Jersey, where she received a B.A. degree in history summa cum laude. For the next two years, she studied at Worcester College, a division of Oxford University, in England, as Princeton's Daniel M. Sachs graduating fellow. After she earned an M. Phil. (master's of philosophy) degree at Oxford, she enrolled at Harvard Law School, in Cambridge, Massachusetts. "I think I was one of these students who go to law school for all the wrong reasons, because they can't figure out exactly what else they want to do . . . ," she told Andrea Sachs for *Ms.* (Summer 2003). "Once I arrived, I actually loved it right away, and I really felt as if I had found something I was good at." Kagan served as supervising editor of the *Harvard Law Review*. She earned a J.D. degree magna cum laude in 1986. From 1986 to 1987 Kagan worked as a law clerk for Judge Abner Mikva on the U.S. Court of Appeals for the District of Columbia Circuit. Next, until 1988, she clerked for U.S. Supreme Court justice Thurgood Marshall. In 1989 Kagan left the public sector to become an associate at the Washington, D.C., law firm Williams & Connolly, where she worked until 1991. In that year she accepted an appointment as an assistant professor at the University of Chicago School of Law, in Illinois. In the summer of 1993, she acted as special counsel to the U.S. Senate Judiciary Committee during the confirmation hearings of Ruth Bader Ginsburg for a seat on the Supreme Court. That year the University of Chicago's Law Student Association honored her with its Graduating Students' Award for Teaching Excellence. She became a tenured professor at the school in 1995.

During a leave of absence from the university in 1995 and 1996, Kagan served as associate counsel to President Bill Clinton, and in 1997 she became deputy assistant to the president for domestic policy and deputy director of the Domestic Policy Council. She played an important role in the executive branch's formation and implementation of both law and policy in areas ranging from education and crime to public health. Kagan was especially forceful in pursuing anti-tobacco legislation, helping to craft a comprehensive tobacco bill, sponsored by Senator John S. McCain of Arizona, which failed to gain passage. "The issues were fascinating," she recalled to Sachs. "Anyone who works at the White House will tell you it's great fun." Kagan became known as a feminist and a powerful advocate for progressive politics and also gained a reputation for being brusque and impatient in her negotiations. (At Harvard, however, she is regarded as a conciliatory figure.) "Kagan uses knowledge as a weapon, absorbing thousands of pages of legal and policy minutiae and then deploying information to beat down opposing arguments," Dana Milbank wrote for the *New Republic* (May 18, 1998), in an article headlined "Wonderwonk." A person who had opposed Kagan in negotiations regarding tobacco legislation told Milbank, "I don't want to tell you that she rolled me, but she was coming at me so hard. She reminds me of Bobby Knight's old [University of Indiana basketball] teams that used to wear you down with defense." In 1999 Clinton nominated Kagan for a seat on the U.S. Court of Appeals for the District of Columbia Circuit, widely considered the second-most-powerful court in the country after the U.S. Supreme Court. The Republican-led Senate Judiciary Committee refused to bring her nomination forward for a hearing; when Congress adjourned in the fall of 2000, her nomination expired, after being held in committee for 18 months.

In 1999 Kagan left government service to teach at Harvard Law School as a visiting professor; she became a professor of law at Harvard in 2001. The subjects of her courses included constitutional law, civil procedure, and administrative law—the last topic being her specialty. "Presidential Administration," a 140-page article by her that appeared in the *Harvard Law Review* (June 2001), was named the top scholarly article of the year by the American Bar Association's Section on Administrative Law and Regulatory Practice; Kagan is currently expanding the piece into a book to be published by Harvard University Press.

On April 3, 2003 Kagan was named the 11th dean of Harvard Law School, becoming the first female dean in the school's history. "I think it is a milestone, a great thing that shows how far Harvard has come and how far the legal profession has come, in terms of women's position," she told Sachs. Lawrence H. Summers, then the president of Harvard University, praised Kagan's ability to understand both the intellectual and practical aspects of law, which would help her make the curriculum of Harvard Law School more relevant to contemporary society. Kagan "understands both academia and legal practice, and has excelled in both domains," Summers said, as quoted by the *Harvard University Gazette* (April 10, 2003). "At a time when legal education faces intriguing questions, and when the legal profession confronts profound changes, I have every confidence that her talents will advance Harvard Law School's vitality as a place of learning, and carry forward its leadership role in the world of law." Kagan's predecessor, Robert C. Clark, who had been dean for over a decade and had earned praise for his handling of the school's notoriously fractious faculty, indicated that Kagan, too, would prove adept in dealing with differences among the staff. In the months leading up to her assumption of the deanship, on July 1, 2003, Kagan displayed the skill at consensus building for which she would become known, meeting individually with all 81 members of the law-school faculty, in part to hear their concerns about the school.

As dean, Kagan immediately began to make small improvements that, for her, symbolized an increased emphasis on student satisfaction and community, and she made moves to signal the kind of leader she would be at a school that consistently ranks behind the other top law schools in terms of students' quality of life. She ordered renovations of two areas: Pound Hall, where free coffee was added to its amenities, and the patios outside Harness Commons; she also made minor improvements to Hemenway Gym and initiated the construction of an outdoor skating rink. "You have to keep your eye on both balls, the long-term and the short-term," she told Beth Potier. "We are what we are because of the students who come here and what they go on to do in their lives. We should communicate that to them in everything that we do."

One month before Kagan took over from Clark, Harvard Law School had launched a $400 million capital campaign, the largest fundraising effort ever by a law school. Scheduled to end in 2008, the campaign will raise money primarily for building and renovations and—of greater importance, in Kagan's view—more endowed professorships and increased financial support for students. Many members of the faculty have commended her emphasis on recruiting a greater number of teachers and a more diverse staff (in terms of gender, race, ethnicity, and political views); between the time of her appointment and March 2006, the school had made approximately 20 offers, including several to political conservatives. "As many quality appointments as we can make, that's how many we should make," she said to Potier. "The thing that will most change Harvard Law School over the next 10 years is the quality of the faculty. . . . That's what makes a school." Kagan also said that the money would allow Harvard to be more generous in forgiving the debts of students who choose jobs in the public sector rather than the more lucrative positions available in private firms. At present only 6 to 10 percent of Harvard Law School graduates begin their professional lives in government or with nonprofit organizations. "Our students ought to say, 'How can I take all this experience and knowledge that I have about legal rules and institutions and find a way to give back to the public?'" she told Kathryn Beaumont for *Princeton Alumni Weekly* (December 17, 2003).

In 2003 Kagan initiated the first wholesale review of the Harvard Law School curriculum since it was introduced by Dean Christopher Langdell in the 1870s and became the model for most law schools in the U.S. (Her immediate predecessor and others before him had made relatively minor changes.) "It really is time to say, 'Is that really what students should be taking? Are they learning the set of competencies that they need to master in order to go out and be a great lawyer in today's world? How has the world changed in the last 100 and some years?" Kagan said to Potier. After three years of study, the eight-person curricular-review committee proposed that Harvard overhaul the first-year curriculum to focus more on complex problem-solving, international law, and modern law-making by government bodies and administrative agencies. In a 2006 vote in which approximately 70 percent of the faculty participated, the committee's recommendations were unanimously approved. "If we do our jobs well in this area, we'll be creating a law school curriculum not just for Harvard but for legal education in general," Kagan told Potier in the middle of the process. "It's the great fun of this job, but it's also the great responsibility of it."

Dean Kagan has dealt with several controversies both within Harvard and within the greater academic community. She was mildly criticized for the way she handled a plagiarism incident in 2004, in which two top Harvard law professors publicly acknowledged that they had misused sources, albeit, as they insisted, unintentionally. The same misuse—whether accidental or intentional—would have meant a severe reprimand and even expulsion for an undergraduate or graduate student, but the professors were allowed to remain on the faculty. Another controversy stemmed from the

Pentagon's policy of "Don't ask, don't tell," which prohibits admitted homosexuals from membership in any branch of the armed services, and a 1994 federal law known as the Solomon Amendment, which allows the secretary of defense to deny federal funding to universities that prevent on-campus military recruitment. Harvard—along with a number of other prominent law schools, among them Yale, the top-ranked law school in the country—banned Pentagon representatives from activities on campus, because they judged the military's "Don't ask, don't tell" policy to be in violation of the school's guidelines of nondiscrimination for on-campus recruiters. According to the *Weekly Standard* (October 3, 2005), Kagan called the military's discriminatory practice "repugnant" and a "moral injustice of the first order." In 2004 the U.S. Third Circuit Court of Appeals upheld universities' rights to prohibit military recruitment on their property, and in November of that year, Harvard announced that it would limit such activity. But Kagan had to reverse that decision in October 2005, when the Defense Department threatened to take away the University's federal funding despite the Third Circuit Court's ruling. Most of the law school's teachers and students supported Kagan's decision, as Harvard University stood to lose approximately $400 million to $500 million a year, or 15 percent of its annual budget, if it defied the Pentagon. In an e-mail message sent to Harvard Law School students and faculty, quoted by the *Weekly Standard*, Kagan told them "how much I regret making this exception" to the school's nondiscrimination policy, which banned recruiters who refused to consider openly homosexual candidates. On March 6, 2006 the U.S. Supreme Court upheld the Solomon Amendment in a unanimous decision, leaving Harvard with little choice other than to continue to allow military recruitment on campus.

When Summers announced in 2006 that he was stepping down from the presidency of Harvard, Kagan was named a top contender for the position, with many newspapers calling her the favorite candidate. The search committee chose instead another woman, Drew Gilpin Faust, the head of Harvard's Radcliffe Institute. After news of Faust's appointment became public, Harvard Law School students and faculty organized a party in Kagan's honor. "Sometimes you win by losing," she said to the party crowd, as Kevin Zhou reported for the *Harvard Crimson* (February 14, 2007). "All of you have made me feel like a real winner today. This really is a great place."

One year into her deanship, Kagan said that her gender had played little, if any, role in her day-to-day activities. "It's not something I think about on a daily basis, and it's something that in many ways has seemed remarkably not relevant in the job," she told Potier. Kagan has often been mentioned as a possible future appointee to the U.S. Supreme Court. She lives in Cambridge, near the Harvard campus.

Kagan, Frederick W.

Mar. 26, 1970– Military historian; writer

Address: American Enterprise Institute, 1150
17th St., N.W., Washington, DC 20036

"Few neoconservatives can claim to have had as much influence on the course of the Iraq war as the trio of scholars in the Kagan family," Sarah Baxter wrote for the London *Sunday Times* (January 14, 2007). The youngest of the three is Frederick W. Kagan, a military historian and resident scholar in defense and security-policy studies at the American Enterprise Institute for Public Policy Research (AEI), in Washington, D.C. Kagan is a widely published expert on military affairs. His early work centered on Soviet and Russian military history; in recent years he has focused on Iraq, Afghanistan, U.S. defense policy, and international terrorism. He is the primary author of "Choosing Victory: A Plan for Success in Iraq," a study that has been described as the blueprint for President George W. Bush's current policy regarding the war in Iraq. In a summary of "Choosing Victory" posted on the AEI Web site (December 14, 2006), Kagan wrote, a few months before the war entered its fifth year, "Victory in Iraq is still possible at an acceptable level of effort. We must adopt a new approach to the war and implement it quickly and decisively." Kagan has frequently offered his views on the Iraq war on television—on CNN and such PBS programs as *Frontline* and *NewsHour with Jim Lehrer*—and on the National Public Radio (NPR) program *Weekend Edition*. He is a regular contributor to the *Weekly Standard*, a leading conservative/neoconservative magazine, and his writings have also appeared in *Foreign Affairs*, *Policy Review*, the *Washington Post*, the *Los Angeles Times*, and the *Wall Street Journal*. He is the author of several books, among them *While America Sleeps: Self-Delusion, Military Weakness, and the Threat to Peace Today* (2000), written with his father, Donald Kagan, and *The End of the Old Order: Napoleon and Europe, 1801–1805* (2006). With Robin Higham, a former editor of the journal *Military Affairs*, Kagan edited *Military History of Tsarist Russia* (2002) and *The Military History of the Soviet*

Chip Somodevilla/Getty Images

Frederick W. Kagan

Union (2002). Kagan, who taught history for a decade at the U.S. Military Academy at West Point, New York, is reportedly pleased to have had the opportunity to use his scholarship to serve his country. "Fred has always been a devout patriot, just more than the average patriotic American," his father told Michael Rothfeld for *Newsday* (January 11, 2007).

The younger of the two sons of Donald Kagan and Myrna Dabrusky, Frederick Walter Kagan was born on March 26, 1970 in Highland Falls, New York, a village adjacent to West Point. His father, who is of Jewish descent, emigrated from Lithuania to the United States as a child, in 1934. Currently the Sterling professor of classics and history at Yale University, Donald Kagan is an expert on the Peloponnesian War (431–404 B.C.), fought between the ancient Greek city-states Athens and Sparta and their respective allies. According to a brief biography of him on the Yale Web site, he "has applied his extensive knowledge of classical history to understand contemporary diplomacy and international relations"; he won a National Humanities Medal in 2003 and has written, co-written, or edited many books. A leftist during his youth, he began to embrace conservative principles during the Vietnam War. Frederick Kagan's brother, Robert (born in 1958), worked in the U.S. State Department from 1984 to 1988, during the second term of President Ronald Reagan; among other jobs, he served as a speechwriter for Secretary of State George P. Shultz. Currently, Robert Kagan writes a monthly column on world affairs for the *Washington Post* and contributes articles regularly to the *Weekly Standard* and the *New Republic*. His wife, Victoria Nuland, has been the U.S. permanent representative, or ambassador, to NATO since 2005. In 1997, with William Kristol, a founder of the *Weekly Standard*, Robert Kagan set up the Project for the New American Century (PNAC), a neoconservative think tank. The PNAC's stated goal is to promote U.S. leadership globally. (Critics have alleged that its real mission is to advance and maintain U.S. dominance over world affairs through military might.) Donald Kagan is among the signers of the PNAC's "Statement of Principles," and Frederick Kagan has been a member of many PNAC study groups. In 1998 the PNAC sent an open letter to President Bill Clinton that strongly recommended the use of American diplomatic, political, and military power to oust Saddam Hussein, who was then the president of Iraq.

Frederick Kagan graduated from Yale University, in New Haven, Connecticut, in 1991, with a bachelor's degree in Soviet and East European studies. He remained at Yale to complete a Ph.D. degree in Russian and Soviet military history, in 1995. From 1995 through 2005 Kagan taught history at the U.S. Military Academy at West Point. He earned an Excellence in Teaching Award there in 1997.

Kagan's first book, *The Military Reforms of Nicholas I: The Origins of the Modern Russian Army*, was published in 1999. In his second, *While America Sleeps: Self-Delusion, Military Weakness, and the Threat to Peace Today* (2000), Kagan and his father attempted to refute the idea that the U.S. was invulnerable to foreign attack. The Kagans argued that the federal government—which was then spending more on arms than the governments of the 13 next-biggest militaries combined—needed to increase its defense budget by at least 25 percent to fulfill its global responsibilities and to avoid capitulation to a foreign power, as had been the fate of Austria, Poland, the Netherlands, and other European nations during Adolf Hitler's rule of Germany (1933–45). In a review of *While America Sleeps* for the *Bulletin of the Atomic Scientists* (March/April 2001), the University of Chicago historian Bruce Cumings wrote, "The storm has been gathering for a decade, according to the Kagans, but in 1991 we failed to comprehend that we were at a critical turning point. . . . It would indeed be one of the great ironies of modern times if 1991—the year the United States emerged from the Cold War as the only remaining superpower . . . —was really the beginning of the end of American dominance. But the United States can save itself, say the authors, if it spends more on defense and acquires loads of new weapons. This last message, which dominates the latter third of the book, seems to have been perfectly timed for the 2000 presidential campaign. . . . There is one good thing about *While America Sleeps*: No one who reads it is going to run out and buy a flak jacket, teach kindergartners to 'duck and cover,' or restock a backyard bombshelter. This is a book to assign to students who want to know what professors mean when they say 'a little history is a bad thing.'" The editors of *Orbis* (March 22, 2001), published by the Foreign Policy Research Institute, remarked in their review of the book: "In sum, [the Kagans] boldly affirm the Clinton administration's rhetoric about America's responsibility to be the world's policeman, but offer no recommendations about where, when, and why U.S. forces ought to be deployed, or what force structures and weapons are likely to be needed in case one or two regional wars erupt." Referring to the Kagans' assertion that Britain's failure to maintain military superiority during the 1920s left that nation ill-prepared for the threat posed by Germany during the ensuing decade, the *Orbis* editors continued, "Their only remedy to our putative 'British disease' is to spend more money. But on what, and for what?" Although *While America Sleeps* received mixed reviews when it was published—because of its highly academic style as well as its controversial subject matter—the Kagans' thesis gained greater recognition, and the book a wider audience, following the September 11, 2001 terrorist attacks on the U.S.

In an article published in *Policy Review* in September 2003, less than six months after Baghdad, Iraq's capital, fell to U.S. troops, Kagan criticized U.S. strategies with regard to Iraq and Afghanistan and found fault in particular with the civilian head of the U.S. military at that time—Secretary of Defense Donald Rumsfeld. "The U.S. has been far less successful in winning the peace than it was in winning the war," Kagan wrote. He tried to show the ways in which the military's increasing reliance on technology and decreasing use of ground troops was unwise. Kagan maintained that although technological advances had enabled the U.S. military to suffer fewer casualties while killing greater numbers of insurgents and other enemies, the extended occupation of Iraq required far more than gadgetry and sophisticated computer systems. He expanded that thesis in his book *Finding the Target: The Transformation of American Military Policy* (2006). That volume discusses in depth the widely repeated neoconservative belief that the military's troubles in the era of the Bush administration and the Iraq war are due in part to the attempted wholesale shift toward high-tech weaponry—an effort spearheaded by Rumsfeld. In an assessment of *Finding the Target* for the *New York Times Book Review* (December 17, 2006), Barry Gewen wrote that Kagan "is concerned with distinguishing genuine transformations from false ones. In *Finding the Target* he argues that what the Rumsfeld Pentagon has proclaimed as a technological revolution in military affairs is no such thing, and that this fundamental misconception has produced the debacle that is the Iraq War." Gewen also wrote, "Kagan contends that . . . by concentrating on raw power, especially air power, to the exclusion of politics and culture, the Bush administration has courted disaster and defeat in a region [the Middle East] it never took the trouble to understand." Kagan also judged to be wrongheaded the insistence of Rumsfeld and senior military figures on "a rapid handover of security responsibilities to Iraqis" as well as on "a relatively light military footprint," as Spencer Ackerman wrote for the *American Prospect Online* (December 15, 2006). The military historian and classicist Victor Davis Hanson wrote for *Commentary* (December 2006) that Kagan's "bipartisan indictment fingers two primary culprits: Bill Clinton, who dismantled crucial elements of the cold-war military establishment, and George W. Bush, who, not understanding the larger political purposes of war, has lacked the necessary vision to reap the advantage of our vast conventional power. . . . 'War is not just about killing people and blowing things up,' he writes. 'It is purposeful violence to achieve a political goal.'"

In early 2006, as criticism of the war in Iraq mounted, Congress named nine prominent former government figures and one businessman (five Democrats and five Republicans) to a newly formed Iraq Study Group (ISG) and charged them with suggesting alternatives to the Bush administration's "stay-the-course" policy in Iraq. Headed by former secretary of state James A. Baker III and former Indiana congressman Lee Hamilton, the ISG determined that the military situations in Iraq and Afghanistan were worse than Pentagon officials had reported. *The Iraq Study Group Report: The Way Forward—A New Approach*, released in December 2006, contains 79 recommendations. Among other proposals, the ISG suggested that the U.S. meet with representatives of Iraq's neighbors, including Syria and Iran, in order to ease tensions in the region. The group also called for a short-term increase in U.S. troops, who would concentrate on training Iraqi soldiers to prepare them for the withdrawal of American soldiers. After the report became public, the White House announced that the administration would also consider recommendations from other sources, among them the Pentagon, the U.S. State Department, and the National Security Council.

Earlier, in June 2006, at a meeting with President Bush and Pentagon officials, Kagan had pushed for a different strategy for Iraq. He said that the achievement of stability in Iraq required more-aggressive military activities. According to Sarah Baxter, at the meeting Donald Rumsfeld was unimpressed by Kagan's ideas, but Kagan later got an enthusiastic response from the president, who reportedly said, "Wow, you mean we can still win this war?," and encouraged Kagan to continue studying the matter. In late 2006 AEI announced the creation of its own Iraq Planning Group, which was referred to as the "Real Iraq Study Group" by Mark Benjamin of *Salon* and other political commentators to indicate that AEI, rather than ISG, had the President's ear. The group was led by Kagan and a retired U.S. general, John "Jack" Keane, and also included about a dozen other AEI scholars as well as several other retired army officers. Some observers believed that the group's sole purpose was to negate the influence of the Iraq Study Group and to offer an aggressive alternative to what many expected the ISG's recommendations would be. With much fanfare, including speeches by Senators John S. McCain of Arizona and Joseph Lieberman of Connecticut, AEI made public its report, *Choosing Victory: A Plan for Success in Iraq*, in January 2007. Among other proposals, *Choosing Victory* recommended shifting the focus from training Iraqi soldiers to using U.S. troops to secure the Iraqi population and contain the escalating violence. That change required the deployment of additional U.S. combat troops to Iraq as soon as possible, to clear the most violent neighborhoods (mainly in Baghdad) not only of insurgents but also a large percentage of the ordinary population; destroy guns and other weapons that people might have been hoarding; and then allow people to reenter their neighborhoods slowly, through checkpoints where they would be screened. The AEI report also called for increasing the money allocated for reconstruction and mobilizing American and other military-materiel industries to "provide replacement equipment" for troops. *Choosing Victory* insisted that not only was a military victory possible, it was a necessary precondition for the return of stability to the region.

Choosing Victory received staunch support from Kagan's AEI colleagues and resonated with people who disparagingly labeled the ISG's report a recipe for surrender. In an article for *Time* (January 15, 2007), William Kristol, the editor of the *Weekly Standard*, referring to General John P. Abizaid, the former head of U.S. Central Command, and General George W. Casey, the former commander of coalition forces in Iraq, wrote that Kagan's plan "reverses the debilitating Rumsfeld-Abizaid-Casey emphasis on a 'light footprint' for the U.S. military and on drawing down American troops as soon as possible." Kristol praised the methodology of Kagan's analyses, remarking that Kagan "follows classic counterinsurgency doctrine by sending enough troops to . . . the center of gravity of the conflict."

Some Pentagon officials saw little difference between Kagan's plan and Operation Forward Together, which the U.S. had launched with high expectations in July 2006. That campaign, which had increased the troop presence in Baghdad, had backfired, and violence had increased to record levels. President Bush argued that Operation Forward Together "failed for two reasons," as quoted by David Wood in the *Baltimore (Maryland) Sun* (January 11, 2007): "There were not enough Iraqi and American troops to secure neighborhoods that had been cleared of terrorists and insurgents. And there were too many restrictions on the troops we have." The Bush administration hoped that by including Kagan's proposals in future strategy considerations, such failures would be avoided in the future.

Many left-leaning pundits hailed the results of the November 2006 elections—which would return control of the House of Representatives and the Senate to the Democrats the following January—and the release of *The Iraq Study Group Report* as harbingers of change in the military strategy in Iraq, which was growing increasingly unpopular among the public. However, such change has not occurred. Paul Campos, a professor of law at the University of Colorado, wrote for the *Rocky Mountain News* (December 19, 2006) that the strategy in Iraq, which was seen by many to be failing, had been strongly influenced by Kagan and other neoconservatives, and he expressed frustration at the Bush administration's decision to continue to rely on the ideas of groups such as AEI. "The chief architects of the Iraq war have suffered no punishment whatsoever for plunging the nation in the biggest foreign policy disaster in our history," Campos wrote, yet "people like [Frederick] Kagan still control our Iraq strategy." Critics of the AEI report also included military officers who had served in Iraq. Among them was James Pasquarette, an infantry commander, who told Spencer Ackerman, "It is beyond military means to fix the issues in Iraq right now. Most everybody agrees there is not a military solution." General George Casey told a reporter for the *New York Times* (January 2, 2007), "The longer we in the U.S. forces continue to bear the main burden of Iraq's security, it lengthens the time that the government of Iraq has to take the hard decisions about reconciliation and dealing with the militias. And the other thing is that they can continue to blame us for all of Iraq's problems." In an article for the *Booman Tribune* (December 16, 2006, on-line), which on its home page calls itself "a stalwart friend of children, but a nocturnal terror for corrupt politicians, lazy reporters, and hypocritical Republican operatives," a retired navy commander, Jeff Huber, wrote, "Fred Kagan has lost all credibility as an honest broker of military thought and scholarship. He's become a compliant tool of the neoconservative cabal headed by his brother Bob Kagan and Bill Kristol, whose objective is to commit America to expanding its conventional military forces to engage in an eternal state of warfare against a marginally definable 'enemy' that has no army, air force or navy."

Although Kagan suggested that the number of U.S. combat troops in Iraq be increased by 50,000, with a similar number of support troops, Bush proposed an increase of just over 20,000. Kagan has said that the effectiveness of the so-called surge in troop strength will not be evident for at least 18 months and that the public must be patient. "We have to be prepared for a bloody year because the enemy will fight us . . . ," Kagan warned, as reported by David Wood for the *Baltimore Sun* (January 11, 2007). "It will take us all of 2007 to get Baghdad under control."

Kagan lives near Washington, D.C.

Kempthorne, Dirk

Oct. 29, 1951– U.S. Secretary of the Interior; former U.S. senator; former governor of Idaho (Republican)

Address: U.S. Interior Dept., Mail Stop 7229,
Washington, DC 20240

As secretary of the United States Department of the Interior, Dirk Kempthorne has authority over more than 500 million acres (781,000 square miles) of federally owned land—about 20 percent of all the land in the U.S. His department employs about 57,000 people, and its budget totals about $10.8 billion. His domain includes the National Park Service, which oversees 58 national parks and 333 other entities, among them national monuments, seashores, and heritage trails; the Fish and Wildlife Service, whose responsibilities include enforcement of the Endangered Species Act and the management of more than 500 national wildlife refuges; the Bureau of Indian Affairs, which provides health, education, and other services to about two million American Indians and oversees the conservation and development of natural resources on 56 million acres (87,500 square miles) of Indian lands; the Bureau of Reclamation, which manages more than 800 dams, reservoirs, and other facilities that provide water to millions of individuals and farms; the U.S. Geological Survey, a purely scientific agency whose workers study the nation's natural resources (and natural hazards, such as earthquakes) and carry out research in biology, geography, geology, and hydrology; the Minerals Management Service; and several other divisions.

Kempthorne, a Republican, is the 48th person to head the department since its formation, in 1849, and like all but a few of his predecessors in the past century, he is closely identified with a state west of the Mississippi River—in his case, Idaho. A native of California, Kempthorne has lived primarily in Idaho since he entered college, in 1971. He began his political life in that state in 1981, as the manager of an unsuccessful gubernatorial campaign. In 1986 he was elected mayor of Boise, Idaho's capital and largest city, and he won reelection four years later. He spent one term as a U.S. senator and then, in 1998, captured the governorship of Idaho. He was serving his second term as governor when, on March 16, 2006, President George W. Bush nominated him to replace Secretary of the Interior Gale A. Norton, who had announced that she was stepping down. Alluding to Kempthorne's steadfast advocacy of states' rights, Bush said, according to a White House press release (March 16, 2006), "Dirk understands that those who live closest to the land know how to manage it best, and he will work closely with state and local leaders to ensure wise stewardship of our resources." While mining-industry spokespeople and other business representatives lauded Bush's choice of Kempthorne for the Interior Department post, environmental and conservation organizations condemned it. On May 26, 2006, after a vote of 85–8 to limit debate on the nomination, the Senate approved it by a voice vote, and on June 7, 2006, Kempthorne was sworn in. Among other actions in his less than 11 months as head of the Interior Department, he persuaded President Bush to earmark $10 billion for improvements in national parks over the next 10 years, according to Sheryl Gay Stolbert and Felicity Barringer in the *New York Times* (February 8, 2007). He has also approved the sales of leases for offshore oil and gas development in 48 million acres along the coasts of Alaska, the Gulf of Mexico, and Virginia that were previously protected from such activity; has proposed permitting as many as 720 snowmobiles in Yellowstone National Park every day; and has authorized the Fish and Wildlife Service to propose regulatory changes that would significantly diminish the powers of federal wildlife-protection agencies.

The youngest of three brothers, Dirk Arthur Kempthorne was born to James Henry "Jim" Kempthorne and the former Maxine Jesse Gustason on October 29, 1951 in San Diego, California. In his early years his family lived in Spokane, Washington. When he was in the fourth grade, he moved with his family to San Bernardino, California, where his father had purchased a hospital-supply business, American Surgical Corp. (Kempthorne's brothers, Mark and James, currently run the company.) In 1970 Kempthorne won election as president of the senior class at San Gorgonio High School, in San Bernardino. The following year he enrolled at the University of Idaho in Moscow, with the intention of preparing for a career in medicine; he later changed his major to political science. In college he served as student-body president in his senior year. He earned a B.S. degree in 1975.

After his graduation Kempthorne spent three years as an assistant to Gordon Trombley, the executive director of Idaho's Department of Lands. In 1978 he entered the private sector, becoming the executive vice president of, and a lobbyist for, the Idaho Home Builders Association. He left that job in 1981 to manage the unsuccessful campaign of Idaho's lieutenant governor, Phil Batt, to win election as the state's governor the following year. (Batt succeeded in a later quest for the governorship, in 1994.) In 1982 Kempthorne worked as a broker for Swanson Investments before becoming the Idaho public-affairs manager for the FMC Corp., a Philadelphia, Pennsylvania–based chemical company that specializes in products for industry and agriculture. During his three years with FMC, he helped set up an office for the company in downtown Boise, where he lived with his wife (they had married in 1977) and their two young children. "We had a wonderful community," he said to Betsy Z. Russell for the Spokane, Washington, *Spokesman Review* (October 20, 1998), "but . . . for too many years it wasn't reaching its potential." One problem was that indecision on the part of Boise city officials and lawmakers had led to the demolition of a sizeable part of the downtown area to make way for a shopping center that was never built. In 1985 Kempthorne ran successfully for mayor of Boise on a platform of reviving the city's downtown. Several sources indicate that on the issue of downtown development, Kempthorne delivered results simply by demanding that representatives of all the interested parties, including City Council members, remain in City Hall on a particular day until a decision on the shopping center was made. Shortly thereafter work began on the construction of the Centre on the Grove, which includes a public plaza and several restaurants and other businesses. "The first key was building relationships, not bricks and mortar, because that town was divided," Kempthorne said to Russell. In 1989 Kempthorne won reelection unopposed. As mayor he also held the posts of first vice president of the Association of Idaho Cities (1990–93); chairman of the U.S. Conference of Mayors standing committee on energy and environment (1991–93); and secretary of the National Conference of Republican Mayors and Municipal Elected Officials (1991–93).

In 1992 Kempthorne made a bid for the seat in the U.S. Senate held by the conservative Republican Steve D. Symms, who had announced his retirement. Kempthorne won the Republican primary with 57 percent of the vote. In the general election he faced Idaho's three-term Democratic congressman Richard Stallings. Although Kempthorne was an elected politician, during the campaign he emphasized that, unlike Stallings, he was not a Washington "insider" and was thus untainted by the dishonesty which he indicated was so prevalent in the nation's capital. He often mentioned that Stallings had written eight checks when he had insufficient funds in his House of Representatives bank account. (Amid mounting public pressure, the House bank had been shut down permanently in 1991.) Kempthorne's platform emphasized the importance of balancing the federal budget. On Election Day he earned 57 percent of the 478,500 votes cast.

In the U.S. Senate Kempthorne emerged early on as a champion of states' rights, as defined by the Tenth Amendment to the Constitution: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved for the States respectively, or to the people." According to *Politics in America 1996*, Kempthorne's voting record during the the 103d Congress reflected his belief that "when it comes to government's exercise of power, the further away from Idaho that decisions are made, the more likely they are to be suspect." He was one of 10 Republican senators who voted against the North American Free Trade Agreement (NAFTA), in 1993, and one of 11 to vote against the General Agreement on Tariffs and Trade (GATT), in 1994; the latter was the precursor of the World Trade Organization, established in 1995, which sets rules for international trade and settles trade disputes between member states. In debate on the floor of the Senate regarding GATT, he said on November 20, 1993, according to the *Congressional Record*, "The United States should seriously reconsider any agreement which gives up sovereignty to any multinational group that will place the needs of international trade over the interests of the American people." Kempthorne attempted without success to seek an exemption from the National Voter Registration Act of 1993 for states in which at least 75 percent of eligible voters had already registered. Also during the 103d Congress, he introduced legislation aimed at blocking so-called unfunded mandates—requirements that the federal government imposes on state or local governments without providing the money necessary to fulfill them. The measure failed to pass; its opponents included Democrats who contended that such mandates (which include, for example, provisions in the Americans with Disabilities Act) aim to protect the public in various ways and safeguard civil rights. On the first day of the 104th Congress, Kempthorne introduced a similar bill, called the Unfunded Mandates Reform Act; it became law in 1995, after the Republicans gained control of both the House and the Senate for the first time since 1952.

Regarding other measures, in 1993 Kempthorne voted yes on a bill designed to bar higher grazing fees on public land, and no on bills to allow federal funds to be used for some abortions, ban some types of semiautomatic assault weapons, and impose a five-day waiting period for handgun purchases. In 1994 he voted against a bill that would have increased funding for research in renewable-energy sources and against a measure that called for safeguarding access to abortion clinics, and the following year he voted for a constitutional amendment prohibiting the desecration of the American flag. In 1996 he voted for bills that limited punitive damages in product-liability lawsuits and exempted small business from paying the minimum wage, and the next year he voted against approval of the Chemical Weapons Convention, a treaty that prohibits the production, stockpiling ,and use of chemical weapons. As the chairman of the Senate Subcommittee on Fisheries, Wildlife, and Drinking Water beginning in 1995, Kempthorne sponsored a short-lived bill to scale back provisions of the Endangered Species Act. He also failed in an attempt to set limits on fines imposed on companies found guilty of polluting rivers and streams with hazardous wastes. Twice, he voted for bills that would have opened up the Arctic National Wildlife Refuge to oil drilling. The League of Conservation Voters gave Kempthorne a near-zero rating for five of his six years in Washington—that is, with only one exception, he had voted against legislation that the league supported and voted for legislation that the organization opposed. In one typical year, 1995, two politically left-wing groups, Americans for Democratic Action and the AFL-CIO (American Federation of Labor–Congress of Industrial Organizations), gave Kempthorne zero ratings, while two politically right-wing groups, the Institute for Cooperative Capitalism and the American Conservative Union, rated him at 100 percent and 96 percent, respectively.

In October 1997, after Phil Batt made public his decision not to seek reelection as Idaho's governor, Kempthorne announced that he would run for the governorship instead of a second term in the Senate. He immediately became the front-runner, and on Election Day 1998 he won in a landslide, capturing 68 percent of the vote; his Democratic challenger, Robert Huntley, a lawyer and former Idaho Supreme Court judge, captured 29 percent. In 2002 Kempthorne ran against the Democrat Jerry Brady, a lawyer and newspaper publisher, and won reelection with 56 percent of the vote. As governor, in early January 2000, Kempthorne tried to block the Clinton administration's attempts to reintroduce up to 25 grizzly bears into the Bitterroot wilderness over a five-year period. (The plan was later withdrawn by Interior Secretary Norton.) In 2005 Kempthorne negotiated an agreement with the Nez Perce Tribe concerning claims to the waters of the Snake River, which stem from an 1855 treaty. The compromise—"one of Kempthorne's biggest accomplishments as governor," according to a University of Idaho Web site—was the culmination of "a decade of talks that resolved the tribe's water rights, protected Idaho water rights and put in place rules and projects to protect endangered salmon and steelhead habitat." The following year the governor and Secretary Norton signed a so-called memorandum agreement whereby Idaho gained a greater role in managing gray wolves within state boundaries. Also in 2006 Kempthorne approved the proposed opening of a gravel mine in Idaho's Eagle Island State Park.

On March 16, 2006, when Norton announced that she was leaving the Interior Department, President Bush nominated Kempthorne to succeed her. His selection pleased industry groups and their supporters in western states. Kempthorne "has the unique advantage of having one foot in Washington and one foot in the West and that is extraordinarily important," Jim Sims, a longtime lobbyist for extractive industries and the head of both the Western Business Roundtable and the Partnership for the West, said to Robert Gehrke for the *Salt Lake (Utah) Tribune* (March 17, 2006). "We want to have a Westerner, but we also want someone who understands the ways of Washington. He knows them both, and I think it makes him uniquely qualified to do the job." By contrast, the nomination of Kempthorne appalled environmentalists and their backers. "In his last campaign as governor," according to an editorial in the *Boston Globe* entitled "America the Bulldozed," as quoted by Gregory Hahn in the *Idaho Statesman* (March 21, 2006), "Kempthorne received a larger percentage of his campaign contributions from the timber, mining, and energy industries than any other Western gubernatorial candidate. . . . Within a Republican Party that has long abandoned the conversation ethic that Theodore Roosevelt embodied, Kempthorne seems at home." Philip E. Clapp, the president of the National Environmental Trust, told Michael Janofsky for the *New York Times* (April 9, 2006), "[Kempthorne] represents a continuation of five years of an administration policy of exploiting public lands for oil and gas development and other resource extraction. President Bush could not have named a Western governor more in line with this administration." "President Bush nominated someone who has consistently opposed protecting public health and public lands," Carl Pope, the executive director of the Sierra Club, told Janofsky. "American families deserve an interior secretary who actually values our national heritage. America deserves someone who will promote safe energy policies that protect sensitive lands and wildlife habitat, instead of giving over our public lands to developers and the oil and gas companies." There were no reports of surprise, however, when the Senate approved the nomination of Kempthorne; as Troy Maben of the Associated Press noted, in an article published by *USA Today* (March 17, 2006), "The Senate rarely turns down one of its former members for the Cabinet."

Among the Interior Department proposals that have come to light since Kempthorne's arrival that have most alarmed environmentalists are those designed to seriously weaken the Endangered Species Act. As Rebecca Clarren reported in *Salon.com* (March 27, 2007), which obtained a copy of a 117-page draft intended for circulation only within the Fish and Wildlife Service, proposed changes to the act would limit the number of species that could be listed as endangered and would prohibit from inclusion on the list any species unlikely to become extinct in 20 years or 10 generations, with the agency deciding which time frame to consider. (The act currently refers to a time frame of "the foreseeable future"—"a species-specific timeframe that can stretch up to 300 years," as Clarren wrote.) In addition, the proposed plans would change the defined geographic range of any endangered species to the current range, ignoring the fact that great reductions in a species' historical range because of development or other human activities are responsible for the animal's precarious hold on survival and hampering the government's ability to foster its recovery in the wild. "Perhaps the most significant proposed change," Clarren wrote, "gives state governors the opportunity and funding to take over virtually every aspect of the act from the federal government. This includes not only the right to create species-recovery plans and the power to veto the reintroduction of endangered species within state boundaries, but even the authority to determine what plants and animals get protection." Large portions of the proposal's text were lifted from legislation that Kempthorne and other Republicans had sponsored in the Senate and that had failed to win passage. "The proposed changes fundamentally gut the intent of the Endangered Species Act," Jan Hasselman, an attorney with Earthjustice, an environmental law firm, told Clarren. "This is a no-holds-barred end run around one of America's most popular environmental protections. If these regulations stand up, the act will no longer provide a safety net for animals and plants on the brink of extinction." Bob Halleck, an endangered-species specialist who worked with the Fish and Wildlife Service for 34 years before his retirement, told Clarren, "If states are involved, the act would only get minimally enforced. States are, if anything, closer to special economic interests. They're more manipulated. The states have not demonstrated the will or interest in upholding the act. It's why we created a federal law in the first place."

Kempthorne has often been described as a master of conciliation. Roger Singer, a onetime director of the Idaho chapter of the Sierra Club, said to Tomas Alex Tizon for the *Los Angeles Times* (March 19, 2006), "[Kempthorne's] charisma carries him a long way. Even when we were at odds, he was very quick to approach our group with a smile and a handshake." According to Betsy Russell, "Kempthorne's critics say he relies on personal charm and vague generalities to win political success." Kempthorne and his wife, the former Patricia Jean Merrill, have two adult children, Heather and Jeffrey.

Kovalchuk, Ilya

(KOVE-al-chook, EEL-yah)

Apr. 15, 1983– Hockey player

Address: Atlanta Thrashers, Centennial Tower,
101 Marietta St., N.W., Suite 1900, Atlanta, GA
30303

On June 23, 2001 the Atlanta Thrashers named the heralded Ilya Kovalchuk as the first overall selection in the National Hockey League (NHL) draft, making him the first Russian-born player ever to be the number-one pick. Kovalchuk has since lived up to his widely touted potential, leading the NHL in goals scored in his third NHL season and delivering the fledgling Thrashers franchise to the brink of play-off contention. Though on occasion the young forward has been criticized for lapses in concentration on defense, Atlanta's head coach, Bob Hartley, told Steve Hummer for the *Atlanta Journal-Constitution* (December 25, 2005) that Kovalchuk has the makings of an all-around player: "He obviously relies on his shot a lot, but there's other parts of his game he's very good at. With a little experience, he's going to have more than one pitch in his arsenal. . . . I'm trying to make him combine speed, responsibility on the ice and his goal-scoring touch." Responding to criticism that he lets his emotions get the better of him after scoring goals—as well as at other times—Kovalchuk has cited his passionate nature as a factor in his success. "I'm an emotional player and hockey is an exciting sport . . . ," he said to Shawn P. Roarke for NHL.com (March 17, 2004). "If you score a goal, that's the most exciting moment in your night. You should show some excitement." Kovalchuk's ability to score led Roarke to compare him to one of hockey's greatest luminaries: "Like [Wayne] Gretzky, Kovalchuk's offensive brilliance comes naturally. Sometimes, it appears that he is barely working at being the best player on the ice."

Ilya Kovalchuk was born on April 15, 1983 in Tver, Russia, near the confluence of the Volga and Tvertsa rivers, some 150 miles north of Moscow. His father, Valeri, had played for the national basketball team of what was then the Soviet Union; he later operated a sporting-goods store in Tver. He died in 2005. Kovalchuk's mother, Luba, is a dentist and an administrator at a health clinic. A precociously skilled athlete, Kovalchuk played a number of sports as a boy, including basketball, soccer, and street hockey, always finding the last-named most enjoyable and best suited to his abilities. Seeing the boy's strong interest in the sport, Kovalchuk's father showed him a video of the Russian hockey player Valeri Kharlamov, who led the Soviet Union's team to gold medals at the 1972 and 1976 Olympic Games and was considered to be one of the best players in the world. The young Kovalchuk quickly adopted Kharlamov—who died in a car accident in 1981—as an idol. He told Robert Picarello for NHL.com (March 17, 2004), "I never saw him play live, but . . . We would watch tapes of his games for hours together. He was really unbelievable to watch." In honor of him, Kovalchuk wears Kharlamov's uniform number, 17.

Early on, as he competed in hockey championship games in his home town and in Russia's Northeast League, Kovalchuk did not imagine a future as a professional hockey player in North America. "I never had aspirations as a child to play in the NHL," he explained through an interpreter to Gare Joyce for the *Ottawa Citizen* (June 23, 2001). "I didn't even know what the draft was or what the NHL was until I was 15." It was then that Kovalchuk went to Moscow to play for Spartak, a professional team. Kovalchuk's height (he stood over six feet tall), manual dexterity, skating ability, and strength were uncommon for players his age. Throughout his pre-NHL hockey career, Kovalchuk exhibited both extraordinary skill on the ice and a mercurial personality. He first played in North America when, at 15, he competed in a junior tournament in Ontario, Canada. His outstanding play in that event caught the attention of North American hockey scouts. Later, as part of a team of under-17 Russians in international competition, Kovalchuk demonstrated his unpredictability by purposely crashing into the Canadian team's bench and afterward cross-checking its goaltender, which resulted in a brawl involving many players. At the 1999 Canada Challenge Cup, another international, under-17 competition, Kovalchuk scored 14 points in just six games, leading Russia to a gold medal. Apparently Kovalchuk's skills overshadowed his volatility in the minds of NHL officials, who, in the lead-up to the 2001–02 NHL draft, saw him as the best prospective player "since at least Eric Lindros and maybe since Mario Lemieux," as Gare Joyce reported.

That year the Atlanta Thrashers, who had joined the NHL in 1999, were given the first selection in the draft. The team's general manager, Don Waddell, narrowed the choice to two players, Kovalchuk and the similarly touted, Canadian-born Jason Spezza. Talking with a reporter for the Ontario *Windsor Star* (April 25, 2001), Waddell expressed the view that prevailed among scouts and team executives: "Offensively, [Spezza] is a very creative player who knows how to dish the puck off and has great instincts. Kovalchuk is a much more individual player. He does a lot by himself, maybe to a fault. He's got the best individual skills in the draft, no doubt about it." On June 23, 2001 the Thrashers signed Kovalchuk to a three-year contract valued at approximately $3.5 million.

Prior to the start of the 2001–02 season, the Thrashers were faced with a difficult decision regarding Kovalchuk's future. There was widespread concern in the organization that he was not ready to handle the physical demands of an 82-game NHL season. The team ultimately decided to acquaint him with league play by sending him to a rookie tournament in Traverse City, Michigan, held in the summer of 2001, before allowing him to start his NHL career that year. In addition to Kovalchuk, the Thrashers had selected another much-talked-about player, Dany Heatley, with the second overall pick in the 2001 draft. Many sportswriters and Thrashers fans saw Kovalchuk and Heatley as potential saviors of the team, which had not qualified for the play-offs in its brief existence. At the 2001 Rookie Evaluation Tournament, in early September 2001, Heatley outperformed Kovalchuk, scoring six goals and making four assists in four games; Kovalchuk tallied one goal and two assists during that time. The pair led the Thrashers to a bronze medal, along the way forming a close relationship in time for the start of the 2001–02 NHL season.

Kovalchuk brought to the NHL the mix of skill and feistiness he had demonstrated elsewhere. In a preseason game against the New York Islanders, he was at the center of a tussle between the two teams' players. During a regular-season game against the Los Angeles Kings, after allowing the Kings to score twice, Kovalchuk was benched by the Thrashers' coach, Curt Fraser. While praising the forward for his goal-scoring ability, sportswriters began to criticize Kovalchuk for what they perceived to be a lack of focus on defense. "There's a clear line of demarcation in Kovalchuk's game between hockey with the puck and hockey without the puck," Michael Farber wrote for *Sports Illustrated* (November 12, 2001). "He's as possessive of the puck as a coach potato is of the remote, passing it only with an air of regret. . . . When Kovalchuk doesn't have the puck and doesn't think he can get it, he lacks urgency on the offensive end and sloughs off his defensive duties, like a teenager who can't see the point in making his bed."

Kovalchuk's offensive abilities, though, were rarely questioned. In the NHL's YoungStars Game, held over the league's midseason break, he scored six goals and was named most valuable player. He finished the 2001–02 season with 29 goals, leading all NHL rookies, and 22 assists, but with a low "plus/minus" rating of negative 19. (A player's plus/minus rating refers to the number of goals scored by his team when he is on the ice, minus those scored against the team.) Kovalchuk finished second to his teammate Heatley in the voting for the Calder Memorial Trophy, awarded annually to the NHL's best rookie of the year. (Heatley and Kovalchuk became the league's first teammates to place first and second, respectively, in rookie ranking since the New York Rangers' Brian Leetch and Tony Granato did so in the 1988–89 season.) Despite Kovalchuk and Heatley's individual achievements, the Thrashers finished the 2001–02 season with the lowest point total in the NHL. When the NHL halted its regular season for two weeks in February 2002 to allow its marquee players to participate in the Olympic Games in Salt Lake City, Utah, Kovalchuk played for the Russian team. In six games he scored one goal and made two assists. The Russian team defeated Belarus by a score of 7–2 to win the bronze medal in the competition.

During the 2002–03 NHL regular season, Kovalchuk continued to play steadily on offense and poorly on defense. At mid-season he was selected to play in his first NHL All-Star Game. Meanwhile, the Thrashers, who had hoped to make significant progress in the standings that season, fell short of their goal. In January 2003 Bob Hartley took over as the team's head coach and set about remaking the Thrashers, stressing the importance of defense and paying close attention in particular to Kovalchuk's progress. The Thrashers' assistant coach Steve Weeks told Picarello that Kovalchuk made improvements on defense under Hartley's tutelage: "Bob has really worked a lot with him and he's very receptive to every thing that Bob shows him. He's shown him lots of video and we're working on his defensive side of the game. . . . And I think he takes pride in now being able to be put in that position. He really has shown us that he wants to work on improving his defensive side of the game, as well as his offensive side." Kovalchuk finished the season with 38 goals and 29 assists. He also, however, had a negative 24 plus/minus rating, which, some argued, was more emblematic than his point total of his contribution to the young franchise.

Tragedy befell the Thrashers in the fall of 2003, when Dan Snyder, a forward on the team, died from injuries he received in a car accident in Atlanta on September 29. Heatley, who was driving the car at the time of the accident, sustained a broken jaw and tore ligaments in his right knee. Snyder's death cast a shadow of grief over the team. Entering the 2003–04 regular season without the injured Heatley, who did not return to the lineup until the end of January, Kovalchuk became the team's de facto leader. Hartley had increased Kovalchuk's time on the ice: he gave the forward a role on the team's penalty-killing unit, made up of players other than goalies who try to prevent the opposing team's "power-play" unit from scoring; he also used Kovalchuk on lines to generate pressure on offense when needed. (A "line" refers to a unit of three forwards who play together throughout a game.) That season Kovalchuk became the fifth-youngest player in league history to score 100 career goals. He was also selected to start in the 2004 NHL All-Star Game. In a vote taken among 30 NHL players (one per NHL team) by *Hockey News* during the 2003–04 season, Kovalchuk was named the league's most exciting player. He scored 41 goals, tying him with Jarome Iginla of the Calgary Flames and Rick Nash of the Columbus Blue Jackets for the league high; along with Iginla and Nash, Kovalchuk was named the winner of the Maurice "Rocket" Richard Trophy, awarded annually to the player who leads the NHL in goals scored. Kovalchuk set a career high in total points in the 2003–04 season, with 87, and brought his plus/minus rating to negative 10. Speaking to Mike Heika for the *Dallas Morning News* (January 11, 2004), Waddell said about Kovalchuk, "He is just so much more mature this year. I could tell when he came back to the team after spending the summer in Russia, that he had done some growing up. First, because you could tell he had really dedicated himself to working out and was in the best condition he had ever been in. Second, you could just see the maturity in his face, in his manners." Although the Thrashers—for a fifth straight season—fell short of qualifying for the play-offs, the team ended the year with a franchise-record 78 points. In the summer of 2004, Kovalchuk represented Russia at the World Cup of Hockey, helping the team to a surprise victory in its first game against the U.S. team. The U.S. team later eliminated Russia from competition, before the medal round.

With the 2004–05 NHL season canceled by a 301-day lockout, Kovalchuk returned to his native country to play in the Russian Super League with the Kazan Ak-Bars. According to John Manasso, writing for the *Atlanta Journal-Constitution* (December 12, 2004), Kovalchuk received a reported $3 million to play for Kazan. In 53 games he scored 19 goals and made 23 assists. Due to clashes with the team's coaching staff, he did not enjoy his stay with the team. In October 2005, after missing the first few games of the new NHL season and threatening to remain in Russia due to stalled contract negotiations with the Thrashers, Kovalchuk signed a five-year contract with the team valued at more than $30 million. He thus became one of the highest-paid players in the NHL. With the Thrashers' having traded Heatley prior to the start of the 2005–06 season to the Ottawa Senators in exchange for the forward Marian Hossa and the defenseman Scott de Vries, Kovalchuk was again thrust into a leadership role. He rose to the challenge, ending the season with 52 goals and 46 assists in 78 games and a negative six plus/minus rating. With 41 wins and 33 losses, the Thrashers also enjoyed a successful season. Along the way there were flashes of Kovalchuk's earlier style of behavior: he was suspended for one game in late December 2005 after he threw a broken hockey stick into the stands, and in April 2006 he was fined $2,500 after an altercation with the Ottawa Senators player Chris Neil.

Kovalchuk had a strong 2006–07 season. He brought his plus/minus rating down to a career best of negative two, and with 42 goals and 34 assists in 82 games, he helped the Thrashers reach the Stanley Cup play-offs for the first time. There, the New York Rangers defeated them in the first round. As of October 2007, with the 2007–08 season just underway, Kovalchuk had made three goals and one assist in five games.

Recognized as one of the NHL's most prolific goal scorers, Kovalchuk told Shawn P. Roarke that his method for slipping the puck past a goalie is instinctive. "When you go in on the goalie, you just try to beat him somewhere," he said. "For me, it's just instinct when you see the goalie. I don't have any idea in my head. You should just wait and see what the goalie shows you and then try to use that." Kovalchuk's celebratory antics following goals, while angering some opposing players and coaches, have impressed many sportswriters. "Kovalchuk erupts in a paroxysm of joy, fist pumping, grin lopsided," Michael Farber wrote for *Sports Illustrated* (November 17, 2003). "In formal interviews he is stiff and programmed and says all the right things, but on the ice his body language is far more quotable." Paul Newberry, commenting for the Associated Press (January 9, 2006) on the perceived stodginess of the NHL, also praised the fiery Kovalchuk: "His knee-sliding, fist-pumping celebrations put an exciting face on a league that had turned boring and stale before its crippling lockout." Echoing a popular reaction to Kovalchuk's antics, his teammate Slava Kozlov told Farber, "I have never seen anything like him in my life. Sometimes I have to tell him he didn't just win the Stanley Cup."

Kovalchuk and Nicol Ambrazaitis, a Russian-born pop singer, have a daughter, Carolina, born in 2005. The three live in Atlanta. Kovalchuk is active in charitable work involving childhood cancer programs in the Atlanta area. "I like kids," he told Steve Hummer. "I think that's a big part of your life. You have to share with kids. When I was young and some guys like famous basketball players or hockey players came and visit[ed] you and talk[ed] to you, it was really cool. I remember that and want to do the same."

Krupp, Fred

Mar. 21, 1954– President of Environmental Defense; lawyer

Address: c/o Environmental Defense, 257 Park Ave. S., New York, NY 10010

"The strategy of the early environmental movement, according to some, could be boiled down to three words: 'mandate, regulate, litigate,'" Fred Krupp wrote for *PERC Reports* (March 2007, online), a publication of the think tank Property and Environment Research Center. As the head, since 1984, of Environmental Defense (formerly known as the Environmental Defense Fund), one of the leading nonprofit environmental-advocacy groups in the United States, Krupp has adopted a different strategy for achieving a healthier environment—one that relies on collaboration with businesses rather than confrontation and antagonism and that emphasizes the bottom line rather than humanitarian concerns. Persuading corporations that "going green" can be profitable has proven successful for both Krupp and Environmental Defense and the environmental movement as a whole. In the nearly quarter-century since he took the reins at Environmental Defense, its annual budget has risen from $3 million to more than $70 million, its full-time staff has grown from 50 to more than 300, and its membership has increased from 40,000 to more than 500,000. Founded in 1967, Environmental Defense "has carved out a space that no one else has, dancing with companies, while groups like Greenpeace tend to dance on companies," Kert Davies, Greenpeace's U.S. climate-campaign coordinator, told David Wessel for the *Wall Street Journal* (March 1, 2007). Under Krupp's direction Environmental Defense has guided corporations including McDonald's, FedEx, and the Texas energy company TXU to become more environmentally responsible; it has also played a key role in the passage of environmental legislation at the federal and state levels and in the formulation of several international environmental treaties. Recently, the organization opened two new offices: one in Beijing, China, and the other in Bentonville, Arkansas, where it will be working with Wal-Mart on the chain's environmental policies. Krupp told *Current Biography* that Environmental Defense is striving to make use of the media attention that now surrounds environmentalism, as well as the public's growing awareness of environmental problems, in pushing for new laws and rules aimed at safeguarding the environment. "I think it's great that the public and the media are focusing on environmental things," he told *Current Biography*, "but the spotlight comes and goes quickly in our society. So what we're focused on is taking this moment and turning it into as much tangible benefit as we can."

The youngest of three brothers, Fred Krupp was born on March 21, 1954 in Mineola, on Long Island, New York, to Rosalind (Mehr) Krupp, a high-school history teacher, and Arthur Krupp, a small-business owner. Krupp's brothers, Jan, a retired physician, and Bart, are the owners of Krupp Brothers Estates, which maintains vineyards and produces several wines. Krupp grew up in Verona, a town in northeastern New Jersey. His interest in environmentalism was sparked when, as a child, he visited the park across the street from his house and found frogs and fish belly-up in the lake, the victims of a chemical spill. At Verona High School Krupp excelled in biology. He was a member of the Model U.N. Team, and during his junior year, he helped to organize an Earth Day celebration that featured seminars and classes in environmental subjects. After he graduated from high school, in 1971, Krupp enrolled at Yale University, in New Haven, Connecticut, where he entered what was known as the combined-science program; required to choose two sciences as majors, he picked political science and biology. He wrote his senior thesis on the lack of political action regarding pollution in New Haven's harbor, on Long Island Sound. One year he served as president of the Yale Political Union. Acting on the advice of his mentor, the chemical-engineering professor Charles A. Walker, who chaired the Committee on the Combined Sciences Major, he decided to apply to law school. "The only reason I went to law school was because of my interest in environmental law," he told *Current Biography.* Walker gave Krupp the book *Defending the Environment: A Strategy for Citizen Action*, by Joseph Sax, a professor at the University of Michigan Law School. The book reinforced Krupp's interest, and after a year at the University of Virginia Law School, he transferred to the law school of the University of Michigan to study with Sax. In the summer of 1977, Krupp interned at Environmental Defense's Washington, D.C., office; in the fall of that year, he interned at the Natural Resources Defense Council in New York City. Krupp graduated from law school in 1978.

That same year he moved to Connecticut and cofounded the private law firm Albis & Krupp; he also helped to set up the Connecticut Fund for the Environment (CFE), splitting his time evenly between the two. CFE, for which Krupp served as general counsel, rose to prominence almost immediately, in connection with a case of contaminated drinking-water wells in Southington, Connecticut; CFE's actions led in 1979 to a new state policy requiring that residents be notified when a well is or is discovered to be contaminated. The next year CFE won a $1.5 million lawsuit against the Upjohn Corp., which had discharged toxic chemicals into the Quinnipiac River alongside North Haven, Connecticut. In both the Southington and North Haven cases, CFE was one of the first groups to publicize the threat of toxicity in the water supply—an important example of the direct impact on communities of environmental degradation. In 1983 Krupp's law partner decided to relocate, and the practice broke up. The following year Krupp joined the law firm of Cooper, Whitney & Cochran, which then changed its name to Cooper, Whitney, Cochran & Krupp.

Within a few months Krupp was offered the position of executive director—later termed president—of what was then called the Environmental Defense Fund. He accepted the post without hesitation. The group's first major accomplishment with Krupp as its head was its work (most of it before his arrival) leading to a 1985 decision by the federal Environmental Protection Agency (EPA) to phase lead out of gasoline. In 1987 Environmental Defense was among the principal groups advising the U.S. government on the Montreal Protocol, an international agreement to eliminate a number of substances that had been shown to be factors in the depletion of Earth's ozone layer. The Clean Air Act of 1990, which Krupp helped to negotiate, was the first clear example of his pragmatic environmental philosophy. The legislation, one in a series of amendments to the Clean Air Act of 1963, required power plants east of the Mississippi River to reduce their sulfur dioxide emissions (which cause acid rain) by 50 percent, so as to lower emissions from 20 million tons of sulfur dioxide to no more than 10 million tons per year. It embraced, as proposed by Krupp and Environmental Defense, a "cap-and-trade" system, in which plants that cut their sulfur emissions by more than the required 50 percent could earn credits that they could then sell to plants that were not able to cut their emissions to the required levels. Krupp described the plan to *Current Biography* as "the first major example of it being in the company's interest to do more than the law required," thereby creating a profit motive—rather than just a humanitarian motive—for companies to improve their environmental policies. Some environmentalists disagreed with that strategy, and though it has been widely praised retrospectively, it was sharply criticized at the time. Krupp told William H. Miller for *Industry Week* (August 15, 1994) that he was confident about the benefits of working with businesses rather than against them. "Any novel, creative idea will encounter initial doubts . . . ," he said. "But more and more people in the movement are seeing that there is power in these ideas—that they get results. And more and more of them are willing to abandon the outdated yardstick that the more a law or regulation hurts business, the better it is for the environment."

While on a family outing to McDonald's (he had married in 1982), Krupp took note of the polystyrene clamshells holding the Happy Meals he had bought for his sons, and he saw another opportunity to cooperate with big business. Instead of starting litigation, he sent suggestions for more environmentally sound practices to Edward H. Rensi, then the president of McDonald's U.S.A. The company—which had already shortened its straws and repackaged its orange juice in attempts to be more environmentally friendly—entered into an unusual partnership with Environmental Defense, with Krupp's group insisting that it would accept no money (even for travel expenses) from McDonald's and that McDonald's was forbidden to use the organization's name in any marketing or advertising material. As a whole, only about 2 percent of the garbage produced annually in the U.S. came from the fast-food industry, but Krupp saw McDonald's as a symbol of the corporate world's disregard for the environment. "My idea was that if McDonald's made major changes they could help set a new environmental ethic of what is acceptable and what isn't," he explained to Connie Koenenn for the *Los Angeles Times* (November 12, 1990). "The polystyrene clamshell is an icon, a symbol of unnecessary form of waste. I think the fact that McDonald's has put an end to it really could mark the turning of the tide on our throwaway society." At the time McDonald's served approximately 22 million meals a day at 11,200 restaurants worldwide, and the announcement that they would use paper-based wraps instead of polystyrene containers made front-page news across the country. Environmental Defense also advised the restaurant chain on other environmentally beneficial practices, which Krupp said he hoped would set an example for the rest of the country's businesses. "Imagine, a fast-food chain composting!" Krupp said to Susan Reed for *People* (April 13, 1991). "It proves that McDonald's recognizes the future is green. Now all we have to do is help convince the rest of corporate America."

During the next decade Environmental Defense advised a number of corporations on improving their environmental standards and played a key role in several environmental conferences. In 1994 Environmental Defense helped General Motors with its "Cash for Clunkers" program, aimed at removing old cars, which tend to add more pollutants to the air than newer ones, from the roads. In 1997 Krupp and his staff advised President Bill Clinton as White House staff drafted the U.S. proposal for the Kyoto Conference, an international conference on climate change. (Clinton signed the resulting Kyoto Protocol, in which nations pledged to reduce carbon emissions, but it was never ratified by the United States Senate; President George W. Bush has expressed his opposition to the treaty. The United States and Australia are the only two industrialized nations that have not agreed to the treaty.)

As the issue of environmental protection, and especially global warming, became more prominent, Environmental Defense found itself with some unexpected, high-profile partners: in 2000 it joined with companies including British Petroleum (BP), DuPont, and Shell International to form the Partnership for Climate Action, in which the firms agreed to markedly reduce their greenhouse-gas emissions. In 2002 Environmental Defense helped to get passed a California law requiring automobile manufacturers to cut carbon-dioxide emissions from cars and light trucks by the 2008 model year. Congress did not pass the Environmental Defense–backed 2003 McCain-Lieberman Climate Stewardship Act to reduce carbon-dioxide emissions, but Krupp applauded the effort as an important first step in achieving such national legislation. "The history of environmental laws shows we gain momentum when these issues leave the back rooms for the sunshine of recorded votes," he told AScribe Newswire (October 30, 2003). He also said, "When the history books are written, today's vote will mark the first chapter in getting climate legislation through Congress." Environmental Defense also worked with FedEx in introducing new hybrid-electric delivery trucks that reduced particulate pollution by 96 percent and increased fuel economy by 57 percent; the trucks debuted in 2004 in Sacramento, California; Tampa, Florida; Washington, D.C., and New York City. In another noteworthy victory, in 2005, the EPA introduced the Clean Air Interstate Rule (CAIR), which tightened the Clean Air Act's guidelines by requiring an additional 70 percent cut in sulfur-dioxide emissions in 28 eastern states, bringing the level of annual emissions down to approximately three million tons. Environmental Defense was an official cosponsor of AB32, the California Global Warming Solutions Act of 2006, which was signed into law in September. The goal of the legislation is the reduction of greenhouse-gas emissions in California by 25 percent by 2020.

At the beginning of 2007, Krupp led Environmental Defense in developing two prominent business partnerships. His meetings with General Electric's head, Jeffrey Immelt, and the World Resources Institute's president, Jonathan Lash, led to the unveiling, on January 10, of the U.S. Climate Action Partnership (USCAP). USCAP—which includes such companies as Alcoa, BP America, Caterpillar, and DuPont, and nongovernmental organizations, among them the Pew Center on Global Climate Change and the Natural Resources Defense Council—is modeling its guidelines on those of Environmental Defense's 1990 cap-and-trade strategy, calling for 10 to 30 percent reductions in carbon-dioxide emissions within 15 years and 60 to 80 percent reductions by 2050. "This is a game changer for action on global warming," Krupp told the Environment News Service (January 22, 2007). "These negotiations weren't easy—we all had strong points of view on the specifics—yet there was a real sense that we were doing something that could be historic." "Environmentalists have been criticized for not having priorities," he said to Bill Slocum for *Greenwich* (May 2007). "Everything is important. But if we don't solve global warming, it affects everything else."

In February the equity firms Kohlberg Kravis Roberts & Co. and Texas Pacific Group turned to Krupp after they announced that they had bought the Texas energy company TXU Corp. for $45 billion, the largest buyout in history. In an effort to make sure Texas officials would accept the buyout, the terms of the deal had specified that before the purchase would become final, the buyers would have to seek ways to make TXU more environmentally sound; to that end, the equity firms told Krupp that their purchase would be contingent upon his approval of the proposed steps. Before the buyout, TXU had planned to build 11 new coal plants, which would have emitted an estimated 78 million tons of additional carbon dioxide into the atmosphere; by the end of negotiations with Environmental Defense, the buyers had agreed to build only three plants. Krupp told Steve Inskeep for the National Public Radio program *Morning Edition* (February 27, 2007, on-line) that the agreement indicated an attitude shift on the part of big business: "I think it clearly means that the world is changing, and there is an awareness that we're moving into a carbon-constrained world." William Reilly, a senior adviser at Texas Pacific, agreed with Krupp. "We all swim in the same culture," Reilly told John Carey for *BusinessWeek* (March 12, 2007), "and the culture is going green." The deal—and the extensive press coverage it received—also offered another sign of the changing relationship between corporations and environmentalists and a new awareness among the former that being considered "green" has become increasingly important financially. "We have come to an intersection between business trends and environmental realities that can work to the benefit of both," Krupp wrote in an op-ed piece for the *Miami (Florida) Herald* (March 19, 2007). "And there's more to come: The precedent-setting events of the last few weeks are evidence of a rapidly changing global economy." He continued: "It's clear we have reached a point that no major business can ignore the impact of its decisions on our climate. CEOs who disregard the effect of the carbon emissions from their operations will find themselves targeted not only by environmental advocates and regulators, but eager investors as well. Like any other management weakness, it will put a financial bulls'-eye on a company's back."

Krupp is a member of the board of the Environmental Professional Interest Council at Harvard University's John F. Kennedy School of Government and of the Leadership Council of the Yale School of Forestry, where a fellowship has been established in his honor. He received the Keystone Center's Leadership in Environment Award in 1999 and the Champion Award from the Women's Council on Energy and the Environment in 2002.

Krupp lives in New Canaan, Connecticut, with his wife, Laurie Devitt, a nutritionist with a special interest in public-health issues. He and his wife enjoy rowboating. The couple have three children: Alexander and Zachary, who are undergraduates, and Jackson, a high-school student.

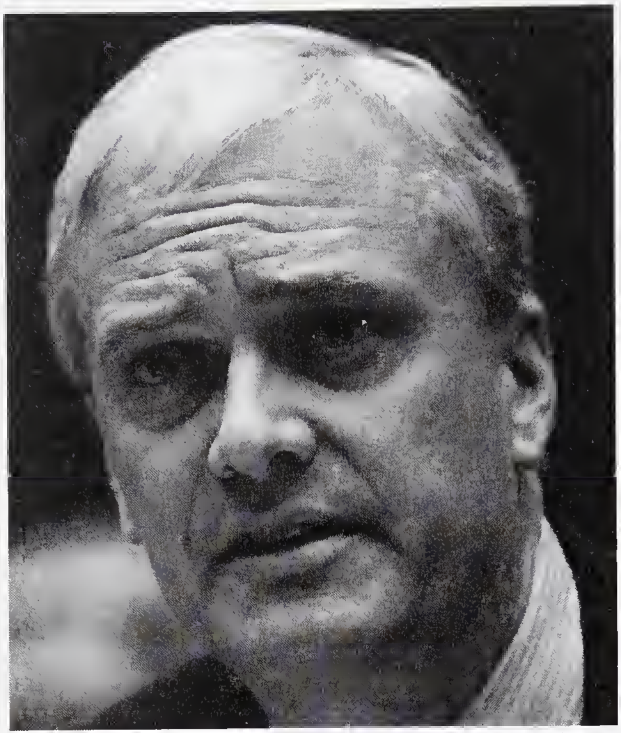
Kummant, Alexander

Aug. 27, 1960– President and chief executive officer of Amtrak

Address: Amtrak, 60 Massachusetts Ave. N.E.,
Washington, DC 20002-4225

"Even today, I believe that the operations of a railroad represents some of the most engrossing and challenging opportunities in terms of a professional career. Therefore, the opportunity to join Amtrak is more than just another job to me, it is a chance to get back into an industry that has kept its hold on me and to advance something I believe in—passenger railroading." Alexander Kummant, the president and chief executive officer of Amtrak, made those statements on September 28, 2006, during his maiden appearance before the



Alex Wong/Getty

Alexander Kummant

U.S. House of Representatives Subcommittee on Railroads, as reported by the Federal News Service in *US Fed News* (September 28, 2006). Kummant spoke to the legislators 16 days after he assumed his post as the head of Amtrak—formally, the National Railroad Passenger Corp., a quasi-governmental entity that took over operation of the nation's intercity passenger trains in 1971. In the 16 years preceding his arrival there, the 46-year-old Kummant held jobs with a series of at least eight private companies. For about four years beginning in 1999, he worked in executive positions with the Union Pacific Railroad. He has earned the nickname "Steamroller," a reference both to the construction machinery and other large equipment that some of his employers manufactured and to his reputation as an uncompromising labor negotiator.

The National Railroad Passenger Corp. (Amtrak) was created by an act of Congress in 1970, following the initiation of bankruptcy proceedings by several major passenger-carrying rail companies, notably Penn Central, and many years of decreasing ridership and increasing deficits throughout the passenger-train industry. The legislation, known as the Rail Passenger Service Act, called for the government subsidization and oversight of intercity passenger trains. Private rail companies were invited to join the system, and 20 of the 26 eligible carriers did so. On its official start date, May 1, 1971, Amtrak offered service on roughly half of the total miles of track in use, with the remaining track set aside for the more profitable carriage of freight. Almost all members of Congress thought that Amtrak would require government subsidies only temporarily, with some believing that passenger rail travel would become obsolete as the popularity of auto travel grew, and others convinced that Amtrak, unburdened by competition, would become a self-sufficient corporation. Thus, from its inception, Amtrak was in the impossible position of trying to become a profitable commercial enterprise despite the steady decline in demand and Congress's disinclination to invest in the corporation as a system of transport. Some viewed the creation of Amtrak as a "last hurrah" for the passenger-rail industry, which had seen both track mileage and ridership shrink during the previous 100 years. In 2006 Amtrak operated its trains over 22,000 miles of track, most of it owned by freight-hauling railroad companies, and carried 25.3 million passengers—the latter being the highest number since 1970. By contrast, in 1917 the privately owned railroad companies in the U.S. operated passenger trains over 245,000 miles of track, more than 10 times as many; railroads carried nearly 95 percent of intercity travelers, in peak years serving nearly 800 million people. Unlike the Interstate Highway System and the commercial aviation industry, which enjoy permanent subsidies through the Highway Trust Fund and the Airport and Airway Trust Fund, respectively, and also benefit from user fees and fuel taxes, Amtrak is forced to lobby Congress each year for the allotment of funds to keep passenger trains in operation. Compounding Amtrak's problems are the powerful lobbies that represent petroleum, trucking, and automobile interests. As a result Amtrak's federal subsidies are minuscule compared with those enjoyed by air- and highway-transport systems: according to reports by the *New York Times* and the *Washington Post*, between the years 1971 and 2002, the latter received a total of $1.89 trillion in government subsidies, while Amtrak—which serves more than 500 communities in 46 states—received less than 2 percent of that amount, or $30 billion. Although Congress designed Amtrak to be self-sufficient or even profitable, during its 35-year history, the corporation has never posted an operating profit. In almost all other countries in both the developed and the developing world, governments have for most of the past 100 years owned and operated passenger railroads, just as they have built and maintained highways, as public necessities, with no thought of profit; attempts at privatization in Great Britain, which started during Prime Minister Margaret Thatcher's term in office, have led to service and maintenance problems on a par with Amtrak's, while government-owned railroads throughout the rest of Europe offer service at levels that the United States has never approached.

Kummnant was chosen to head Amtrak by its board of directors, all of whom were nominated by President George W. Bush. His selection, which did not require confirmation by the U.S. Senate (board members do have to go through that process), aroused much criticism among those who favor greater reliance on and expansion of passenger rail service. Those critics argued that Kummant's skimpy experience in the railroad industry, none of it involving passengers, left him ill-equipped to manage Amtrak, which is deeply in debt and plagued by deteriorating infrastructure and other serious troubles. (With few exceptions, members of Amtrak's board have lacked experience in railroad management.) Kummant's critics also maintained that none of his previous jobs had provided him with the insight, shrewdness, and skills necessary in dealing with politicians and lobbying members of Congress, and thus he was not equipped to carry out one of his most important tasks as head of Amtrak: promoting the corporation to members of Congress, who decide how much money the federal government will allocate for Amtrak, and persuading the legislators of the importance of meeting Amtrak's short-term and long-term goals. Kummant's detractors attributed his appointment to his generosity as a Republican donor and the paucity of qualified candidates willing to head the beleaguered corporation, and they warned that the board's choice showed that its members actually wanted to downsize Amtrak or privatize it entirely, as do Senator John S. McCain of Arizona, one of Amtrak's most outspoken critics, and a sizable number of other members of Congress.

Although, when questioned by members of the House Subcommittee on Railroads last September, Kummant offered no concrete suggestions for tackling Amtrak's many problems, he presented himself as a zealous supporter of passenger rail transport. "I believe we are at a pivotal point in the history of passenger rail service," he said, as quoted by the *US Fed News* reporter. "I am committed to operating a national system of trains. I believe long-distance trains are an important part of the nation's transportation network, and I believe that it is our challenge to run them in the most efficient and effective way." He also said, "At a time of high oil prices, growing highway and airport congestion and record freight volumes, problems which beset and constrain our transportation system, we should be embracing rail and developing it as quickly and as responsibly as we can."

Alexander Karl Kummant, the youngest of three children of Austrian immigrants, was born on August 27, 1960 in Lorain, Ohio, and raised in nearby Amherst, a few miles from Lake Erie. His brother, Peter, is a physician; his sister, Inge, is a teacher. His father worked first as an engineer and then as an engineering manager at U.S. Steel Lorain Works. During his childhood Kummant spoke only German at home, and he took Suzuki-method violin lessons at the music conservatory at Oberlin College. After he graduated from the Marion L. Steele High School, in Amherst, he enrolled at Case Western Reserve University, in Cleveland, Ohio, where he majored in mechanical engineering. During summers he worked at the Lake Terminal Railroad, which has served the Lorain Works for over a century; in one of his jobs there, he wielded a sledgehammer as a member of a track crew. Gregory Meyer, writing for Crain's *Chicago Business* (June 1, 2005, on-line), remarked that as a young adult, Kummant developed an "emotional tie to big stuff in industrial settings." Kummant earned a B.A. degree in mechanical engineering from Case Western Reserve in 1982. He received an M.S. degree in manufacturing engineering from Carnegie Mellon University, in Pittsburgh, Pennsylvania, in 1986, and an M.B.A. from Stanford University's Graduate School of Business, in California, in 1990.

In the early 1990s Kummant worked in the solar-energy unit of Standard Oil of Ohio, now British Petroleum. Next, he created software for an artificial-intelligence firm in Pittsburgh. He then spent two years as a business analyst with the Timken Co., in Canton, Ohio. Timken is a major manufacturer of tapered roller bearings (including those for railroad applications) and specialty steels. Kummant left Timken to join the Emerson Electric Co., in St. Louis, Missouri, which manufactures such products as electric motors, instruments for climate control, and professional tools. At Emerson he worked as the personal assistant of the company's then–vice president, Ivor J. "Ike" Evans, before being promoted to president of an Emerson division, in Cincinnati, Ohio, called Sweco, which manufactures customized equipment for non–oil-related industrial separation processes. "I grew up at Emerson," Kummant told Bette Pearce for the Elyria, Ohio, *Chronicle-Telegram* (September 6, 2006). "That's where I got the financial and strategic training that I come with in my tool kit to this day." Kummant left Emerson Electric in 1998 to become president of Filtran, a division of the SPX Corp. that manufactures automobile transmission filters; he held that position until September 1999.

Kummant left SPX thanks to an unexpected phone call he received during the summer of 1999 from Ike Evans, who in 1998 had been named president and chief operating officer of the Union Pacific Railroad Co. (UP), headquartered in Omaha, Nebraska. With the words "How'd you like to run a $4 billion business?," as Kummant recalled to Bette Pearce, Evans offered him the position of UP's vice president and general manager of industrial products—that is, the division of UP responsible for the transport from point of origin of such items as lumber, cement, paper, appliances and other consumer goods, and trash and other waste products, a function that generates approximately a fifth of UP's income. (Other UP divisions direct the transport of chemicals, coal, new cars and trucks, containers bound for ships, and containers and truck trailers for domestic destinations, the last of which is called "intermodal" business.) "So, I went," Kummant told Pearce. Kummant had impressed Evans, as the latter told Gregory Meyer, as having "an intellectual curiosity. He wants to understand how things work." Kummant was soon promoted to vice president of UP's central operating region in Kansas City, where he oversaw the performance of the intermodal and automotive divisions as well as nearly 6,000 transportation employees who supported an 8,000-mile rail network. According to an Amtrak press release (August 29, 2006, on-line), Kummant was credited for gains that UP made in customer service, on-time delivery of products, and both financial and operational performance. While testifying before the House Subcommittee on Railroads, Kummant asserted that his years with UP had left him with "an indelible and abiding interest in the railroad industry," as reported by the *US Fed News* writer.

In 2003 Kummant, turning to advantage his fluency in German, left the Union Pacific Railroad to become president of Bomag, a manufacturer of heavy industrial equipment, based in Boppard, Germany. After just over a year there, citing "personal reasons," as reported by a writer for *World Highways* (January 2005), he resigned from Bomag and returned to the United States. In 2005 he was hired by the Japanese company Komatsu Corp. to fill the post of executive vice president and chief marketing officer at the firm's U.S. headquarters, in Rolling Meadows, Illinois. Komatsu, best known in North America for its huge mining and quarrying machinery, is the world's second-largest supplier of construction equipment. Kummant spearheaded a marketing campaign designed to promote in the U.S. Komatsu's new offerings—smaller bulldozers, excavators, and other equipment with relatively low horsepower, for personal use—a scheme that was moderately successful despite strong competition from Deere & Co. (also called John Deere).

On August 29, 2006 Amtrak's board of directors announced that Kummant had been selected as its next CEO and president and would assume those positions two weeks later. Kummant replaced David Hughes, Amtrak's chief engineer, who had served as Amtrak's head on an interim basis after the ouster of David L. Gunn, in November 2005. When Kummant joined Amtrak, the organization was struggling with both external and internal problems, as it has for much of its existence. In 2005 Amtrak had accumulated over $550 million in operating losses, according to the Associated Press, adding to its total debt of over $3.5 billion. The growing debt had led to increasingly limited maintenance, which in turn had led to a rash of technical failures. A discovery of faulty brakes on some of Amtrak's train cars resulted in the suspension of high-speed Acela Express service in April 2005 and an investigation by the federal Government Accountability Office concerning the way the corporation monitored performance and managed its finances. The technical troubles continued into 2006, when several power failures along the Northeast Corridor, Amtrak's busiest route, caused significant delays, the worst of which lasted for over three hours and provided a stark example of the railroad's deteriorating infrastructure. Another ongoing problem involved failures in labor negotiations, which had left some of Amtrak's unions, representing more than two-thirds of its 19,000 employees, without new contracts for nearly a decade; according to Frank N. Wilner, writing for the *Journal of Transportation Law, Logistics & Policy* (September 2006), existing Amtrak labor contracts are "inflexible." In addition, Amtrak has had great difficulty in attracting skilled workers in several busy locations, notably in New York City and on the West Coast, primarily because the wages being offered are not competitive. Moreover, as Wilner wrote, obtaining sufficient funds merely to operate the trains daily requires "24/7 cadging on Capitol Hill."

Fund-raising has become more difficult recently, because since 2003 President Bush has tried to eliminate federal support of Amtrak. Pia Sarkar, writing for the *San Francisco Chronicle* (February 25, 2005), reported that Bush's proposed 2004 budget allocated just $800 million for Amtrak, $1 billion less than Amtrak's request; Congress raised the allocation to $1.2 billion. In the *Washington Post* (June 30, 2005), Shailagh Murray explained that President Bush's proposed 2006 allocation was zero dollars (again voted down by Congress), further evidence of an executive approach that favors the elimination of Amtrak as a monolithic passenger-rail service and the privatization of the industry, with only the Northeast Corridor, Amtrak's most-successful route, remaining in public custody. Some members of Congress support those measures, while others have maintained that elimination of Amtrak subsidies would lead to the immediate bankruptcy of the corporation. According to some observers, the vehemence with which David L. Gunn opposed the privatization of passenger-rail service led to his ouster. Referring to the splitting-off of the Northeast Corridor, Representative John Mica, a Florida Republican, told a reporter for the Associated Press (November 9, 2005), "David Gunn bucked that idea, so that was the straw that broke the camel's back. He's a very capable operational manager, but he wasn't willing to go along with the dramatic changes that need to be made." Gunn's firing provoked some controversy in Congress, because of his perceived success in leading Amtrak; many observers believe that the Amtrak board of directors searched for a replacement who would be more amenable to the Bush administration's long-term goals, rather than one capable of strengthening Amtrak. As reported by the Associated Press (November 9, 2005), Democratic senator Charles E. Schumer of New York called Gunn's removal "a crushing blow to Amtrak's hopes for success and reform."

Few people qualified to succeed Gunn expressed interest in applying for the top position at Amtrak, despite the board of directors' decision to raise the CEO's annual salary from $300,000 to $400,000. Kummant was one of the small number of potential candidates who seemed to be undaunted by the prospect of heading the floundering organization. "An old professor once told me, it's the hard things that are worth doing. This [Amtrak] matters, and I'm excited to be a part of it," he told Bette Pearce. After the Amtrak board announced his selection, according to the Associated Press (August 29, 2006, on-line), Senator Schumer said, "It's good they finally appointed someone, but given [the Bush] administration's record on Amtrak, we need to know whether he was brought in to build up Amtrak or tear it down." An unnamed freight-railroad insider who had worked with Kummant at Union Pacific told Frank N. Wilmer, "If you backed [Kummant] into a corner and demanded he tell you everything he knows about railroads, he wouldn't be talking more than a couple of minutes." There is no shortage of people willing to offer the new president and CEO advice. An Amtrak worker whom Jim Wrinn interviewed for *Trains* magazine (December 2006) suggested that Kummant ride the trains and converse with passengers and employees about their experiences. "First-hand data beats statistical assumptions hands down," the man said. "Even the lowly redcap who totes bags gets to understand why people use the train, what they want, and most of all, what they expect. Involve these people in making your decisions."

Kummant has been forthright about the limitations of his experience with passenger rail. Paul Dyson, the president of the Rail Passenger Association of California, wrote in an article for the group's Web site (October 18, 2006) that Kummant "doesn't seem daunted by the challenges" facing him and "has the attitude of any good executive taking the helm of a corporation; that it's his job to grow the business and improve the bottom line." Dyson also wrote that he and Kummant agreed that the issue of passenger-rail service "is on the public agenda as it has not been for many years."

Kummant currently lives in Washington, D.C., with his wife, Kathleen Regan Kummant, a former senior executive with the Burlington Northern Santa Fe Railway. The couple enjoy outdoor activities.

Kushner, Jared

1981– Newspaper publisher; real-estate developer

Address: New York Observer, *915 Broadway, New York, NY 10010*

Peter Kramer/Getty Images

When the then-25-year-old New Jersey native Jared Kushner bought the *New York Observer* for $10 million in July 2006, he ignited a media frenzy. By acquiring the financially struggling, salmon-colored weekly paper from its founding owner, Arthur L. Carter, Kushner became the youngest owner of a major media property in New York City, inviting comparisons to the legendary tycoon William Randolph Hearst. Though the *Observer* has a relatively modest circulation of 50,000, it is renowned for its influence among the elite political and business leaders of Manhattan. Among other changes, Kushner has made some alterations to the paper's physical format and devoted increased space to its coverage of real estate, one of his wealthy family's greatest passions. By purchasing the *Observer*, Kushner assumed the leadership of a paper that, like other New York City media outlets, had devoted considerable attention to the legal and financial troubles of his father, Charles Kushner, a prominent real-estate developer—troubles that involved a sex scandal and an investigation by federal authorities. While the younger Kushner has made efforts to distance himself publicly from his father with regard to those matters, in December 2006 he acted as proxy for his father's corporation, Kushner Companies, in a record-setting, $1.8 billion purchase of the 41-story building at 666 Fifth Avenue in Manhattan. In interviews Jared Kushner has been reserved about revealing plans for the *Observer*'s future; still, his

March 2007 purchase of PoliticsNJ.com indicates a strong interest in Web-based news media.

Jared Kushner was born in 1981 in New Jersey to Charles and Seyrl Kushner. His siblings are Dara, 27 as of 2007; Nicole, 24; and Joshua, 21. The patriarch of the Kushner family was Jared's grandfather, Joseph, a Holocaust survivor who married in Russia, emigrated from there in 1949, became a construction worker and father, and joined the group of immigrant Jewish families known as the Holocaust builders—who settled in northern New Jersey and launched extraordinarily successful building and real-estate ventures. The group includes, in addition to the Kushners, the Wilf, Rosen, Zuckerman, and Pantirer families. Like the other families in that small subculture, the Kushners have long been involved in philanthropic activities, donating money to Jewish causes in the U.S. and Israel, building schools, and engaging in a variety of other charitable endeavors. Charles Kushner funded the building of the Joseph Kushner Hebrew Academy, a school in Livingston, New Jersey, for students in pre-kindergarten through eighth grade, and the Rae Kushner Yeshiva High School, named in honor of his mother. Both are Modern Orthodox Jewish institutions that combine religious and secular study.

While Joseph Kushner amassed a fortune over the years, it was Charles Kushner who developed the family business, Kushner Companies, into the powerhouse it is today. Charles Kushner attained his bachelor's degree at New York University (NYU) in 1976. In 1979 he earned a law degree from Hofstra University and an M.B.A. degree from NYU. In Jared's early years, his father was a lawyer at the firm Brach, Eichler, Rosenberg, Silver, Bernstein, Hammer, and Gladstone, in Roseland, New Jersey. When Jared was four his father joined Kushner Companies. Jared told Geoffrey Gray for *New York* magazine (August 14, 2006), "Growing up, around the dinner table my father and I didn't talk sports. We talked business. He took me to job sites when I was four years old. . . . Sundays my friends would go to football games with their dads. I'd go look at new property to buy."

Kushner attended the Frisch School, a private, co-ed Orthodox Jewish yeshiva high school in Paramus, New Jersey. Controversy surrounds his admission to Harvard University, in Cambridge, Massachusetts, in 1999. Alex Beam reported for the *Boston Globe* (September 4, 2006) that when Jared was applying to colleges, his father pledged $2.5 million to Harvard. According to Beam, in *The Price of Admission: How America's Ruling Class Buys Its Way into Elite Colleges—and Who Gets Left Outside the Gates*, by the *Wall Street Journal* deputy bureau chief Dan Golden, an official at the Frisch School was quoted as saying, "There was no way anybody in . . . the school thought [Kushner] would on the merits get into Harvard. His GPA did not warrant it, his SAT scores did not warrant it. We thought, for sure, there was no way this was going to happen." A Kushner family spokesman, Howard Rubenstein, told the New York *Daily News* (August 23, 2006), "Jared is a very unusual and talented man. He graduated Harvard with honors, proving that they were correct in admitting him." Harvard's dean of admissions, William Fitzsimmons, according to Beam, issued a statement declaring that "all students admitted to Harvard are fully qualified to be here."

At Harvard, Kushner became the chairperson of Chabad House, a social, educational, and recreational Jewish community organization. Also during his college years, he raised capital from his parents and family friends to form Somerville Building Associates, a division of Kushner Companies, through which he purchased nine buildings in Somerville, Massachusetts, near Cambridge. He told Gabrielle Birkner for the *New York Sun* (August 4, 2006, on-line), "I'd be in class, and get a call that a toilet broke, and have to get a contractor over there. . . . We did significant upgrades, putting in new kitchen countertops, new floors, and better lighting. These were very neglected buildings, and we turned them into places that people could go home, and be proud of." In 2000 he purchased a residential building for approximately $2.3 million. He renovated the building and sold its 16 condominium homes for $4.3 million two years later. He gave credit to his father for advising him, telling Birkner, "I had a very convenient expert at my disposal." While at Harvard Kushner made sizable monetary contributions to the Democratic Party. After graduating, in 2003, he joined Kushner Companies, a $1 billion umbrella organization encompassing a vast array of real-estate and business holdings spread over nine states. He also entered the four-year, combined J.D./M.B.A. program at his father's alma mater, NYU.

By that point Charles Kushner had become known as a major financial supporter of James McGreevey's successful 2001 campaign for the governorship of New Jersey. As Governor McGreevey named him to head the Port Authority of New Jersey, despite the fact that the elder Kushner had held neither a political office nor a security post. Charles Kushner resigned the post to avoid questions from William Gormley, head of the New Jersey State Senate Judiciary Committee, about potential conflicts of interest. In 2004 Charles Kushner found himself at the center of a full-blown scandal, when he was accused of retaliating against a federal witness and filing false tax returns and campaign-finance reports. While the latter two charges attracted ample notice in the media, the most sensational details emerged from the first charge. The United States attorney's office had approached Charles Kushner's sister, Esther, and her husband to cooperate with a campaign-finance investigation. In retaliation, Charles Kushner paid a prostitute $10,000 to lure his sister's husband, William Schulder, to a motel room at the Red Bull Inn in Bridgewater, New Jersey, while arranging for the tryst to be videotaped via a hidden camera; the tape was later sent to Esther Schulder on the day of a family party. She reported the incident, and on August 19, 2004 Charles Kushner pleaded guilty to 18 counts of tax evasion, witness tampering, and illegal campaign donations. He later served a year in prison.

The scandal surrounding the elder Kushner's activities was mentioned in nearly every article about Jared Kushner's $10 million purchase of the *New York Observer* in July 2006. According to Katharine Q. Seelye, writing for the *New York Times* (July 31, 2006), "Mr. Kushner said that he bought the newspaper because it was a marquee property in the media capital of the world, and that the opportunity to buy a newspaper did not come around very often. . . . He also said the *Observer* was a good brand that could one day make a lot of money, though it now loses about $2 million a year." In an interview with David Carr for the *New York Times* (July 31, 2006), Kushner said, "As far as this transaction goes, it is about me. It is not about my father."

The bulk of most articles about Kushner's purchase of the *Observer* had to do with his relative youth. Patrick Phillips noted for the Web site *I Want Media* (August 7, 2006), "At age 25, he is perhaps the most high-profile young U.S. newspaper owner since William Randolph Hearst, at age 23, became proprietor of his first newspaper back in 1887." Kushner told Phillips, "As I have said before, age is just a convenient barometer that people use to compare someone to their peers at a given point in their life. Being young, I am not bound by conventional wisdom and, in this changing industry, I have the ability to see media for what it is becoming without having an emotional attachment to what it once was. . . . I believe that when it comes to the news, my generation has shorter attentions spans and greater expectations."

Other media coverage of the purchase focused on Kushner's lack of experience in journalism. By his own admission, he had been an *Observer* reader for only a few years. Kushner told Birkner that he began reading the *Observer* during college on the short shuttle flights between New York and Boston, adding, "So many media properties are owned by big companies, and they either have a liberal bias or a conservative bias, but the *Observer* praises the good and goes after the bad. It's about getting the truth."

The London *Guardian* (August 1, 2006) reported that Kushner sent the *Observer* staff an e-mail message reading, "At 25 and with only non-publishing-related business experience, I am now equipped with two of the finest tools a publisher could ever have: this fine staff and the inquisitive energy to tackle convention." As a writer for the London *Independent* (August 1, 2006) put it, the *Observer*'s relatively modest circulation—about 50,000—"belies its importance in New York," as the paper "has long been a must-read for members of New York's social, media, literary and political circles." Carr described the paper as "a small but mighty piece of Manhattan media . . . a paper that has long preoccupied wagging tongues in New York because of the youthful insouciance of its writers." Kushner told Carr, "The truth of the matter is that I would have loved this chance to come along in a few years, but that's not how life works. Life brings opportunities as they occur, and this is one I could not pass up. . . . This is a phenomenal brand, with an elite readership and one of the best editors there is."

Kushner was referring to Peter W. Kaplan, who joined the paper in 1994 and has earned a reputation as a top-notch editor and mentor to the *Observer*'s staff members; drawing comparisons to characters in J. K. Rowling's Harry Potter novels, Carr described Kaplan as "Professor Dumbledore to the paper's young editorial wizards." Kaplan told Carr, "When he [Kushner] said he would not interfere in the editorial process, I believed him. . . . The way the world is working, I find that I have as much to learn from 25-year-olds as they do from me. . . . He exists in the world that is about to be, and that seems worth trading for my information about the world as it has been."

In December 2006 Kushner made a successful bid for the 41-story building at 666 Fifth Avenue in Manhattan, purchasing it on behalf of the Kushner Companies for $1.8 billion and setting a record for the highest price ever paid for a building. According to the Web site of Tishman Speyer, the company that previously owned the building, it was erected in 1957 and comprises about 1.5 million square feet. Kushner paid approximately $1,200 per square foot for 666 Fifth Avenue, which houses the National Basketball Association (NBA) store and the Noguchi Museum, among other commercial tenants. He told the *New York Times* (December 7, 2006), "This is a great acquisition for our company. We are upping our presence in Manhattan. It's a logical expansion for us."

In February 2007 a redesigned *New York Observer* debuted on newsstands. The most obvious change was the addition of an outside four-page wrap containing headlines, photos, a small version of the paper's illustrated logo, and an advertisement. In addition, the back page covered real estate, breaking with the city tabloids' tradition of devoting the back page to sports stories. Peter Kaplan, referring to the 1969 film starring Paul Newman and Robert Redford, told Keith J. Kelly for the *New York Post* (February 12, 2007), "There's definitely a Butch Cassidy and Sundance Kid thing going on here, and that's fine"— which Kelly interpreted to mean that Kaplan and Kushner "have similar goals but different styles." According to Katharine Seelye, Kushner told Kaplan that he had "three objectives" for the paper: "to market the brand name of the *Observer*; to build its Internet traffic; and to provide resources for more news beats" in order to create "a stronger paper with more constituencies and more advertising."

In March 2007 Kushner's newly formed Observer Media Group purchased PoliticsNJ.com, a popular Web site run by an anonymous figure who uses the pseudonym Wally Edge (a nod to the former New Jersey governor Walter Evans Edge, who served in that post during both world wars). According to John Holl, writing for the *New York Times* (March 11, 2007), Kushner said that he bought the site because "it's become a place for people to break news and because it's independent."

When Phillips asked Kushner what he saw himself doing at 35 or 45, Kushner replied, "Life is very interesting and it takes us all on many unexpected paths. The truth is, if you told me that at 25 I would own a premier New York newspaper and be actively purchasing real estate while completing a JD/MBA, I wouldn't have believed you. At 35, 45? Your guess is as good as mine. Whatever I am doing, I hope to be having as much fun as I am now."

Lamont, Ann Huntress

Oct. 1956– Venture capitalist

Address: c/o Oak Investment Partners, One
Gorham Island, Westport, CT 06880

Ann Huntress Lamont never got to rip open the presents she received as a child. Instead, she and her five siblings were told to unwrap the paper carefully so it could be reused. Now Lamont, whom Alison Leigh Cowan described in the *New York Times* (October 16, 2006) as "one of the most successful women ever in the lofty realm of venture capital," can afford to buy all the wrapping paper she wants. Lamont is currently one of four managing partners of Oak Investment Partners, a leader in its field. Venture-capital firms such as Oak typically finance new, growing, or struggling businesses in investments that are too risky for standard public-investment markets or other forms of private investing, such as bank loans; such high-risk deals usually either reward the investor with exponential returns or fail completely. Oak was founded in 1978 with $25 million in funds; in 2006, the company boasted $8.4 billion in holdings. A specialist in the especially risky fields of biotechnology and financial-services information technology, Lamont has spearheaded some of Oak's most successful ventures, including investments in the pharmaceutical company Cephalon and the hospice provider Odyssey Healthcare. Companies count on Lamont for her "money, market intelligence and moxie," Cowan wrote. But even while serving as a role model for women in finance and proudly investing in companies run by women, Lamont prefers to leave the spotlight to her husband, Ned Lamont, who mounted an ultimately unsuccessful run for the United States Senate in 2006. Her reticence has hardly had a negative effect on her career; rather, her thoughtful nature has proven to be a distinct advantage, and her ability to listen and willingness to work behind the scenes are two of her most valuable traits in the demanding field of venture capital. "We're not the heroes," Lamont explained to Cowan. "We're here to support the entrepreneurs."

The youngest of six children, Lamont was born Ann Greenlee Huntress in October 1956 in Whitefish Bay, Wisconsin. Lamont's father, Carroll Benton Huntress Jr., was president of Huntress Realty in Milwaukee. Lamont "grew up in a big family with a small budget—and one Coke a week," as her husband's campaign literature read, according to Cowan. The family was very money-conscious; in addition to reusing wrapping paper, the family would "wash Glad bags 10 times," Lamont told Cowan. In 1975 Lamont entered Stanford University, in California, where she earned a B.A. degree in political science. During her junior year, while she was studying in England, she received a call from home saying that her father was sick and could not work and that the family would not be able to afford her next quarter's tuition—approximately $1,500. Instead of taking her out of school, Lamont's parents decided to cash in a life-insurance policy so that she could return to Stanford in the fall and graduate with her class. (While Lamont participated in her class's graduation ceremony in 1979, she did not officially receive her degree for another 10 years, having failed to turn in a paper in the spring of her senior year.)

After graduation Lamont moved to San Francisco, California, where she worked briefly as a paralegal before taking a position as a research associate at Hambrecht & Quist Capital Management, a pioneer in the venture-capital field. While Lamont was with Hambrecht & Quist, the firm helped many future top-performing companies to go public—that is, to open to public investment. Those companies included U.S. Surgical, which produces medical devices; Genentech, a pharmaceutical developer; and Apple Computer (now Apple Inc.).

In 1982 Michael Levinthal, a friend of Lamont's from Stanford, introduced her to the venture capitalist Ed Glassmeyer. Glassmeyer "was obviously taken by her," Levinthal recalled to Cowan; he soon offered Lamont a job at Oak Investment Partners, a new private equity firm he had co-founded. When Lamont began work at Oak's Westport, Connecticut, office, the company was only four years old, begun with a capital base of $25 million. From the start, Lamont focused her investments in health care and biotechnology, a particularly risky investment option. "Investors in biotech have the potential to reap tremendous rewards, but at the same time, the risk can be enormous—sometimes in the same stock," Marc Lichtenfield wrote for the financial Web site TheStreet.com (July 27, 2006). Emerging biotechnology companies normally have an extremely difficult time raising initial funds, even from habitual risk-taking investors such as venture capitalists. Claire Philpott, a biotechnology attorney for Lane Powell PC, told *MedAd News* (July 1, 2005, on-line), "[Venture capitalists] don't like to dabble in biotech and life sciences. . . . It's such a long runway to cash revenue coming from paying customers. The turnaround time can be a decade." But when biotechnology investments pay off, they do so extraordinarily well. According to Barath Shankar, a research analyst for the pharmaceutical and biotechnology consulting firm Frost & Sullivan, also interviewed by *MedAd News*, an investment of $1,000 in any of the top 10 biotechnology companies in 1994 would be worth $240,000 today.

In the late 1980s Lamont initiated one of Oak's most successful investments, in the pharmaceutical company Cephalon, which produces the sleep-disorder drug Provigil, the anticonvulsant Gabitril, and the analgesic Actiq. In 2004 the company's revenues exceeded $1 billion. In the mid-1990s Lamont also led Oak's investment in Odyssey Healthcare, a hospice operator. Odyssey began in 1996 with two operating locations; in 2006 it had more than 85 locations across the country and was one of the larger hospice providers in the U.S. Both investments have had returns of 10-fold or higher. Lamont's more recent investments have been focused primarily in the biotechnology sector, in companies such as Athenahealth, American Esoterics, CareMedic, Harbor Payments, Health Dialog, iHealth Technologies, NetSpend, United BioSource, and Vesta. In 2006 Lamont became one of four managing partners of Oak Investments. That same year Oak finished raising a $2.56 billion fund—the largest venture fund ever among any firm. Every year or two, Oak raises a new fund for that year's investment portfolio; the $2.56 billion fund, which is the company's 12th, represents capital that Oak designated for new investments in the 2006 portfolio. The size of a fund can be seen as one measure of investor confidence in a venture-capital firm, with higher investment indicating higher confidence. Oak already has $8.4 billion from previous funds invested in more than 320 companies.

Like all high-risk investors, Lamont has also had her share of failures. Lamont led Oak's investment in BMJ Medical Management Inc., which went into sharp decline after its initial public offering (IPO) on February 4, 1998. The company ended up filing for bankruptcy in December of the same year. In a class-action lawsuit filed on February 2, 1999, disgruntled shareholders sued Lamont, among a number of other parties instrumental in BMJ's development, for securities fraud, accusing her of withholding information about BMJ's management practices and business prospects that would have been valuable in deciding whether or not to invest in the stock. Lamont and the other defendants agreed on a multimillion-dollar settlement, and Lamont resigned from BMJ's board of directors on June 4, 1999.

In September 2000 Oak became the lead investor in a new on-line and cash gift-certificate company called Flooz.com, based on the record of the company's chief executive officer (CEO), Robert Levitan, who had co-founded the successful women's Web site iVillage. Flooz.com was an example of a new kind of venture-capital market, driven by Internet start-up companies that no longer required 40-page business plans to raise initial funds. "The competitive profile changes daily for these kinds of startups, and so a business plan becomes outdated very fast," Lamont explained to Katherine Goncharoff for the financial newspaper *Daily Deal* (February 15, 2000), citing as an example Oak's investment in a European e-commerce site, OneSwoop.com, which was also made without the normal lengthy written proposal. "Funding without a formal plan is becoming more of a norm," she continued, adding that venture capitalists were far more willing to "make a leap of faith" when it came to investments in Internet companies proposed by trusted entrepreneurs. Oak's leap of faith in Flooz.com, however, was followed by a fall, as the new company folded shortly after its inception.

Asked by Cowan in 2006 to talk about some of her past underperforming investments, Lamont responded only by saying, "Who wants to talk about their failures?" Lamont's peers and partners have cited such reserve as one of her greatest professional attributes. "She's wise and practical and doesn't talk when it's not important and does talk when it is," Jonathan Bush, CEO of the Oak-backed healthcare company Athenahealth Inc., told Cowan. Lamont's friends agree with the description of the businesswoman as a realist. Elena Phleger, a friend of Lamont's from Stanford, said about her former classmate to Cowan, "If you were on a range of idealism versus pragmatism, her needle would be a little more over on the pragmatic side."

On the more idealistic side is Lamont's husband, the politician and businessman Edward Miner ("Ned") Lamont Jr. The pair met shortly after Ann Lamont—then Ann Huntress—moved to Connecticut; they were married in 1983, at Ned Lamont's family home on Long Island, New York. (Their wedding reception was catered by Martha Stewart, a then-unknown culinary talent Ann Lamont had met at a gym.) In 1984 Ned founded Lamont Digital Systems, a small telecommunications network. In 1990 he ran unsuccessfully for a Connecticut State Senate seat, and in 2006 he launched a run for the United States Senate against the incumbent Democrat Joe Lieberman. Ned Lamont surprised many pundits by winning the primary in August, but he ultimately lost the seat to Lieberman, who ran as an independent in the general election. The race focused a great deal of scrutiny on the Lamont family, particularly its finances. While Ned Lamont came from more privileged circumstances than his wife (Harvard University's Lamont Library is named after his great-grandfather, Thomas W. Lamont, who made a fortune at J. P. Morgan & Co.), reports published during the campaign indicated that Ann Lamont contributed considerably more than her husband to the family's income. The *New York Times* estimated the Lamont family's assets at between $90 million and $332 million, further stating that $54 million to $193 million of that total came from Ann Lamont's work at Oak Investment Partners. Lamont has never publicly disclosed her annual income, but competitors calculate that she takes home an annual salary of at least $15 million. Some of that money has gone to political causes—for example, Lamont contributed $2,000 each to the Democratic presidential candidates Howard Dean and John Kerry in 2003, according to opensecrets.com, a Web site that monitors political donations. By September 30, 2006, less than two months before the general election, two-thirds of Ned Lamont's campaign money, totaling approximately $8.7 million, had come from the couple themselves.

In addition to contributing financially to the campaign, Ann Lamont worked behind the scenes, organizing her husband's schedule and networking with her contacts from the business world. The Lamonts' daughter Emily described her mother to Cowan as the "campaign's master secretary and policy adviser." Still, Lamont told Cowan—who described Lamont as she appeared in her husband's campaign material as "the petite, well-dressed blonde at the rim of the frame"—that she preferred to stay out of the limelight. "I don't have any desire to be public or famous," she said. Both Lamont and her husband denied that her history in finance could adversely affect his political aspirations. "She's hardly a lobbyist or anything like that," Ned told Cowan. "She's a woman who has had a wonderful career."

Lamont lives with her husband in Greenwich, Connecticut. The couple have three children: Emily, who is a freshman at Harvard; Lindsay; and Teddy.

Lang, Robert J.

May 4, 1961– Physicist; engineer; origami artist

Address: c/o Alice and Klaus Peters Publishers,
888 Worcester St., Suite 230, Wellesley, MA
02482

When Robert J. Lang quit engineering to pursue his other passion—origami, the Japanese art of paper folding—as a full-time career, he had written more than 80 technical papers and held 46 patents on lasers and other optoelectronics (devices for emitting, modulating, transmitting, and sensing light).

Now one of the premier origami artists in the world, Lang has created more than 480 designs and expanded the field both artistically and scientifically, finding practical applications for origami in fields ranging from medical technology to space exploration. Lang—whom Susan Orlean described for the *New Yorker* (February 19, 2007) as "composed, moderate, painstaking"—has been practicing origami since he was six years old, when a teacher gave him an instruction book to keep him from getting bored during math class. "The thing that got me hooked on origami all those years ago was the 'something for nothing' aspect," he told Chad Berndston for the South Boston, Massachusetts, *Patriot Ledger* (November 8, 2004). "The wonder of the things we can make has grown enormously." Among Lang's greatest artistic achievements is a full-size cuckoo clock, though in general he is best known for his figures that represent the natural world. Lang's shapes, which range from a simple banana slug to a koi fish complete with scales, can require more than 300 folds; he is among an elite group of artists whose creations defy the normal scale of difficulty in origami, prompting the creation of the new "super-complex" category. "I've always loved problem-solving—it's part of being a scientist and an engineer," he told Berndston. "Coming up with a design is just another form of that, and while it's fun to fold an origami figure, it's also fun to solve the puzzle of how you create a new figure." That problem-solving also extends to the scientific realm, in which Lang's knowledge of origami has contributed to many advances, including ways to fold tricky items such as a heart stent, an airbag, and a telescope lens. Lang told Orlean that the field of origami is advancing rapidly, with almost limitless potential for both artistry and practical applications. "It's like math," he said. "It's just out there waiting to be discovered. The exciting stuff is the stuff where you don't even know how to begin."

Robert James Lang was born on May 4, 1961 in Dayton, Ohio, to Carolyn Lang, a secretary and homemaker, and Jim Lang, who worked for the Airtemp division of the Chrysler Corp. Lang has one older brother, Greg, who is a professor of horticulture at Michigan State University, in East Lansing; his younger sister, Marla, is a commercial interior designer. The family moved frequently when Lang was young but settled in Atlanta, Georgia, by the time he was 10. Lang was always a "super-duper math whiz," his father told Orlean, recalling that his son often read the recreational math column in *Scientific American*. Lang became interested in origami at age six, when an elementary-school teacher gave him a book about origami to keep him entertained during math class. Those two interests—math and origami—persisted throughout the family's many relocations, with Lang creating his own origami figures from an early age. "I sought out all the books I could from the local library, and there weren't that many, and if I wanted to make an animal I couldn't find in the book, I wanted to try to make it up," he told Berndston. "All the people in the books had, so why couldn't I?" In high school Lang joined the school math team, which placed in state and regional competitions.

After graduating from high school, in 1978, Lang enrolled at the California Institute of Technology (Caltech), in Pasadena. "Caltech was very hard, very intense," he told Orlean. "So I did more origami. It was a release from the pressure of school." The mathematical work involved in origami "revs your brain up into high gear," he explained to *Current Biography*, adding that the increased stimulation spilled over into other intellectual areas. "Origami was just a way of exercising your brain in a different direction from quantum mechanics," he said. Although he began to pursue origami seriously during that time, developing his own designs for a Pegasus, a parrot, a crab, and a squirrel, he kept his hobby largely to himself. "I guess I thought it was a kid's pastime that I hadn't grown out of," he told Orlean. "I was a little embarrassed about it." In 1982 Lang graduated from Caltech with a degree in electrical engineering and a growing stock of original origami designs. After earning a master's degree in electrical engineering at Stanford University, in Palo Alto, California, Lang returned to Caltech to pursue a Ph.D. in applied physics. While working on his dissertation, "Semiconductor Lasers: New Geometries and Spectral Properties," Lang created more than 50 origami designs, including those for a hermit crab, an ant, a skunk, and a mouse stuck in a mousetrap. From the beginning Lang's figures displayed not only sophisticated artistry but also striking realism. "They were dense and crisp and precise but also full of character: his mouse conveys something fundamentally mouse-ish, his ant has an essential ant-ness," Orlean wrote. For several months after receiving his Ph.D., in 1986, Lang stayed at Caltech to finish his research; he then traveled to Germany for a 10-month postdoctoral program, studying semiconductor lasers. While in Germany, Lang also created an origami version of the traditional Black Forest cuckoo clock; described as a "tour de force" by Constance Ashmore Fairchild, writing for *Library Journal* (February 15, 2004), the figure took him three months to design and six hours to build.

After completing his postdoctoral studies, Lang returned to Pasadena to work at the National Aeronautics and Space Administration (NASA) Jet Propulsion Laboratory, where he focused on optoelectronics. That same year, 1988, Lang also published his first collection of origami designs, *The Complete Book of Origami: Step-by-Step Instructions in Over 1000 Diagrams.* He followed that effort with *Origami Zoo: An Amazing Collection of Folded Paper Animals* (1990), written with Stephen Weiss, and *Origami Sea Life* (1990), co-written by John Montroll. In 1992 he published his fourth book, *Origami Animals*, and became the first Westerner ever invited to address the annual meeting of the Nippon Origami Association, in Japan. Meanwhile, Lang continued to work as an engineer, beginning a stint at Spectra Diode Labs, in San Jose, California, in 1992.

In the early 1990s Lang began to integrate mathematics and origami, developing a computer program named Origami Simulation that allowed the user to fold a sheet of paper on screen. When not working on such projects as fiber-optic networks for space satellites or the patenting of self-collimated resonator lasers, Lang continued to pursue origami with an increasing number of side projects. In 1995 he published *Origami Insects and Their Kin: Step-by-Step Instructions in Over 1500 Diagrams*, a collection of designs for 20 complex insect figures, and in 1997 he published *Origami in Action: Paper Toys That Fly, Flap, Gobble, and Inflate*, a book of his collected designs for beginners. In 1999 Lang was commissioned to create four works for the Downtown Transit Mall in Santa Monica, California. He made four animals representative of the area's fauna—a tree frog, a sea urchin, a dragonfly, and a garibaldi (a species of fish)—which were then cast in bronze and used to adorn drinking fountains around the city. Lang's creations received the Southern California American Public Works Association's award for streets and transportation project of the year in 2002, and in 2005 Lang was commissioned to create two more figures, a sea turtle and a flying fish.

Around that time Lang began to think seriously about quitting his job as an engineer and pursuing origami full-time. Besides his work on the Santa Monica project, he had been a consultant for companies or government agencies that applied origami techniques in various ways. The Lawrence Livermore National Laboratory, for example, hired him to devise a way of folding a telescope that was to be sent into space. Lang calculated that from those kinds of consulting jobs, as well as his artistic commissions, he could make a living out of paper folding. In addition to those projects, Lang wanted to create a different kind of origami book. "Most origami books at the time were collections of recipes for specific origami figures, but what I wanted to do was to teach people how to come up with their own recipes," he explained to *Current Biography*. That book, though, would require his full attention, he realized. The idea for the book came to him around the time of the dot-com bust, during which the company for which he was then working, JDS Uniphase (which makes equipment used to build fiber-optic-telecom, data, and cable-television networks), lost a large portion of its business. By then Lang was in a managerial position at the company; with the bust, his duties largely changed from overseeing research and development to dealing with pay cuts and plant closings. "Laying people off was a lot less fun than inventing things," he told Orlean. "There were plenty of people doing lasers. The things I could do in origami—if I didn't do them, they wouldn't get done. Deciding to leave was a convergence of what I wanted to do plus what was happening at my company." By the time he left JDS Uniphase, in 2002, Lang had written more than 80 technical papers and held 46 patents on lasers and optoelectronics. Although he admitted to *Current Biography* that the idea of leaving a successful career in engineering for one in origami "sounds pretty crazy," he said that he was confident in his decision: "Sometimes, you know the crazy thing is the right thing to do. It was one of those few times when I knew it was the right decision."

The following year Lang published *Origami Design Secrets: Mathematical Methods for an Ancient Art* (2003)—which he refers to on his Web site as his "magnum opus"; he also published *Origami Insects II* (2003), a collection of 18 new insect designs. That same year he was featured in the Origami Masterworks exhibit at the Mingei International Museum, in San Diego, California. The exhibit, which included a six-foot-tall heron that Lang had folded, was originally supposed to run for six months, but it proved so popular that it was extended first by six months and then by an additional eight. Lang's pieces have also been featured in a number of commercial venues: he created a menagerie of toilet-paper origami animals as part of a commercial for the fabric deodorizer Febreze; a life-size model of Drew Carey for *The Drew Carey Show*; and airplane seats for the cover of an aircraft-seating magazine. He worked a week of 14-hour days to supervise the folding of hundreds of origami figures for a 2006 commercial for the Mitsubishi Endeavor, in which the car is driven through a world composed entirely of origami. Most recently, he completed a series of figures for a McDonald's commercial; the human figures, who wear such accessories as gold chains and Kangol hats, are folded from what appears to be McDonald's cheeseburger wrappers (actually origami paper printed with the McDonald's pattern).

Lang is constantly breaking ground in the area of practical applications of origami—specifically, fitting large items into small spaces. Among his designs are a pouch for medical instruments that can be opened without any unsterile surface touching a sterile one; a cell-phone antenna that fits inside the body of the phone; a heart implant that is folded into a tube for implantation, then unfurled when in place; and a computer model that simulates the folding and deployment of airbags.

Lang has also continued to develop two computer programs that allow for the mapping of complicated figures. TreeMaker, a program he began working on in the late 1980s and first released in 1994, can describe in mathematical terms any origami figure that can be represented by a stick-figure drawing—for example, an insect or a human, but not a cloud—and produce a replica of the creases necessary to fold the figure. Although some criticize the program as a perversion of the origami tradition, Lang said that he firmly believes that using a computer is an obvious step in the evolution of origami. "If people object to using computers to create origami, do they also object to using brushes to create a painting?" he said to *Current Biography.* Lang rarely uses TreeMaker in his work. When he created the program, he needed it specifically to make such complex features as deer's antlers and insects' legs. In general, however, he sees TreeMaker as a learning tool; by writing the program, he said, he gained valuable insight into the design process, which he could then translate into his more intuitive work. That intuitive work, he said, is what makes for the most amazing origami. "The computer is a tool. It's efficient for laying down a pattern or framework," he told Bennett Daviss for *New Scientist* (January 18, 2003). "But human skill will always be needed to implement the design. It's the person that makes the difference between creating something awkward and lifeless or something elegant and beautiful." TreeMaker is now on its fifth version; because it is freely distributed on Lang's Web site, he does not know exactly how many people have downloaded it, but he has estimated that a couple of hundred people do so every year.

While TreeMaker creates a pattern of creases, it cannot calculate the sequence in which the creases should be folded. To solve that problem, Lang created a different program, ReferenceFinder (currently in its fourth incarnation), which is also available for free download on his Web site. ReferenceFinder helps the origami artist find the most efficient folding pattern for a given crease; however, with upwards of 200 creases per figure, it is still inefficient to run ReferenceFinder on every crease. The artist must decide on his or her own which creases would be best to run through the program.

In his willingness to share origami designs and design strategy, Lang co-founded the Origami Design Challenge at OrigamiUSA's annual convention. Conceived by Lang and a friend, the origami expert Satoshi Kamiya, the informal event involves no judges or winners—just the exchange of ideas. All of the contributors create the same general shape, but with different designs and, ultimately, different results. In 2004 Lang and Kamiya both brought versions of an origami beetle to the convention. The next year they announced that they would make hermit crabs, along with the eight other artists who had entered the challenge. In 2006 the ever-growing group made sailing ships. "It is a pleasant and remarkable situation, this mixture of sharing and competition that has remained nicely balanced for many years. Yes, we're all trying to outdo each other, but we're also 'giving away the store,' so to speak, by showing each other how our latest invention is constructed . . . ," Lang wrote for his Web site. "By this means, the entire art is advanced." In 2007 the competition centered on a complete plant—roots were optional, but the plant had to have a stem. The emphasis remained on the community of origami and on the personal challenge of pushing to do one's best, even without prizes. "The purpose of a design challenge is not rooted in some award, the joy of getting a bit of ribbon stuck onto one's effort," Lang wrote for his Web site. "The purpose of a design challenge is in the process, that it provides a spur and a goad to try something new and different. And the only opinion that matters is one's own. (Well, and maybe the opinions of other origami composers.)"

Lang recently completed a life-size flying pteranodon for a permanent installation at the Redpath Museum at McGill University, in Montreal, Canada. He is one of the few Western columnists for *Origami Tanteidan Magazine*, the journal of the Japan Origami Academic Society. In January 2007 Lang was named editor in chief of the *Journal of Quantum Electronics*, published by the Institute of Electrical and Electronic Engineers. He has also consulted for Cypress Semiconductor for several years.

Lang lives in Alamo, California, with his wife, Diane, whom he met at Caltech as an undergraduate when they were both in a campus production of *The Music Man.* They have one teenage son, Peter.

Lanier, Cathy L.

(luh-NEER)

July 22, 1967– Chief of the Metropolitan Police Department of the District of Columbia

Address: Metropolitan Police Dept.
Headquarters, 300 Indiana Ave., N.W.,
Washington, DC 20001

On January 2, 2007 Cathy L. Lanier assumed the position of acting chief of police and chief executive officer of the Metropolitan Police Department of the District of Columbia (MPDC), one of the most high-profile, demanding jobs in law enforcement. The D.C. City Council confirmed her appointment as chief of police and CEO in March. Lanier leads a 3,800-member uniformed force whose responsibilities include fighting crime in the Washington, D.C., metropolitan area, coordinating presidential

Mannie Garcia/AFP/Getty Images

Cathy L. Lanier

motorcades, protecting dignitaries, and maintaining order at such events as parades, protest marches, and state funerals. Lanier began her career in the MPDC as a foot-patrol officer in 1990 and earned a series of promotions with unusual rapidity. For eight months before she became the acting head of the MPDC, she occupied the top position at the city's Office of Homeland Security and Counter-Terrorism, where she functioned within the inner circle of her predecessor as police chief, Charles H. Ramsey. Lanier is the first woman to serve as chief of police permanently in the nation's capital (Sonya Procter served as interim chief before Charles H. Ramsey's tenure); currently, she is one of a half-dozen women to supervise a police department in a major U.S. city. At a press conference held in early January 2007, Lanier said, as quoted by Allison Klein in the *Washington Post* (January 6, 2007), "Our overriding goal is to reduce crime and the fear of crime in every neighborhood." "When I stand in the mirror, I see somebody who is compassionate but with a strong desire to help people do what's right, to help maintain that line between right and wrong," Lanier told Courtland Milloy for the *Washington Post* (December 6, 2006, on-line). "Sometimes, it's a balancing act. I feel just as compassionate when I see someone involved in criminal activity. Something caused that person to be in an environment that contributed to the criminal behavior. I feel sorry and empathetic, even though what they are doing is wrong. We have to get them off the streets, but I have to keep the compassion because that's what keeps us from policing in a way we shouldn't."

Cathy Lynn Lanier was born on July 22, 1967 and, along with her two brothers, was raised by her mother in a modest neighborhood in Tuxedo, Maryland. Her father, who did not live with the family, was deputy chief of the Prince George's County, Maryland, fire department before his retirement. Lanier has said that her youth was spent as "one of the boys," and that at times she literally took her share of punches from her brothers; one brother is now a captain in the Prince George's County fire department, and the other is a detective in the Greenbelt, Maryland, police department. When Lanier was in ninth grade, she gave birth to a baby boy and dropped out of school. At 15 she married the child's father; their union ended after two years. Inspired by her mother, who had held several jobs while her children were growing up, Lanier earned a high-school equivalency diploma and worked as a print-shop assistant and as a canopy and awning saleswoman. When she was about 20, following what had become a family tradition of public service, Lanier entered the police academy and recognized immediately that she had found her calling.

Lanier began active duty with the Metropolitan Police Department of Washington, D.C., in 1990, during a time when the MPDC was struggling to field a full complement of officers. Between the years 1988 and 1990, because of escalating crime rates in the city, department officials had been under heavy pressure to hire and train hundreds of new officers, and they had cut corners in conducting background checks and in training recruits. Those shortcuts later haunted them, as dozens of fledgling officers began to be prosecuted on criminal charges or disciplined for other serious offenses. In that environment, Lanier stood out for her exemplary behavior, and she moved quickly up the law-enforcement ladder. After serving as a uniformed patrol officer in the Fourth District in the northeastern part of the capital, she advanced to the rank of sergeant, in 1994, and was assigned to the Sixth District, in the city's southeastern quadrant. In 1996 she was promoted to lieutenant and returned to the Fourth District as patrol supervisor. As a member of the department's reorganization team, known as G21, she helped develop the district's community-policing model.

In 1996 Lanier and a female sergeant, Lena Johnson, brought charges against the city for alleged sexual harassment on the part of some of MPDC employees. The previous year, *Washington Post* investigative reporters had found evidence that sexual harassment was widespread in the Police Department; dozens of police officers and administrators had acknowledged or complained that women in the department were often subjected to physical and verbal harassment. Along with many of their female colleagues, Lanier and Johnson shared a belief that MPDC officials did not regard sexual harassment as a serious problem and that they rarely enforced sexual-harassment regulations or followed up on complaints. Lanier and

Johnson brought a lawsuit against the city, stating that the department showed indifference to their right to work in an atmosphere free of sexual harassment. The lawsuit was settled out of court, and the two officers were awarded $75,000 each. In addition, as their lawyer explained to Martin Weil for the *Washington Post* (January 8, 1997), the Police Department agreed to provide additional training concerning sexual harassment to all its employees and resolved to make clear to all of them that such behavior would not be tolerated.

In January 1999 Lanier was promoted to captain and assigned again to the Sixth District, where she served as assistant district commander. Later that year she again rose in the department, gaining the title of inspector; she was placed in charge of the Major Narcotics Branch and the Gang Crime and Vehicular Homicide Units in the Special Services Bureau.

In 2000 Lanier was promoted to commander in charge of the Fourth District, perhaps the most diverse and populous of the city's seven police districts. The district was the only one in the city in which crime rates had increased during 1999; moreover, four of the officers on duty there had been arrested for criminal charges ranging from burglary to armed robbery. Many of the district's problems were attributed to a lack of leadership and excessive turnover among those in command of law enforcement; prior to Lanier's becoming commander in charge, the Fourth District had had three commanders in succession in two years. In her new post Lanier was credited with introducing "precision control teams," whereby, based on data analyses indicating in which places and at what times criminals were most apt to strike, extra officers were stationed in crime hotspots. With additional officers assigned preemptively to Fourth District neighborhoods that were potentially at risk, the number of crimes in those parts of the city dropped. As paraphrased by David Nakamura and Allison Klein in the *Washington Post* (November 21, 2006), Leopold Wilburn, a social activist who lived in the district, said that Lanier "developed a reputation as someone willing to listen to residents and incorporate their ideas." Wilburn and others thus distinguished her from her predecessors, whom they criticized as merely uniformed bureaucrats who had no concern with the well-being of district residents.

In 2002 Lanier was again promoted, to commanding officer of the MPDC's Special Operations Division (SOD), where she managed the Emergency Response Team; Aviation and Harbor Units; Horse Mounted and Canine Units; Special Events/Dignitary Protection Branch; and Civil Disturbance Units. During her tenure as SOD commander, Lanier set up the Police Department's Homeland-Security/Counter Terrorism Branch and created a department-wide chemical, biological, and radiological response unit known as the Special Threat Action Team. Lanier also spearheaded a campaign to enlist Washington, D.C.–area businesses to help law-enforcement agencies. As part of a renewed terrorism-prevention initiative, the MPDC set up a dedicated telephone line that businesses could use to report suspicious purchases, requests, or activities. Lanier told reporters that the police were particularly interested in places where boats were sold or serviced, marinas, parking garages, and special-events sites.

In April 2006 Lanier was named the commanding officer of the Office of Homeland Security & Counter-Terrorism (OHSCT), an arm of the office of the chief of police. As head of OHSCT Lanier played a major role in developing and implementing counterterrorism strategies for all units within the MPDC. Among the many colleagues impressed by her management skills and leadership abilities were Joseph Persichini Jr., assistant director of the Washington Field Office of the FBI, who told Allison Klein and Sara Horowitz for the *Washington Post* (November 21, 2006), "Cathy just epitomizes the collaborative spirit."

Meanwhile, Lanier had been continuing her education, and by her own account, the degrees that she earned while working full-time and raising her son are a source of great personal pride. Lanier received a bachelor's degree in criminal-justice studies from the University of the District of Columbia, bachelor's and master's degrees in management from Johns Hopkins University, in Baltimore, Maryland, and a master's degree in national security studies from the Naval Postgraduate School (NPS) in Monterey, California. Her NPS thesis was titled "Preventing Terror Attacks in the Homeland: A New Mission for State and Local Police." She also graduated from the FBI's National Academy, the Federal Drug Enforcement Agency's Drug Unit Commanders Academy, and took courses at the John F. Kennedy School of Government at Harvard University. In addition, she is certified at the technician level in Hazardous Materials Operations.

After Adrian Fenty won the Washington mayoral election, in November 2006, he announced that he was nominating Lanier for the position of police chief, to replace Charles H. Ramsey, who would step down at the end of the year. During his mayoral campaign Fenty had criticized Ramsey, echoing the complaints of many Washingtonians, especially those living in the city's poorest neighborhoods, that he had focused too much on federal security issues and too little on street crime. Lanier has said that Fenty's decision to nominate her took her completely by surprise; rank-and-file officers were "stunned" by Fenty's choice, as Officer Kristopher Baumann, the chairman of the MPDC police union, told Nakamura and Klein. The union's leaders, who had feuded with Ramsey, had hoped that Fenty would select someone with an independent point of view, preferably a person from outside the department, and certainly not a protégé of Ramsey's, as Lanier had been; indeed, Ramsey had been responsible for many of Lanier's promotions. Phil Mendelson, the chairman of the Judiciary Committee of the Council of the District of Columbia (whose members are elected by city residents), approved of Fenty's choice but said that he would have preferred a broader search for a successor to Ramsey, who had been selected in 1998 from more than 50 applicants nationwide; but Mendelson also noted to Nakamura and Klein that "hiring from within means it's more likely that changes will be in line with current improvements rather than just doing things differently, which is more likely with an outsider." During a November 20, 2006 press conference, as reported by Gary Emerling for the *Washington Post* (November 21, 2006), Fenty defended his decision, saying, "We needed someone who knows the department, someone who knows community policing, someone who knows how to protect the interests in the District of Columbia, which are unique to this city. There's only one person who I would recommend for this position, and that's Cathy Lanier." He also said, according to Nakamura and Klein, "It's indisputable that the police department [under Ramsey] has made objective improvement[s], but it's always appropriate to bring in someone who has a new set of eyes and brings new ways to attack the problems. Cathy Lanier will do that without losing the good initiatives of Chief Ramsey." In addition, he said, as quoted by the Associated Press (November 20, 2006), that Lanier "has superbly served the residents of the District of Columbia for nearly two decades and brings a unique understanding of both the importance of community policing and the expertise in homeland security that the top law enforcement officer of the nation's capital must possess."

Although crime rates decreased during the eight years that Ramsey was chief, the department's performance was a source of concern for voters in 2006 elections, in part because the police were still dogged by the reputation they got in the 1990s, when officers were criticized for using excessive force, botching investigations, and engaging in criminal activity. "It does not matter what the crime statistics are if people feel afraid," Lanier explained at a news conference, as reported by Nakamura and Klein. Lanier believes that making the force more efficient will be more effective than increasing its size, as some have suggested. (Still, according to Allison Klein's January 6, 2007 *Washington Post* article, the department plans to hire 100 new officers.) Lanier has said repeatedly that she does not anticipate making any drastic changes. To increase the visibility of the MPDC, she plans to make foot and bicycle patrols more common than assignments of officers in storefronts and substations. She has said that she will retain a controversial Ramsey initiative requiring patrol cars in certain areas to flash their white lights at all times to announce their presence; though some residents find that measure intrusive, and it limits the MPDC's ability to make covert arrests, Lanier believes that it deters potential criminals from acting. She has also started to alter the top-down problem-solving structure on which the MPDC has relied, on the grounds that it is not fruitful and hurts officers' morale. In one change, she has given more authority to commanders and beat officers to customize crime-fighting programs and to include community members in decision-making. "With community policing, there is not one template you can implement across the city," Lanier said in an interview with Allison Klein for the *Washington Post* (November 27, 2006). "Every neighborhood is different." She also plans to sponsor research at local universities to investigate past and potential effects of police procedures. "I want us to be innovative," she told Klein. "I want us to change the way we do this to mirror a successful business." She has also expressed her determination to make MPDC changes and protocols known to the public.

In another effort to increase efficiency, Lanier has ordered investigations of the use of omnidirectional microphones, which other cities use to pinpoint the location of gunfire. The so-called "shot spotters" pick up the distinctive sound of gunfire and transmit radio signals to police, thus drastically reducing response time. Lanier also intends to maintain a system, introduced by Ramsey, that relies on cameras at fixed locations to create records of cars whose drivers break traffic laws. By identifying such drivers, the system potentially could serve as a deterrent to speeding or going through red lights. The automated system has enabled the Police Department to issue more tickets and has generated more than $38 million in fines since 1999, but it has not yet had a measurable effect on the number of traffic fatalities. Lanier also applauded recently passed legislation that will permit Washington's police chief to have neighborhood surveillance cameras installed. The cameras would be placed in high-risk areas and not monitored in real time; rather, recorded images would be reviewed only after a crime was reported in the area. Lanier has called the cameras a "very good use of technology," according to Matthew Cella in the *Washington Times* (December 6, 2006).

Lanier is aware of the difficulties she may face as a white chief of police in a city that has a history of racial polarization and whose population of more than a half-million people is about 60 percent black. "I've been feeling a bit frustrated, because I thought more people would be interested in the new police chief's policies and crime-fighting strategies than in her race and hairstyle," she told Courtland Milloy. Referring to her race, she told Klein and Horowitz, "If people get to know you, I think it's not a big deal. If I treat everybody the way a chief should treat them, there won't be a problem."

Lanier, whose annual salary is $175,000, lives in a house on six acres in Anne Arundel County, Maryland, with her son, her mother, and her boyfriend, an MPDC police sergeant. As of early 2007 she was house-hunting, because, as Washington's police chief, she is required to live within city limits. According to many sources in the fall of 2007, the Fox network was planning to create a TV series about her life.

Lantos, Tom

Feb. 1, 1928– U.S. representative from California (Democrat)

Address: 2413 Rayburn House Office Bldg., Washington, DC 20515

"I'm only at the midpoint of my political career," the 79-year-old U.S. congressman Tom Lantos told Edward Epstein for the *San Francisco Chronicle* (January 1, 2007). A Democrat from California, Lantos—the only Holocaust survivor ever to hold a seat in the U.S. Congress—is currently serving his 14th term in the House of Representatives. He is a former professor of economics whose political career included only senior-advisory roles for various members of the U.S. Senate, until he became the only Democrat in the 1980 congressional elections to beat an incumbent Republican who was not facing indictment; he thus claimed the seat representing California's 11th Congressional District, encompassing southwest San Francisco County and northern San Mateo County. Lantos's first year in Congress was marked by open hostility from a Republican-dominated Senate after Ronald Reagan's landslide victory in the 1980 presidential race. Since then, the Hungarian-born Lantos has won respect for his strong advocacy of human rights and careful handling of foreign affairs. Lantos, the current chairman of the House Committee on Foreign Affairs, on which he has served for 26 years, has also furthered his presence on the world stage as the founder of the Congressional Human Rights Caucus. Domestically, Lantos has backed liberal causes, supporting, for example, the rights of gays to marry and the use of marijuana for medical purposes, and he is strongly pro-choice. Although the congressman has recently received a wave a criticism for changing his stance on the Iraq war (he initially voted to authorize the war and now stands adamantly against it), Lantos is widely respected on both sides of the political fence and has continued to dominate general elections, receiving an average of about 75 percent of the vote. Lantos is "the last lion," Representative Adam Schiff, a fellow California Democrat, said to Epstein. "That's in the sense that he brings historical understanding, has earned immense respect, and has a level of gravitas second to none."

The only child of Pal Lantos, a banker, and Anna Lantos, a high-school English teacher, Thomas Peter Lantos was born on February 1, 1928 in Budapest, Hungary. He came from a Jewish family with a tradition of teaching: one of his uncles was a professor at the University of Budapest, and his grandmother was a former principal of a local gymnasium (high school). Although most of the Jews in Hungary, including Lantos's family, were assimilated and deeply patriotic, the end of World War I brought new restrictions upon Hungarian Jews, which included the passing of a law in 1923 that prohibited the percentage of Jews entering universities from exceeding the proportion of them in the overall Hungarian population. In 1933, when Lantos was five years old, Adolf Hitler came to power in Germany, increasing the anti-Semitic sentiment in the region. A Nazi movement had begun within Hungary, and Lantos and his friends feared the Hungarian Nazis' emblem, the arrow cross, even more than the swastika. Walking to and from school, Lantos often saw fellow Jews being attacked and beaten. Lantos, a voracious reader even as a young boy, has said that one of his most vivid childhood memories is of buying his first newspaper in 1938, when he was 10 years old; walking home from school, he read the headline "Hitler Marches into Austria." In James Moll's Academy Award–winning 1998 documentary, *The Last Days*, in which Lantos was one of five Holocaust survivors featured, he recalled, as quoted on his official Web site, "I sensed that this moment, this event would have a tremendous impact on the lives of Hungarian Jews, my family and myself."

When Hitler invaded the Soviet Union, in the summer of 1941, he demanded that both Hungary and Romania provide troops to fight alongside the Germans against the Soviets. Both countries responded eagerly, largely for the sake of acquiring territory in the Carpathian Basin (Hitler had divided the area known as Transylvania between Hungary and Romania in 1940; the area had been Hungarian prior to World War I, but Romania had taken all of it by war's end). Hungarian Jews, forbidden to serve in the army, were forced to do menial and dangerous work on the Soviet front, which included walking through minefields to clear the way for troops. All the young men in Lantos's extended family were made to perform such tasks, and all of them perished, as he recalled in *The Last Days*: Back in Hungary, many Jews were forced out of their jobs and businesses. On March 19, 1944, when Lantos was 16, German troops occupied Hungary. Afterward, it became mandatory for every Jew to wear a yellow Star of David.

While most Hungarian Jews outside Budapest were sent to the infamous concentration camp at Auschwitz, many Jewish young men in the capital city were dispatched to forced-labor camps. Lantos was sent to a camp in Szob, a small village about 40 miles north of Budapest. His parents were later deported from Budapest; his father survived the war, but Lantos never found out what happened to his mother. On one occasion Lantos escaped from the work camp but was caught and severely beaten. His second attempt succeeded: he made contact with the Hungarian Underground, led by Raoul Wallenberg, which provided escapees with food, shelter, medical supplies, and fake passports. Staying in what was called a safe house, Lantos found himself among more than 50 people who shared a room that would normally have been occupied by four or five. Lantos, whose blond hair and blue eyes allowed him to pass for an Aryan, was sent around Budapest in a military cadet's uniform to deliver bread, medicine, and other supplies to various safe houses. Despite his looks, he was continually at risk of being discovered by German or Hungarian Nazi officers, who often identified Jewish men by ordering them to lower their pants (only Jews were circumcised) and shot them to death on the spot—the fate of some of Lantos's friends. Lantos recounted in the documentary, "There was one occasion when the people in the protected house next to the one I was living in were ordered by a group of Nazi military or police—Hungarian or German—down to the Danube. They were machine-gunned or shot one by one and their bodies pushed into the river. It was as simple as that. The 'protected' house only provided protection when the good Lord and good fortune were with you."

On May 8, 1945, with the German surrender to Allied forces, World War II officially ended in Europe, and Hungary became a Communist satellite state of the Soviet Union. In the fall of 1946, Lantos began studies at the University of Budapest. He intended to study medicine, until, as he recalled to Jon Marmor for the *University of Washington Alumni Magazine* (September 1999, on-line), "they brought in the first corpse, and I was through with medical school." Then, in the summer of 1947, he was awarded a Hillel Foundation scholarship to study in the United States, based on an essay he had written about U.S. president Franklin D. Roosevelt.

Recalling his arrival at the University of Washington, in Seattle, Lantos said to Marmor, "Here I was, coming out of the Holocaust, starvation, poverty, persecution, the worst horror of mankind, and I had landed in this bucolic setting. People were friendly and wonderful, there was all the food I could eat. I couldn't believe my eyes." He worked part-time jobs to support himself and to send chocolate and other items to friends and family in Hungary. He even persuaded officials at the university to hire him to teach Hungarian, which he began doing at 19. (At the time the school was one of only two universities in the nation to offer instruction in Hungarian.) Lantos received his bachelor's degree in 1949 and master's degree in 1950 from the University of Washington—both in economics. In June 1950 he married his childhood sweetheart and fellow Holocaust survivor Annette Tillemann (a cousin of the actresses Eva and Zsa Zsa Gabor). The couple moved to the San Francisco Bay Area, where Lantos pursued graduate studies at the University of California, Berkeley. Three years later he received his doctorate in economics and began teaching the subject at San Francisco State University, where he would remain for the next 30 years.

While teaching, Lantos chaired the Millbrae, California, board of education; developed his own public-television program on international affairs; served as an economic consultant to a number of businesses; and was actively involved in politics—his real love. In 1978 he took a year's leave of absence from San Francisco State to work as a foreign-policy adviser to Democratic senator Joseph Biden of Delaware. Then, on November 18, 1978, California's 11th Congressional District representative, the Democrat Leo Ryan, was killed at an airstrip in Guyana; he had gone there in search of former constituents who had moved to Jonestown—the site of the camp founded by the cult leader Jim Jones, who later died amidst the murders and suicides of more than 900 of his followers. In the 1980 race for the congressional seat, after running unopposed in the Democratic primary, the inexperienced Lantos defied odds to defeat the incumbent Republican, William Royer, who had won the special election after Ryan's death. Lantos won his seat with the lowest plurality of any member of Congress elected that year, winning 46 percent to Royer's 43 percent. He was sworn in on January 5, 1981.

One of Lantos's first acts as a congressman was to initiate legislation to make Raoul Wallenberg an honorary citizen of the United States. Once President Reagan signed the legislation, in October 1981, Wallenberg became only the second foreigner ever to receive the honor. (British prime minister Winston Churchill was the first.) In 1983 Lantos and the Republican John Edward Porter of Illinois founded the Congressional Human Rights Caucus. Over the years, the group has become the leading voice in Congress on human-rights issues. The group's activities have included speaking out for Christians seeking to practice their faith in Saudi Arabia and Sudan, fighting for Tibetans' right to retain their culture and religion, and advocating for other oppressed minorities worldwide. In 1987 the caucus became the first official U.S. entity to host the Dalai Lama, when the spiritual leader proposed a "Five Point Peace Plan" to Congress. During much of the 1980s, Lantos helped lead the Human Rights Caucus in expressing opposition to Communist regimes as well as other dictatorships. For example, in 1988 he called for economic sanctions against Iraq in response to that country's gassing of the Kurds. In 1990, as communism was facing its demise (Germany reunified in October 1990, and the Soviet Union collapsed in December 1991), he became the first U.S. official since 1946 to visit Albania. He sponsored the first U.S. aid to the newly democratic countries of Eastern Europe and became a strong advocate for NATO expansion.

Long an outspoken opponent of political fraud and of the misuse of campaign funds, Lantos explained to Edvins Beitiks for the *San Francisco Examiner* (June 1, 2000), "I'm one of those in Congress who thinks campaign fund-raising is getting out of hand. I favor shortening campaigns, both presidential and congressional." In 1989 and 1990 he conducted hearings to investigate allegations of misconduct on the part of HUD (the Department of Housing and Urban Development) secretary Samuel Pierce. In 1991 Lantos became the center of controversy himself, during the buildup to the Persian Gulf War, which he strongly supported. That U.S.-led war followed Iraq's invasion of neighboring Kuwait; the Human Rights Caucus had hosted a number of hearings at which a Kuwaiti woman identified only as Nurse Nayirah brought to light the atrocities committed by Iraqi soldiers. Support in Congress for the invasion of Iraq increased as a result of her testimony. After the war it was found that Nurse Nayirah was in fact the 15-year-old daughter of the Kuwaiti ambassador to the United States—one of the perpetrators of a hoax contrived by a public-relations firm on behalf of the Kuwaiti government to generate U.S. support for an invasion. It was also revealed that the firm, Hill & Knowlton, had provided free office space to the Congressional Human Rights Foundation, an affiliate of the Human Rights Caucus. Lantos had been reported as saying that Nayirah's last name must remain classified, or her family in Kuwait might face reprisals from Iraqi occupiers. With many believing that he was a participant in the hoax, Lantos continues to receive criticism for the episode.

After the 1992 general election, in which he won 69 percent of the vote, Lantos took the seat representing California's 12th Congressional District. (He had made the move from the 11th district due to redistricting that followed the U.S. census of 1990.) For much of the 1990s, Lantos continued to champion human-rights issues, with many of the conflicts on which he focused mirroring his own experiences in the Holocaust. That was particularly true of the war in the former Yugoslavia, waged from 1992 to 1995, in which Bosnian Serbs carried out a campaign of so-called ethnic cleansing against that country's ethnic Serbs and Croats (most of whom were Muslims). Lantos advocated a more active American role in Bosnia and in other parts of the former Yugoslavia. He sharply criticized China for its human-rights violations and opposed the normalizing of U.S. trade relations with China. Over the years he had also been quick to criticize what he perceived as anti-Semitic behavior. For example, in 1996, after the controversial Nation of Islam leader Louis Farrakhan made a number of anti-Semitic remarks and met with the leaders of Libya, Iran, and Iraq in what the press called a "thugfest tour," Lantos helped introduce a resolution to censure Farrakhan. Lantos's action brought disapproval from members of the Congressional Black Caucus, but he did not retreat from his position.

At the outset of the new millennium, Lantos continued supporting sanctions against Iraq, which had been imposed in the aftermath of the Persian Gulf War; Democrats in the House remained divided over the issue, with many arguing that sanctions were contributing unduly to poverty and disease in Iraq. Lantos and fellow pro-sanction representatives, however, maintained that Iraq's leader, Saddam Hussein, was withholding available food and medicine as a means of garnering sympathy and ending sanctions. Lantos also cited Iraq's anti-Jewish, anti-Israel, and anti-Western policies as a justification for sanctions. His stance on China remained firm: he sponsored a resolution in September 2000 urging (unsuccessfully) that Beijing not be selected as the site of the 2008 Olympics. Lantos came out against U.S. participation in the United Nations conference on racism in Durban, South Africa, arguing that it would perpetuate anti-Semitism. As quoted in the *Almanac of American Politics*, Lantos called the conference "another forum for Israel-bashing and for the most extreme form of antisemitism to gain global notoriety." In particular, he felt that the conference had strayed away from its ostensible purpose—that of addressing past and present racial discrimination on a global level—by singling out Israel for its alleged persecution of the Palestinians in the occupied regions. In April 2002 Lantos and Majority Whip Tom DeLay co-sponsored a resolution backing Israel's military response to Palestinian suicide attacks on Israeli civilians; the measure passed by a vote of 352–21 in May of that year. Lantos also worked with the former House International Relations Committee chairman, Henry Hyde, to fight AIDS around the world, directing $1.3 billion toward that purpose in December 2001 and, in May

2003, $3 billion of the $15 billion pledged by President George W. Bush. Lantos's other acts included a meeting with Muammar Al-Qaddafi in January 2004, after which Lantos announced that the Libyan leader had renounced all forms of mass destruction. Lantos was also among the first members of Congress to visit the country since the 1960s. In October 2004 he persuaded Congress to pass a bill that suspended aid to Ethiopia and Eritrea until they settled their border dispute. Although Eritrea had gained independence from Ethiopia in 1993, after a 30-year guerrilla war, no border was agreed upon, and a full-scale war between the two countries took place from 1998 to 2000, claiming tens of thousands of lives. Even after a peace agreement was reached, in 2000, the two countries remained in conflict.

On April 28, 2006 Lantos and four other members of Congress were arrested after blocking the entrance to the Sudanese Embassy in Washington, D.C. Their action was a protest against the Sudanese government's sponsorship of genocide against non-Arab citizens in the region of Darfur, where an estimated 200,000 to 450,000 people have perished. Lantos said, as quoted by Jim Doyle in the *San Francisco Chronicle* (April 28, 2006), "We have been calling on the civilized world to stand up and to say, 'Enough.' The slaughter of the people of Darfur must end." The Bush administration denounced a trip that Lantos made with House Speaker Nancy Pelosi, Democrat of California, to Syria, in an attempt to improve relations with the country. Since 2003 U.S.-Syrian relations have been marked by open hostility, especially regarding U.S. foreign policy in the Middle East. The U.S., for its part, has accused Syria of allowing terrorists safe passage into neighboring Iraq and has criticized its involvement in Lebanese politics. Many political observers called the Pelosi-Lantos visit ill-timed, arguing that it allowed Syria to exploit the lack of unified resolve in Washington over the issue of Iraq. As quoted in a transcript from *Lou Dobbs Tonight* (April 12, 2007), Lantos called the administration's intense criticism of the visit "particularly pathetic," noting that Republican colleagues had joined Lantos and Pelosi on their Damascus trip and adding: "So if this is not hypocrisy, I don't know what is." In addition, Lantos has received a firestorm of criticism from many of his House peers for doing an about-face on the current war in Iraq, four years after he voted to authorize the war. He claimed that his initial support for the war was based on the intelligence available at the time, which indicated that Saddam Hussein had obtained weapons of mass destruction. After learning that the intelligence was false, he changed his stance. About his current stance, Lantos explained to Edward Carpenter for the *San Francisco Examiner* (March 19, 2007), "The dream of erecting a prosperous and peaceful democracy in Iraq won't happen in my lifetime or yours." He added, "You can't unscramble an omelet." Lantos, along with House Speaker Pelosi and other members of Congress, drafted a bill that would have funded overseas military operations ($124 billion in emergency spending and an estimated $100 billion to continue the wars in Iraq and Afghanistan), with the proviso that the president would begin withdrawing troops from Iraq as early as July 2007. Bush vetoed the bill. Lantos has denounced that veto and continues to advocate withdrawal of troops from Iraq.

Lantos has a head of white hair that "belies a mind filled with intellectual firecrackers," as described by Edvins Beitiks, and he speaks with what Edward Epstein called "a charmingly accented English that younger generations on Capitol Hill swear sounds like Count von Count on *Sesame Street*." He maintains his youthful vigor by swimming each morning. Lantos and his wife have two grown daughters, Annette and Katrina, and 17 grandchildren. The congressman speaks five languages and dedicates six hours daily to reading books and magazines. "Really the only reason I wouldn't enjoy dropping dead tomorrow is because there's still so many books I want to read," Lantos told Janine Zacharia for the *Jewish Bulletin News* (April 20, 2001). A secular Jew, Lantos is nonetheless deeply proud of his heritage; his office is filled with lithographs of scenes from Jerusalem and colorful Israeli-made pottery. Since January 2007 Lantos has been hard at work in his new role as chairman of the House Committee on Foreign Affairs. His main areas of focus include the ongoing Darfur conflict, the war on terrorism, and the nation's policy on combating AIDS in Africa. Lantos said to Epstein: "In a sense my whole life has been a preparation for this job."

Lanzone, Jim

1971– CEO of Ask.com

Address: Ask.com, 555 12th St., Suite 500,
Oakland, CA 94607

"We are like a cockroach—for a long time, with a sub-par product, we survived," Jim Lanzone, the chief executive officer of Ask.com, told Richard Waters for the London *Financial Times* (August 1, 2006). "We're still in the game." The "sub-par" product to which he referred was Ask.com's earlier incarnation, the search engine AskJeeves.com. Lanzone joined Ask Jeeves Inc. in 2001, when it ac-

Jim Lanzone

quired the assets of eTour, the company he had cofounded several years earlier. Launched in 1997 by David Warthen and Garrett Gruener, AskJeeves.com took the name of a character created by the 20th-century British comic writer P. G. Wodehouse: the supremely efficient, seemingly omniscient valet Jeeves. Unlike other search engines, AskJeeves.com "encouraged users to type in questions rather than simply entering keywords," as Verne Kopytoff explained in the *San Francisco Chronicle* (July 19, 2004). AskJeeves, as Lanzone told Kate Bulkley for the London *Guardian* (October 5, 2006), was "editorial based, with editors literally coming up with answers and creating a 'technology' that would match those answers to certain questions." The downside was that "frustratingly, [the user] would also get back a list of more questions." Thus, as Lanzone put it to Bulkley, AskJeeves "over-promised and under-delivered," while its rivals "weren't promising anything and [were] over-delivering." The solution to that problem came shortly after Lanzone's arrival at Ask Jeeves, when the firm acquired an innovative new search system called Teoma. In 2005 AskJeeves itself was acquired by the Internet conglomerate IAC/InteractiveCorp.; it was rechristened Ask.com in 2006. Although, in terms of market share, it is well behind Google, Yahoo!, and MSN (the Microsoft Network), Ask.com is currently the nation's fastest-growing search engine, and as Lanzone told Justin Ewers for *U.S. News & World Report* (November 20, 2006), it is "the seventh-largest Web property . . . , ahead of Amazon and the *New York Times.*" "We have over 25 million people a month in the U.S. and 40 million worldwide using Ask," he said. In a review of Ask.com for *PC Magazine* (December 26, 2006), Davis D. Janowski wrote, "Jeeves has retired, but his employer's search service looks better than ever. . . . Extras such as the Smart Answers feature, which tries to place related and authoritative results above other search returns, put Ask ahead of rivals for anyone looking for answers to specific questions or doing research. Smart Answers content often meshed well with what I was looking for. And a useful binocular view produces a pop-up preview of a results page before you go to it. A notable new mapping feature lets you easily generate either walking or driving directions—a capability unique among the Web search/mapping players. And the well-organized image search does a good job of associating similar images, sometimes providing a wider range of results on its first few pages than Google. There's a lot more to discover on Ask.com, and the new format is worth a look."

James Lanzone was born in California in 1971 to Robert J. Lanzone, a lawyer, and Barbara Lanzone, a teacher. He grew up in San Carlos, California, a few miles from San Francisco Bay, where he attended St. Charles Elementary School, a Catholic parish school. In 1985 he enrolled at Junipero Serra High School, a boys-only Catholic school in nearby San Mateo, where his mother was then teaching English. He was a member of the school basketball team and, in his senior year, served as editor of the *Friar*, the student newspaper. In a piece written for an article in the Serra publication *Traditions* (Summer 2006, on-line), he stated, "The real world is very competitive, and Serra taught me how to compete, in sports and academics. That's carried through to running a business, where winning usually depends more on hard work and team work than just being the smartest guy in the room." After his graduation, in 1989, Lanzone enrolled at the University of California at Los Angeles (UCLA), where he received a B.A. degree. He then entered a dual-degree program, in law and business, at Emory University, in Atlanta, Georgia. As a graduate student he developed an interest in Internet technologies and startup ventures. While working toward his M.B.A. and J.D. degrees, which he earned in 1998, Lanzone worked briefly in product marketing and management for KnowX.com (a division of the Thomson Corp.), an Internet service that specialized in searches of public records.

In 1997 Lanzone teamed up with his Emory business-school classmate Roger Barnette to set up an innovative Web-browsing guide called ProLaunch, with the help of a $100,000 investment from a third party. Adopting the slogan "Surf without searching," ProLaunch—which subsequently adopted another name, eTour—gathered information about the interests and preferences of frequent Internet browsers (Web surfers) and used that data to direct them to other creative, quirky Web sites in such categories as sports, entertainment, and shopping. ETour quickly gained a reputation as a very useful virtual tour guide of the Web. Within a few years Lanzone and his partner had raised over $40 million in venture capital and expanded their staff to nearly 150 employees. As eTour's president and chief marketing officer, Lanzone acquired revenue-generating ads placed by the Ralston Purina Co., Mercedes-Benz, and General Electric, among other corporate clients. ETour was named the Most Addictive Web Site of 1999 by the *Industry Standard*, an on-line news magazine, and in 2000 it was recognized as both the "coolest site" in the Web Tool category, at the Fifth Annual Cool Site of the Year Awards ceremony, and the Useful Best of Breed, by *Entertainment Weekly*. That year eTour had more than 2.5 million registered users and attracted an average of 15,000 new registrants every day. But in the wake of the dramatic collapse of the dot-com industry, eTour's fortunes soon took a sharp turn for the worse. With revenues shrinking, eTour was forced to lay off many workers, and Barnette resigned as chief executive officer. Lanzone tried in vain to revive the company by selling its proprietary search technology to other Web sites. In May 2001 the Emeryville, California–based Ask Jeeves Inc. acquired eTour's assets, among them what Tiffany Kary, writing for CNET News.com (May 22, 2001), described as "a proprietary direct e-mail marketing technology with 2.2 million newsletter subscribers" and "a strong advertiser base." A few months later Lanzone became Ask Jeeves's vice president of product management.

In the fall of 2001, in an attempt to improve AskJeeves.com, Ask Jeeves Inc. purchased, for $4.4 million, the New Jersey–based company Teoma Technologies and its unique Internet search software. Teoma was the creation of half a dozen computer scientists, among them Apostolos Gerasoulis. (Gerasoulis served as a vice president of research and development for AskJeeves in 2001–02, during a leave of absence from Rutgers University, where he was a professor of computer science.) Teoma began as a research project that compared the contents of two technical papers, published in 1998, that offered contrasting approaches to Web searches. One paper, "The Anatomy of a Large-Scale Hypertextual Web Search Engine," written by Larry Page and Sergey Brin, Stanford University graduate students who later founded Google, argued that the best search results could be obtained by tabulating links to the most popular Web sites. Their PageRank algorithm, according to a writer for the *Economist* (June 17, 2006), "treated the links to web pages as votes conferring authority, just as the best academic papers tend to get the most citations in other research." The second paper, "Authoritative Sources in a Hyperlinked Environment," written by the IBM researcher Jon Kleinberg, proposed that more-focused and accurate search results would be obtained through a Web site analysis based on concepts, rather than the frequency of "hits." Its premise was that regarding Web sites, popularity among the general public did not necessarily correlate with correctness, but popularity among experts did. Though many considered Kleinberg's "concept-grouping" method the superior algorithm, it was heavily dependent on computing power, which significantly slowed the search process and thus made it impractical for the average user. Gerasoulis and his colleagues theorized that if the algorithm were modified to permit slightly less accuracy, Kleinberg's search process would be much speedier. "If you made [Web results] 95% accurate instead of 100% percent, it was feasible to get results in less than a second," he told Kevin Maney for *USA Today* (October 4, 2006). With alterations to Kleinberg's methods, Gerasoulis and his team created Teoma. As Kaizad Gotla, an Internet analyst with Nielsen/NetRatings, told Chris Gaither for the *Houston Chronicle* (December 25, 2004), "While Google, Yahoo, and MSN give you the most popular pages, Ask Jeeves gives you the most credible ones."

Armed with Teoma technology, AskJeeves formed several partnerships to bolster its position in the increasingly crowded and swiftly evolving search-engine market. In 2002 the company negotiated a deal that permitted Google to place sponsored links valued at $100 million on the Ask framework. Two years later Lanzone, who by then had become AskJeeves's senior vice president of search properties, signed an agreement whereby CitySearch, a specialized local-search database, agreed to license its local dining and merchant information in exchange for its share of advertising revenue. "It's our technology and their data," Lanzone told Pete Barlas for *Investor's Business Daily* (September 21, 2004). "They, for example, have eight years of restaurant reviews." Also in 2004 AskJeeves introduced a personalized search service called MyJeeves, which allowed users to store Web pages and mark them with personalized notes. Chris Sherman, an expert on search engines who heads the consulting firm Searchwise, told Gaither that although AskJeeves had a "very small share" of the market, "a very dedicated group of people" was using it.

In 2005 the Internet conglomerate IAC/InteractiveCorp., headed by the media mogul Barry Diller, acquired Ask Jeeves Inc. for $1.85 billion, making it a featured component of IAC's newly branded venture IAC Search & Media. In early 2006 AskJeeves changed its name to Ask.com. "We were dealing with a 10-year-old brand with Jeeves that was closely identified with the dot-com boom," Lanzone told Justin Ewers. "The brand had baggage in terms of being known for having a poor product in the late '90s [and] as a pure Q&A site," he said, characterizing the rechristening as "a way to take the shackles off." Soon afterward, following the departure of Steve Berkowitz, the CEO of IAC Search & Media, Lanzone was promoted to chief executive of Ask.com. Among his first actions, he oversaw a redesign of Ask.com's home page; upon opening Ask.com, the viewer would now see, prominently displayed, a so-called palette of search tools. "We have some great tools, and we wanted to move them more up-front for the user," Lanzone told Gord Hotchkiss for *MediaPost Publications* (May 18, 2006, on-line). "We didn't want to hide them with tabs, which no one clicks on. With the palette, it's right there, waiting for them." Ask.com also introduced a feature called "zoom," which enables users to expand or narrow their searches and, as the Ask.com site explains, offers "related names"—"a list of names that are conceptually tied to topic options within the 'Narrow Your Search' and 'Expand Your Search' lists."

Lanzone has said that he wants Ask.com to grow gradually. "We don't want to climb Everest right now," he told Hotchkiss. "We're not planning on knocking out Google. Our goal is to take our 20 million users, who are currently using us twice a month, and bump that up to four times a month. That doubles our market share." During an interview with the blogwriter John Battelle for battellemedia.com, Lanzone said, "Remember that a 1 point gain in market share for Ask (from 6% to 7% share) is a 15% increase in share of queries. The way our business works, that's also likely a 15% increase in share of revenue. So just one point of share has an incredible impact on our business growth, and I think people forget that because they're comparing us to Google, rather than to our own growth curve." "It's not a zero-sum game," he added. He told Kate Bulkley, "[Search] is still the number one need, it's the doorway. We are going to build great doorways, not destinations. The product roadmap for us is to be able to find stuff that you're looking for faster, whether it's content, commerce or community. Our first job is to become a preferred primary search engine."

In the fall of 2006, Ask.com began to embrace some of IAC's 60 e-commerce assets, among them Ticketmaster and evite.com, an on-line invitation service (for parties and other events). In December 2006 Ask.com introduced AskCity, which offers maps and information on merchants, restaurants, and entertainment listings in several dozen localities. "There's no one single feature that catapults [AskCity] to the top, but instead the totality of features," Greg Sterling, an analyst for Sterling Market Intelligence, told Jefferson Graham for *USA Today* (December 4, 2006). "It takes local search to another level because it packages data and features together in a very user-friendly way."

In 2006 and 2007 Lanzone was a featured speaker at the Search Engine Strategies Conference and Expo, held in Milan, Italy. His wife, Shannon, a fellow graduate of the Emory University School of Law, worked as a district attorney before becoming a homemaker. The couple live in Alamo, in the San Francisco Bay Area, with their son, Asher, and two daughters, Devin and Reese.

Laws, Hubert Jr.

Nov. 10, 1939– Flutist

Address: c/o Scepterstein Records, 444 S. Flower St., Suite 1800, Los Angeles, CA 90071

"It is like speaking two languages, really—knowing two cultures. I don't want to belabor the point, but it just doesn't make much of a difference to me, playing classical music or jazz," the internationally renowned and multifaceted jazz flutist Hubert Laws Jr. told Bob Karlovits for the *Pittsburgh Press* (January 17, 1991). Over the past 40 years, Laws has explored both forms—releasing albums of straight-ahead jazz or of jazz interpretations of classical music—while also mastering pop, funk, and rhythm and blues. Described by Jon Pareles, writing for the *New York Times* (August 3, 1989), as "the leading jazz flutist of his generation" and as having "technique to spare," Laws has enjoyed popular as well as critical success: for 10 years in a row he was voted the best living American jazz flutist by the readers of *Down Beat* magazine. Upon graduating from the esteemed Juilliard School of Music, Laws recorded as a solo artist before serving as a session musician for legends as varied as Miles

Davis, Herbie Hancock, Paul McCartney, Aretha Franklin, Roberta Flack, and Leonard Bernstein, among many others. In addition, Laws, who has been nominated for Grammy Awards on three occasions, has appeared with the New York Philharmonic under Zubin Mehta; the symphony orchestras of Los Angeles, Dallas, Chicago, Cleveland, Amsterdam, Japan, Detroit; and the Stanford String Quartet. With a discography comprising 20 albums, Laws has also lent his musical talents to a variety of other projects, which include music for the bittersweet film comedy *California Suite* and scores for several other films, among them *The Wiz* and *The Color Purple*. "Most of Laws' writing has been in the jazz vernacular with strong emphasis on beautiful melodic structure, though always with the goal of emotional interaction and communication with the listener," Lauren McMinn wrote for the *Juilliard Journal* (February 2004, on-line). "For Laws, the flute is his 'voice,' and when playing with others he listens closely to 'what the other instruments have to say.'"

The second of eight children, Hubert Laws Jr. was born in the Studewood section of Houston, Texas, on November 10, 1939, into a Baptist family. His musical education came from a variety of sources, including a honky-tonk saloon, Miss Mary's Place, directly across the street from his home. At Miss Mary's, which hosted a diverse mix of live musical acts, a very young Laws often watched his grandfather perform on harmonica and his mother, Miola, play gospel music on the piano. Laws himself took up the piano when he was six years old. In elementary school he learned to play the mellophone, clarinet, and alto saxophone, and he performed with rhythm-and-blues bands at neighborhood dances in his early teens. When he entered Phillis Wheatley High School, in the early 1950s, he was exposed to jazz through the influence of his band director, Sammy Harris. Listening to the likes of Gil Evans, John Coltrane, and Miles Davis, the young musician developed an affinity for the improvisation allowed jazz musicians. Then, during his senior year, after learning that his high-school band needed a flute player, Laws gave up the other instruments and volunteered to become the band's regular flutist. He recalled to Rick Nowlin for the *Pittsburgh Post-Gazette* (December 6, 2000), "I was called to play a flute solo during the *William Tell Overture*. There's a slow movement that starts out called 'Dawn,' with [what sounded like] bird calls and stuff like that. It was a horrible rendition, and I'm glad it wasn't recorded." Laws took private flute lessons from a teacher named Clement Barone, who contributed to his understanding of classical music. He built up experience and confidence through an early solo performance with the Houston Youth Symphony and regular gigs with a Houston-area jazz group known by names including the Swingsters, the Modern Jazz Sextet, the Night Hawks, and the Crusaders.

After high school Hubert enrolled at Texas Southern University, in Houston, where he studied music for two years before going with the Crusaders—as they were known then—to Los Angeles, California, where they tried to broaden their audience. Between gigs, Laws took classes at the Los Angeles State College of Applied Arts and Sciences. He then auditioned for a chance to attend the Curtis School of Music, in Philadelphia, Pennsylvania, but was rejected. Undaunted, he next auditioned for the world-renowned Juilliard School of Music, in New York City, and was accepted there in 1960. While a scholarship covered his tuition, he met his other expenses via music performances. Speaking to a reporter for *Houston Newspages* (May 14, 1990), as quoted on his Web site, Laws recalled that in the fall of 1960, he was "down to my last fifty bucks and wondering what to do" when he received an offer to play at Sugar Ray's Lounge, in the Harlem section of the city. He added, "I haven't looked back since." Laws studied music every day, under the guidance of Julius Baker, one of the foremost American orchestral flute players of his time, then spent his nights gigging around the city. As his musical ability grew, so did his popularity, and before long he was playing with the likes of the acclaimed jazz percussionist Mongo Santamaria; the Lloyd Price Big Band; John Lewis of the Modern Jazz Quartet; and the Berkshire Festival Orchestra at Tanglewood, Massachusetts, the summer home of the Boston Symphony Orchestra.

Upon graduating from Juilliard, in 1964, with a bachelor of music degree, Laws began recording as a bandleader for Atlantic records, releasing the albums *The Laws of Jazz* (1964), *Flute By-Laws* (1965), and *Laws' Cause* (1969). *The Laws of Jazz*, which featured the future Grammy Award–winner Chick Corea, was well-received for its straight-ahead jazz tunes, with highlights that included "Miss Thing," "Bessie's Blues," and "Bimbe Blue." Each album was marked by a strong Latin sound, due in part to the influence on Laws of Santamaria's Afro-Cuban rhythms. During those years Laws also developed a reputation as a ubiquitous session player, recording with Santamaria, Clark Terry, Benny Golson, Jim Hall, and fellow flutist James Moody. In addition, he was a frequent guest performer on albums by artists including the husband/wife rhythm-and-blues duo Ashford and Simpson, the jazz trumpeter Chet Baker, and the multifaceted guitarist George Benson. On the subject of such diverse collaborations, Laws explained to the writer for *Houston Newspages*, "There are only a few openings nationwide with the symphony orchestras. You have to be practical." Despite the scarcity of such openings, in 1968 Laws became a member of the Metropolitan Opera orchestra, where he would remain officially until 1973. He kept up his guest work during that period, as heard on the title track of Quincy Jones's highly acclaimed, star-studded 1969 album *Walking in Space*. Laws later collaborated with the impresario on *Bady Heat* (1974), a soul record that included work by artists as varied as Herbie Hancock and Wah Wah Watson. Jones opened doors for Laws to work with still other artists, and the flutist found himself teaming with Aretha Franklin, Roberta Flack, Bob James, Paul Simon, and Carly Simon. "I was first call on a lot of that, especially with Quincy," Laws recounted to Rick Nowlin, adding, "Anytime he had something, he called me."

During the 1970s Laws reached his full artistic maturity, releasing a handful of innovative jazz albums under Creed Taylor's CTI label while working with the New York Philharmonic from 1971 to 1974. Since his launch of CTI, a subsidiary of A&M Records, in 1968, Taylor had been looking for a standout title in the then-new jazz-fusion genre, which the label would soon come to typify. In 1970 he realized that goal with the release of Laws's *Crying Song*. For that record Taylor had originally booked the noted jazz saxophonist Stanley Turrentine, who became unavailable at the last minute; Taylor then contacted Laws. *Crying Song* featured Laws's cover of the Beatles' "Let It Be," recorded before the Beatles' version was even released on what would be the group's 12th and final studio album. (Taylor had won the admiration of Paul McCartney, who sent the producer a demo of the soon-to-be-classic song.) *Crying Song* garnered praise for Laws's flute work, which helped initiate an entirely new sound for the instrument in the decade to come. A reviewer for *Dusty Groave America* (on-line) noted that the album was "a landmark record" and "a sublime exploration of sound and space—very different than Laws' 60s Latin sides for Atlantic, and handled in a baroque mode that has his flute drifting over a mixture of organ, piano, and rhythms augmented with strings—easy and jazzy in the same moment." Later that year Laws released his second CTI effort, *Afro-Classic*, which was also considered groundbreaking for its melding of jazz, classical, and pop-music forms. The album included covers of James Taylor's hit "Fire and Rain," two pieces by Bach, "Theme from Love Story," by Francis Lai, and a Mozart flute sonata. Thom Jurek wrote for the All Music Guide Web site, "It was *Afro-Classic* that established a new role for the flute in contemporary jazz."

For Laws *Crying Song* paved the way for more musical exploration, and in 1971 he released *Rite of Spring*, on which he recorded his interpretations of four classical-music pieces. In addition to his rendition of Stravinsky's masterpiece on the title cut, the album included takes on Debussy's "Syrinx," Fauré's "Pavane," and two movements of Bach's Brandenburg Concerto no. 3. With that admixture of classical music and jazz, Laws further expanded the boundaries of the latter genre. Reviewing the album upon its re-release in 2002, Jules Epstein noted for *Jazzmatazz* (February 2002, on-line), "*Rite of Spring* is a compelling event even thirty years after its original issue. It is not a pop recapitulation of classical music, but a portrayal of classical music that hews to the original and then remakes it without losing the composer's intent/essence." Thom Jurek, writing for the All Music Guide, disagreed, calling most of the recording "stiff, rigid, oddly intoned, and lackluster" and adding that the album was "a brave but ultimately failed experiment." Most critics, however, have ranked the album as an important work in the annals of jazz history. "The jazz brings a certain freedom to the classical," Laws explained to Mark Kanny for the *Pittsburgh Post-Gazette* (January 19, 1991). "The composer may have had definite ideas in mind, but, as a composer myself, I realize that maybe he could be liberal about how his pieces should be played. Many times composers realize that what's been written can be enhanced by the players."

While recording albums under the CTI label, Laws continued doing session work and making records under different labels, going back to Atlantic to record *Wild Flower* in 1972. Craig Jolley, writing for *All Abaut Jazz* (on-line), called that album "the best flute record I know of" and applauded its intricate ensemble work. Laws released four more records for CTI over the course of the decade: the flute-heavy *Marning Star* (1972); the live album *At Carnegie Hall* (1973); the more commercial *Chicago Theme* (1975); and most notably, *In the Beginning* (1974). The last-named record is widely considered to be Laws's masterpiece, integrating 1970s-style funk elements into his classically oriented jazz and including work by the guitarist Gene Bertoncini, the bassist Ron Carter, the drummer Steve Gadd, three string performers, and Laws's brother Ronnie on tenor saxophone. Scott Yanow declared for the All Music Guide that the recording is "one of the most rewarding of Hubert Laws' career."

After CTI went bankrupt, in 1978, Laws moved to Columbia Records to record four albums in the latter half of the 1970s—including *Romea and Juliet* (1976); *Land of Passion* (1979), an R&B-inflected album that, like other, similar records he released around that time, was generally thought to be unsuccessful; and the better-received soundtrack to the film comedy *How to Beat the High Cost of Living* (1980). In that period he also contributed to soundtracks for the films *California Suite* and *The Wiz*. In 1980 Laws released the aptly titled *Family*, which featured the work of his brothers and sisters (who have established themselves in the music world as well), including his brother Ronnie on saxophone and his siblings Johnnie, Eloise, and Debra on vocals. The versatile flutist gained residency at the Atlantic Center for the Arts, based in New Smyrna Beach, Florida, in 1983, the same year he performed with the Los Angeles Chamber Orchestra for the Montreux Festival in Switzerland.

While playing live in a number of venues, including the Playboy Jazz Festival in Los Angeles and the Cultural Center of the Philippines in Manila, Laws recorded only one more album in the 1980s (*Make It Last*, in 1983). While his absence from the studio was in part a response to the critical lambasting he had received for several of his records in the preceding years, Laws was also beginning to raise a family, and he decided to put music on hold for an indefinite period. Except for work on the soundtracks of *The Color Purple* (1985), which was produced by Quincy Jones, and the made-for-television film *Spot Marks the X* (1986), Laws stayed out of the musical limelight for about five years. As he explained to Kanny, "I've had a career, but I've never experienced anything like having children. Although it's a lot of work, a lot of dedication, it is really the most important thing. Life is about life, and things about things. Music is a thing, although it's an excellent gift to have and to appreciate."

With the dawn of a new decade, the flutist reappeared on the music scene, with the release of *My Time Will Come* (1990), on the Music Masters label. In addition to standout solo performances by Laws himself, the album featured remarkable work by the pianist John Beasley. Critics regarded the record as a return to form for Laws. The following year he joined the opera singers Kathleen Battle and Jessye Norman as a guest player on the recording *Spirituals in Concert*. Then, in 1994, he released his second effort under the Music Masters label, *Storm Then the Calm*, which featured two interpretations of Kurt Weill and Ira Gershwin's "My Ship." After touring extensively for much of the 1990s, Laws recorded a tribute album to the jazz pianist and popular-music legend Nat King Cole, entitled *Hubert Laws Remembers the Unforgettable Nat King Cole*, (1998), under RKO Records. Receiving much critical acclaim at the time of its release, it featured renditions of such Cole classics as "Tenderly," "Unforgettable," and "Mona Lisa." Laws also released a solo album, *I Love My Daddy*, in 1998 under Columbia.

In 2000 Hubert released an eclectic greatest-hits album, *The Best of Hubert Laws*, made up of recordings from 1970 to 1975 and featuring adventurous interpretations of John Coltrane's "Moment's Notice," Maria Muldaur's "Midnight at the Oasis," and Stravinsky's *Rite of Spring*. Laws returned to his Latin roots in the fall of 2002 with *Baila Cinderella*, released under his own Scepterstein label. An homage of sorts to one of his early collaborators, Mongo Santamaria, the album was a "throw back to those years when Laws was heavy into the Latin sway," as noted by Nelson Rodriguez for *Latin Beat* (August 1, 2002). He next collaborated with musicians who included the pianist Dave Budway, the guitarist Evan Marks, the bassist John Leftwich, and the drummer Ralph Penland for *Moondance* (2004), which recalled the smooth soul-jazz he had recorded with CTI in the 1970s. The record's standout songs included a version of a Van Morrison tune (the title track), the piccolo-driven "Summer of '75," and the dreamy "Bloodshot"; in addition, Herbie Hancock played acoustic piano on the midtempo number "Nighttime Daydream." John Kelman, in a review for *All About Jazz* (on-line), called the record "a step above most smooth jazz recordings" despite being "a little too conservative for a capable artist who has always seemed to represent more about potential and less about realization." In 2005 Laws honored Bach in a tribute album.

Although the flutist has been criticized for hewing to commercial trends for much of the latter half of his career, his legacy of innovation remains. Thom Jurek, acknowledging that Herbie Mann "may have been the first" to gain attention as a jazz flutist, explained, "Laws explored jazz and all the sound worlds that informed it—especially in the electric domain—with the kind of grace and innovative vision that made him a mainstay." In 2007 the Mosaic Contemporary label re-released Laws's *Afro-Classic*.

A self-described health freak, Laws stays in shape by playing tennis. He lives with his wife in Los Angeles.

Legend, John

Dec. 28, 1978– Singer; songwriter; pianist

Address: c/o Columbia Records, Sony BMG Entertainment, 550 Madison Ave., New York, NY 10022

At a time when R&B and hip-hop songs are dominated by the themes of money and sexual conquest, John Legend stands out as a singer-songwriter whose music is focused more on love and commit-

Scott Gries/Getty Images

John Legend

ment than on lust and one-night stands, characterized more by melody than by thumping beat. "It's frustrating to realize that in so much R&B these days, the songwriting just doesn't measure up," Legend told Jim Farber for the *Ventura County (California) Star* (November 16, 2006). "I can't listen to it." As sales of his records suggest, however, plenty of people are able—and willing—to listen to Legend. His 2004 debut album, *Get Lifted*, sold close to three million copies worldwide and garnered three Grammy Awards, and his 2006 follow-up, *Once Again*, was also wildly acclaimed. On both records Legend eschewed dominating trends in contemporary music, instead pursuing his own brand of piano-driven, emotion-laden songs that otherwise defied easy categorization. "I think the most important thing is that I'm making music that the people enjoy," Legend told Farai Chideya for the National Public Radio program *News & Notes* (November 20, 2006). Alicia Keys, who collaborated with Legend early in his career, attributed his success to his willingness to be different from—and perhaps more emotionally honest than—many of his peers. In an interview published in the *Manila Times* (February 3, 2006), Keys, herself a nine-time Grammy Award–winner, described her former touring mate: "He's special. . . . There's nothing more special than to see an artist playing his own music. I think a lot of people are seeking it out—the truth of it."

The singer was born John Stephens on December 28, 1978 in Springfield, Ohio, the son of Ronald Stephens, a factory worker, and Phyllis Stephens, a seamstress. The second-oldest of four children, Legend grew up with his sister and two brothers in a working-class neighborhood. His entire family was involved in the local Pentecostal church—his grandfather was the minister, his grandmother the organist, his mother the choir director, and his father a drummer for the band—and gospel became an important early influence on Legend. After begging to begin piano lessons at age four, Legend quickly joined his family on the church stage, singing in the choir at age six and writing arrangements for the 30-member adult group when he was only 11. "I don't know if you believe in destiny, but John seemed favored from the beginning . . . ," Legend's father told John Soeder for Newhouse News Service (July 26, 2005). "He always put his whole heart into singing." When he was 11 Legend also began entertaining at weddings, earning up to $100 at each ceremony for performing songs such as Stevie Wonder's "Ribbon in the Sky."

In 1989 Legend's parents divorced; they would reunite 12 years later. Legend has often credited their relationship with sparking his interest in the complexities of love and commitment, which have become the primary focus of his work. Home-schooled off and on by his mother through junior high school, Legend had skipped two grades by the time he entered Springfield North High School. Only 12 years old when he entered his freshman year, he soon earned the nickname "Doogie," as in Doogie Howser, M.D., the title character of a TV sitcom about a boy physician. "My saving grace was that I could sing," Legend told Margeaux Watson for *Entertainment Weekly* (November 10, 2006). "I killed [at] all the talent shows, but I was still a nerd." But his combination of brains and talent paid off; when Legend graduated, at 16, he was not only his class's salutatorian but also prom king and student-body president.

Legend turned down both Harvard and Georgetown Universities to attend the University of Pennsylvania (Penn) in Philadelphia, where he performed for one year with the school's nationally acclaimed a capella group Counterparts. Majoring in English with an emphasis on African-American literature, Legend spent 20 hours per week in a work-study job to help pay his tuition. On Sundays he drove to Scranton, where he worked in a musical capacity at the Bethel African Methodist Episcopalian Church, putting his salary from the church toward his schooling as well. From 1995 (his freshman year at Penn) to 2004, Legend served variously as the church's pianist, its choir director, and, ultimately, the head of its music department, leaving his post only upon the release of his first album. Meanwhile, in 1998, Legend had met the singer Lauryn Hill through a mutual friend. At the friend's urging, Legend played the piano in a private performance for Hill, who then asked him to accompany her on "Everything Is Everything," one of the hit singles from her mulitple-Grammy-Award–winning album *The Miseducation of Lauryn Hill*. Legend subsequently auditioned for a place in Hill's band but was rejected. After graduating magna cum laude from the University of Pennsylvania, in 1999, at the age of 20, Legend moved to New York City, where he was an associate consultant with the prestigious Boston Consulting Group for three years.

It was in New York that Legend—still John Stephens at the time—got his big break, thanks to an up-and-coming producer and rapper named Kanye West. Devon Harris, West's cousin and Legend's former Penn classmate, sensing that both West and Legend were bound for stardom, pushed for the two to meet. After much prodding, West agreed to attend one of Legend's solo nightclub shows and, impressed by what he saw, entered into what is often described in the press as a mentor-protégé relationship with Legend. Legend—the supposed protégé—has taken issue with that description. "I guess the media needed a way to explain who I was," he told Tamara Conniff for *Billboard Magazine* (August 26, 2006). "It's funny, though, because Kanye and I started at the same time. It was never a student and teacher relationship. We were always collaborators." Whatever the terminology used to describe the pair, the partnership clearly paid off for Legend. Over the next few years, Legend was featured as both a vocalist and a pianist on a number of hip-hop and R&B hits, including tracks by Jay-Z, Janet Jackson, the Black Eyed Peas, Talib Kweli, and Keys, many of which were produced by West. Legend also contributed significantly to West's 2004 smash hit, *College Dropout.* "I didn't look at it as starting as a session musician and then doing my own thing," Legend told James Wigney for the *Townsville (Australia) Bulletin* (November 3, 2006). "I was always doing my own thing—I just wasn't famous for it yet."

In the midst of his rising visibility, Legend acquired his new name. In 2002 the Chicago, Illinois–based poet John ("J") Ivey began calling the singer "Legend" because of his stylistic similarities with legendary soul artists, such as Marvin Gaye and Stevie Wonder. The nickname quickly caught on, and Legend adopted it permanently in the hope that it would serve as a self-fulfilling prophecy. "The nickname kind of grew, and it got to the point where more people were knowing me by that name than by my own name," he recalled to Bill Harris for the *Toronto Sun* (October 24, 2006). "And then I'm deciding, do I actually want to take this on as a stage name? It's kind of presumptuous and I know people are going to hate on me if I do that. But eventually I said, you know what? It's going to make a bit of a statement. It announces its arrival beforehand. And then I'm going to have to live up to it."

In 2004 Legend became the first artist signed to West's production company, KonMan Entertainment, and the first artist to release an album on West's Columbia-distributed label, GOOD (Get Out Our Dreams) Records, distributed by Columbia. With West serving as executive producer, Legend's 2004 debut, *Get Lifted*—released on December 28, his 26th birthday—landed at the number-one spot on the first *Billboard* R&B album chart of 2005, selling more than 115,000 copies in its first week alone. It entered the *Billboard* Top 200 chart at number seven and jumped to number four the following week. The record was a critical as well as a popular success, considered a standout achievement in a genre that had come to be defined by themes of obtaining wealth and sex. "With its old-school emphasis on live instrumentation, lushly crafted melodies and lyrics that were more about romance than sexual conquests, *Get Lifted* seemed like a breath of fresh air on an R&B scene dominated by stale synthesized sounds and raunchy, pandering seductions," Jim DeRogatis wrote for the *Chicago Sun-Times* (November 5, 2006). In the *New York Times*, Kelefa Sanneh described Legend as "a lovely crooner" and his songs as "strikingly handsome" (January 3, 2005). Even without significant radio play, the album sold 1.8 million copies in the U.S., and another one million copies overseas. The record was certified gold and platinum (indicating sales of half a million and a million, respectively) on February 10, 2005, less than three months after its release.

The album's standout track, a ballad titled "Ordinary People," featured only Legend's voice and minimal piano accompaniment. Directly inspired by his parents' breakup and reunion, the song describes the confusion that comes with falling deeply in love and the necessity of beginning a relationship slowly to make it last. On the strength of "Ordinary People," Legend was nominated for eight Grammy Awards, including those for song of the year, best new artist, best R&B song, best R&B album, and best male R&B vocal performance. Only two other artists received as many nominations that year; one of them was West, for his second album, *Late Registration*—which featured Legend on the Grammy-nominated track "They Say." Legend took home three Grammys, for best new artist, best R&B album, and best R&B male vocal performance. In addition, *Get Lifted* earned Legend four *Vibe* Award nominations, two Brit Award nominations, and two Soul Train Awards.

Legend released his second album, *Once Again*, on October 24, 2006. The record's style was as difficult to categorize as its predecessor's, incorporating the influences of artists as varied as the hip-hop duo Outkast, the Beatles, the rock musician Jeff Buckley, and the "indie" star Sufjan Stevens. "I refuse to be pigeonholed in terms of what music I can and can't play," Legend told Farber. "All music is available to me. My only responsibility is to do it right." The album debuted at number three on the *Billboard* charts and garnered almost unanimously positive reviews, with critics pointing to Legend's development as an artist. "*Once Again* . . . paints a more complete portrait of Legend than did its predecessor, and it rides a more relaxed, vintage-feeling vibe," Adam Graham wrote for the *Detroit News* (November 8, 2006). Farber also noted Legend's evolution: "If his first album stood out by defying R&B clichés, this time he broadened the palette to sometimes push beyond that genre entirely." In the *Washington Post* (October 24, 2006),

J. Freedom du Lac lauded Legend for his growing immunity to contemporary trends, writing that *Once Again* "is among the genre's most audacious artistic statements of 2006."

That audacity is just what Legend had in mind, he told Farber. "Millions of people hate what's on the radio right now," he said. "I also hate what's on the radio right now. So I've put my bet on being different." But not all critics viewed Legend as a breath of fresh air. Writing for *Daily Variety* (November 20, 2006), Jeff Miller described Legend's oeuvre as a "brand of half-soulful, half-schticky R&B." And in an otherwise favorable review of one of Legend's live shows, Jim Harrington, writing for *Inside Bay Area* (November 21, 2006), expressed the opinion that Legend has "the looks, the moves, and the voice. . . . What he doesn't have, at least as of yet, are many memorable songs."

Legend currently lives in New York. In 2005 he made his acting debut in the film *Loverboy*, directed by Kevin Bacon. He also appeared as himself in the 2005 movie *Dave Chappelle's Block Party*, alongside his former and current collaborators Hill, Kweli, and West. Musically, he is constantly widening his scope, contributing to new albums by artists as diverse as Tony Bennett and Jay-Z. Still, Legend remains faithful to his roots in soul—maintaining, for example, his admiration for the arguable king of soul, Stevie Wonder, with whom he has appeared onstage multiple times. In 2005 Legend covered Wonder's song "Don't You Worry 'Bout a Thing" for the film *Hitch*, starring Will Smith, and he played Wonder himself on an episode of the NBC drama *American Dreams*. But Legend dismisses comparisons between him and Wonder or soul greats of the past, insisting that he has not yet lived up to his name. "It's an honor to hear those kinds of comparisons, and I'm absolutely flattered, but I don't let it go to my head too much," Legend told DeRogatis. "I know that my career can't be compared to Stevie's anytime soon. . . . I have a lot of dues to pay before I can really be compared to Stevie or Marvin."

Lewis, Ray

May 15, 1975– Football player

Address: The Ray Lewis Foundation, P.O. Box 342, Owings Mills, MD 21117

Brian Bahr/Getty Images

Ray Lewis, now in his 12th season as a linebacker for the Baltimore Ravens, is one of the most dominating defensive players in the National Football League (NFL), known for his ferocious tackling, seemingly limitless energy, superior speed, and unfailing work ethic. Over the past decade Lewis has led a Ravens defensive unit that perennially ranks as one of the best in the league and that has set several single-season records. Along the way Lewis has won numerous accolades, among them the NFL Defensive Player of the Year Award for the 2000 and 2004 seasons and, in 2001, the Super Bowl XXXV Most Valuable Player (MVP) Award, presented after he led the Ravens to their first championship. Lewis has led the NFL in tackles during four seasons and has made eight Pro Bowl appearances, including play in five consecutive games (1997–2001). His coaches have praised his tenacity, through which he inspires his teammates. "The players who've left [Baltimore] aren't as successful as they were here," the Ravens' owner, Steve Bisciotti, told Peter King for *Sports Illustrated* (September 1, 2003). "I think Ray gets the people around him to play 30 percent better than they are." Lewis's former teammate Corey Fuller agreed, telling King, "Ray plays so hard that all these players on defense don't want to let him down." Once widely considered too small to make a mark in professional football, Lewis has since been described as one of the toughest players in the NFL and has often played while injured. As reported by Paul Attner for the *Sporting News* (October 27, 2003), the former New Orleans Saints general manager

Randy Mueller believes that Lewis is unique in today's NFL and is comparable only to past NFL legends. "There have been tough guys who have played before, but they haven't been the athlete he is or produced like he has," Mueller declared. "He wants to break someone in half each time he hits them; he has no fear for his body. He has the explosion of [Ray] Nitschke and the instincts of [Dick] Butkus but the speed and natural talents that separate him from everyone else. They are on top, and he is right there with them. It's hard to conceive anyone else is tougher." Lewis's exemplary career and Hall-of-Fame-worthy statistics reflect his desire to be the best football player in the history of the NFL. "I already believe that I am the best linebacker in the game," Lewis told Mike Preston for the *Baltimore Sun* (September 8, 2005). "Now, I have to show one more thing—that I am the most dominating, influential person in the game and the best football player to ever put on a pair of cleats."

Lewis, who spends as much time preparing for games as his coaches do, enjoys a level of autonomy with the Ravens that is rare in the NFL. He is allowed to change up to 10 plays per game before the ball is snapped, as he anticipates particular offensive formations that the coaching staff might not have predicted. "He is as close to a true defensive quarterback as anyone I've ever coached," the former Ravens defensive coordinator Mike Nolan remarked to Jamison Hensley for the *Baltimore Sun* (October 3, 2004). Nolan told Brian Costello for the *New York Post* (September 12, 2004), "I have no reservations about saying he's the best defensive player ever to play the game."

Ray Anthony Lewis Jr. was born on May 15, 1975 in Bartow, Florida, midway between Orlando and Tampa. His mother was in her teens when Lewis was born, and his father left the family before Lewis had developed any memory of him. (Lewis and his father reunited briefly while Lewis was in college but quickly fell out of contact again.) Growing up, Lewis helped his mother, who remained single and often had to work up to three jobs to support her family, by cooking dinner and putting his four younger siblings to bed. Lewis's grandfather, with whom he occasionally lived, was an early mentor. "My grandfather was my father," Lewis told Randall Mell for the Fort Lauderdale, Florida, *Sun-Sentinel* (January 22, 1996). "He showed me the love of a father. . . . My grandfather's the biggest reason I'm not on a corner selling drugs or robbing banks or doing crazy things." Lewis found other role models in his neighborhood, many of them older boys. One of them, Raymond King, four years Lewis's senior and also fatherless, introduced him to weightlifting and otherwise kept him out of trouble after school.

Lewis attended Kathleen Senior High School, in Lakeland, Florida, where he excelled at both wrestling and football. He eclipsed nearly every wrestling record at the school and became a state champion in his senior year. He showed even more promise as a football player. Starring on both offense and defense, Lewis played linebacker and tailback as well as contributing on special teams as a part-time returner of kick-offs and punts. In one game he made an 85-yard punt return for a game-winning touchdown, and he made an 81-yard rush for a touchdown in another. His high-school coach, Ernest Joe, described Lewis as having been "quick as a hiccup," according to Susan Miller Degnan, writing for the *Miami Herald* (May 8, 2006). "He went sideline to sideline in an instant. Ray had an air about him that said, 'I'm the best, and I'm going to show you why.'" Although he showed great potential as an athlete, most recruiters in the National Collegiate Athletic Association (NCAA) lost interest in him after he failed four times to reach a 700 on the Scholastic Aptitude Test—the minimum for eligibility to play on an NCAA team. Only two local universities, Florida State and the University of Miami, maintained an interest in Lewis. Once he achieved a higher score on the test, each school offered him a scholarship. He chose the University of Miami.

That year, 1993, Lewis joined the school's football team, the Hurricanes, which was widely regarded as one of the best NCAA Division I teams in the country—a perennial contender for the national championship. Lewis, at six feet one inch tall and just over 200 pounds, was undersized for a collegiate linebacker, particularly at Miami, which in recent years had sent three players at that position—Jesse Armstead, Michael Barrow, and Darrin Smith—to the NFL. Midway through his freshman year, Lewis was elevated to a starting position and was overwhelmed at first by the responsibility. "He was wild-eyed, no hair on his head, a skinny little-old thing; barely 205 pounds," the Hurricanes' All-American defensive lineman Warren Sapp recalled to Rick Stroud for the *St. Petersburg Times* (December 29, 2001). "He stepped into the huddle, and [the coaches] gave him the call. And he's like, 'Uh, uh, uh.' I had to stop him. I said, 'Wait, wait, wait! Stop this. You are the middle backer. This is your huddle. Take control, and let's roll.' It's the last time I ever had to say something like that." Sapp's swift intervention brought about a turning point for Lewis, who in his first game as a starter recorded 17 tackles, leading the team in that category. He came to embrace his role as the emotional leader of a defense known as much for their persistent "trash talk" as they were for their aggressive play. Lewis rarely failed to back up his talk with excellent performances; at the same time he was so impulsive that coaches prohibited him from attending most media events, because of what he might say.

In his sophomore year Lewis made 152 tackles, 92 of them unassisted, leading a defense rated at the end of the season as the best overall in college football. The Hurricanes advanced to the national championship game, which they lost to Nebraska in the Orange Bowl by a score of 24–17. For his performance during the 1994 season, Lewis was named by the Associated Press as a third-team All-American.

Heading into the 1995 season, Lewis was included on almost every preseason All-American list and was chosen as the Big East Conference's preseason Defensive Player of the Year. He also emerged as a leading contender for the Butkus Award, presented annually to college football's best linebacker. With many defensive standouts from the 1994 team having left, Lewis was the undisputed leader of a young and inexperienced defense, and many critics predicted failure. But Lewis had his finest season up to that time, recording 160 tackles. His 95 unassisted tackles in the 1995 season were a Miami record. He was named a first-team All-American and was voted the Big East's Defensive Player of the Year. Lewis was the runner-up for the Butkus Award, which went to Kevin Hardy of the University of Illinois. (Lewis was the only junior in consideration for the honor.)

Despite the success that Lewis found on the football field at the University of Miami, off-field incidents began to weigh on the young star. Several of his friends, including Raymond King and Lewis's college roommate, Marlin Barnes, were murdered while Lewis was at Miami. Lewis had his own legal trouble: he was twice accused of assault, although he was never formally charged. During the 1995 season Lewis also became a father for the first time. Tatyana McCall, Lewis's girlfriend and the mother of Ray Lewis III, was a classmate of Lewis's at Miami and an international-finance and marketing major. When she became pregnant, McCall tried to distance herself from Lewis, but he was determined to help raise his son. "I looked at myself last summer, and I said, you have a child now," Lewis explained to Randall Mell. "A lot of fathers abandon their children these days, let the mother do what they want to do. That's never going to happen with me. That's a promise I made to myself, that I would always take care of my child no matter what." Lewis and McCall later moved into an apartment together, taking classes on alternating days after the baby was born so that one of them would always be at home with their son. Lewis has said that the experience of raising his child, more than any other, helped him mature into an adult.

At the end of his junior season, Lewis declared himself eligible for the 1995 NFL draft, leaving Miami with a record of 408 career tackles. Although he was considered a strong NFL prospect, questions regarding his size and problems away from the field dampened enthusiasm about him; in the end he was selected by the Baltimore Ravens as the 26th pick in the first round. At 20 years of age, he was the youngest player ever selected in the NFL draft's first round. After signing a contract for $4 million per year, he bought his mother a house in Randallstown, Maryland, near his own new home.

Lewis's rookie season, 1996, was also the inaugural season of the Baltimore Ravens. The franchise had moved to Maryland from Cleveland, Ohio, as a result of then-owner Art Modell's growing financial disputes with that city. The organization needed players to energize its new fan base and endear the team to the city, and thus had high expectations for the rookies and other young players. The Ravens' other first-round pick that year, Jonathan Ogden, was immediately named the starting left guard, while Lewis was placed behind the 10-year veteran Pepper Johnson at the middle-linebacker position. His mobility and strength—he weighed in now at nearly 240 pounds—helped him perform well even against the larger NFL players. Surprising some sportswriters, just before the start of the 1996 season, the Ravens released Johnson and announced that Lewis was the starting middle linebacker. In his first professional start, Lewis recorded nine tackles and an interception, earning the NFL's Defensive Player of the Week honors. By the conclusion of his rookie year, Lewis had accumulated 110 tackles, which led the team, and had earned *USA Today* All-Rookie honors. Despite the efforts of Lewis, Ogden, and the star quarterback Vinny Testaverde, the Ravens finished the season with four wins and 12 losses.

Lewis was determined to make an even larger impact on the NFL during the 1997 season. "You have a choice—either you're going to be an average player in the NFL or one of the great ones," Lewis said to John Eisenberg for the *Baltimore Sun* (November 16, 1997). "Either you just play and pick up your paycheck every Monday, or you become known as a great football player. I want that." He increased his already intensive workout routine and developed a reputation for being one of the most well-prepared players in the league. "The big change for me [from 1996] is studying and focusing," Lewis said to Eisenberg. "I like to go home, sit downstairs by myself and just study film alone. You can read things when you're alone. You can just focus on the field and learn the formations. And then I see the formations on Sunday and I know what's coming. It's easy." The results of Lewis's approach were not lost on his coaches. The defensive coordinator Marvin Lewis remarked to Eisenberg, "Ray did a good job last year, but this year he has a much better understanding of the different offenses he is facing every week, and what his role is in stopping them." Marvin Lewis also told Eisenberg, "Ray is also more prepared physically. A lot of first-year players need that first off-season to develop after they get here [to the NFL] and realize how tough and physical it is. Ray was one of the guys who was here early every morning and every day during the off-season." Lewis was also becoming a leader on a team filled with young would-be stars. As the middle linebacker, he was responsible for calling defensive plays and ensuring that his teammates were in the proper positions. At the same time he led by example, and his energy and effort were contagious. His former teammate Jamie Sharper said to Jamison Hensley about Lewis's influence on the team: "The way he played, if you missed a tackle and he just looked at you, you said to yourself, 'I've got to make that next tackle.' I don't think he had to verbally say anything. His play on the field made everyone else raise their game." Lewis channeled his energy to great effect during the 1997 season, recording 183 tackles, 155 of them unassisted—both figures topping the league. Although Baltimore won only six games, Lewis was selected as a backup for his first of five consecutive Pro Bowl games.

By the beginning of the 1998 season, Lewis, as the anchor of a terrific defense, had earned a reputation as one of the best defensive players in the league. Opposing coaches were forced to alter their offensive game plans in an effort to help their players avoid Lewis. That season Lewis logged 118 tackles, 99 unassisted, though he missed two games due to injuries. As a team the Ravens did not improve, winning only six games. Brian Billick replaced Ted Marchibroda as head coach. In 1999 Billick led the team to modest improvement, winning eight games and losing eight. Lewis again led the league in tackles, with 167, 131 unassisted, and was invited to his third straight Pro Bowl game.

After the 1999 season, following a Super Bowl party on January 31, 2000, Lewis was at the scene of an altercation outside an Atlanta, Georgia, nightclub that resulted in the stabbing deaths of two men. Lewis and his entourage fled the scene in Lewis's limousine but later turned themselves in to investigators. The athlete and two of his associates were charged with murder and aggravated assault. During the 15 days he spent in an Atlanta prison awaiting trial, Lewis insisted that he was innocent and that he was a victim of circumstance—and of his own celebrity. "The truth is this is not about those two kids who are dead," Lewis said during a pre–Super Bowl interview nearly 13 months later, as reported by Jim Slater for the Agence France Presse (January 23, 2001). "It's about me being Ray Lewis. It was about 'getting' Ray Lewis." In June 2000 Lewis pleaded guilty to obstruction of justice, a misdemeanor, in order to have the more serious charges dropped. He also agreed to testify against the other two defendants, who were ultimately acquitted. There was little evidence that linked Lewis directly with the murders, and he was sentenced to 12 months' probation. The families of the two victims brought civil suits against Lewis, which he settled out of court. Some sportswriters argued for Lewis's suspension from the league. He was eventually fined $250,000, one of the largest fines ever levied by the NFL against a player, for "conduct detrimental to the game." Lewis also lost all of his endorsement contracts and became something of a pariah around the league. It was not until 2003 that he again won contracts for product endorsements.

The incident affected Lewis greatly. He became deeply religious and cut ties with many of his friends. Lewis later explained to Susan Miller Degnan for the *Miami Herald* (May 8, 2006), "The first thing that changes when you choose God is your crowd. You don't get along with your crowd. Because now I don't drink no more, I don't go to clubs no more, I don't hang out no more." Ryan McNeil, a friend of Lewis's and a former University of Miami player, told Degnan, "Since the incident [Lewis has] been a lot more reserved, more selective in what he does and who he does it with and where he goes. He learned you can't keep doing the same thing, make the same mistakes, go to the same places and hang out with the same crowd. He has done a 180—inward and outward." Lewis also began devoting much of his spare time to charity work, in particular to the Ray Lewis Foundation, whose mission is to provide personal and economic support to disadvantaged youth.

Lewis returned to the Ravens for the 2000 season with a renewed desire to win—as well as a chip on his shoulder, born of his belief that there was a universal misconception about his character. Building on the previous year's momentum, the team finished the season with a 12–4 record. While the veteran quarterbacks Tony Banks and Trent Dilfer and the rookie sensation Jamal Lewis were critical to that success, the Ravens' defense became the hallmark of the team; some writers argued that it was the greatest defensive squad ever assembled. That season the Ravens' defense broke two notable NFL records, both previously held by the 1985 Chicago Bears: they held opposing teams to a total of 165 points, eclipsing the Bears' standard of 198, and limited opposing teams to 970 yards rushing, well below the previous mark of 1,319. They also posted four shutouts, just one shy of the NFL record. Lewis's squad was so effective that they propelled the Ravens to three victories during a five-game stretch in which the offense failed to score a single touchdown. Lewis, with 137 tackles, was named the NFL's Defensive Player of the Year; the Ravens' defensive tackle Sam Adams and defensive back Rod Woodson were named to the Pro Bowl along with Lewis, who celebrated his fourth selection. The Ravens earned the AFC wild-card berth in the play-offs, making their first postseason appearance since they relocated to Baltimore. Their defense dominated the first game, leading the team to a 21–3 victory. In their next contest they defeated top-seeded Tennessee, 24–10, with Lewis providing a decisive interception. They followed that success by winning the American Football Conference (AFC) championship game, 16–3, earning their first and only trip to the Super Bowl, where they would meet the New York Giants, who possessed one of the hottest offenses in the NFL. In a matchup of contrasting styles, the Ravens' defense neutralized the offensive finesse of the Giants, forcing five turnovers en route to a 34–7 victory. The Ravens became only the third wild-card team to win a Super Bowl. Following the game, Lewis was honored with the Most Valuable Player trophy. He is only the second player in NFL history to win the Defensive Player of the Year Award and a Super Bowl MVP trophy in the same season.

In 2001 Lewis again led the NFL in tackles, with 161, and was honored with his fifth straight invitation to the Pro Bowl. The Ravens lost in the second round of the play-offs, after posting a 10–6 record during the regular season. Afterward, for financial reasons, the Ravens organization decided to rebuild the team, releasing or trading many of its best players. The team started the 2002 season with the youngest players in the league, including 19 rookies. Nevertheless, the general manager, Ozzie Newsome, was determined to keep Lewis, signing him to a seven-year contract worth $50 million, which made him one of the league's highest-paid defensive players. For the Ravens Lewis was valuable not only for his work as a defensive player but also for his role as a mentor and leader of the players around him. Lewis embraced the responsibility of teaching the younger players. "In 2000 we had Hall of Famers," he told Peter King. "What can I tell Rod Woodson? But now we have a bunch of young guys who want to be great. I stress learning from film, doing the extra things. At the end of practice I say, 'If you stop your preparation here, you lose. We lose.'" A shoulder injury limited Lewis to five games in 2002, and the team struggled to a 7–9 record. Despite having missed games, Lewis finished fifth on the team in tackles, with 57.

In 2003 some doubted that Lewis could return to form after having missed so much of the previous season. A number of sportswriters surmised that years of brutal treatment had taken its toll on a body that was small by the standards of NFL linebackers. But as it turned out, the time off revitalized Lewis. "They say the ultimate prize is a Super Bowl Ring. I have that. They say the ultimate prize is an MVP award. I have that," Lewis explained to David Ginsburg for the Associated Press (August 21, 2003). "I don't care about none of that. I care about being the most dominant player in this business. I'm trying to be the greatest ever." In 2003, one of his finest seasons, he posted 161 tackles and had a career-high six interceptions. At the conclusion of the season, he was voted the NFL's Most Dominant Player by head coaches and *CBS SportsLine*. He won his second Associated Press Defensive Player of the Year Award, earning 43 of 50 first-place votes. (Only Lawrence Taylor, formerly of the New York Giants, has won the award three times; several players have won it twice.) Paul Attner wrote about Lewis: "When the NFL's toughest man tackles a running back, he never tries to duck his head. He wants to look him square in the eyes; he wants to see the results of the pain and intimidation he is inflicting. . . . 'I read body language,' he says. 'I know when it is over, when I have won, when I am in control, when that guy won't want to come back for any more.'"

In 2004 Lewis excelled again, posting 146 tackles. The Ravens, however, managed only a 7–9 record. The 2005 season brought further frustration for Lewis; beset again by various injuries—including one to a hamstring, which required surgery—he played in only six games, recording 46 tackles. At the end of the season, there were reports that Lewis was unhappy with the direction in which the organization was headed. Again, many predicted that Lewis would never return to the level of ability he had formerly displayed; they also argued that his lucrative contract was prohibitive to overall team success, preventing the team from acquiring other top players, and some suggested that the Ravens should trade Lewis, or that the athlete should retire. Lewis countered with typical defiance. "I don't want to be a GM [general manager]. I don't want to be a coach," Lewis said, as reported by Mike Preston for the *Baltimore Sun* (October 22, 2005). "I'm going to be a player again and end up being the Most Valuable Player, not just on defense, but for the entire league." Lewis was outspoken about his distaste for Baltimore's defensive philosophy, which had shifted in recent years to a team-oriented approach that Lewis felt downplayed his relevance and limited his personal production. While he insisted that he would not demand to be traded, he often hinted at the opposite. "Baltimore is my city . . . ," Lewis told Jamison Hensley for the *Baltimore Sun* (April 22, 2006). "But at the same time, it's just like another businessman or businesswoman in America. What's better for me? Because if I'm not being used right, you might as well let me go."

In part to help Lewis, the Ravens acquired Haloti Ngata, a 340-pound defensive tackle, in the 2006 NFL draft. The team's coaches believed that Ngata's size would overwhelm opponents and force them to commit multiple players to stopping him, allowing Lewis more freedom and maneuverability. Heading into the 2006 season, the Ravens hired a new defensive coordinator, Rex Ryan, who changed their defensive strategy to a formation known as the 46. In that format Lewis returned to his prominence as the central playmaker, and the defensive tackles were responsible for opening up lanes through which Lewis and other linebackers could attack the ball. The Ravens finished the 2006 regular season with a franchise-best record of 13 wins and three losses and were granted a bye for the first round of the play-offs. They lost their first game, 15–6, to that year's eventual Super Bowl champions, the Indianapolis Colts; thanks in part to the Lewis-led defense, there were no touchdowns scored throughout the entire game. Lewis ended the season with 164 tackles, five sacks, and two interceptions; he was named to his eighth Pro Bowl team, but due to a hand injury, he bowed out, allowing his teammate Bart Scott to play in his first Pro Bowl.

In total, by the beginning of the 2007 season, Lewis had amassed 1,838 tackles, 1,259 of them unassisted, nine forced fumbles, 80 passes defended, 80.5 tackles for loss, 28 sacks, 12 fumble recoveries, and 23 interceptions in 148 games. As of mid-October 2007, in his 12th season with the Ravens, he had made 45 tackles, 32 of them unassisted.

Lewis is very active in community service, particularly in the Baltimore area. Each year he hosts a charitable back-to-school event for Baltimore children, a holiday gift drive, and a Thanksgiving turkey benefit. He also hosts annual bowling events, which draw teammates and other celebrities, in an effort to raise money for community projects in Baltimore. Lewis tries to separate his persona as a football player from his service efforts, never wearing his uniform and rarely signing autographs at charity events. In 2004 Lewis was one of 32 finalists for the Walter Payton Man of the Year Award, given annually by the NFL to a player to recognize community service as well as athletic excellence. In 2006 Lewis contributed his efforts to the Sports for Life program of the Veterans for America Foundation (formerly the Vietnam Veterans of America Foundation), which uses sports as a means of rehabilitating and empowering landmine survivors and other victims of conflict around the world—particularly children. "Sport has always played an important role in my life, and this is something that I want to share with the next generation. My work with kids around the country has taught me that organized sporting activities can help kids feel good about themselves, it can help them assimilate into society, teach confidence and self-reliance," Lewis stated in a press release issued by the foundation.

Lewis is single and has homes in Baltimore; Highland Beach, Florida; and Orlando, Florida. He has four sons and two daughters and spends the off-season with all of his children in Florida. In 2006 Lewis was inducted into the Miami University Hall of Fame, an honor he has called one of the highlights of his career. His hobbies include fishing and bowling.

Marcus, Bernie

May 12, 1929– Co-founder of Home Depot; philanthropist

Address: Marcus Foundation, 2455 Paces Ferry Rd., S.E., Atlanta, GA 30339-4024

As the co-founder of Home Depot Inc., the largest chain of its kind in the United States, Bernie Marcus can trace his success to his getting fired from a company called Handy Dan Home Improvement in 1978, when he was 49 and already had years of experience in the retail industry, many of them as an executive. The next year, along with Arthur Blank, who had also lost his job with Handy Dan, Marcus opened the first three Home Depot stores in Atlanta, Georgia. In unadorned quarters that resembled warehouses rather than retail outlets, with many sealed but empty cartons scattered about to give customers an impression of abundant stock, the men began to sell lumber and other building materials; electrical, plumbing, and kitchen equipment and supplies; hardware; and paint, flooring, and wallpaper. In the years to come, they added such seasonal items as snow shovels, plants, and lawn fertilizers. "The concept was far from a safe bet," Megan McRainey wrote for the *Atlanta Business Chronicle* (May 3, 2002). "The idea, a home improvement warehouse, was a new one. And Atlanta shoppers in the 1970s were unaccustomed to such a specialized store." While Blank served as chief operating officer and focused on matters such as time management, Marcus—who has been widely described as a charismatic visionary—concentrated on building employee morale and customer satisfaction, developing Home Depot's reputation for vast inventories, low prices, and exemplary service. Two other men played key roles in the fledgling company: Patrick Farrah, a master of merchandising, and Ronald Brill, an expert in financial management. By 1986 Home Depot had opened a total of 60 stores, in many additional locations, and the company's annual sales had climbed to more than $1 billion. By 2002, when Marcus retired as chairman and CEO, positions he had held for nearly a quarter-century, Home Depot's annual sales exceeded $58 billion; the figure for fiscal year 2006 was $81.5 billion. Currently, Home Depot employs close to 350,000 people and operates more than 2,000 stores, with at least one in each of the 50 states, the District of

Columbia, Puerto Rico, the U.S. Virgin Islands, every Canadian province, Mexico, and China.

"There's great satisfaction in building a business and making money, but there's also great satisfaction in doing something and knowing how good you're making people feel," Marcus told Wendy Bowman Littler for the *Atlanta Business Chronicle* (September 17, 2004). "Whether saving a life or just helping someone along, part of my job is to convince people to try it and experience the feeling." During the years that Marcus was an almost daily presence at Home Depot outlets, he encouraged workers to donate their energy and time to community projects, such as building houses as volunteers for the nonprofit group Habitat for Humanity. Since the late 1980s Marcus—who became a billionaire at Home Depot and who remains the corporation's largest stockholder—has given more than $650 million to various organizations and institutions, much of it through the Marcus Foundation, which he set up with his wife in 1988. The Georgia Aquarium, in Atlanta, which opened in 2005, owes its existence to his gift of $250 million to the city. In *BusinessWeek*'s 2006 list of the 50 most generous philanthropists in the United States, he ranked 25th. Marcus has earned many honors, both locally, in Georgia, and nationally, but, perhaps in an example of his stated desire to focus on others rather than himself, he listed only one of them—a 2006 Golden Plate Award from the Academy of Achievement—in his citation for *Who's Who in America, 2007.*

Bernard Marcus was born on May 12, 1929 in Newark, New Jersey, where he and his three siblings grew up in a tenement. His father, a cabinetmaker, and mother were Jewish immigrants who met in the U.S. after fleeing persecution in Russia; in their home in the U.S., they followed many of the tenets of Orthodox Judaism. "My mother used to call [the U.S.] the golden land in Yiddish," Marcus told Jim Tharpe for the *Atlanta Journal-Constitution* (May 29, 2005). "We had cockroaches. We had mice. But this was heaven to them compared to what they came from." Although his father worked extremely long hours, he earned barely enough to support the family. Young Bernie would sometimes "try to help him build these things, and he would take out every nail I put in," as Marcus told Tharpe. "My father was a perfectionist, and I couldn't satisfy him." Beginning at an early age, Marcus hung around with gangs of black youths in his gritty section of Newark: "A lot of the guys that I ran with are dead," he said, as quoted by Littler. "One of them went to the electric chair . . . he killed somebody." According to Littler, Marcus's parents moved from that neighborhood when the boy was 12, because it was getting too rough. At 13 he started working at various odd jobs; during high school they included soda jerk and, during summers, busboy. Despite the family's financial struggles, Marcus's mother taught him the importance of giving. "When I was a boy, I donated nickels to help plant trees in Israel," he told Littler. "That's what my mother taught me; that you have to give back. I couldn't understand why I was doing it. This was my ice cream money that I was giving away. But, she said, 'You have to help people who are less fortunate; this is what we do.' It is a concept in Judaism called *tzedaka*, which means 'to give back.' I honestly believe that when you give, you get back in spades. And, if you don't get it back in financial reward, you get it back in satisfaction. You don't have to have a lot of money to do these things. You can give of your own soul. You can give of your own time."

After his high-school graduation, Marcus entered a pre-med program at Rutgers, New Jersey's state university. During his college years, by his own account, he often cut classes to sell freezers to homeowners, and in the summers he sometimes entertained as a stand-up comedian in Catskill Mountains hotels, in New York State. Various sources have reported that he abandoned hopes of becoming a psychiatrist after learning that Harvard Medical School maintained an ethnic quota system, and that as a Jew, "he would have to bribe a medical school administrator in order to gain admission," according to Marcus's profile in the *New Georgia Encyclopedia* (November 17, 2005, online). Lacking the thousands of dollars supposedly required for such a bribe—or, according to some sources, having insufficient funds to attend any medical school—he got work in a pharmacy after he earned a B.S. degree, in 1954. As a drugstore salesman, he discovered that he loved dealing with customers. His fondness and aptitude for sales soon led to progressively higher-ranking jobs at Two Guys (later renamed Vornado's), which sold goods ranging from appliances to lawn furniture; when he left, in 1968, after more than a dozen years there, he held the title of vice president. He next served for two years as president and chief operating officer of Odell, a company that manufactured shoe polish and other consumer products. In 1970 he joined Daylin Inc., where he directed a division that oversaw 34 discount stores. In 1972 Daylin placed him in charge of its Handy Dan Home Improvement stores; he held the title of president and later became the chairman of Handy Dan's board of directors. At Handy Dan he worked closely with Arthur Blank, the firm's chief financial officer, and helped to expand the chain significantly. He also learned a lot about the equipment, supplies, and skills needed for home-improvement projects. In the mid-1970s the Brand Names Foundation named Handy Dan the Home Center of the Year.

In 1978 Sanford Sigiloff, Daylin's CEO, abruptly fired Marcus, Arthur Blank, and a third Handy Dan executive, Ronald Brill. In their book, *Built from Scratch: How a Couple of Regular Guys Grew the Home Depot from Nothing to $30 Billion* (1999), written with Bob Andelman, Marcus and Blank maintained that the reasons for their dismissals were purely personal. Chris Roush, who looked into the matter for his book *Inside Home Depot: How One Company Revolutionized an Industry*

Through the Relentless Pursuit of Growth (1999), came to the same conclusion. Earlier, Marcus had confided to Kenneth G. Langone, an investment banker who had had dealings with Handy Dan, that he dreamed of launching his own home-improvement business, in which he would buy merchandise directly from manufacturers and stock it in huge, warehouse-like buildings; the bare-bones settings, he believed, would give customers the accurate impression that prices would be lower than elsewhere. Within days of Marcus's ouster, Langone remarked to Marcus that he was now free to go into business for himself. With $2 million that Langone raised from a group of investors, and a $3.5 million loan from a West Coast bank that had worked with Marcus when he represented Handy Dan, Marcus and Blank set about starting up their company. (They had hoped to have a far larger sum to start off with, but a deal that Langone had tried to negotiate with the real-estate and investment-company mogul Ross Perot fell through.) Marcus took the positions of chairman and chief executive officer, and Blank, the title of president. The partners benefited from the merchandising expertise of Patrick Farrah, whom they recruited after learning that a similar home-improvement warehouse that Farrah had recently opened in Los Angeles, California, was failing—not because of any inadequacies on Farrah's part but because the business "lacked adequate financial controls," as the economist Richard E. Hattwick wrote in a history of Home Depot for the Web site of the American National Business Hall of Fame. Heeding Marcus and Blank's advice, Farrah closed his store and joined Home Depot. In time, according to Hattwick, Farrah "may have been a stronger motivational force among the rank and file than were either Blank or Marcus." Ronald Brill, too, came on board, as comptroller.

Serendipitously, at around the time that Marcus and Blank decided to base their operations in Atlanta, four Treasure Island stores in the Atlanta area became vacant. The men negotiated leases for those spaces, and the first three Home Depots opened there, in 1979. In its first year the company earned $7 million in sales, for an overall loss of about $1 million. "We sweated bullets" in the beginning, Langone told Roush. "It didn't take off right away. Bernie and Arthur used to call me and say, 'We're in trouble.'" Determined to succeed, Marcus resorted to such measures as having his three children distribute $1 bills to prospective customers in Home Depot parking lots, and sending workers to other stores to buy products sought by customers who failed to find them in Home Depot. The fourth Home Depot store opened in 1980. That year total sales reached $22 million and profits totaled $856,000. "Bernie, he would say things in terms of the stock, in terms of the size of the company, the size of the industry, the size of the market, that had no foundation whatsoever," Blank recalled to Tharpe. "But half the time half of what he said ended up becoming reality."

In 1981 Home Depot made an initial public stock offering of 750,000 shares at $12 apiece. "An investor who bought 1,000 shares at that price could have cashed them out 19 years later for about $15.6 million," Tharpe noted. Also that year Home Depot opened four stores in Florida, attracting huge crowds with greatly discounted prices on ceiling fans. By the end of 1983, the 19 Home Depot outlets then in existence produced total revenues of $250 million; in 1984 another 31 stores opened. That year Home Depot stock began selling on the New York Stock Exchange. A $250 million loan from Security Pacific National Bank in 1985 enabled the chain to add another 50 stores, at sites in Texas, California, and Louisiana. Within a year, with 10 more stores, the company's sales had exceeded $1 billion. Home Depot's expansion into the Northeast in the late 1980s led to a surge in sales and profits. "The stores we opened there did many, many times higher volume than even we were accustomed to . . . ," Marcus and Blank recalled in their book. "In the South, we would sell 60 electrical receptacles and then order 72 more. In the Northeast we needed a thousand of the same item. So then we went back to the vendors and said, 'We will no longer buy these in 48-packs. . . . We want you to bundle up a thousand of them at a time." Among the new stores was Home Depot's first supersize outlet, covering 140,000 square feet—currently, the standard floor space. Aiding the chain's expansion were Marcus and Blank's purchases of related businesses, such as Georgia Lighting, and wholesale distributors. Home Depot opened its 500th store in 1997; the 1,000th opened in 2000, and the 2,000th, in 2005.

Earlier, in 2002, having reached the mandatory retirement age of 72, Marcus relinquished his titles to Robert Nardelli. (Frank Blake succeeded Nardelli after the latter resigned, under pressure from shareholders, in early 2007.) Meanwhile, in the 1980s, he had begun to involve himself in philanthropic activities. According to *BusinessWeek*'s list of the most generous U.S. philanthropists in 2006, he has given to charities a total of $650 million, or 34 percent of his net worth; between 2002 and 2005 he gave or pledged $317 million. His beneficiaries have included Autism Speaks, which supports research into the causes and possible cures for autism; the Centers for Disease Control (CDC) Foundation, for a state-of-the-art bioterrorism unit at the CDC's headquarters, in Atlanta; a nanotechnology research facility at Georgia Tech University; the National Holocaust Museum; and the Shepherd Center, which aids disabled and severely injured people. With funds totaling more than $70 million, he and his wife established and have helped to maintain the Marcus Institute, in Atlanta; the institute, which is associated with the Emory University Medical School, in Atlanta, and the Kennedy Krieger Institute, in Baltimore, Maryland, has served more than 30,000 children and adolescents suffering from neurological and behavioral disorders, learning disabilities, and other developmental problems. In 1991 Marcus helped to found the Israel Democracy Institute, a nonpartisan think tank based in Israel, to promote and defend democracy in that country. Marcus's gift, through his foundation, of more than $250 million made possible the construction of the Georgia Aquarium, in Atlanta; containing more water and housing more aquatic and marine animals than any other aquarium in the world, the facility opened to the public in 2005. According to the Association of Fundraising Professionals, Marcus "personally solicits major donors for gifts, resulting in six-figure contributions for the organizations he supports."

A member of the Jewish Republican Coalition, Marcus contributed nearly $1.3 million to Republican candidates between 1998 and 2005, according to Jim Tharpe in the *Atlanta Journal-Constitution* (June 6, 2005). "Generally, I'm a supporter of the free enterprise system," he told Tharpe. "I believe the Republicans better respond to that. Creating jobs is more important than giving people a handout. There's a big difference between the Republican Party and the Democratic Party on that issue. The free enterprise system has allowed me to become what I am."

Home Depot won the Governor's Council on Developmental Disabilities Award for the State of Georgia in 1997 and the Gold Award of Honor for Employer of the Year from the National Business and Disability Council in 2000. In 1998 Marcus was named Georgia Philanthropist of the Year. His other honors include, in 2006, the National Marine Sanctuary Foundation Stewardship Award, a Golden Plate Award from the Academy of Achievement, and a "Friends of Georgia's Children" Award from the Georgia Parents-Teachers Association. In 2007 he earned the America's Democratic Legacy Award from the Anti-Defamation League and the Paschal Murray Award for his outstanding philanthropical activities from the Association of Fundraising Professionals. Also that year Boys & Girls Clubs of Metro Atlanta named Marcus and his wife, Billi, among Atlanta's Hometown Heroes.

When Marcus met his wife, she was raising an adolescent son. He has three children from an earlier union. In his spare time he enjoys playing golf and reading.

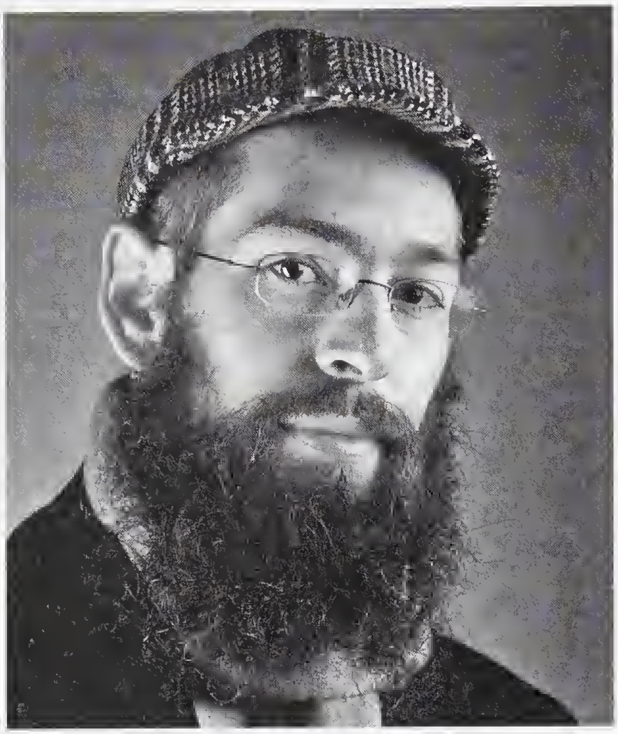
Matisyahu

(MAH-tiss-YAH-hoo)

June 30, 1979– Reggae singer/songwriter

Address: c/o Or Music, 37 W. 17th St., Suite 5W,
New York, NY 10011

"In my music, I'm really not trying to preach to people, or trying to tell people how they should lead their lives," the reggae/rap singer/songwriter Matisyahu told David Prince for the *Santa Fe New Mexican* (September 23, 2005). "It's really more of a reflection on my own life, and what are the lessons that I've come to . . . and then just putting them in the music." A dreadlocked Deadhead (as fans of the Grateful Dead are known) and nonpracticing Jew as a young teenager, Matisyahu floundered spiritually and dropped out of high school before embracing the branch of Orthodox Judaism known as Chabad-Lubavitch Hasidism, when he was in his early 20s. Channeling his newfound faith into reggae and hip-hop–inspired songs, he made his first studio album, *Shake off the Dust . . . Arise*, in 2004. His next recording, *Live at Stubb's* (2005), reached number one on the *Billboard* reggae charts and sold more than 500,000 copies. In the past three years, although his religion forbids him to perform during the Jewish sabbath, thus prohibiting Friday-night or Saturday-matinee gigs, and although his apparel is limited to the staid garb dictated by Chabad-Lubavitch tradition, he has secured hundreds of concert dates every year at clubs, festivals, and elsewhere, and he regularly sells out 2,000–3,000-seat halls. The style and melodies in his music, he told Diane Cardwell for the *New York Times* (December 11, 2004), do not resemble those categorized as Jewish, but his work "is filled with images of Judaism. I created my own internal feelings about what it meant to be Jewish and connected it to reggae music." "Matisyahu sings music that is open, rangy, catchy, novel, and compulsively appealing enough that any listener can take from it the sound and feel of a certain kind of freedom—a licentiousness of the spirit . . . ," Devin McKinney wrote for the liberal publication *American Prospect* (May 3, 2006, on-line). Ma-



Mark Mainz/Getty Images

Matisyahu

tisyahu, McKinney continued, "incarnates" Chabad-Lubavitch's "18th-century comprehension of song as religious rapture and its emphasis on joy expressed through wild dance, free gesticulation, the open throat." He also wrote, "Matisyahu and his three-man band, Roots Tonic, combine the joyous leap of reggae with the spatial expanse of dub and the aggression of rap. The pieces come together, and the whole hurtles itself outward in multiple directions." "I'm just trying to put my music out there," Matisyahu told Nekesa Mumbi Moody for the Associated Press (April 19, 2005), "and at the end of the day, I hope people take away from it what I took away from music growing up, that it gave me a sense of strength and hope and peace, and stability and inspiration." Matisyahu's gold-certified CD *Youth* (2006) was nominated for a 2007 Grammy Award as best reggae album. In mid-2007 Matisyahu revealed his intention to affiliate himself with a branch of Hasidism outside the Lubavitch movement.

Matisyahu ("Matis" to his friends) was born Matthew Paul Miller on June 30, 1979 in West Chester, Pennsylvania, to Robert Miller and Rochelle Lieber-Miller, both social workers. Shortly after his birth Matisyahu's family moved to Berkeley, California, where they lived until 1983, when they settled in White Plains, New York, about 25 miles northeast of New York City. Some sources have described his parents as nonobservant Jews; others have reported that they are adherents of Reconstructionism, the most recent of the four branches of contemporary organized Judaism (the others being Orthodox, Conservative, and Reform Judaism). According to the Web site of the Jewish Reconstructionist Federation, Reconstructionist Judaism "integrates a deep respect for traditional Judaism with the insights and ideas of contemporary social, intellectual and spiritual life" and emphasizes "respect for such core values as democratic process, pluralism, and accessibility." Its followers "continue to turn to Jewish law for guidance, if not always for governance. We recognize that in the contemporary world, individuals and communities make their own choices with regard to religious practice and ritual observance." As a youngster Matisyahu enjoyed playing ice hockey. Neither school nor religion interested him. He hated attending Hebrew lessons after his regular schoolday and was so disruptive at Hebrew school that he was almost expelled. His troublesome behavior continued into junior high and high school, as did his conflicts with his parents. Meanwhile, by the age of 14, he had become an ardent fan of the band the Grateful Dead and wore his hair in dreadlocks. He often sang and became "the guy that made the beats, like did the beats with my mouth" (known as beatboxing), as he told Anthony Mason for the TV series *CBS Sunday Morning* (March 26, 2006, on-line). He recalled to Robin Eggar for the London *Sunday Times* (January 22, 2006), "I loved the Allman Brothers, the Grateful Dead, reggae bands like Israel Vibration and Steel Pulse, dancehall singers Sizzla and Buju Banton. Then I got into hip-hop and groups like Outkast and the Roots. Bob Marley's music gripped me. His lyrics fitted in terms of my life. There were references to the Old Testament, to overcoming obstacles and the system. That was where I found a lot of strength in those years." During his junior year of high school, after he caused a fire that badly damaged the chemistry classroom, Matisyahu went camping by himself in the Rocky Mountains of Colorado. There, he began to reevaluate his life. "I think I was a typical teen," he told T'cha Dunlevy for the Montreal, Canada, *Gazette* (January 18, 2005), "trying to find a place, and to [figure out] what's truthful and real in the world. A lot of times, you feel like you're not in control of situations, you're at the whim of the system. It rubs you the wrong way." "As a kid you're just born into a certain system, into a certain place," he commented to Anthony Mason. "And you're just expected to go along with that. . . . What if it doesn't work? What if you feel it's not right? What if you feel it's not true?" In the wilderness, isolated from society, Matisyahu felt the presence of God.

Soon afterward Matisyahu took a trip to Israel, where he was struck by the way Jewish culture and religion seemed to imbue every aspect of the lives of Orthodox Jews, especially followers of Hasidism. Hasidic Judaism came into being in the 18th century in what is now the Ukraine, through the teachings of a mystical rabbi known as the Baal Shem Tov. The Baal Shem Tov maintained that everything in the universe is a manifestation of God—"God is all and all is God"—and that the most important goal in worshipping God is the achievement of a feeling of oneness with Him. He also emphasized the importance of finding joy in daily life and worshipping God exuberantly, which would please God, and avoiding asceticism, which would not. While in Israel Matisyahu felt his "dormant Jewish identity stirred into consciousness," as he wrote for his Web site. He told Dunleavy, "I felt a connection to Judaism that seemed real. The Hasidim seemed real, devoted. . . .When I saw the Hasidim in Israel, there was something very true about it." Chabad-Lubavitch is one of more than a dozen Hasidic sects (which are considered ultra-Orthodox). Starting when they turn 13, Lubavitch males wear dark suits (usually black), tieless white shirts, yarmulkes (skullcaps), and, out of doors, black felt fedoras. They keep their hair (and sideburns) short and never shave.

Back in the U.S., Matisyahu chafed at the restrictions imposed upon him at school and at home. (Now, as a fully observant Jew, he must obey God's 613 commandments, as conveyed in the Hebrew Bible, among them such "positive" commandments as "Love God and fear Him" and "Circumcize all males on the eighth day after their birth" and such "negative" commandments as "Do not testify falsely" and "Do not embarrass others.") At 17 he left home and school to follow the jam band Phish on one of their national tours. After a few months of being on the road and experimenting with illegal drugs, Matisyahu ran out of money and returned home, feeling "burnt out," according to his Web biography. At his parents' insistence, he enrolled in a wilderness-therapy program for teenagers in Oregon. The program allowed Matisyahu to cultivate his musical talents, and he began to study reggae and hip-hop and to develop his own hip-hop–infused reggae sound. He thrived on the attention he received rapping, singing, and beatboxing before an audience at the weekly open-mike event.

After he completed the program, through which he earned a high-school diploma, Matisyahu remained in Oregon for another two years, working at a ski resort and performing in coffeehouses with Soul for I, a band he had put together. In 1998, in part because he had started taking drugs again and had resolved to stop, he returned to New York. In addition to taking classes in the New School's Arts in Context program, he performed at the Nuyorican Poets Cafe's open mikes. His sets comprised his own songs, whose themes echoed those of Bob Marley, a follower of the Rastafarian religion. "It was how I expressed myself," Matisyahu told Joan Anderman for the *Boston Globe* (June 20, 2004). "I just felt that music. Lots of reggae artists are called conscious and the words are about Jah, but they're talking about God. . . . I was able to find my culture and identity in Judaism and hold onto the truth in this music." Spiritually, he was "looking for something more" during that period, as he told Teresa Wiltz for the *Washington Post* (February 19, 2006). "I was looking for a way to stay clean, I was looking for a way to fill the gap or hole in my life . . . to glue all the pieces of my life together in one common focus." He found some of what he was seeking at Congregation Kehilath Jacob, called the Carlebach Shul (for its founder, Shlomo Carlebach), a synagogue on the Upper West Side of New York City known for its "hippie-friendly vibe and exuberant singing," according to Matisyahu's Web biography. At around that time, by chance, while walking in a New York City park, Matisyahu met a Lubavitch rabbi, Dov Yonah Korn. A formerly secular Jew who had met his wife at a Grateful Dead concert, Korn spoke to him about the benefits of returning to one's Jewish roots and embracing the Chabad-Lubavitch way of life. To gain an understanding of what that would entail, Matisyahu boarded with the rabbi's family for several months. He then enrolled at a yeshiva (a religious school for Jewish males) in the Crown Heights section of Brooklyn, where many Lubavitcher Hasidim live. Abandoning his music, he immersed himself for most of the next year in prayer, study, and quiet reflection. In 2001 he officially changed his given name to Matisyahu ("Matthew" in Hebrew).

While in the yeshiva Matisyahu wrote more than 20 songs. He left the school with the determination to celebrate his spirituality by performing his own brand of reggae music. "The rabbis at first were like, 'You're in yeshiva—why would you want to go to these clubs and go to these bars and go back to this lifestyle that you used to be a part of?'" as he told Nekesa Mumbi Moody. He gained their approval of his plans after he performed for a group of young Hasidic boys at a local community center. "I closed my eyes and sang the song, and afterwards I looked up, the two rabbis from the yeshiva were right next to me, and I looked up at them and they like had huge smiles," Matisyahu told Moody. "Ever since then, they got it, and the whole community is totally supportive." With the guitarist Aaron Dugan, the bassist Josh Werner, and the drummer Jonah David, all New School classmates of his, Matisyahu formed the band Roots Tonic and began to perform more widely in public. He was soon picked up by JDub Records—a relatively little-known New York label whose goal is to introduce young Jewish artists to mainstream audiences.

Matisyahu's first album, *Shake Off the Dust . . . Arise*, was released in October 2004. In a review of it for the *Denver Post* (January 23, 2005), Elana Ashanti Jefferson wrote, "This artist's versatile, studied delivery coupled with hip-hop and dub production results in one of the more appealing reggae CDs in years." Matisyahu's video for the disc's track "King Without a Crown" aired on MTVU (a version of MTV that targets university students), and Matisyahu quickly attracted a cult following, as students voted on-line to place the video on the number-one spot on MTV's countdown show *The Dean's List*. *Shake Off the Dust . . . Arise* spent nine weeks on *Billboard*'s top-reggae-albums list and was a crossover hit as well, reaching number seven on *Billboard*'s modern-rock chart. Matisyahu's music " is just connecting at a moment where eclecticism is prized more than ever," Ross Martin, MTVU's head of programming, told Wiltz. "His message is one of unification. . . . It's broad enough that people from all walks of life can connect." Concurrently, Matisyahu's performances at clubs and festivals nationwide, as well as appearances on *Jimmy Kimmel Live* and *Last Call with Carson Daly*, in 2004, attracted much notice. He has since been a guest on programs including *The Tonight Show with Jay Leno*, *Late Night with Conan O'Brien*, *Late Show with David Letterman*, and the BBC's *Later . . . with Jools Holland.*

Whereas *Shake Off the Dust . . . Arise* sold only 20,000 copies (it is no longer available), Matisyahu's second album, *Live at Stubb's*—a recording of a performance of the songs on *Shake Off the Dust . . . Arise* at a club in Austin, Texas—sold upwards of half a million copies after it was issued in 2005 by Epic Records, a division of Sony BMG. It also earned much critical acclaim. In an assessment for the *Boston Globe* (May 13, 2005), for example, Renee Graham wrote, "Matisyahu brings a generous spirituality to his brand of reggae, something that has been lacking as the music has been overwhelmed by sexually explicit and sometimes hateful lyrics. . . . He can rip with the kind of supple dancehall-style delivery designed to get crowds on their feet." Graham added, "Rather than a punch line or a sendup, Matisyahu proves himself as a fine new artist whose music revives the righteousness and uplift of heartfelt reggae music." In the *Edmonton (Alberta, Canada) Journal* (December 3, 2005), Sandra Sperounes called Matisyahu's performance on the album "passionate, propulsive, and soulful." *Live at Stubb's* remained on *Billboard*'s reggae charts for months, peaking at number one.

Matisyahu's voice, according to Devin McKinney, is "deep-throated" and "rich" and like "a living thing, a wild, charismatic entity excited by the world and by itself as a force in the world." "Matisyahu allows himself no great range of vocal subtlety—his goal is exhortation, not reflection, statement, not nuance. But his tones can soar and succor like those of a Southern soul man, and in stray stanzas . . . he evinces some of Bob Marley's warmth," McKinney wrote. In *La Scena Musicale* (May 3, 2006, on-line), Norman Lebrecht took note of Matisyahu's "sweet high-baritone voice and a crisp elocution that ensures no word gets missed." Tom Breihan, however, in writing for *Pitchfork Media* (January 10, 2007, on-line) about Matisyahu's seven-track CD *No Place to Be*, released at the end of 2006, compared Matisyahu's voice unfavorably to that of the reggae singer Barrington Levy, describing it as "a flat, weedy simulation of Barrington Levy's honeyed scatter-croon. He floats between singing and chatting without ever mastering either, and there's precious little vigor or conviction in his washed-out tenor." After attending a performance by Matisyahu at the 25th Ragga Muffins Festival, in Long Beach, California, Richard Cromelin wrote for the *Los Angeles Times* (February 21, 2006), "Any sense of novelty suggested by his thick beard and black Hasidic garb was quickly dissipated by the force of his music and his presence. . . . The tall singer covered the stage in long strides, and sometimes in huge, high hops that got the capacity crowd roaring. . . . He trusted his music to form the link with his listeners, and the no-nonsense earnestness of his manner demanded attention and respect."

In 2006 Matisyahu teamed up with the band P.O.D., whose music has been categorized as Christian rock, to record two tracks on their album *Testify*. He worked with the renowned producer Bill Laswell, whose many credits include albums by Herbie Hancock, Bootsie Collins, and Mick Jagger, on his next album, *Youth* (2006). According to Richard Cromelin, the album "doesn't lock on one sound, instead moving smoothly from classic-sounding roots-reggae to rapid-fire dancehall to American hip-hop. It's the perfect platform for Matisyahu's plunge into the big time—diverse and entertaining enough to make curious listeners comfortable, but uncompromised in theme and music." In a critique for the London *Guardian* (May 5, 2006, on-line), Caroline Sullivan wrote that Matisyahu "applies his reedy toasting style to fiery promises of redemption and grim predictions of hellfire" and concluded that the album was "more invigorating than you would believe." By contrast, Kelefa Sanneh, a reviewer for the *New York Times* (March 8, 2006), deemed the record "dull" and found little to enjoy in a sold-out Matisyahu performance at the Hammerstein Ballroom in New York City; but Sanneh acknowledged that among those in the audience, "no one seemed disappointed."

In mid-2007 Matisyahu told an interviewer for the *Miami (Florida) New Times* (July 17, 2007, on-line) that he no longer felt attached to the Lubavitch community and was planning to expose himself to other forms of Judaism. Later in the year, as Yair Ettinger reported for the Israeli newspaper *Haaretz* (October 12, 2007, on-line), Matisyahu, while maintaining the importance of "connect[ing] to a universal message," visited synagogues in Israel maintained by members of the branch of Hasidim associated with the 18th-century Rabbi Nachman of Bratslav.

Matisyahu lives in Crown Heights with his wife, the former Tahlia Silverman, whom he met while she was a film student at New York University. The couple, who married in 2004, have two sons.

Matsuzaka, Daisuke

(mat-soo-ZAH-kah, DICE-kay)

Sep. 13, 1980– Baseball player

Address: Boston Red Sox, Fenway Park, 4
Yawkey Way, Boston, MA 02215

Although the 2007 season was the first in Major League Baseball (MLB) for the Japanese-born Daisuke Matsuzaka, the term "rookie" was not an entirely appropriate one for the stocky, right-handed pitcher. Matsuzaka first gained a following in his native country as a teenager, when he led his team to victory in the national high-school baseball tournament; he then signed with the Seibu Lions of Japan's Nippon Professional Baseball League (NPB). In eight seasons with the Lions, he enjoyed celebrity on a level perhaps unprecedented for an athlete in Japan, with roaring crowds filling stadiums mainly to see him pitch. When Matsuzaka signed with the Boston Red Sox, in late 2006, he instantly became MLB's most heralded new player in many seasons. Predictions varied as to how well Matsuzaka would fare on the mound in the U.S. Though some Japanese pitchers, such as Hideo Nomo, Kazuhiro Sasaki, and Takashi Saito, have enjoyed successful initial seasons in MLB, others have failed spectacularly, and nearly all of them have come to the United States after enduring years of unregulated pitch counts that often leave them injury-prone as they age. Some observers noted that batters in the U.S. are stronger on average than those in Japan and would present a particular challenge to Matsuzaka, while others predicted that the intense emotions of rival fans would come as a shock to the pitcher, who was accustomed to adoring crowds in Japan. Still others, however, felt that Matsuzaka came to the U.S. well prepared for what he would face, in terms of both his attitude and his pitching arsenal—which in Japan consisted of a 96-mile-per-hour fastball, a cut fastball, a curve, a changeup-like *shuuto*, three sliders, and a mysterious, double-spin "gyroball," which broke toward and then away from right-handed batters. Before the 2007 season Tadahito Iguchi, a onetime baseball star in Japan who has played in the U.S. since 2005, said that while he and Matsuzaka would face each other as opponents, he would root for Matsuzaka's success—and anticipated that most other Japanese players in MLB would, too. Iguchi told Adam Rubin for the New York *Daily News* (November 8, 2006) about Matsuzaka, "This is one of our best pitchers, and we want him to be, and we need him to be, one of the best pitchers in the States, too." After some ups and downs in his rookie season, Matsuzaka started the postseason—in which the Red Sox were pitted against the Cleveland Indians—in a slump, then recorded a win in Game Seven of the division championship, helping the Red Sox reach the World Series. When he took the mound for Game Three of the series, he became the first Japanese pitcher to start a World Series game. After nearly six innings of strong pitching and two RBIs (a rare statistic for a pitcher in the World Series), Matsuzaka recorded his second postseason win. In the next game the Red Sox finished their sweep of the Colorado Rockies, to win their second World Series championship in four years.

Daisuke Matsuzaka was born on September 13, 1980 in Higashi Tsugaru-gu, in the Japanese province of Aomori. During the time that Matsuzaka's mother was pregnant with him, Daisuke Araki, then a high-school freshman, captivated the nation by leading the Waseda Jitsugyo High School team to the championship game of Japan's Koshien Tournament; Matsuzaka's mother named her baby boy after the young pitcher. After showing great promise as a pitcher during his youth, Matsuzaka himself became a national hero during the Koshien Tournament in his final year of high school. (Koshien elicits the type of national fervor that "March Madness," the men's basketball tournament organized by the National Collegiate Athletic Association, generates in the United States; the series draws sell-out crowds and the largest TV audience of any sporting event in Japan.) Matsuzaka, Yokohama High School's then-skinny,17-year-old ace, gave a dazzling performance during the 1998 tournament. Yokohama cruised through the first two rounds, and Matsuzaka threw a shutout in round three to advance the team to the quarterfinals. The next day Matsuzaka again went the distance, this time needing 250 pitches to earn the victory in a game that lasted 17 innings, nearly twice the usual nine. In the semifinals the following day, he played left field with his right arm wrapped in layers of bandages, both to protect it and to allow it to recover from the previous day's pitching; then, in the eighth inning, his manager summoned him back to the mound for the final two innings of the game—which ended in a come-from-behind victory. Matsuzaka cemented his legend the next day in the championship game against Kyoto Seisho High School, in which he threw a no-hitter—pitching nine innings without allowing a single hit—a feat that had not been accomplished in the championship game at Koshien since 1939. "I went into the game thinking I didn't want to give up any runs but I didn't mean to pitch a no-hitter," the surprised teenager told Koichi Nakagawa for the Asahi News Service (August 24, 1998). "Nobody will ever forget what Daisuke did," the baseball writer Keizo Konishi said, as reported by Tim Larimer for *Time* magazine (September 11, 2000). Following his achievement at Koshien, Matsuzaka led Japan to the World Amateur Championship title, earning the Most Valuable Player award for his effort, and completed his final year of high school without recording a single loss.

After graduating from high school, Matsuzaka announced that he would pursue a career in Japan's Nippon Professional Baseball League. Unlike in the United States, where many players have been drafted by professional baseball teams straight out of high school, a 17-year-old pro in Japan was a rarity. In December 1998 the Seibu Lions selected Matsuzaka first overall in the draft and signed him to a contract for 13 million yen per year and a 50-million-yen signing bonus, a total value of over $500,000. Matsuzaka was given the number 18, which in Japan is typically reserved for an ace pitching prospect. Shintaro Kano, writing for the Asahi News Service (April 8, 1999), compared the Japanese media's anticipation of Matsuzaka's professional career to a "stallion broke out of its corral." In the time between Matsuzaka's signing with Seibu and his first start as a rookie, the following April, Kano wrote, "there hasn't been a day . . . that his name hasn't been mentioned in the press." Matsuzaka did not disappoint during his eagerly awaited rookie campaign. He received a standing ovation upon entering the game that saw his first professional start, and a second roar of applause from the still-standing, sell-out crowd followed his strikeout of the first batter. The remainder of the year brought more of the same. Matsuzaka finished the season with a league-high 16 wins against five losses and an earned-run average (ERA) of 2.60, good enough to earn Rookie of the Year honors in the Pacific League. He also earned a Golden Glove for his fielding skills and made the Best Nine team as the top pitcher in his circuit. He was elected to the All-Star team, receiving the most votes of any pitcher, and struck out five batters in the All-Star Game.

In the 2000 season Matsuzaka, the ace of the Seibu Lions, became the first teenager in 15 years to start on opening day. Although he still dominated at times, completing the season with 144 strikeouts and winning 14 games, his ERA rose to 3.97 as hitters began to adjust to his unusual delivery and an overreliance on his finest pitch, the fastball. At midseason Matsuzaka had a 5–5 record and a decidedly mediocre 4.19 ERA, and some writers speculated that the young pitcher's success would prove to be a flash in the pan. Noting the inconsistency of his pitching motion (most successful pitchers repeat the exact same motion every time they throw a particular kind of pitch), many observers felt that Matsuzaka was not practicing sufficiently, which they blamed on his fast-paced lifestyle—an outgrowth of his celebrity. Matsuzaka was reprimanded by the Seibu Lions several times for his actions off the field, which included late-night partying and one instance of driving without a license. The Seibu Lions, embarrassed by their star player's attempt to cover up his antics, briefly suspended him from the organization. Some team officials blamed the Lions for giving their star special treatment and effectively spoiling him. Matsuzaka's high-school coach, Motonori Watanabe, told Hideko Matsuhisa and Katsutoshi Hashimoto for the *Mainichi Daily News* (July 8, 2000) that he had never doubted Matsuzaka's ability and described the young pitcher's indiscretions as evidence of immaturity that would dissipate over time. "I'm not worried," Watanabe said. "What he's going through now is a natural part of being a professional baseball player." True to his former coach's expectations, Matsuzaka rebounded during the season's second half, notching nine wins and only two losses in the remainder of the year and earning his second Best Nine placement.

Following the 2000 season Matsuzaka joined other Japanese players, both professional and amateur, in representing Japan at the Olympic Games in Sydney, Australia. Among the Japanese fans who went to Sydney were more than 80 Matsuzaka devotees who traveled in a special tour arranged by the pitching ace's fan club. One member of the group, Naomi Odagiri, skipped her university examinations to attend the games. "I know I will pay for it later, but watching him on the mound at the Olympics is very important, in my opinion," she explained to Jun Saito for the Asahi News Service (September 26, 2000). "I want to see him strike out as many powerful hitters as possible." Matsuzaka did not fare well, however, losing games to South Korea and to the United States. Against the U.S. Matsuzaka pitched 10 innings in an eventual 4–2 loss. He nonetheless impressed the U.S. players and their manager, Tommy Lasorda. "He pitched a heck of a ball game," Lasorda said, according to Saito. "We knew he was going to be tough, and we knew we were going to be in for a battle."

In his third professional season, Matsuzaka pitched a league-high 240 innings and built a 15-win, 15-loss record; he allowed 27 home runs, more than in his two previous seasons combined. He led the league in both wins and losses and worked hard to develop his secondary pitches, which had remained unrefined. During the 2001 season his cut fastball—slower than a traditional fastball, but with greater movement—became a reliable "out pitch." Batters could make contact with the pitch, but not solidly, and the weakly hit balls made for easy outs. Kazuhiro Wada, a teammate of Matsuzaka's, explained to Jim Allen for the *Daily Yomiuri* (November 16, 2006) that by using the cut fastball the pitcher sacrificed some of his strikeout potential—but that, on the positive side, the alternative pitch helped him stay on the mound longer, as evidenced by his league-leading 12 complete games. At the end of the season, Matsuzaka earned his third straight Best Nine commendation and won the Sawamura Award as the best pitcher in Japan.

In 2002 Matsuzaka's effectiveness and playing time were limited for much of the season by an elbow injury. Many scouts saw him as a victim of his own ability and of his manager's desire to coach every game as if it were the team's last, which made Matsuzaka a constant presence on the mound. A typical major-league pitcher throws between 100 and 120 pitches in a game, but even in his teens Matsuzaka had been throwing 150-pitch games routinely. As the Lions' most effective pitcher, he had often been left in games until he was totally exhausted, far past the limit of what is healthy for a teenage pitcher. One writer, in an article for the *Yomiuri Shimbin* (May 20, 1999), explained that in Japan a team's standing is placed above the health of the players: "Fans and baseball people instinctively know that Matsuzaka's arm will be sacrificed for the glory of baseball. Matsuzaka likely won't be a great pitcher for long, so they need to celebrate him while he lasts and then wait for the next hero to come along." Isao Ojimi, a former professional Japanese player, agreed, telling Tim Larimer, "I worry about [Matsuzaka's] future because he throws a lot compared to American pitchers and even other Japanese pitchers. Managers in Japan aren't worried about their players' futures, they only care about winning today. . . . He needs rest."

In 2003 Matsuzaka seemed to have recovered fully from his injuries, pitching to a record of 16–7 while his 2.83 ERA and 215 strikeouts paced the league. He had similar success in 2004, winning 10 games with a league-low 2.90 ERA. The Seibu Lions won the Pacific League title and advanced to the Japan Series, in which, despite a below-average performance from Matsuzaka, they were able to capture their first title in 14 years. Following the 2004 season, Matsuzaka again represented Japan in the Olympics, in Athens, Greece, where he became the first Japanese pitcher to throw a 100-mile-per-hour pitch. He excelled in both of his starts, shutting out Cuba through eight innings for a victory and earning a hard-luck 1–0 loss against Australia when his offensive support vanished. Overall, the Japanese team met expectations, winning the bronze medal at the Games.

In 2004 Matsuzaka remained by far the most popular baseball player in Japan, having reached heights of celebrity that were unusual for an athlete in that culture. Everywhere he went he was surrounded by adoring fans, and because of his many product endorsements, his face was among the most recognizable in Japan. The 35,000-seat Seibu Stadium was generally full during the games in which he pitched—and half-empty for those in which he was not slated to appear. When the team went on the road, the home teams, too, could expect better-than-usual turnouts for games. Younger players and fans admired Matsuzaka's bravado and red-dyed hair. "He says brave things, like how he will strike out batters, but then he backs it up," a 21-year-old fan told Larimer. "That's exciting." Unlike those of American sports stars, Matsuzaka's personal life was not chronicled on a daily basis, and his fame was largely confined to his exploits on the field. Still, some details of his lifestyle in Japan were well-noted, in articles mentioning, for example, his expensive Tokyo apartment and his collection of cars, which includes a $130,000 Mercedes G-Class.

Matsuzaka thrilled fans again in the 2005 season, though he received little offensive support, leading to a 14–13 record despite a 2.30 ERA, the best of his career up to that time. He totaled 226 strikeouts, which led the league, and completed 15 of his 28 starts, with three shutouts. During the season he reached the 1,000-strikeout milestone, becoming the fifth-fastest Nippon Professional Baseball pitcher ever to do so, and won another Golden Glove.

Following that season Matsuzaka asked to be released from his contract and to be allowed to play for Major League Baseball. MLB teams had expressed an interest in the pitcher, and Matsuzaka feared that if he played to the final year of his contract, 2008, he might get hurt and lose the opportunity to play in the United States, which had been his lifelong goal. During the process of posting a player for consideration by MLB, the U.S. teams bid for the right to negotiate with the Japanese player, and the player's team has the option to accept or reject the highest bid. If a contract agreement is reached, the player's former team receives the amount of the bid, in exchange for the contractual rights to the player. Several Japanese players had transferred to MLB previously, with Ichiro Suzuki bringing in a then-record posting bid of $13.25 million. Although the Seibu Lions were in need of the funds that could be obtained by posting Matsuzaka, he was their best player and the primary draw for fans; the team decided to keep him against his wishes but agreed to post him the following year if he performed well enough to bring a large bid from a U.S. team.

Prior to the 2006 Nippon season, Matsuzaka again led the Japanese team on the international stage, this time in the inaugural World Baseball Classic, a 16-nation tournament. While Japan's other starting pitchers collectively accumulated a 2–3 record, Matsuzaka went 3–0 with a 1.38 ERA and was named the tournament's MVP after beating Cuba in the final. He followed that dominating performance with another stellar season in the Pacific League, going 17–5 while pitching 200 strikeouts and 14 complete games and establishing a career-best 2.13 ERA. At the end of the season, Seibu agreed to post him, with the expectation that bids would likely be in excess of $30 million. Indeed, the top bid, offered by the Boston Red Sox, was $51.1 million (6.1 billion yen), which exceeded the second-highest figure by over $12 million and represented, according to Tom Singer, writing for MLB.com (December 14, 2006), "approximately *triple* the Lions' total payroll for the 2006 season." The Lions accepted the bid, and after a lengthy negotiation process, Matsuzaka inked a contract with the Red Sox worth $52 million over six seasons. He finished his eight-season career in NPB with totals of 108 wins, 60 losses, 1,355 strikeouts, an overall ERA of 2.95, and six Golden Gloves.

The benchmark for pitching success by a Japanese player in the U.S. is that of Hideo Nomo, who achieved a 123–109 record in the major leagues. Nomo and Matsuzaka had comparable success in Japan, but Nomo suffered from an even more burdensome workload, and by some accounts his health was already in decline when he moved to the U.S. Hideki Irabu, another highly touted Japanese pitcher, was a disappointment for the New York Yankees because he was injury-prone and could not control his weight or his pitches. While those pitchers enjoyed celebrity similar to Matsuzaka's upon arriving in the United States, most observers feel that Matsuzaka has greater ability than his predecessors, as well as a greater diversity of pitches, both of which, they feel, should ease his transition to his new league. Still, some have questioned whether Matsuzaka will be able to adapt to the pressure of pitching amid the intense, decades-old Boston Red Sox–New York Yankees rivalry, which Irabu ultimately proved unable to handle. Lou Merloni, a former infielder who spent time playing in both Boston and Japan, has predicted that the emotions surrounding the Red Sox–Yankees games might surprise Matsuzaka. "Games [in Japan] get pretty intense, but it's a friendly intense," he explained to Jeff Horrigan for the *Boston Herald* (December 29, 2006). "There's no hatred like you can feel over here." The pressure that Matsuzaka is to face will likely include being booed and having his failures celebrated by American sportswriters—a notoriously cynical lot—up and down the East Coast. Most Japanese sportswriters, though, believe that such treatment will not rattle the young pitcher. "He knows how to deal with pressure," the Japanese writer Hideki Okuda told John Powers for the *Boston Globe* (December 15, 2006). "He pitched in the World Baseball Classic. He pitched in the Olympic Games twice. He helped win the championship for Seibu. He knows how to handle it."

In his first major-league start, on April 5, 2007, Matsuzaka faced the Kansas City Royals; after pitching seven innings with 1.29 ERA, including 10 strikeouts, he recorded his first win in MLB. In May he pitched his first complete game in MLB, in a 7–1 win over the Detroit Tigers; against the New York Yankees, he recorded one win and one loss during the regular season. At one point he recorded wins for four games in a row, and a month before the completion of the regular season, he broke the Red Sox's record for most strikeouts by a rookie. When the regular season ended, his record stood at 15 wins and 12 losses, and the Red Sox were the American League East champions. The team went on to sweep the Los Angeles Angels of Anaheim in the American League Division Series. During that series Matsuzaka started an MLB play-off game for the first time; his performance was mediocre, and he was removed during the fifth inning. In the conference play-offs, against the Cleveland Indians, Matsuzaka returned to the mound in Game Three, in which he again pitched poorly and was taken out of the game before the end of the fifth inning; with that game he recorded his first play-off loss, because he was pulled after passing the 100-pitch mark. Down three games to one, the Red Sox made a comeback and forced a seventh game, which Matsuzaka began by retiring the first eight batters. He pitched five solid innings, allowing only two runs, thereby helping the Red Sox to win, 11–2, and move on to the World Series, against the Colorado Rockies.

In Game One of the 2007 World Series, the Red Sox, playing in their home stadium, defeated the Rockies 13–1; in the next, they squeaked by, 2–1. The series moved to Colorado for the next two games. In Game Three Matsuzaka became the first Japanese pitcher to start in a world championship; he allowed two runs and three hits in five and a third innings, and with his first major-league hit, a single, he drove in two runs. The next day the Red Sox beat the Rockies, 4–3, for a four-game sweep of the series.

The sportswriter Wayne Graczyk described Matsuzaka to John Powers as "friendly, outgoing, polite, confident, a little cocky." Matsuzaka and his wife, Tomoyo Shibata, a former television announcer, have a daughter. The pitcher's main interest beyond baseball is golf; he reportedly boasts an impressive 300-yard drive.

Mauer, Joe

Apr. 19, 1983– Baseball player

Address: Metrodome, 34 Kirby Puckett Pl.,
Minneapolis, MN 55415

In 2006 Joe Mauer of the Minnesota Twins became the third catcher in history to record the highest batting average in all of Major League Baseball (MLB) and the first to do so in the American League. At 23 years of age, he was also the youngest batting champion since Alex Rodriguez earned that distinction in 1996. Mauer relies on a simple, swift, compact swing that sends line drives to all parts of the field and that produced only one strikeout in his entire high-school career. According to Daniel Paulling, writing for the Web site At Home Plate (July 12, 2004), the Baseball Hall of Fame inductee Paul Molitor said that Mauer possesses "one of the best swings" he has ever seen. Others have compared Mauer's hitting technique to that of Ted Williams, widely considered one of the best hitters in MLB history, and have suggested that Mauer—given his age and rare ability—could become one of the greatest catchers ever to play the game. "We've tried to downplay expectations, but he's a phenomenon," the Twins' manager, Ron Gardenhire, told Jim Souhan for the Minneapolis, Minnesota, *Star Tribune* (April 4, 2004). Veteran teammates are equally impressed with Mauer. "That's a rare guy right there," the center fielder Torii Hunter told Souhan during Mauer's rookie year, in 2004. "He's 20, but he's 20 going on 40. To take pitches like he does, to throw out people the way he does, to call games like he does, and to do it all with that personality and character, that's special." Commenting on Mauer's demeanor, Hunter added, "He got me a drink of water the other day. I'm like, 'What? A first-round draft pick getting me water?' Most of those guys have too much testosterone and ego to do that." Despite the predictions of greatness, the *Sports Illustrated* cover articles about him, his batting title, and a new, $33 million contract—the second-largest in Twins history—Mauer has remained humble. "The thing you hear all the time is what a great kid he is," Mauer's mother told Dean Spiros for the *Star Tribune* (April 6, 2004). "As a parent, regardless of how he plays baseball, you think about what kind of person he is. As parents, that's what we're most proud of." "I don't think his parents would let him change the way he carries himself, which for him has always been as a true professional," Mauer's friend Tony Leseman told Ray Richardson for the *St. Paul (Minnesota) Pioneer Press* (July 9, 2006). "I still see him as a regular Joe, as a friend . . . not as a huge superstar. He comes from a special family that raised him right."

The youngest of three sons, Joseph Patrick Mauer was born on April 19, 1983 in St. Paul, Minnesota, into a close-knit family with a passion for sports—baseball in particular. Mauer's great-grandparents emigrated in 1900 from Austria to Minnesota, where their four sons became local baseball stars at Cretin High School (now Cretin-Derham Hall High School), in St. Paul; each later played for a living, with Mauer's grandfather Jake sustaining the longest professional career—28 days. The following generation, which included Joe's father, Jake Jr., consisted of 12 boys, all multi-sport high-school stars in Minnesota. As their playing days ended, they took up the coaching of the next generation. Mauer's father and mother, Teresa Tierney Mauer, herself a three-sport athlete at St. Paul Central High School, coached many of their sons' teams. "Joe's got [athletic] genes coming at him from both sides," Ken Mauer, Joe's great-uncle, told Roman Augustoviz for the *Star Tribune* (August 30, 2000). "That makes him doubly tough. . . . The youngest one always has the privilege of learning from the other ones in the family, and that Joe is a freak in the same way Michael Jordan and Mark McGwire are freaks." As a child Mauer tagged along with his brothers, Jake III and Billy, whose athletic feats he tried to emulate. He first stepped into a batting cage at the age of two and took to it right away. As a four-year-old Mauer was banned from the tee-ball leagues at the local playground because he hit the ball so hard that other parents worried for their own children's safety; by the time he was eight, he was holding his own against overhand pitching from his brothers and father; and at 10 he was banned from a league for 12-year-olds after he pitched a no-hitter. In fifth grade Mauer started on the eighth-grade basketball team alongside Billy, and he filled in on his brothers' baseball teams when they needed an extra player. Mauer's parents believed that the competition he faced when playing with older boys was good for his development. "We figured if somebody hit a ball at him too hard he could always get out of the way . . . ," Mauer's father told Augustoviz. "In youth sports, sometimes parents hold their kids back. We didn't think it was good for Joe to dominate at his age group." The three brothers played highly competitive but friendly games of stickball in their backyard, a tradition that lasted until they were in their 20s. "They [played with] some trucks growing up," Teresa Mauer told a writer for the *St. Paul Pioneer Press* (April 4, 2004). "But mostly it was baseballs, footballs, basketballs. . . . We had a lot of broken glass." To keep his sons busy with something other than video games during the bitter Minnesota winters, Mauer's father built and installed in the garage a hitting device—consisting of a V-shaped chute made of plastic piping and attached to a pole, whose base was a coffee can filled with cement. The Mauer boys fed wiffle balls into one end of the chute, moved into hitting position as the balls rolled through the piping, and hit them into a tarpaulin. The drill helped them to develop quick, compact swings and good eye-hand coordination. It also allowed them to take thousands of swings without having to venture outside during the winter or find other boys to play with. (After Joe Mauer became a professional baseball player, his father refined the device and began selling it in sporting-goods stores.)

Mauer's brothers both excelled at baseball at Cretin-Derham Hall High School. Jake III went on to star as a second baseman at the University of St. Thomas, a Division III national baseball power in Minnesota, and Billy was a pitcher for North Hennepin Community College. Joe Mauer proved a more versatile athlete than either of his brothers, performing well in baseball, basketball, and football. In basketball, playing shooting guard, he averaged 20 points per game in his junior season at Cretin-Derham and was voted the most valuable player in the St. Paul City Conference; he was selected as an all-state performer in his junior and senior years. Mauer was even more of a standout on the football team, starting at quarterback in his junior and senior seasons and becoming one of the best players in the history of the school. His record over two seasons as a starter was 25–2. In his junior season Mauer led the team to its Minnesota Class-A state championship victory. Although the team fell one win short of repeating that feat during his senior season, Mauer compiled impressive statistics, including 3,022 passing yards and 41 touchdowns—both school records, according to the *Minnesota Football Record Book*. Regarded as one of the top quarterback prospects in the nation, in 2000 Mauer was named the *USA Today* top offensive player in football; Metro Player of the Year; Minnesota Player of the Year (by the Associated Press); athlete of the fall season (by the *Pioneer Press*); and the Gatorade national player of the year. Mauer was recruited by some of the best college-football programs in the nation, including those at Florida State University, the University of Arizona, the University of Miami, and the University of Minnesota, which offered him a scholarship for both football and baseball. Nonetheless, Mauer's closest supporters believed that his future lay in baseball. Jake Mauer said that while he believed his grandson could be a collegiate star in any of the three sports he had played, he had pushed Mauer to pursue baseball, because it was the family's tradition. "I've told him when he grows up, I want to sit in a box seat at Yankee Stadium and watch him play," Jake Mauer told Augustoviz. "That's the only desire I have in my life. That's where he belongs."

In baseball Mauer showed promise as an infielder before moving to his current position, catcher, in high school. In his sophomore season he hit .576 with 28 runs batted in (RBIs) and won All-Metro honors. The following season he hit .542 with 31 RBIs. In those two seasons he led the team to records of 24–3 and 27–2, respectively. In his junior year he excelled in both hitting and pitching, building a 4–0 record and a 1.27 earned-run average as a starter and striking out 50 opponents in 33 innings with his 89-mile-per-hour fastball. Following his senior year, in which he hit .605 with 15 home runs and 53 RBIs while leading Cretin-Derham to the Class 3-A championship, Mauer was rated the seventh-best high-school baseball player in the United States by *Baseball America*. He became the first athlete ever to be named player of the year in two sports, football and baseball, by *USA Today*. Additionally, from 1998 to 2000 Mauer played on the U.S. Junior National Team, earning a spot as a backup before becoming one of the team's stars in his final year. In the summer of 2000, at the World Juniors Tournament in Panama, he earned most-valuable-player (MVP) honors after leading the entire tournament in hitting with a .559 average and 15 RBIs, which raised his profile further among the nation's scouts. Teresa Mauer told Jim Wells for the *St. Paul Pioneer Press* (November 30, 2000) that her son was at times uncomfortable with his local celebrity. "I think he's a little embarrassed by it all," she said. "He knows that he's playing a team sport and that if it wasn't for his [blockers] he wouldn't get all that passing yardage, and if someone wasn't setting screens he wouldn't score all those points. And baseball is every bit a team sport, too." A good student as well as all-around athlete, Mauer maintained a 3.26 grade-point average in high school. He was a member of Choice Group, an organization of student-athletes who pledged to remain drug-free and traveled to local schools to talk about the dangers of drug use, whether for athletic enhancement or recreation.

Although Mauer had signed a letter of intent to play football at Florida State University, the Minnesota Twins of Major League Baseball selected Mauer with the first overall pick in the June 2001 amateur players' draft, marking the first time in modern history that a Minnesotan had been taken first overall in any professional sports draft; Mauer also became the first catcher selected number-one overall since B. J. Surhoff, in 1985. As a left-handed power-hitting catcher, Mauer was a rarity who filled a need in the Twins organization, and as a local talent he seemed likely to draw fans. In July 2001 Mauer signed his first professional contract, which included a $5.15 million signing bonus—the largest that the Twins had ever offered, and the second-largest in MLB history. The Twins also selected Mauer's brother Jake as an infielder with the 667th overall selection.

With their All-Star catcher A. J. Pierzynski entrenched in his position at the major-league level, the Twins were able to let Mauer develop in the minors. Mauer began his professional career in the summer of 2001 in Tennessee, playing for the Elizabethton Twins of the rookie Appalachian League. His brother Jake was assigned to the same team, and they lived together with three other teammates. In 32 games Mauer managed a .400 average with 14 RBIs and impressed his teammates and coaches with his keen batting eye, which led to only 10 strikeouts against 19 walks. In 2002 he played for the Quad City River Bandits of the Class-A Midwest League, for which he batted .302 in 110 games, with four home runs, and again amassed more walks than strikeouts; he was named the top overall prospect in the Midwest League at the conclusion of the season. In the spring of 2003, Mauer was assigned to Fort Myers of the Florida State League, where he was reunited with Jake. After 62 games Mauer was promoted to the Class-AA New Britain Rock Cats of the Eastern League. He continued to impress, batting .341 with four home runs in 73 games. Overall during the 2003 season, Mauer hit over .335 at each stop and compiled five home runs and 85 RBIs. He was chosen as Minor League Player of the Year by *Baseball America* and named by that publication as the top prospect for 2004.

Although Mauer's hitting and defensive skills, including his above-average throwing arm, gave him the tools to succeed in the major leagues, he needed to develop his talents in the other aspects of being a catcher—which most consider the hardest position in baseball to master. In particular, he had to become adept at calling pitches, or telling pitchers which pitches to throw; controlling base runners (that is, keeping opposing players from stealing bases); and observing the tendencies of both his team's pitching staff and opposing hitters. In 2002 and 2003 Mauer was invited to attend spring training with the Twins' major-league team; he was paired with the veteran catcher Tom Prince to learn the minutiae of his position. As well as learning about handling a pitching staff, Mauer gained an appreciation for the importance of each pitch and became a thoughtful signal-caller. Mauer also impressed the major-league veterans with his hitting, compiling a .400 average during spring training in 2003. Overall during his minor-league career, Mauer hit .330 in 277 games, while showing an innate ability to learn the tendencies of new pitchers and new hitters at his various minor-league posts. Mauer's experience as a quarterback helped him to digest information quickly, made him comfortable with split-second decisions on the field, and helped develop his considerable arm strength.

In November 2003 the Twins traded Pierzynski to the San Francisco Giants. Many saw the transaction as a way of allowing Mauer to play at the major-league level, despite his being only 20 years old. After another strong showing in spring training, Mauer earned the starting position. Observers immediately began drawing comparisons between Mauer and the Hall of Fame catcher Johnny Bench, who won rookie-of-the-year honors as a 20-year-old with the Cincinnati Reds in 1960. A rookie starting catcher is rare in the major leagues; in the previous 40 years, only four other 20-year-olds had become everyday catchers: Bench, Ivan Rodriguez, Butch Wynegar, and Bob Didier. "[Catcher is] the toughest position to break in at," the Los Angeles Angels manager and former Los Angeles Dodgers catcher Mike Scioscia told Jim Souhan. "You have to know so much. The 140 pitches you call will have more chance of deciding the game than anything else you do, even if you hit two home runs." According to Scioscia, a catcher needs to play in about 500 games before having the experience necessary to play every day at the major-league level. "Catching is a total feel thing," Scioscia told Souhan. "It's not a push-button operation. It's the last thing that really develops in a catcher, and it's a constant state of evolution, because you're always working with new pitchers against different hitters. . . . What wins games at the major league level is calling a good game. There's no substitute for experience."

An opening-night crowd of 49,584 cheered Mauer on as he made two hits and drew two walks in his MLB debut: a 2004 game against the Cleveland Indians, whom the Twins defeated. In the second game of his rookie season, while sliding to recover a pop foul, Mauer sustained a knee injury—a distressing development for a catcher, who spends most of the game crouched behind home plate. After undergoing out-patient surgery to repair the damage, he recovered quickly; he appeared in a few minor-league games, to regain his batting timing and test his knees and stamina, then returned to the Twins, having missed eight weeks of play. After 33 more games, because of continued pain and swelling in his knee, he was placed on the disabled list for the remainder of the season. In his 35 MLB games, Mauer had offered a glimpse of his potential, batting .308 with six home runs and 17 RBIs.

Mauer returned for the 2005 season intent on relieving concerns that his injured knee might force a position change to first or third base, as had been the case with many catchers. He was solid, if unspectacular, in his second season, batting .294 with nine home runs and 55 RBIs. Most importantly, he was consistently healthy, appearing in 131 games.

His .372 on-base percentage led all Twins regulars, and he spent 108 games batting in the third spot in the lineup. The Twins, however, stumbled to a 83–79 record, finishing third in their division.

The 2006 season was a stellar one for Mauer, as he became the first catcher ever to lead the American League in batting average. He demonstrated competence rare for one so young; since the Hall of Famer Al Kaline won the batting title in 1955, at the age of 20, only five other players had won a batting title before the age of 24. (Mauer was 23.) When asked how he had developed from a good hitter into one of the game's elite players, Mauer responded to La Velle E. Neal III for the *Star Tribune* (July 11, 2006), "I have been more patient. I'm trying to hit pitches that I can handle. . . . Just trying to put together more quality at-bats." Mauer finished the season batting .347, after spending much of the summer chasing the .400 mark, which had not been eclipsed since 1941. Hitting .388 at the time of the All-Star break, Mauer made his first All-star team. He finished sixth in the MVP race, won by his teammate Justin Morneau. The Twins overcame the Detroit Tigers to win the American League Central Division in the regular season's final weekend. In the first round of the play-offs, the Twins were defeated by the Oakland Athletics. In early May 2007 Mauer strained a quadriceps muscle and missed 30 games. He ended the season with a .293 average in 109 games, with seven home runs and 60 RBIs. The Twins, meanwhile, finished the season with a losing record, 79–83.

Mauer's talent, likability, and good looks have opened up marketing opportunities for the Twins. During its 2006 games the organization held numerous promotional events centered on the catcher, including Joe Mauer Bobble-head Doll Day, Joe Mauer Autographed Bat Day, and Joe Mauer Sideburns Day—on which fans received synthetic sideburns to match those that Mauer grew during the season. "You put the name 'Mauer' or Joe's No. 7 on any item and it sells," Matt Noll, the Twins' merchandise director, said in a press interview, as reported by Paul Levy for the *Star Tribune* (June 29, 2006). Following that season Mauer signed a $33 million, four-year contract with the Twins, the second-biggest guaranteed contract in franchise history. He is currently the only Twin locked into contract through 2010, when the team is scheduled to open its new stadium.

Mauer divides him time between his homes in Minnesota and Fort Myers, Florida. His hobbies include playing golf, video games, and pool.

McClurkin, Donnie

Nov. 9, 1959– Gospel singer; minister

Address: Sierra Management, 1035 Bates Court,
Hendersonville, TN 37075

"Entertainment is not my goal," the gospel singer, songwriter, and Pentecostal minister Donnie McClurkin wrote for his Web site. Rather, his aim as a performer is that "God be pleased and someone who hears experiences Jesus in a greater way." That objective notwithstanding, sales of McClurkin's albums have eclipsed those of many other gospel singers, and his skills and appeal as an entertainer have earned him two Grammy Awards—for best contemporary soul gospel album (in 2003), for *Donnie McClurkin . . . Again*, and best traditional soul gospel album (in 2005), for *Psalms, Hymns, & Spiritual Songs*. In a review of a multi-artist concert presented at the Theater at Madison Square Garden, in New York City, in 2006, the music critic Jon Pareles wrote for the *New York Times* (September 15, 2006), "Mr. McClurkin has one of the strongest and most supple voices of his generation of gospel singers. He uses the velvety baritone croon of an R&B ballad singer, rising to an almost operatic falsetto; he can be tenderly imploring or commanding. At times his singing suggests Al Green and Mr. Green's inspiration, the Rev. Claude Jeter. Mr. McClurkin can pepper a song with rhythmic syllables or sustain a long, arching phrase. His set reached back to old-fashioned gospel and up to a dance hall, and he also drew a doctrinal line, singing 'You are the only living God: not Buddha, not Krishna, not Muhammed.'" In the sermons McClurkin has given as the pastor of the Perfecting Faith Church in Freeport, New York, and in many interviews, as well as in his songs, his memoir, *Eternal Victim, Eternal Victor*, and the documentary *The Donnie McClurkin Story: From Darkness to Light*, he has talked about or alluded to his family's struggles with substance abuse and violence, his being raped by relatives when he was eight and 13 years old, his struggles with his sexuality, and his fathering a child out of wedlock. "My battle with loneliness is my greatest battle and wanting, in fact, to be 'normal,'" he told Shirley Henderson for *Ebony* (October 2005). McClurkin has performed on Broadway, at the White House, and for the Democratic and Republican National Conventions in 1992 and 2004 respectively. With the gospel super-

stars Kirk Franklin and Yolanda Adams, he was a headliner during the 2002–03 Hopeville Tour. In 2004 he was inducted into the International Gospel Music Hall of Fame and Museum, in Detroit, Michigan. "Singing is secondary to me," he told Kelly L. Carter for the *Detroit Free Press* (October 26, 2004). "It really is. I'm a pastor of a church and that's the primary thing."

Among the oldest of the 10 children of Frances and Donald McClurkin Sr., Donald McClurkin Jr. was born on November 9, 1959 (some sources say 1961) and raised in Amityville, New York, on Long Island. Music was always prominent in his life; he hummed in tune before he learned to talk, and he and his siblings sometimes sang for their parents and neighbors. The lives of the McClurkins took a tragic turn when, one day when he was eight, his two-year-old brother got killed by a car on their street. Donnie, who had been been told to watch the toddler, witnessed the accident, and he felt devastated, holding himself responsible for the tragedy. Compounding his misery, on the day of the funeral, a maternal great-uncle of his raped him. McClurkin told no one about the rape, in large part, he has since said, because he did not understand what had happened. His great-uncle "went on to habitually molest McClurkin and two of his sisters," as Celia C. Peters wrote in a review of *From Darkness to Light* for afro-netizon.com (February 3, 2005). His brother's death led to, or exacerbated, his parents' substance abuse and violent quarreling. McClurkin tried to act as peacemaker between his mother and father; he has recalled hiding knives so that his parents would not stab each other during arguments. He himself became increasingly withdrawn and burdened with feelings of shame. At the family church he found some degree of comfort: the church became "my world, a place where I felt at peace and felt like I belonged," he told Glenn Jeffers for *Ebony* (August 2001). "The only way my mother could punish me was saying I couldn't go to church," McClurkin told Brian McCollum for the *Detroit Free Press* (March 28, 1997). "That's the only reason I would cry." One day during the summer before his 10th birthday, he was "saved" and dedicated himself to God.

One of McClurkin's aunts was a backup singer with the influential gospel singer Andraé Crouch and his group, the Disciples. At a performance by the Disciples that McClurkin attended when he was 11, he and Crouch were introduced. Crouch encouraged him both musically and spiritually, and in letters that he wrote to the boy, he would suggest Bible passages to read and advise using music as a release from inner turmoil. McClurkin taught himself how to play the piano and began to sing more in church. "I was the guy that was scared of crowds, that was inferior," he told Kim Lawton for *Religion & Ethics Newsweekly* (March 3, 2006, on-line). "I had such an inferiority complex. And the only way that I could really depict any feelings or any emotions was through music." His problems with his self-image increased when, at age 13, he was raped by a son of his abusive great-uncle.

Also at 13 McClurkin joined the choir of the Kings Temple Church of God in Christ, in Amityville. "I remember running home and saying, 'Ma, I joined the choir,'" McClurkin told Lynette Holloway for *Essence* (May 2003). "She said: 'Why did you do that? You can't sing.' That hurt my heart. But my family's always been frank. I couldn't sing a lick, but it was a matter of getting comfortable with my voice." By the time he was 14, McClurkin had become the pianist for the church's youth choir, in which his sisters were standouts. Along with four sisters and four friends, he formed a group called the McClurkin Singers. "What I couldn't verbalize, I could express musically . . . ," McClurkin said, according to Jeffers. "When you sang, you left everything. You entered a place that was literally divine." The McClurkin Singers performed in prisons and some of New York City's poorest, most dangerous neighborhoods. In the mid-1970s the group brought in new members and renamed themselves the New York Restoration Choir. In 1975 they recorded *I See a World* for the roots-oriented Savoy label. Two songs from *I See a World*—"Speak to My Heart" and "Prayer"—became hits for McClurkin during his subsequent solo career.

Meanwhile, inspired by Crouch's counseling of troubled youths, McClurkin had become a street evangelist in and around Amityville and in New York City. In 1983 he attended a religion-oriented seminar hosted by the minister and gospel singer Marvin Winans. Four years later he was cast as a choir member in the Broadway musical *Don't Get God Started*, for which Marvin Winans wrote the music and lyrics and Ron Winans created the musical and vocal arrangements. The show ran for about 10 weeks in 1987–88.

In 1989 McClurkin moved to Detroit, Michigan, to become an assistant to Marvin Winans, the leader of that city's 2,000-member Perfecting Faith Church. Soon afterward he was diagnosed with leukemia. Doctors suggested immediate treatment, but McClurkin decided to postpone chemotherapy. After a month, during which he prayed steadily, he felt better, and he returned to his doctor prepared to turn down treatment. An examination revealed that the cancer was in remission and nearly undetectable. McClurkin has since revealed that the prospect of trying to conquer the disease without medical help frightened him, but that he felt that he had to turn to God. "I tell people to believe that God will save you," he said, as reported by Jeffers, "[and] I had to turn around and practice the very thing that I preached."

As a representative of Marvin Winans's church and a leader of Winans-affiliated choirs, McClurkin performed at churches and gospel venues around the country, and his reputation grew. He performed at the White House during the presidencies of George H. W. Bush and Bill Clinton, toured internationally, lent his background vocals to several Winans recordings, and spent some of his free time writing his own music. His exhausting schedule led to his suffering a nervous breakdown during one tour. "I told God, 'Why can't I just be normal with a wife and kids and cat and white picket fence? This is not what I signed up for.' I wanted to know, 'Where is mine?'" After he had reflected and prayed, McClurkin said to Henderson, "God told me, 'I never promised you that you would not feel the burden of ministry.'" His breakdown inspired him to write "Stand," which became one of his signature songs.

During that period McClurkin developed a friendship with Demetrus Alexander (now Alexander-Stewart). After she became an executive with Warner Alliance, she helped him secure a recording contract with that label. In October 1996 McClurkin released his self-titled debut album, which included "Stand," "Speak to My Heart," "Just a Little Talk with Jesus," "Jesus, the Mention of Your Name," and five additional songs. Most reviewers praised the album, as did the critic for the *Tennessee Tribune* (October 30, 1996), who wrote, "The nine tracks on *Donnie McClurkin* . . . [contain] an amazing range of musical and spiritual expression, as well as a stellar list of guests and producers . . . who added to the album's power, joy and reverence." Around that time Oprah Winfrey promoted *Donnie McClurkin* on her television talk show. "You've heard me talk about Donnie McClurkin before," she told her viewers, as McClurkin recalled to Kim Lawton. "This is a voice that you've got to reckon with, and this ['Stand'] is my favorite song." Within two weeks of Winfrey's recommendation, sales of "Stand" had surpassed half a million copies. The album, too, gained gold status, and it earned a Grammy Award nomination.

With his sisters Olivia and Cheryl McClurkin, Andrea McClurkin-Mellini, and Tanya McClurkin-Bulgin and several other female singers, McClurkin next recorded *The McClurkin Project* (1999), for the Gospo Centric label. "Family is sometimes more than blood," McClurkin told a reporter for the *New Pittsburgh Courier* (December 11, 1999) during a conversation about *The McClurkin Project*. "We have been working together for 20 years, my blood sisters and my sisters who are just like blood sisters. It's great to finally share with the world what we have experienced for the past 20 years." The album demonstrated McClurkin's songwriting and arranging abilities and featured his vocals on four tracks. It debuted at number 12 on the gospel charts and earned critical and popular success, securing for McClurkin a 2000 Detroit Music Award and two Stellar Gospel Music Awards. The *New Pittsburgh Courier* writer described the album as "characterized by the use of classic melodies, rhythmic hooks, compelling and inspiring lyrics and complex harmonies."

McClurkin's 2000 album, *Live in London and More*, was recorded in part in 1999 at Fairfield Halls, in London, England. Among other tracks, it included the songs "We Fall Down," "That's What I Believe," "I Trust You, Lord," "Lord, I Lift Your Name on High," "Caribbean Medley," and the duet "Who Would've Thought," sung with Marvin Winans. The single "We Fall Down" remained on the gospel charts for 40 weeks and also climbed near the tops of *Billboard*'s R&B charts, while the album sold more than two million copies and remained on the *Billboard* charts for 126 weeks. "I don't know if anyone can really be prepared for something like that . . . ," McClurkin told Kelley L. Carter for the *Detroit Free Press* (October 26, 2004). "It's amazing how one CD, one successful CD, can thrust you into such a whirlwind of acclaim. The task is to keep your balance and not to change. That's been the greatest task. I'm surrounded with people who help me achieve that."

Soon after his ordination as a pastor, in mid-2001, McClurkin became the spiritual leader of the Perfecting Faith Church, a Pentecostal house of worship, that he set up at the site of an abandoned supermarket in Freeport, New York. His work there, he told a *Jet* (June 25, 2001) interviewer, "is the greatest joy I have ever known. I never thought I would love this like I do, because ministry means people." He added, "The vision for the church is to heal those that have been broken in life and in the church. To introduce people to the living Saviour. To move on from religious tradition, to a relationship with God. To raise people from being obedient followers, to becoming powerful leaders to whatever capacity they have ability." The congregation of the church currently numbers about 1,000, and the services there, according to Kim Lawton, are "exuberant and interactive. Church members are likely to be dancing in the aisles, speaking in tongues or lying on the floor, overcome by the Holy Spirit." During the summer months

McClurkin also conducts outdoor services in a strip-mall parking lot near his church, with the goal of attracting the unchurched or lapsed Christians who might hesitate to enter a church but might be drawn to the singing that dominates the outdoor services. He also hopes to build a congregation that is racially integrated. "I set out to reflect God . . . ," he told Katti Gray for *Newsday* (August 26, 2004). "[People] made the black church, the white church, the Asian church, the Hispanic church. That's never been God and never will be."

McClurkin has attributed his success as a minister to his openness about what he has called his sins, among them his out-of-wedlock sexual activities, both homosexual and heterosexual. He has traced his leanings toward homosexuality, which he has called a "curse," to his having been raped in childhood; he has also said that during his teens, his feminine mannerisms and speech embarrassed him, and that older female members of his church helped him learn to control them. The hypocrisy of many church leaders "angers me in a way, because the bottom line is, if you mess up, just say, 'I messed up.' Don't cover it up . . . ," he said to Kim Lawton. "If you're a preacher and a pastor or a minister and you mess up, just come clean." Writing his memoir, *Eternal Victim, Eternal Victor* (2001), required the painful process of revisiting his childhood traumas, but "it also gave closure and resolution to a lot of things, and I was able to deal with a lot of taboo issues, like sexuality and my struggle with bisexuality and how God helped me find myself, find who I really am," McClurkin said, according to Nekesa Mumbi Moody of the Associated Press (April 13, 2005). "The man—not the bisexual, the homosexual, the man that I am, that's made for one woman." "My desires were toward men, and I had to fight those things because I knew that it wasn't what we were taught in church was right," McClurkin told Lawton. Through Bible study and intense prayer, McClurkin has said, he turned away from homosexuality. "God gave me the wherewithal to get out of that and to find out who I really am and, consequently, that's how the change took place. . . . God walked me through it, " he told Lawton.

Eternal Victim, Eternal Victor and the documentary *The Donnie McClurkin Story: From Darkness to Light* (2004) were greeted with warm praise from those who found McClurkin's story forthright, inspiring, and moving; they sparked fierce criticism from those who construed his message as homophobic and dishonest. McClurkin has defended himself against accusations of homophobia by arguing that he is merely trying to help people who have decided for themselves that they do not want to live as gays or lesbians. "If [homosexuality is] your desire, I'm not looking to change you, but there is a contingent of people who are miserable, who want out, who are hard-pressed and committing suicide. To them, I offer my testimony . . . ," McClurkin told Jeffers. "My thing is not about hatred . . . ," he continued. "God loves everybody. He doesn't condone everything."

Earlier, the Grammy Award–winning *Donnie McClurkin . . . Again* (2003) had debuted at the top of the gospel charts and at number 12 on the *Billboard* R&B charts. Yolanda Adams joined McClurkin in the duet "The Prayer," one of the 11 tracks on the recording. "His new album . . . is just as wonderful as his *Live in London*," Lynn Norment wrote for *Ebony* (April 2003). "McClurkin's dynamic, unique sound and wonderful vocals continue to minister to the hearts of listeners." McClurkin's second Grammy Award winner, *Psalms, Hymns & Spiritual Songs* (2005), debuted at number one on the gospel charts and number five on the R&B charts. In an assessment of it for *Billboard* (April 9, 2005), Gordon Ely wrote, "McClurkin returns facing great expectations, and he doesn't disappoint. . . . He is clearly making music for the flock—albeit with a lush pop veneer and otherworldly lead and ensemble vocals that should please non-churchgoing folk as well. The 15 songs draw significantly on praise and worship standards, revamped with a gospel/R&B flavor that lends them new life and excitement ('Agnus Dei,' 'Draw Me Close'). McClurkin takes things home in grand fashion on two traditional foot-stompers ('I Love to Praise Him' and 'I Love Jesus') and wraps it dueting with Kirk Franklin on the cool, retro soul of 'Ooh Child.' McClurkin's focus on who he is and what he does only gets tighter and more exhilarating each time out." Following the release of *Psalms, Hymns & Spiritual Songs*, McClurkin was named best gospel artist at the BET (Black Entertainment Television) Awards ceremony. In early 2007 he was named a "Gospel Giant" by the Trumpet Award Foundation, which is supported by Turner Broadcasting.

In September 2007 Verity Records released *The Essential Donnie McClurkin*, a two-disc collection of the singer's best-known material. The following month McClurkin joined "Embrace the Change," a three-date gospel concert tour inspired by the presidential campaign of the Democratic U.S. senator Barack Obama of Illinois. The concert series was scheduled to take place in South Carolina, where Obama was trailing his fellow Democratic presidential hopeful Hillary Rodham Clinton in opinion polls, and demonstrate "how Barack Obama's family values and faith have shaped his leadership and commitment to bringing all people together around his movement for fundamental change," according to the States News Service (October 15, 2007). Some political pundits and members of the lesbian, gay, bisexual, and transgender (LGBT) community chided Obama for aligning himself with McClurkin, who some see as an anti-gay bigot. "I have consistently spoken directly to African-American religious leaders about the need to overcome the homophobia that persists in some parts our community so that we can confront issues like HIV/AIDS and broaden the reach of equal rights in this country," Obama said, according to the Associated Press (October 23, 2007). "I strongly believe that African Americans and the LGBT community must stand together in the fight for equal rights. And so I strongly disagree with Reverend McClurkin's views and will continue to fight for these rights as president of the United States to ensure that America is a country that spreads tolerance instead of division."

In addition to performing on such television programs as the *Arsenio Hall Show* and *Oprah*, McClurkin has appeared in several feature films, among them *The Fighting Temptations* (2003), *The Gospel* (2005), and *Diary of a Mad Black Woman* (2005). He contributed to the soundtracks of *The Prince of Egypt* (1998) and *The Ladykillers* (2004). He hosts a nationally syndicated radio show and has co-hosted the Stellar Gospel Music Awards ceremony several times.

McClurkin has one son, born in 2000, and one daughter, the latter of whom he adopted when she was 10; she is now in her 20s and lives in London, England. "God has been so great to me . . . ," he told Henderson in 2005. "The one thing missing is a wife and family." In his leisure time he enjoys watching cartoons, old movies, and sitcoms from the 1960s and 1970s.

McConnell, Mike

July 26, 1943– U.S. director of national intelligence

Address: Office of the Director of National Intelligence, Washington, DC 20511

On February 20, 2007 John M. ("Mike") McConnell was sworn in as the director of national intelligence, charged with overseeing the 16 agencies that comprise the intelligence community of the United States government. Succeeding John Negroponte, McConnell is the second national director since the position was created, in 2004, on the recommendation of the National Commission on Terrorist Attacks Upon the United States—better known as the 9/11 Commission—which investigated intelligence failures surrounding the September 11, 2001 terrorist attacks. In his announcement of McConnell's nomination, as quoted in a White House press release on January 5, 2007, President George W. Bush lauded McConnell, a former vice admiral and career intelligence officer in the U.S. Navy, for demonstrating "the experience, the intellect, and the character to succeed in this position," and highlighted McConnell's track record of "ensuring that our military forces had the intelligence they need to fight and win wars." In accepting the nomination, McConnell vowed, as part of the global war on terror, to implement "better sharing of information" across the various intelligence agencies while improving "security processes" and ensuring "deeper penetration of our targets to provide the needed information for tactical, operational, and strategic decision-making."

McConnell's 40-year career in intelligence began in the 1960s and includes distinguished tours as a naval intelligence officer in both Vietnam and Japan. Known for his integrity, work ethic, and keen insight into the rapid developments of global intelligence, McConnell quickly advanced through the military ranks, serving in the early 1990s as the joint intelligence officer for General Colin L. Powell, then the chairman of the Joint Chiefs of Staff, and Richard B. ("Dick") Cheney, then the secretary of defense, during Operation Desert Storm in the

Persian Gulf. From 1992 to 1996 McConnell was director of the National Security Agency (NSA) under President Bill Clinton, guiding the agency during pivotal, geopolitical shifts in the aftermath of the Cold War. In the dawn of the age of information technology and cellular communications, he made information security a priority for the NSA. Under McConnell's leadership, the organization was also credited with providing vital intelligence relating to the Bosnian conflict. Following his tenure at the NSA, McConnell spent 10 years as senior vice president at Booz Allen Hamilton Inc., a strategy consulting firm, leading its efforts in developing cutting-edge intelligence and information operations for both the private financial and government sectors. In that role McConnell became a prominent—albeit controversial—advocate for increased public-private partnership with regard to intelligence exchange and information security.

McConnell has been described by colleagues as a "soft-style gentleman," as Ben Szobody wrote for the South Carolina *Greenville News* (January 7, 2007), leading some to wonder, in the wake of his nomination as director of national intelligence, whether his gentle and courteous temperament was appropriate for such a post. Mark M. Lowenthal, a former staff director for the U.S. House Intelligence Committee, dismissed such concerns, telling Scott Shane for the *New York Times* (January 5, 2007), "[McConnell's] quiet manner and his lovely South Carolina accent belie it, but I have no doubt he can be forceful when necessary."

John Michael McConnell was born on July 26, 1943 in Greenville, South Carolina. His father, Harold E. "Mack" McConnell, worked in the shipping business, his mother, the former Dorothy Beatrice Cassell, in the garment industry. As a teenager McConnell attended the local Wade Hampton High School, from which he graduated in 1962. He next attended North Greenville College (renamed North Greenville University in 2005), for the first two years of college, becoming student-body president while working his way through school. Nicknamed "Dobie" by his fellow students, as Ben Szobody noted, McConnell is remembered by classmates for his quiet temperament, which perhaps masked his growing military ambition. McConnell finished his collegiate studies at Furman University, also located in Greenville, in 1966, graduating with a bachelor's degree in economics. He then joined the U.S. Navy and was commissioned as a line officer. Beginning in 1967 he served a tour in Vietnam as a member of the navy task force aboard the *USS Colleton* in the Mekong Delta, and from 1968 to 1970 he was stationed in Japan as a counterintelligence analyst for the Naval Investigative Service. Among his other naval assignments during the 1970s, McConnell served as commander of the Middle East Force in the Persian Gulf from 1974 to 1976 and as an intelligence officer for the Fleet Ocean Surveillance Information Facility in Spain, from 1976 to 1979. McConnell's building a career as a naval intelligence officer, which encompassed nearly 25 years, surprised his family and friends—particularly his father, who initially suspected that "Mike was just going to go ahead and get his [military] obligation over with," as he put it, according to Szobody.

In the mid-1980s McConnell worked as an intelligence officer of the Chief Pacific Fleet in Honolulu, Hawaii, and of the Seventh Fleet Western Pacific, before serving as executive assistant to the director of naval intelligence, in Washington, D.C. He earned a master's degree in public administration from George Washington University and a master's degree from the National Defense University, both in 1986, as well as a Ph.D. degree from the National Defense Intelligence College in 1992. In 1991 McConnell was chosen to be the director for joint staff intelligence, or J-2, for General Colin L. Powell, then the chairman of the Joint Chiefs of Staff, and Dick Cheney, then the secretary of defense, during Operation Desert Storm—the U.S.-led military campaign to liberate Kuwait from Iraqi invaders. McConnell conducted daily briefings for Powell and Cheney. At first "he didn't really know a lot of the Army-speak," Mark Gerencser, a senior vice president and director of Booz Allen's global government business, told Ben Szobody. "He immediately learned, studied it real hard, was honest with Powell and then rose to be one of his best advisers." McConnell also teamed with Lieutenant General Thomas W. Kelly, director of operations for the Joint Chiefs of Staff, to deliver daily reports on troop movements and aerial assaults for the news media. In his press briefings McConnell was admired for "distill[ing] complex ideas into easily understood terms," as Siobhan Gorman noted in the *Baltimore Sun* (January 6, 2007). According to Melissa Healy, writing for the *Los Angeles Times* (January 29, 1991), the press corps came to dub McConnell and Kelly's news briefings as the "Tom and Mike Hour." One journalist, as Healy reported, labeled the pair the "Huntley and Brinkley of the Pentagon's briefers [a reference to the longtime newscasters Chet Huntley and David Brinkley of the *Huntley-Brinkley Report*], complementing each other's talents and providing a calm but frank picture of the unfolding Persian Gulf War." "Against Kelly's bluff loquacity," Healy observed, "McConnell is the picture of a military intelligence analyst—meticulous, detail-oriented and scrupulously organized." Bill Smullen, a former aide to Powell, characterized McConnell as "measured, methodical, and detailed," according to Scott Shane, while U.S. senator Arlen Specter of Pennsylvania, as quoted by Globalsecurity.org, assessed McConnell's Gulf War service as "instrumental in saving U.S. and coalition lives" and in "bringing about a quick and decisive victory for allied forces."

In 1992 McConnell was promoted to vice admiral and appointed the head of the National Security Agency (NSA), reportedly the largest intelligence-gathering agency in the world. Assessing the role of the NSA, McConnell noted, as quoted by Scott

Shane and Tom Bowman in the *Austin-American Statesman* (January 7, 1996), "There is not a single event that the U.S. worries about in a foreign policy or foreign military context that NSA does not make a very direct contribution to." McConnell's four-year tenure, which coincided roughly with President Bill Clinton's first term, began during a pivotal juncture in the geopolitical landscape. With the dissolution of the Soviet Union, in December 1991, and the resulting end of the Cold War, McConnell redirected the NSA's attention toward emerging Internet technologies and cellular communications, whose growing importance revealed vulnerabilities within the agency's intelligence-gathering operations. He lobbied for information assurance (IA) and information defense, helping initiate an encryption technology that protected sensitive electronic transmissions across the Internet from enemy saboteurs. As Matthew M. Aid, an NSA historian, told Scott Shane in 2007, "[McConnell] begged and borrowed and took money from research and development to pay for operations." Under McConnell's watch the NSA was also credited with gathering vital intelligence relating to the violent ethnic clashes among Bosnian Muslims, Serbs, and Croats in the former Yugoslavia. McConnell drew criticism for permitting Congress to slash the NSA's budget in the mid-1990s; that reduction, though, resulted in the streamlining of top-level staff and reallocation of responsibility that enabled him to manage "in a more effective way, with oversight and accountability," as he explained to Siobhan Gorman. By the end of his tenure, in 1996, McConnell had received more praise than criticism for his leadership. William P. Crowell, McConnell's deputy at the NSA, told the *New York Times*, as quoted by a writer for the *BBC News* (January 5, 2007, on-line), that McConnell was a "consummate professional," while another colleague, Ronald D. Lee, characterized him as "an exceptionally gifted leader who was completely devoted to the rule of law and the Constitution." Senator Specter lauded McConnell for "his candor and openness with the Congress," as quoted by Globalsecurity.org.

In the spring of 1996, McConnell officially retired from military service and became a senior vice president at the McLean, Virginia–based Booz Allen Hamilton Inc., one of the world's leading strategy consulting firms. In recent years Booz Allen, a noted supplier of intelligence contracting for the U.S. government, particularly the NSA, had sparked a growing trend in government circles toward the outsourcing of intelligence initiatives to private firms. (John Gannon, a former CIA official, characterized Booz Allen as having probably "the biggest chunk of recent former CIA people of any of the corporations," as Siobhan Gorman noted.) McConnell spearheaded Booz Allen's programs in information security for the private finance and banking sectors. He oversaw the firm's support of the Presidential Commission on Critical Infrastructure Protection (PCCIP) and the Presidential Decision Directive 63 on Critical Infrastructure Protection, initiatives established by President Bill Clinton in 1997 to protect critical infrastructures in the private sector from computer sabotage. Addressing business leaders at the LOMA (formerly, Life Office Management Association) Systems Forum, a preeminent financial-services technology conference, McConnell observed, as quoted by *Business Wire* (April 11, 2002), "Business security is a key aspect of homeland defense. Security planning needs to be incorporated across an entire organization to reduce risks in operations, personnel and financial areas, as well as information systems, through a single, integrated strategy." He further lobbied for more "public-private partnership." McConnell also led Booz Allen's support of national defense clients, such as the U.S. Navy, the Defense Information Systems Agency, and the NSA. Commenting on the vulnerabilities of the federal security branches, McConnell told Charles Smith for *Insight on the News* (December 1, 1997), "Our biggest problem is how do we tell if we are under IW [information warfare] attack. It is difficult to determine if an incident is merely a software error, a teenage vandal intent on causing trouble, a criminal, a terrorist cell or another country actually carrying out an attack." With increasing threats to information security, McConnell also helped launch Booz Allen's "Intelligence to Operations" campaign, which helped the firm identify internal weaknesses and improve upon its own intelligence support for clients. Under McConnell's leadership, Booz Allen accumulated $1.59 billion in government contracts in 2006.

McConnell's 10-year tenure at the firm saw some controversy. From 1997 to 2002 McConnell helped Booz Allen secure $63 million in government contracts for the "Total Information Awareness" (TIA) program, a data-mining project launched by John M. Poindexter, a former national security adviser under President Ronald Reagan; the TIA program enabled the government to track potential terrorist activities through a unified systems search of government databases, private financial data, and personal records. Writing for *Salon.com* (January 8, 2007), Tim Shorrock described the TIA as a "warrantless surveillance of the telephone calls and e-mails of American citizens," and as Michael Hirsh and Mark Hosenball reported for *Newsweek* (January 4, 2007, on-line), the American Civil Liberties Union (ACLU) called TIA an "Orwellian program"—a reference to the novelist and essayist George Orwell, who wrote about threats to free society. Congressional lawmakers, too, questioned the TIA's observance of privacy laws. Raising eyebrows as well was McConnell's association with Poindexter, who was indicted during the 1980s for his role during the Iran-Contra affair, a political scandal involving the U.S. government's illegal sale of arms to Iran—with profits going to support the Contras, an anti-Communist militia in Nicaragua. Congress banned the TIA program in 2003. Many, though, continued to object to Booz Allen's close ties with the U.S. government. In June

2006 it was publicly revealed that the government was inspecting financial transactions of the Society for Worldwide Interbank Financial Telecommunication (SWIFT)—with Booz Allen hired to ensure that the process was handled fairly; the ACLU questioned whether Booz Allen was sufficiently objective for that task. Reports also surfaced that two Booz Allen infrastructure-service projects for the NSA, dubbed Groundbreaker and Trailblazer, had ended in failure. Despite the controversies, McConnell's tenure at Booz Allen garnered the admiration of his peers. Mark Gerencser described McConnel as a "futurist," as paraphrased by Szobody—"one of the best I've ever seen," Gerencser added.

On January 5, 2007 President George W. Bush nominated McConnell to succeed John Negroponte as the nation's second national director of intelligence—or "intelligence czar"—a position that was established in 2004 for oversight of 16 agencies of the intelligence community. Negroponte, whose tenure lasted 20 months (he has been appointed deputy to Secretary of State Condoleezza Rice), predicted that McConnell, with "wise stewardship and success," would "continue to drive forward the reforms we have initiated," as Katherine Shrader reported for SignOnSanDiego.com (January 5, 2007)—reforms aimed at unifying the intelligence networks. For his part, McConnell stated that his 10 years at Booz Allen had helped prepare him for his new post, by allowing him "to stay focused on national security and intelligence communities as a strategist and as a consultant. Therefore, in many respects, I never left," as quoted by Mark Mazzetti and David E. Sanger for the *New York Times* (January 5, 2007, on-line). Some lawmakers, however, including California Democratic congresswoman Jane Harman, expressed reservations concerning McConnell, who, along with General Michael V. Hayden, the recently appointed head of the CIA, "may complete the military takeover of all the civilian intelligence agencies," in her words, as Gorman reported in the *Baltimore Sun* (January 5, 2007). Such objections notwithstanding, the Senate confirmed the appointment of McConnell, who was sworn in on February 20, 2007.

In April 2007, two months after taking office, McConnell unveiled a "100-day plan" to improve national intelligence. His goals included hiring more immigrants and children of immigrants, decreasing the time it takes for candidates to undergo security checks, and establishing stronger ties with foreign intelligence groups.

The following August McConnell was among those who successfully urged Congress to amend the Foreign Intelligence Surveillance Act (FISA) so as to grant the government permission to eavesdrop on international telephone calls made from or received in the U.S., provided overseas parties are the primary subjects of the surveillance. Under the law—which is effective for six months, and which McConnell has said he wants to make permanent—intelligence officials still need to secure warrants from secret courts in order to listen in on conversations of U.S. residents or citizens. Some Democrats and legal observers have expressed concern about the newly revised FISA, suggesting that the law might give the government authority to seize business records and physical property in the U.S., so long as it is done under the guise of targeting a foreign suspect.

In September 2007 McConnell said that fewer than 100 Americans have had their phones tapped as a result of conversations with foreign terror suspects. (He declined, however, to elaborate on what period of time that figure covered.) He added that no Americans had been spied on without court orders and insisted that no warrantless tapping of Americans had occurred since at least as far back as February 2007, when he became director of national intelligence. In addition to arguing that the FISA amendments should be made permanent, McConnell proposed a measure that would extend retroactive legal immunity to telecommunications firms who cooperated with the NSA's programs prior to FISA's passage. The next month McConnell made public a "500-day plan" intended to build on six key areas outlined in the "100-day plan," including "creating a culture of collaboration," "accelerating information sharing," and "clarifying and aligning . . . authorities" of the director of national intelligence, as quoted in *Washington Technology* (October 12, 2007).

McConnell has received numerous honors, including three Bronze Stars and the Meritorious Service Medal with two Gold Stars from the secretary of the navy. In 2002 McConnell was named one of the top 25 most influential consultants by *Consulting* magazine. In 2004 he joined the board of directors of CompuDyne Corp., an industry leader in information security technologies for the public sector. McConnell is married to Terry McConnell, a homemaker, with whom he has two children and two stepchildren. He also has two children from a previous marriage.

McNeil, John

Mar. 23, 1948– Jazz trumpeter; writer; educator

*Address: 500 Second St., No. 2, Brooklyn, NY
11215-2503*

Writing about the jazz trumpeter John McNeil for the *New York Times* (February 15, 2007), Ben Ratliff remarked that McNeil, a "kind of trickster figure," is the stylistic scion of a trumpet lineage that traces its roots to Freddie Hubbard and Thad Jones, "with a little of Blue Mitchell's dark, warm sound, and Lester Bowie's imagination in free improvising." McNeil is frequently hailed by colleagues and music journalists as one of the most talented musicians in the business. Renowned for his ability to fuse classical harmony with bebop and free jazz, he is also acclaimed for his mastery of difficult meter and complex arrangements; he tours with several bands and is in demand as a producer, arranger, writer, composer, and educator. Since his days as part of the underground jazz scene that flourished in New York City's Greenwich Village in the 1970s, McNeil's career and professional reputation have grown enormously. To the evident disappointment of critics including Ratliff—who called McNeil "one of the best improvisers working in jazz" while referring to the "rather questionable choices" of nominees for 2007 Grammy Awards in the jazz category—McNeil has never gained entree to prominent awards ceremonies or enjoyed mainstream success. Yet he commands enormous respect among both academics and ordinary jazz fans, a feat that is doubly impressive given the physical hardship he has had to overcome.

John McNeil was born on March 23, 1948 in Yreka (pronounced "why-REE-kuh"), California, near the Oregon border. His father owned a grocery store in the town. His sister, Rory McNeil, currently the mayor of Yreka, "wields absolute power over all Yrekans," McNeil said to *Current Biography.* In the late 1950s McNeil saw the legendary trumpeter Louis Armstrong on Milton Berle's television show and developed a desire to master the trumpet himself. But beginning in childhood, he struggled with the neuromuscular disorder Charcot-Marie-Tooth disease, an illness he inherited from his father (who did not display signs of the disorder until he was in his 70s). Charcot-Marie-Tooth disease affects the nerves and muscles in the extremities of the body; though it rarely has an impact on the facial musculature, McNeil's face, as well as his tongue and diaphragm, bear the effects of the disorder. McNeil laughed when he told Ben Ratliff, "So, basically, I have the big three for trumpet playing." McNeil wore braces from his legs to his neck from age seven through 16, when he underwent operations that eliminated the need for them. When he was in high school, he underwent diagnostic tests at the Mayo Clinic and was told that he should not attempt to build a career as a musician, advice that he ignored.

When he was in grade school, McNeil taught himself to play the trumpet and read music. He told Frank Tafuri for the Omnitone Web site (January 2006) that he "used to copy Chet Baker a bit" when he started out. By the time he graduated from high school, in 1966, he had already begun playing professionally. He enrolled as a trumpet major at the University of Portland, in Oregon, where an instructor revamped his technique, eliminating "many of the bad habits acquired from being self-taught," as McNeil told *Current Biography.* McNeil graduated with a degree in trumpet performance and then studied the instrument briefly at the University of Miami. Afterward, he launched his professional career in earnest, playing as many gigs as he could. At one point, when a gig required it, he learned to play the alto saxophone. During a December 2006 interview with the Swedish Web site *Jazz pa svenska,* McNeil recalled, "I played alto sax at a dude ranch, which is a ranch where people from the city can go and pretend they are cowboys. It was a terrible band, I was a terrible saxophonist and the whole experience was like being trapped in a Salvador Dali painting."

In the mid-1970s McNeil left the West Coast for New York. There, he occasionally played trumpet with the Thad Jones/Mel Lewis Orchestra and the Gerry Mulligan Concert Jazz Band. He began leading his own groups at venues including the famed Greenwich Village jazz club Boomer's; his sidemen included the pianists Mulgrew Miller and Hal Galper, the bassist Rufus Reid, and the saxophonist Bill Evans. In the late 1970s McNeil joined the Horace Silver Quintet, touring Europe and North America. At around the same time, he signed with the Danish label SteepleChase as a solo artist. He made nine recordings for the label, among them *Embarkation* (1978), *Faun* (1979), *Look to the Sky* (1979), and *Clean Sweep* (1981), with musicians such as David Liebman on tenor sax, soprano sax, and flute; Richie Beirach on piano; Buster Williams on bass; Billy Hart on drums; and Joanne Brackeen on piano. *Look to the Sky* in particular stands as a perennial favorite among trumpet players, since it features McNeil's collaboration with his fellow trumpeter Tom Harrell. The year after that album was released, McNeil began teaching occasional clinics at the prestigious New England Conservatory of Music. His former students include the successful jazz trumpeter Dave Douglas.

In 1982 McNeil's physical condition took a turn for the worse. After completing work on *I've Got the World on a String* (1983) and having a particularly bad day in 1983 while recording the live album *Things We Did Last Summer*, he abruptly stopped recording; he did not release another solo album for 13 years, due primarily to Charcot-Marie-Tooth disease. He began to experience unexpected bouts of bodily weakness and a loss of motor control, which sometimes made it impossible to play. For a time he kept up a regular performance schedule, but the difficulty of predicting how well he would be able to play eventually made that impractical. He told Ratliff, "Then I just stopped everything. The irregularity was maddening. I began to think I didn't have any talent. It does strange things to your confidence. You don't have to fail absolutely to have no confidence; you just have to fail every so often." He focused once again on revamping his technique, developing a method of balancing the muscles in his face in order to maintain sufficient compression in his lips. He also underwent surgery to have his spine reconstructed.

In 1989 McNeil increased his duties at the New England Conservatory of Music, taking on a weekly music-theory class that he still teaches. According to McNeil's faculty biography on the conservatory's Web site, "He has a reputation for encouraging his students to establish an emotional connection to their playing, and to develop a strong personal style." In an interview with Craig Jolley for the Web site *All About Jazz* (May 19, 2005), McNeil said, "Students get from me in the classroom what they would get playing in a band. I'm not big on theory for theory's sake. I teach students how to play better, how to put things together. . . . I'm also kind of a brass troubleshooter. I had a lot of trouble learning to play the trumpet, a lot of problem-solving experience, so I became a good brass teacher. There's a whole range of people that call me up for lessons from time to time, which is ironic considering I've been known more as a creative trumpet player than technician." In 1993 Gerard & Sarzin Publishing Co. brought out McNeil's two-volume treatise *The Art of Jazz Trumpet*, a comprehensive study of modern jazz trumpet playing. Six years later the company published an updated edition of the work, combined into a single volume and augmented by a CD. The book includes a brief history of McNeil's own experience with the jazz trumpet, a selected discography, and extensive analysis of valve technique, phrasing, alternate fingerings, and articulation. It also includes practice exercises to develop rhythmic diversity, finger coordination, and jazz articulation. In the introduction, McNeil wrote, "I remember how abysmally long it took me to learn to play jazz on the trumpet, and I would hate to see anybody else have to spend the same amount of time. . . . Jazz is, however, an expression of life, and life can be untidy. If a player is operating at the far frontiers of his or her ability, pushing the envelope so to speak, it seems to me that a certain amount of failure is inevitable. Maybe even desirable." Early in the book, McNeil acknowledged one of his heroes, the alto saxophonist and bebop pioneer Charlie Parker, as "the fountainhead of contemporary jazz."

By 1996 McNeil's playing was reliable enough for him to return to the recording studio. He released *Hip Deep*, a collaboration with the clarinetist and saxophonist Kenny Berger, on Brownstone Records; the album also featured John Mosca on trombone, Dean Johnson on bass, and Steve Johns on drums. *Brooklyn Ritual* (1998), another collaboration with Berger, released on the Synergy label, also included the work of Mosca and Johns. In 1997, after *Brooklyn Ritual* was recorded but before it was released, Charcot-Marie-Tooth disease once again threatened McNeil's career. He temporarily lost the ability to extend the fingers in his right hand—which he used to play. He had two trumpets made for the left hand, and over the next couple of years he taught himself to play them. Having made that transition, he recorded the album *Fortuity*, released in 2001 on his old label, SteepleChase. *Fortuity* featured Allan Chase on alto saxophone and baritone saxophone, Eric Thompson on drums, Kate Vincent on viola, and Derek Olphy on flute. Eventually, McNeil regained the use of his right hand and returned to his normal way of playing. He was recently fitted for a set of sterling-silver finger braces that give him stability and allow for greater flexibility in his fingers, thus vastly improving his valve technique. He has once again become a consistent performer on the New York jazz scene.

In 2001 International Production Group released an instructional video called *John McNeil's Jazz Series*, in two volumes. According to *Music Educators Journal* (January 2001), McNeil "introduces viewers to major scales and modes, minor (major seventh) scales, basic concepts of chords and scales, scale construction, tetrachords, and the advantages of being able to sing jazz and blues scales in order to recognize and play them on an instrument." Those videos were re-released on DVD in 2007.

In 2003 McNeil signed with a small label, Omnitone, and released *This Way Out*, a record that included Gorka Benitez on tenor saxophone, Giulia Valle on bass, and Joe Smith on drums. The album, which McNeil recorded in Barcelona, Spain, exhibits clear Spanish influences. He originally composed the music in preparation for a three-week tour in Spain with Benitez; the tour was so successful that McNeil booked a studio at its conclusion and spent two days recording an album with Benitez and others. McNeil told a reporter for *Jazz pa svenska*, "Spanish music tends to have a high emotional content. If you're into self-expression and speaking the truth about who you are (as I am) it's a natural fit. There's a lot of room in there to laugh and cry." David Adler wrote for *Jazz Times* (January/February 2004) about the album, "McNeil's writing is enormously sophisticated and a bit warped . . . full of conceptual surprises."

In 2004 Omnitone released *Sleep Won't Come*, with McNeil on trumpet, Jeff Jenkins on piano and prepared piano, and Kent McLagan on bass. The album was inspired by McNeil's frequent bouts with insomnia, for which he takes the prescription sleeping medication Ambien. The band that played on the album was jokingly called Insomnia. Jay Collins wrote for the Web site *One Final Note* (December 22, 2004, on-line), "What emerges is a slightly bi-polar program of haunting reveries, mixed in with some arousing, energized performances that demonstrate the breadth of McNeil's goal and his trio's talents. . . . While the musicians are top-flight and McNeil proves that he deserves more ink, taken as a whole, this can be a disjointing listen, as several of the pieces prove to be mere mood-setters or unresolved sketches. . . . However, when one keeps McNeil's purpose in mind [capturing 'the scenes that went through your head when you are laying in the dark staring at nothing'], this diverse range of compositional moods and terrains proves worthwhile." Mark Keresman, a contributing writer for *Jazz Review* (on-line), remarked on the record's "concise, witty tunes."

The year 2004 also saw the publication of McNeil and Laurie Frink's *Flexus* (published by OmniTone Books), which addressed the physical demands of trumpet improvisation. The jacket blurb states that "the physical act of playing needs to be a conditioned reflex." In 2006 Omnitone released *East Coast Cool*, whose title alludes to the West Coast—or "cool"—school of jazz dating back to the 1950s; the record includes the work of Allan Chase on baritone saxophone, John Hebert on bass, and Matt Wilson on drums. Writing for *Dusted* (January 3, 2006, on-line), Derek Taylor opined, "Temperature tags have long since fallen out of fashion as codifiers for coastal jazz differences. But damn if trumpeter John McNeil hasn't struck pay dirt, intended incongruities aside, with *East Coast Cool*. . . . The tunes, all but three written by McNeil, delight in subtle and mischievous upendings of expectation. But it's all done with a close attention to tunefulness and it often takes a careful ear to fully discern just how subversive the band's being with both its arrangements and improvisations." Troy Collins, a contributor to *All About Jazz*, wrote, "Enjoyably accessible yet intriguingly innovative, McNeil and his quartet have taken [Gerry] Mulligan and [Chet] Baker's piano-less quartet inspired music and drawn an overt parallel to Ornette Coleman's piano-less quartet innovations of the same time period [the 1950s], building a conceptual link between the two." Chuck Graham wrote for the *Tucson (Arizona) Citizen* (March 9, 2006) about the record, "The artistic effect is a little like seeing an impressionist painter's version of DaVinci's *The Last Supper*."

In his interview with Craig Jolley, McNeil said, "I tend to write arrangements with improvisation integrated into the composition instead of head-improv-head. There's nothing wrong with that; it's just boring if you do it on every tune. These days, when it's time to write, something clicks, and I can usually just do it . . . if I were going to give advice to anyone about how to write I'd say, 'Don't fall in love with what you write.'" McNeil told Frank Tafuri, "To be a jazz musician, you have to be a 'professional listener'. . . . There's basically no kind of music on this planet that I don't hear on a semi-regular basis. And New York's a great place for listening."

McNeil recently helped put together My Band Foot Foot, in order to cover the music of the 1960s teenage girl group The Shaggs, a campy favorite of a number of New York City underground musicians. McNeil told Jolley, "It's the best or the worst thing you've ever heard. They didn't know anything about music. The drummer was inept—sometimes she'd be playing in two different tempos at once; and their melodies were unstructured. There's a cult following—people know the lyrics. We're doing largely instrumental versions. It's trumpet, trombone, squeezebox, violin, guitar, bass and drums, and we all sing a little."

McNeil's latest regular gig is a standing Sunday-night date in a small back room at Biscuit, a barbecue restaurant in the Brooklyn, New York, neighborhood of Park Slope. With the noted tenor saxophonist Bill McHenry, he co-leads a quartet there that plays mainly pieces from the 1950s by Dizzy Gillespie, Wilbur Harden, Gerry Mulligan, and Russ Freeman. (McNeil's group played at the same site when it was a jazz restaurant called Night & Day.) Ratliff wrote of the quartet's performances, "The gig has become one of the best regular jazz events in the city," and he called McNeil "one of the best improvisers working in jazz." The McNeil/McHenry Quartet earned stellar reviews for their performances at the Village Vanguard in August 2007.

McNeil is married to a professional trombonist, Lolly Bienenfeld.

Meyer, Danny

Mar. 14, 1958– Restaurateur

Address: Union Square Hospitality Group, 24 Union Sq. E., New York, NY 10003

Over two decades ago, at the age of 27, the New York City restaurateur and philanthropist Danny Meyer became a novice entrepreneur as the owner of the Union Square Cafe, in a then-downtrodden neighborhood near New York University. Today he is credited with almost single-handedly revitalizing the Union Square area and transforming it into an upscale neighborhood. Meyer founded and owns the Union Square Hospitality Group (USHG), which operates five of the most critically acclaimed fine dining establishments in New York: Gramercy Tavern, Eleven Madison Park, Tabla, and Blue Smoke and Jazz Standard as well as the Union Square Cafe. Meyer and USHG operate Hudson Yards Catering and all three restaurants housed in the Museum of Modern Art: Terrace 5, Café 2, and the Modern. He also owns Shake Shack, a wildly popular fast-food outlet in Madison Square Park that donates part of its profits to the Madison Square Park Conservancy. Meyer is well-known for his charitable work with local and national organizations that fight hunger, and he has long won praise for the hospitality shown to patrons of his restaurants. He told Julie Schlosser for *Fortune* (July 24, 2006), "Once a month I meet with every employee who's been hired in the previous four weeks. We have over 1,000 employees right now. And we spend a lot of time talking about the power of hospitality."

Daniel Harris Meyer was born on March 14, 1958 in St. Louis, Missouri, to Morton L. Meyer and Roxanne Harris Frank. He has at least one sibling—a brother, Thomas. His maternal grandfather, Irving B. Harris, an entrepreneur and philanthropist, founded the Toni Home Permanent Co., the Pittway Corp. (a manufacturer of burglar and fire alarms), and other highly successful businesses, and he financed the creation of the Yale Child Study Center, the Erickson Institute for Advanced Studies in Child Development, the University of Chicago's Graduate School of Public Policy Studies, and the Ounce of Prevention Fund, among other educational, child-welfare, and cultural endeavors. Meyer's father owned a travel, hospitality, and real-estate company. He became a representative of a French firm that grew into the Relais & Chateaux chain of luxury restaurants and hotels, and for a time he operated the Seven Gables Inn in St. Louis. According to the USHG Web site, Meyer's family "relished great food, cooking, get-togethers, travel and hospitality." Both his parents loved French culture and cuisine, and as a youngster Danny took French-language lessons. He often accompanied his father on business trips to Europe. He told Julie Schlosser that his father "founded some exciting companies" but "expanded far too quickly and didn't surround himself with the kind of people who could compensate for his weaknesses." "I watched him go bankrupt on two different occasions," Meyer said. "That has colored the way I view growth. It was almost a decade before I could even get comfortable with the idea of a second restaurant."

Meyer attended the John Burroughs School, a college-preparatory junior high and high school in St. Louis, and then Trinity College, in Hartford, Connecticut. During his undergraduate years he worked summers for his father as a tour guide in Rome, Italy. After he graduated, with a bachelor's degree in political science, he moved to Chicago, Illinois, to work as the Cook County field director for the unsuccessful 1980 presidential campaign of Republican congressman John B. Anderson of Illinois, who ran as an independent. He then worked as a salesperson for several years before moving to

New York. He spent much of 1984 as an assistant manager at Pesca, an Italian seafood restaurant in the Flatiron District. He next studied cooking as an apprentice in Italy and Bordeaux, France. In both countries he "learned a lot about shopping for food" as well, as he told an interviewer for the Web site of the Institute of Culinary Education (ICE) in 2003.

In 1985, at the age of 27, Meyer opened his first restaurant, the Union Square Cafe. He told Robert Levin for the *New York Enterprise Report* (August 16, 2006), "I just had to give birth to this business. It was bubbling inside me; it was a passion that just had to happen." He chose the then-scruffy Union Square site, which is bounded by 17th Street on the north side and 14th Street on the south, in large part because of the Greenmarket Farmers Market located there; four days a week, proprietors of small farms come to Union Square to sell their produce, which includes a far greater variety of items than is offered in stores. According to the restaurant critic Frank Bruni, writing 20 years later for the *New York Times* (October 12, 2005), Meyer was then "relatively inexperienced" but also "wildly optimistic" when, disregarding the many people who disparaged his plan as "foolhardy," he opened his "unusual restaurant in a Manhattan neighborhood not then associated with fine dining." "The neighborhood wasn't the only wild card," Bruni continued. "This restaurateur had decided to wed serious food to mirthful, big-hearted service, to make diners feel that in going out they were coming home. He had also decided to jettison ethnic boundaries, emphasizing Italian but inviting French and even Asian into the mix." The Union Square Cafe was an instant success, immediately earning three stars out of four from the *New York Times*. Later, in the Zagat Survey, which rates restaurants, Union Square Cafe was voted the most popular restaurant in New York an unprecedented seven times (1996–2002). In 1992 the café won the prestigious James Beard Award for Excellence in Service and Hospitality. Meyer told Levin, "Excellence is how well something works technically. Hospitality is how well the people who are using that product feel while they're using it. They're very different things, but both matter." Robin Landis of Ridgewood, New Jersey, echoed the sentiments of many of the café's patrons when she wrote in a letter to the *New York Times* (September 24, 2006) that 15 years earlier, when she worked near the café and sometimes ate there, "Meyer was usually up front greeting the line of waiting patrons. Scruffy and jeans-clad though we were, he treated us like favored guests and as though our business really mattered to him. He was so gracious that to this day, I still have warm feelings for the restaurant. And the food is fabulous." Meyer has often been credited for almost single-handedly rejuvenating the Union Square area through his activism and commitment to neighborhood improvement projects.

In 1994 Meyer opened his second restaurant, the Gramercy Tavern, in collaboration with the chef Tom Colicchio. The week that it began operating, its image appeared on the cover of *New York* magazine. Gramercy Tavern quickly earned three stars from the *New York Times*, and it took first place in the Zagat Survey's list of New York City's most popular restaurants in 2003, 2005 and 2006. (In 2007 it fell to second place, with the Union Square Cafe having become most popular.) In mid-2007 the tavern charged $36 for a three-course lunch, $55 for a five-course lunch, and $76 for a three-course dinner. It also offered so-called tasting menus, in which, for either $82 or $98, diners received small portions of nine dishes. Adam Platt, who reviewed the restaurant after Michael Anthony took over as chef, wrote for *New York* (April 23, 2007) that the menu is filled with "subtle, slightly bucolic creations like lightly smoked lobster (decked with seasonal springtime ramps), crispy poached barnyard chicken, and delicious soups made with parsnips and strips of bacon or chunks of creamy heirloom cauliflower." Platt's smoked-trout appetizer "melted, in a most pleasing way, into a bed of crunchy pickled onions and sunchoke puree"; the braised lamb shoulder, he reported, "comes wrapped in a tight little roll, which breaks open over a bed of Swiss chard when you crack it with your fork." "The star of the show . . . ," he wrote, "is the bread pudding, which is flavored with rich deposits of chocolate and served with candied cherries and a spoonful of barely melting anise ice cream."

In 1998 Meyer formed the Union Square Hospitality Group as an umbrella company for his businesses. That same year he opened Eleven Madison Park in a historic skyscraper facing the long-neglected Madison Square Park. "Social historians will be fascinated by Eleven Madison Park, a conscious homage to the area's past," the restaurant critic Ruth Reichl wrote for the *New York Times* (January 27, 1999). "The enormous painting on the back wall is a misty remembrance of the park at the turn of the century, and the menu is a thoughtful return to Continental cuisine." Reichl had mixed feelings about the cuisine, awarding the restaurant only two stars, but she praised the staff as unusually warm and friendly and noted that "the place has been packed since it opened three months ago." Five years later Eleven Madison Park won the James Beard Award for Best Service in America. Also in 1998 Meyer opened Tabla, next door to Eleven Madison Park. Offering the chef Floyd Cardoz's new Indian cuisine, Tabla immediately garnered three stars from Ruth Reichl in the *New York Times* (February 24, 1999). It was soon voted the top Indian restaurant in New York by the Zagat Survey, the Web site CitySearch, and the magazine *Time Out New York*. In the same neighborhood in 2004, Meyer opened Shake Shack, as part of a $10 million fundraising effort to improve Madison Square Park. A portion of every purchase at Shake Shack is given to the Madison Square Park Conservancy. Shake Shack, which sells hot dogs, hamburgers, fries, frozen custard, thick milkshakes, lemonade, iced tea, beer, and wine, quickly became a popular lunchtime destination for local office workers, who sometimes wait in line for an hour or more before being served. Would-be customers can check the length of the line in real time via the Internet.

In 2002 Meyer judged the 14th Annual Jack Daniel's Barbeque Championship in Lynchburg, Tennessee. In March of that year, he opened a pit-barbeque and jazz restaurant called Blue Smoke and Jazz Standard. The eatery won the 2003 CitySearch Awards for best barbecue and best jazz club in New York City and was featured in *New York*'s "Where to Eat Now" issue in 2004. At Blue Note and Jazz Standard, as a way of keeping children occupied and inspiring them to behave properly during their meals, they are given a chance to decorate their own cookies before the meals begin. Each child's particular cookie is served to him or her after the main course is eaten. "That's hospitality, not service . . . ," Meyer told Joe Yonan for the *Washington Post* (February 21, 2007), adding, "All people are kids. They want to be delighted, and they want to know you did something for them."

In the winter of 2004–05, after a restoration and expansion project, the Museum of Modern Art reopened in Manhattan with three new restaurants owned and managed by USHG: Terrace 5 and its twin, Café 2, and the Modern, a fine-dining restaurant, which was named best new restaurant of 2005 by the James Beard Foundation. USHG also caters events at the museum. In 2005 USHG added a division called Hudson Yards Catering, located in a former warehouse on 28th Street on Manhattan's West Side. The ground floor was converted into an event space, and kitchens were installed on the upper floors.

With the award-winning chef Michael Romano, who became the Union Square Cafe's chef in 1988 and Meyer's business partner in 1993, Meyer wrote *Union Square Cafe Cookbook: 160 Favorite Recipes from New York's Acclaimed Restaurant* (1994) and *Second Helpings from Union Square Cafe* (2001). The former earned the Julia Child Award from the International Association of Culinary Professionals (IACP) for best new cookbook by a first-time author. Meyer's third book, *Setting the Table: The Transforming Power of Hospitality in Business*, was published in 2006.

Meyer told R. W. Apple Jr. for the *New York Times* (February 2, 2005) that Jean-Claude Vrinat, the owner of the acclaimed restaurant Taillevent, in Paris, is his role model. "He is the first, best and most persevering hospitalitarian I have ever met," Meyer said. "From him I learned that luxury and kindness need not mean pomposity. At Taillevent, they have fun taking service seriously." In an interview with Linda Tischler for *Fast Company* (September 2006), Meyer listed the characteristics he looks for in potential workers: "The first is a natural warmth and optimism. I either feel that from a person, or not. The second is intelligence and curiosity, and it doesn't have to be about the restaurant business. I love when I can converse with people about theater, art, books, or sports. The third is work ethic. You'd be surprised at how many people show up late for an interview, or don't shave. The fourth is empathy. I like to ask how their previous employer felt when they gave notice, and gauge their response. And the fifth is a combination of integrity and self-awareness. I want somebody who's thoughtful about who they are and where things fit into their lives. If they're not accountable to themselves, it's unlikely they'll be accountable to the people they're working with."

In the early 1990s Meyer testified at a U.S. Department of Agriculture hearing about school lunches. He told Marian Burros for the *New York Times* (December 8, 1993), "By buying from the Greenmarkets, we have forced the traditional sources of food distribution to offer safer, fresher food. The Government as a purchaser has so much more power than we do. If it can come up with a coherent kind of diet objectives for schools, because it is shelling out all that cash, it could change the way food is produced. If the Government doesn't care if apples have little holes in them, the producers will say, 'Fine, we won't spray them.'"

Meyer currently serves on the executive boards of Share Our Strength, an organization whose aim is to eliminate hunger among children in the U.S., and City Harvest, which collects unused food from such sources as hotels, restaurants, and corporate cafeterias in New York City and delivers it to community food programs in the city's five boroughs. He is on the executive committees of NYC & Co., the city's official tourism and marketing agency, and the Madison Square Park Conservancy and is the co-chair of the Union Square Partnership. He is a frequent guest at *Food & Wine*'s annual Aspen Classic and has been a guest speaker for the Culinary Institute of America, Cornell University, and the National Restaurant Association, among other institutions or organizations.

In 1996 Meyer won the IACP Restaurateur of the Year Award and the James Beard Humanitarian of the Year Award for charitable work and service to the community. The next year he earned the New York City Partnership and Chamber of Commerce Annual Small-Business Award "for his success in the restaurant world as well as his work to improve the Union Square neighborhood and for the campaign against hunger," as Lisa W. Foderaro reported for the *New York Times* (May 2, 1997).

R. W. Apple Jr. described Meyer as "tall, lean and soft-spoken" and as unusually self-effacing. With the former Audrey Heffernan, a one-time actress whom he married in 1988, Meyer has two daughters and two sons: Hallie, Gretchen, Charles, and Peyton. The family live in New York. Meyer told the ICE interviewer, "My wife and I usually eat what's in season. We belong to a community-supported agricultural farm. We pick up different organic vegetables once a week at an Upper West

Side church. Since I'm not home a lot and my wife doesn't cook, I tend to make soups, stews, pastas and things I know she can reheat during the week. When I am home, I keep it simple and fun. . . . If we have friends over, I like to serve cheeses, bread, dips and simple food so I can spend as much time as possible with my guests."

Mitchell, Jerry

1960– Choreographer; theater director

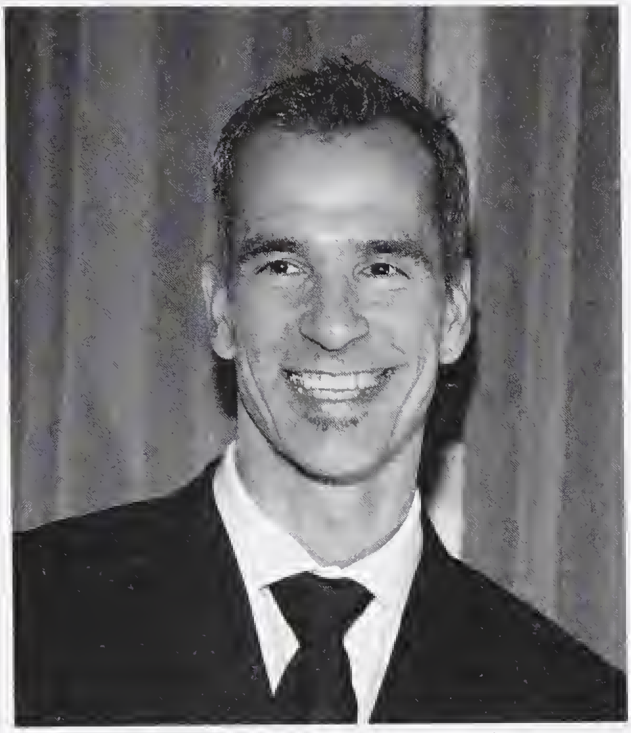
Address: c/o McDonald/Selznick Associates, 140
Broadway, 46th Fl., New York, NY 10005

In early 2004 a theater fan seeking tickets for a show on Broadway could have chosen to see a revival of the musical *Gypsy*; the long-running hit *Hairspray*; or *Never Gonna Dance*, an old-fashioned yarn about a vaudeville hoofer who comes to New York City to earn cash. Those productions all featured dance numbers by Jerry Mitchell, one of the only choreographers ever to have three Broadway musicals running simultaneously. He repeated that feat in 2005, with simultaneous runs of *Hairspray, La Cage Aux Folles*, and *Dirty Rotten Scoundrels*. "I love Broadway!" Mitchell exclaimed in his acceptance speech for the 2005 Tony Award for best choreography in a musical, as quoted by Christine Cox in the *South Bend (Indiana) Tribune* (July 17, 2005). (That year he had been nominated for his work on both *La Cage Aux Folles* and *Dirty Rotten Scoundrels* and won for the former.) Mitchell himself was a successful Broadway dancer before he became a choreographer and—more recently—a director. "I have exacting standards," he told Jesse Green for the *New York Times* (April 15, 2007), "and unlike most dancers always knew what everyone else was supposed to be doing. I'm mathematical. I can't spell my own name, but I can see where everyone is now and where they will be a moment later. I was always outside the box."

Mitchell's career has included work on several Broadway adaptations of hit films—*Hairspray, Never Gonna Dance, Dirty Rotten Scoundrels*, and *The Full Monty*, among others. Such adaptations are easy prey for critics, who sometimes automatically dismiss a show as either too similar to or too different from the original version. Mitchell, however, has won wide praise for his ability to navigate those pitfalls successfully. *Legally Blonde*, which premiered in 2007, is his first show as both director and choreographer. "The thing that I love most about what I do is I get a group of people together into one place and they're transported into a place outside their daily lives," he told Cox. "It's not always a happy place. . . . But the stories I'm interested in are stories that give people hope. I think, in general, it's what theater does the best."

Born in 1960, Jerry Mitchell grew up in Paw Paw, Michigan, a farming town with a population of approximately 3,500. His parents, Gene and Katie Mitchell, owned and operated a Paw Paw restaurant named Gene's Friendly Place. Mitchell has two older brothers: Gary, a firefighter, and Rick, the athletic director for Paw Paw High School, the Mitchell brothers' alma mater. Mitchell has remained exceptionally close to his family, and his parents have attended many of his awards ceremonies. They have been accepting of his homosexuality, which he revealed to them when he was 30. "My parents and my brothers have always been there for me. Always," he told Cox. "In this business, I've met a lot of people who don't have that support." Rather than finding the town's small size stifling, Mitchell has said that Paw Paw's intimacy made for an especially supportive atmosphere. "Living in Paw Paw and growing up there I was sort of free to do whatever I wanted to do and that was a great thing for me as a kid," he told Pam Gehl for the *Kalamazoo (Michigan) Gazette* (June 20, 2005). From a young age, Mitchell was interested in musicals. "I *knew* I was going to be in this business," he recalled to Cox. "I think I knew since I was five years old. I don't know how I knew. I didn't see a Broadway show until I was 17." When Mitchell was eight, the Paw Paw Village Players, the local theater troupe, cast him in a production of *The Music Man*. Mitchell has dated his awareness of his homosexuality to around that time, although he had girlfriends as a teenager.

Mitchell focused on such sports as football, basketball, and track until, at age 15, he was sidelined after breaking his collarbone in a bicycle accident. He began taking jazz and tap lessons, despite initial reluctance, to keep his legs in shape. "I was a little afraid, as most boys are," he explained to a reporter for *American Theatre* (October 2004), "but once I was there, you couldn't get me out." Mitchell's first instructor, Cindy Meeth of Paw Paw's Meeth Dance Studio, offered him free dance lessons and paid him to teach younger students as an incentive to keep him dancing. After his collarbone healed, Mitchell returned to athletics; in addition, he frequently choreographed routines for the school's



Paul Hawthorne/Getty Images

Jerry Mitchell

band and pompom and cheerleading squads and also choreographed several school plays, including a production of *Grease*. The summer after his junior year in high school, Mitchell was accepted as an apprentice at the Hope Summer Repertory Theatre, in Holland, Michigan. During his senior year he auditioned to replace an injured dancer in a touring show of *West Side Story*; though the show interrupted his studies, both his parents and his school principal allowed him to leave for the six-month, 42-state tour. Despite that absence—which required him to give up the post of class president and also to miss the basketball season—Mitchell graduated with his class, in 1978, and he won a conference championship for the high jump, a track event. That fall he enrolled at Webster University, in St. Louis, Missouri, which had awarded him a scholarship. There, he studied ballet and earned membership in the Actors' Equity Association, a professional group. He also began receiving his first residual checks, for dancing in an advertisement for the soft drink Dr. Pepper.

Mitchell's schooling was interrupted when, on a spring-break trip to New York City in 1980, he accompanied two female friends to an open audition for Agnes de Mille's production of the musical *Brigadoon*. Neither of Mitchell's friends made the cut, but de Mille was impressed with Mitchell's height (six feet, four inches) and offered him a role. Webster officials allowed Mitchell to earn academic credit for his performance, and he planned on returning to school after the show closed. Instead, he immediately got another part, as a dancer in the musical version of *Woman of the Year*, which was followed by a part in the film version of the musical *The Best Little Whorehouse in Texas*. Mitchell never returned to Webster, instead pursuing a career as a dancer. As he won parts in the choruses of numerous shows, Mitchell became more and more interested in being behind the scenes, designing the dance moves rather than performing them. "It was an amazing time," he recalled to Judith Newmark for the *St. Louis Post-Dispatch* (June 5, 2005). "I'm big and strong. I can lift girls. I could always get a job. But when I was in my 20s, I realized that choreography was more creative. My favorite place to be is in the rehearsal hall with really talented people." In 1989 Mitchell worked as an assistant to the choreographer for *Jerome Robbins' Broadway*, thus beginning his transition to a career out of the spotlight. He returned to it as a scantily clad dancer in the 1991 hit *The Will Rogers Follies*. The role led to a larger mission. "When I was dancing naked in *The Will Rogers Follies*, somebody said, 'Why don't you dance naked and make money for a cause?'" he explained to Valerie Gladstone for the Newark, New Jersey, *Star-Ledger* (October 19, 2000). Inspired, Mitchell created the Broadway Bares event, benefiting the organization Broadway Cares/Equity Fights AIDS. In the first Broadway Bares, in 1992, Mitchell danced at the gay bar Splash, in New York City. That event raised $8,000. Mitchell continued to organize the event until 2002. (The latest Broadway Bares, in 2007, collected $650,000; the total raised in 15 years is more than $3 million.)

Meanwhile, Mitchell had begun to work steadily as an associate choreographer on several large shows, among them the 1994 Broadway production of *Grease*, and as a full choreographer on smaller shows including *Seconds Out* (1993), *Follies* (1998), and *Jekyll and Hyde* (1999). In 1999 Mitchell also choreographed the well-received Broadway revival of *You're a Good Man, Charlie Brown*.

Mitchell's experience with Broadway Bares proved useful in 2000, when he choreographed the high-profile musical version of the hit 1997 film *The Full Monty*. The story follows a group of unemployed steelworkers, who, out of financial desperation, form a striptease act. One of the men needs the money to pay child support and salvage his relationship with his son. "*The Full Monty* is not about six guys who take their clothes off," Mitchell said to John Moore for the *Denver (Colorado) Post* (October 18, 2002). "It's about a father and how far he would go for the love of his son." The characters do not know how to dance, so Mitchell's choreography emphasized their endearing awkwardness, especially evident when they finally bare all. The show became a critical hit and earned more than $50 million during its two-year run. As a choreographer Mitchell "knows how to be riotous as well as raunchy," a reviewer wrote for the *Toronto (Canada) Star* (December 5, 2000). "This is obviously the guy to take on when you want to take it off." Mitchell earned nominations for a Tony Award and a Drama Desk Award for best choreography for his work on *The Full Monty*.

Mitchell next choreographed a revival of *The Rocky Horror Show*, the musical that inspired the cult movie *The Rocky Horror Picture Show*. The revival opened on Broadway later in 2000 to widely varying reviews. "Mitchell's choreography is generally uninspired and wan," Jacques le Sourd wrote for the Westchester County, New York, *Journal News* (November 16, 2000). The *Toronto Star* (December 3, 2000) reviewer, however, praised the choreographer: "Mitchell's choreography can be campy, klutzy, or erotic as the moment demands." Mitchell was nominated for a Drama Desk Award for his work for *Rocky Horror*. The show—which critics generally considered fun but unimpressive, lacking much of the shock value and spark of the original—ran until January 2002.

In 2002 Mitchell choreographed *Hairspray*, a musical based on a 1988 film by John Waters. Set in 1962, the story follows an overweight teenage girl who wins a place on a popular dance show and uses her newfound fame to promote racial integration. Mitchell told interviewers that he did not seek work on musicals based on films but nonetheless saw them as a natural choice for producers and audience members. "It's certainly not my choosing that our last two projects have been film adaptations, but I can't say I'm surprised by it," Mitchell told Moore. "When people find a story they like, they enjoy seeing it told in different ways." Still, Mitchell said, he was careful not to follow each movie too closely. "I had seen [the film] *Hairspray* when it first came out," he explained to Sylviane Gold for *Dance* (November 2002, on-line). "And when I was offered the musical, I watched the movie once—the same thing I did with *The Full Monty*. Then I never went back. You could fall into a real pit if you watch it too much, because in a movie, the camera tells an audience where to look. Onstage, your dance has to tell 2,500 heads where to look." Although Mitchell emphasized that he was not trying to replicate the film *Hairspray* but rather to use it as a jumping-off point, comparisons with the original were inevitable—and often unfavorable. "Choreographer Jerry Mitchell manages to capture the essence of teen dance in the 1960s, but fans of John Waters' 1988 film version are likely to miss the sexiness of the film's footwork," Jeffrey Eric Jenkins wrote for the *Seattle (Washington) Post-Intelligencer* (August 27, 2002). Other critics applauded both the musical and Mitchell's choreography, with Sylviane Gold describing the 1960s-style steps as "frisky dance numbers that look dead-on accurate but somehow new." The musical immediately recouped the producers' approximately $10.5 million investment, with advance-ticket sales totaling $15 million by opening night. Mitchell was nominated in the category of best choreography for an Outer Critics Circle Award, an Astaire Award, a Drama Desk Award, and a Tony Award. The show won the 2003 Tony Award for best musical, and as of mid-October 2007, it was still playing on Broadway.

Mitchell next worked on a new production of *Gypsy*, a now-iconic story of an overbearing stage mother that had already been adapted many times for stage and screen. His version starred the actress Bernadette Peters as the mother—the role made famous on Broadway by Ethel Merman—and ran from May 2003 to May 2004. He took on an even more intimidating adaptation late in 2003, when he premiered *Never Gonna Dance*, a stage version of the 1936 film *Swing Time*, which starred the dance team of Fred Astaire and Ginger Rogers. "Mitchell's choreography is the backbone of the show," Charles Isherwood wrote for *Variety* (December 8, 2003). For his work on *Never Gonna Dance*, which had only a short run, from December 2003 to February 2004, Mitchell was nominated for Drama Desk and Tony Awards.

For the 2004 revival of *La Cage Aux Folles*, Mitchell again worked with a previously known production—not a movie this time but a Broadway show that had debuted in 1983. The story is about a gay couple, Georges and the flamboyant Albin; when Georges's son brings home his fiancée and her conservative parents, humorous antics follow. Although the story line was considered progressive in the early 1980s, earning the original musical six Tony Awards, many critics pointed out that the show had lost much of its surprise by 2004. Nevertheless, Mitchell's choreography was widely praised. In a review for *USA Today* (December 10, 2004), Elysa Gardner called it "exhilarating," and Frederick Winship, writing for United Press International (January 3, 2005), described it as having "the energy and humor of the opulent burlesques that are endangered species all over the world today except in Paris." For his choreography, Mitchell won a Drama Desk Award, an Outer Critics Circle Award, and a Tony Award. (Because of quirks in the awards cycle, Mitchell was nominated for the Tony for both *La Cage Aux Folles* and his subsequent musical, *Dirty Rotten Scoundrels*.) "Awards are strange anyway because I don't know how you compare one type of dancing to another type of dancing or one type of actor to another type of actor," he told Gehl. "I know it sounds [like a] cliché, but to be included in the community and be honored with a nomination is award enough. I've been nominated [for a Drama Desk Award] five times and I won this time but I truly believe I won for all the times I've been nominated."

The other musical for which Mitchell had been nominated, *Dirty Rotten Scoundrels*, made its Broadway debut in 2005. Based on the 1988 film of the same name, which concerns a competition between two low-level con men, the musical was a moderate success, running until September 2006. "Although there are few full-blown dance sequences, Jerry Mitchell's sprightly choreography is first rate," F. Kathleen Foley wrote for the *Los Angeles Times* (August 18, 2006). In addition to his Tony nomination, *Dirty Rotten Scoundrels* earned Mitchell a Drama Desk Award nomination for best choreography.

With *Legally Blonde*, which premiered on April 29, 2007, Mitchell made the transition from choreographer to choreographer-director. "For me it was a natural step," he told Cox. "You start out as a dancer; you're working with these choreographers and you're watching them and you become their assistants. I'm ready now to be in charge of the entire project." Based on the 2001 hit film of the same name, *Legally Blonde* follows a sorority girl named Elle Woods to Harvard Law School, where, after various difficulties, she realizes that she is exceedingly bright as well as beautiful. Though executives at MGM, the film studio, were hesitant to entrust their $13 million investment to the untried Mitchell, the producers recognized his enthusiasm for the project and his deep understanding of the story. "The condescension in the culture toward male dancers is extreme. Just as it is to[ward] supposedly dumb blondes like Elle Woods," Mitchell said to Jesse Green. "Which is why *Legally Blonde* was clearly the right story for me to tell my first time as a director. Elle exists in the space between feminism and [the pop star] Britney Spears, and speaks directly to the problem of girls who dumb themselves down to be attractive to boys. Girls still need to be told it's O.K. to be beautiful and smart. Or more importantly, it's O.K. to be smart."

The show has garnered 10 Drama Desk Award nominations, including those for outstanding musical, outstanding director, and outstanding choreographer. In the *San Francisco Chronicle* (February 8, 2007), Robert Hurwitt praised the "knock-'em-dead dance numbers" and added that Mitchell has "given *Blonde* a remarkably fluid, cinematographic incarnation that succeeds in making the musical look not only larger than life but bigger than film." Among reviewers who felt less enthusiastic was Clive Barnes, who wrote for the *New York Post* (April 30, 2007), "Jerry Mitchell, making his debut as a full-scaled Broadway director, gives the story a staging that moves from the frenetic to the frantic, and his choreography is what paint-by-numbers is to portraiture. That said, his dances certainly have a slick snap, crackle and pop." Linda Winer, in a lukewarm assessment for *Newsday* (April 30, 2007, on-line), wrote, "With *Legally Blonde*, his directing debut, [Mitchell] takes the logical well-worn step from moving bodies to energizing the total vision. Everything gets moved—except, you know, your heart."

Mitchell will choreograph a musical adaptation of the 2002 film *Catch Me If You Can*; the stage version is set to debut in 2008. He is also helping David Rockwell, a set designer with whom he has often collaborated, to design the new JetBlue Airways terminal at John F. Kennedy International Airport, in New York City; he was hired to choreograph, in effect, a smooth flow of people through the structure.

Mitchell has choreographed dance sequences for a number of movies, among them *Scent of a Woman* (1992), *Jeffrey* (1995), *In & Out* (1997), *The Object of My Affection* (1998), and *Hedwig and the Angry Inch* (2001). He was nominated for an Emmy Award in 2000 for choreographing an episode of the television sitcom *The Drew Carey Show*.

In 2005 Mitchell was presented with an honorary diploma from Webster University. He lives in New York City with his partner, Eric Sherr, an actor.

Monte, Elisa

(MOHN-tay, eh-LEE-sah)

May 23, 1946– Dancer; choreographer

Address: Elisa Monte Dance, 481 Eighth Ave.,
Suite 543, New York, NY 10001

The dancer and choreographer Elisa Monte founded her company, Elisa Monte Dance, in 1981, with the "conviction of bridging cultural barriers through the universal language of dance," according to the company's Web site. Almost three decades later, Elisa Monte Dance has toured more than 45 nations, the particularly active nature of their

Roy Volkmann

Elisa Monte

dancing helping them to accomplish their longtime mission. "We're known for being physical. We're known for being muscular, we're known for being sensual, we're known for sort of having an intelligence of the body. Glorifying the body as a message and as a tool," Monte explained to Ellen Dunkel for the Bergen County, New Jersey, *Record* (June 4, 1999). "And that's one of the reasons we've been successful in so many milieus, because you didn't need any words to interpret what we were doing." As a young woman, after years of classical training, Monte left ballet for modern dance, becoming a principal dancer of the Martha Graham Dance Company. She remained with that company for eight years before forming her own, dancing with many others along the way. Her choreography, informed by her own sensibilities and her varied training, is eclectic but always suggestive of a driving force behind the moves. "Whether an Elisa Monte dance lurches in fast-forward or lingers on a juncture for precarious poses, it quickens the pulse," Guillermo Perez wrote for *Dance Magazine* (July 1, 2006). "The rush seems full of ritualistic purpose, and stationary figures loom with totemic magic." While critics universally admire the company's sheer physicality, they are more divided on the merits of Monte's choreography. "Though sleekly assured in its dancing, the Elisa Monte Dance Company lacks individuality in its dances," Molly McQuade wrote for *Dance Magazine* (July 1, 2006). "The company seems to depend on eclecticism, but also carries it as a sort of burden." Monte, for her part, has said that she could not work in any other way. "Which is better: to speak seven languages, but with an accent, or only one language perfectly?" she asked Jack Anderson for the *New York Times* (May 2, 1982). For Monte, the answer has long been clear—to risk sacrificing perfect fluency for the sake of variation and diversity. As she told Anderson, "To move in just one way is to lock myself in a kind of prison I don't want to be in."

Elisa Monte was born on May 23, 1946 in the New York City borough of Brooklyn to Anthony Montemarano, a bookkeeper, and Elisa Montemarano. Both Monte and her older sister, Barbara, who is a personal fitness trainer, shortened their surname to "Monte." From the age of six, Monte would accompany her older sister to her ballet lessons; Monte began taking lessons herself at age nine. "I just always loved to dance," she told *Current Biography*. "I was hooked from the beginning." When she was 10 she began taking ballet lessons with Vladimir Dokoudovsky, a renowned ballet dancer who had recently retired. At 11, Monte made her professional debut in a revival of the musical *Carousel* at New York's City Center. For high school she attended New York City's Professional Children's School, founded for young people with professional careers in the performing arts; she simultaneously attended the School of American Ballet. After graduation, however, Monte realized that she was not interested in pursuing ballet professionally. "Although I loved the technique, whenever it became time to look for a company to perform, I realized I wasn't really enthralled with the ballet repertory," she explained to *Current Biography*. Unsure what she wanted to do next, Monte went abroad for a year, to study at the American College in Paris, France. Back in the U.S., she enrolled at St. John's University, in New York City, to study psychology.

After a year at St. John's, Monte decided that she wanted to return to dance—but modern dance, not ballet. She began studies with the Pearl Lang Dance Theater, a modern-dance group that at one point boasted Madonna as a member, and subsequently appeared with the Lar Lubovitch Dance Company. In 1974 Monte joined the prestigious Martha Graham Dance Company, one of the most influential troupes in the world of modern dance. As a principal dancer Monte appeared in numerous Graham classics, including *Seraphic Dialogue*, *Clytemnestra*, and *Appalachian Spring*, as well as in the premiere of *O Thou Desire Who Art About to Sing* in 1977. Beginning in 1975, Monte also worked with the Marcus Schulkind Dance Company for such shows as *The Fred and Barbara Section*, *Ladies' Night Out*, *Circular Ruins*, and *Affetuoso*, first as the assistant artistic director, then as co–artistic director, and finally as co-director. Monte has long believed that a dancer should be capable of working with a variety of choreographers and companies, describing the ideal dancer to Dunkel as being "without borders" and "neutral." Monte herself exemplified that philosophy: in addition to her work with Graham and Schulkind, she became involved with the Pilobolus Dance Theatre through a lucky coincidence in 1977, when she was renting space to the 5 by 2 Dance Company. Moses Pendleton, a member of Pilobolus, was choreographing a work for 5 by 2; Monte told Pendleton that she greatly admired Pilobolus, and he invited her to join the company for the 1977–78 season. As all works for Pilobolus are devised collectively by members of the company, Monte became responsible for a work of her own, *Molly's Not Dead* (1978). While Pilobolus was her best-known side project, Monte also danced with the Mary Anthony Dance Theatre, Ballet Etudes, and the Morse Donaldson Dance Company. The year 1977 was an important one for Monte in other ways: that was when she met David Brown, a new dancer for Graham. The two were instantly drawn to each other, and in 1979 Monte asked Brown to be her partner in her first choreographed piece as a director. Created for a Graham workshop, the duet—*Treading*—centered on a story about sea creatures, with corresponding amphibious movements. The couple moved in together soon afterward and were married a few years later.

Even before marriage, the couple cemented their partnership with the founding of the Elisa Monte Dance Company, in 1981. With Monte as the choreographer and Brown as artistic director, the company aimed to promote diversity—not only by varying the ethnicities of the featured dancers, but also by encouraging multidisciplinary collaboration and educational efforts. The company's three goals, as listed on its Web site, are to "train and maintain a select group of professional dancers of multi-ethnic origin," to "commission work from distinguished artists in other disciplines for collaborative projects " and to "educate individuals in the art of movement, and audiences in the appreciation of live dance performance." The following year Monte and the company got their first break when Monte met the modern-dance legend Alvin Ailey at a theater; Ailey told Monte that he had heard about *Treading* and asked to see it performed. Soon, the Alvin Ailey Dance Theater itself began performing *Treading*, a glowing endorsement of a new choreographer's talents. Based on the success of *Treading*, Ailey commissioned a second piece from Monte, which she titled *Pigs and Fishes*. "To me, pigs and fishes symbolize some of the basic things of life," she explained somewhat obliquely to Anderson, adding that a friend of hers, who grew up on a farm, had found the title "perfectly clear because, if you live on a farm, pigs and fishes are all you may need." The dance debuted at City Center later in 1982, displaying the kind of physicality that would become Monte's trademark. "*Pigs and Fishes* is a dance of great, almost violent energy, and it is rare that women dancers embody this," Maggie Lewis wrote for the *Christian Science Monitor* (August 23, 1982), pinpointing one of Monte's areas of interest: emphasizing the power of women. "They danced well, with convincing, but not threatening, strength." In 1982 the Elisa Monte Dance Company was named best company at the International Dance Festival of Paris. Monte premiered a number of dances during the company's first decade, including *Dreamtime* (1986), based on Australian Aboriginal rituals, and *Audentity* (1987), created soon after the birth of Monte and Brown's daughter, Elia. After *Diamond Song* (1993), Monte co-choreographed a piece with Brown, *Vejle/Border Crossing*, a duet for two men set to the music of Puccini. In reviews of those pieces, critics continued to praise the dancers' extraordinary physical presence. "They exude power, dynamism and commitment, throwing themselves into all of Monte's choreographic patterns with genuine intensity," R. M. Campbell wrote in a review of a Monte tour for the *Seattle Post-Intelligencer* (March 31, 1990). "Arms slice the air like cleavers, while whole bodies are thrown into swings with the centrifugal force of cars turning corners at high speed." But while critics lauded Monte for choreography that took full advantage of the high skill of her dancers, they also often criticized her for relying too heavily upon the dances' sheer physical impact. "The pace and stupendous variety of movements [demand] so much attention that you want to cry, 'Stop! I can't take it all in!'" Margaret Putnam wrote for the *Dallas Morning News* (May 1, 1995). Also, the order of the individual dances within the overall performance was sometimes criticized as incoherent. "Even a powerfully innovative, beautifully presented series of steps adds up to very little if it isn't shaped both as a dance and as one of a group of dances forming the beginning, the middle and the end of an evening's performance," Janice Berman wrote for *Newsday* (February 11, 1993). In 1994 Monte and Brown co-choreographed *Absolute Rule*, which examined the sexual power dynamic of male-female relationships.

Monte and Brown teamed up again to choreograph *Feu Follet* (1995), a two-act production, celebrating Cajun culture, that became one of the company's best-known works. Loosely based on Henry Wadsworth Longfellow's poem "Evangeline," the dance unfolds in three parts, successively set in France, Nova Scotia, and Louisiana. Examining how a culture and a community survive being displaced, *Feu Follet* draws heavily on traditional Cajun dance, which Monte and Brown researched extensively before choreographing the work. "When touring Louisiana, I realized this is one of the few dance cultures that America has. There are not many cities or people or communities that you meet where dance is very much the basis of part of their social life," Monte told Theodore P. Mahne for the New Orleans, Louisiana, *Times-Picayune* (September 21, 1995). Monte told Mahne that she was originally intrigued by the integral nature of dance in Cajun society: "It's often basic forces of life that hold a community together. [The Acadians] are one of our few cultures that keeps dance as an important aspect to who they are. So I'm very drawn to it. I want to know why. I want to find out more about it." Monte acknowledged that she was an outsider to the culture and did not presume that she would be able to understand its complexities fully. "It's really us looking at this culture and illuminating it from our perspective, which is the only way we can," she told Mahne. "In the program notes we say we're not trying to out-Cajun the Cajuns because we would fail instantly." Commissioned by the Performing Arts School of Acadiana, the performances were sponsored primarily by the Louisiana division of the National Endowment for the Arts (NEA), a federally funded program constantly in danger of being cut. Monte argued that her project was proof that the NEA is a necessary organization, pointing to the NEA's unique record of funding projects that might not otherwise be considered commercially viable and adding that the loss of the NEA would be debilitating for the advancement of culture in America. "Here I am doing a piece saying that the essence to life is music and dance and keeping yourself connected in that way to stay alive and interested and honest and true and responsive . . . ," she told Mahne. "If [the NEA opponents] would look at some of the very old cultures that have lasted for thousands of years through many hardships, they would find that the strength of the culture and the society was through their artistic endeavors." The year 1997 saw the premiere of *Volkmann Suite*, a piece inspired by the work of the dance company's photographer, Roy Volkmann, and the interplay between his work and Monte's—between the art of still photography and the movement of dance.

When the Elisa Monte Dance Company was founded, Monte was choreographing almost all of the dances, with Brown serving as artistic director; by 1998 Brown and Monte were evenly splitting choreography duties, prompting Monte to change the company's name that year to Monte/Brown Dance. Monte told Dunkel that she saw the change as a "natural evolution." "For me, my work and my personal life are one thing," she said. "It's not two separate compartments to me at all. The art I do as a dancer-choreographer has always been who I am, and who I'm married to is who I am, and my child is who I am. So for me, it's all one picture." Monte/Brown Dance premiered a number of Monte's works, including *Amor Fati* (1999), *Day's Residue* (2000), and *Shattered* (2000), which was especially praised—as many of Monte's works had been—for its marked physicality: "The action, as clusters of dancers spread out and then paired up, could look like stormy discharges: whirls, jittery footwork, big leaps," Guillermo Perez wrote.

Monte and Brown divorced in 2002, and the company returned to Monte's sole control and to its original name. In the years that followed, Monte choreographed two "high-concept" works, *Shekhina* (2004) and *Via Sacra* (2005). *Shekhina* was commissioned by the actor and photographer Leonard Nimoy. According to *kabbalah* (Jewish mysticism), the shekhina is the feminine aspect of the divinity, symbolizing creativity and wisdom. In 2002 Nimoy had published a controversial book of his photographic representations of the shekhina; for her dance, which was inspired by those images, Monte incorporated Nimoy's photographs into the staging. Dance, she told Julia Goldman for the *Jewish Week* (February 6, 2004), was the perfect medium for the message of the shekhina. "Dance is a feminine art. It deals with things that can't be spoken. It's not about explaining what you see, but about looking at your reaction to it." She also said that her dance was designed to emphasize the empowering nature of the shekhina. "It's for us girls to . . . realize what is lacking [in the world]," she told Goldman. "We need to get on the stick and take our place in running the world, so it becomes more balanced."

The next year Monte took on her most ambitious project to date with the three-act *Via Sacra*. Begun in 2001 as a reflection on personal grief, the piece changed its focus after that year's terrorist attacks to a meditation on universal loss. Named after a temple-lined street in ancient Rome, the dance featured three distinct acts, originally staged as separate pieces with their own titles: "The Way It Was (Lost Things)," "The Way It Is (Psyche's Journey)," and "The Way It Should Be (Light Lies)." Though critics expressed appreciation for the efforts behind the work, they commented less favorably on its execution. "*Via Sacra*, though deeply felt, was not fully convincing," Jack Anderson wrote for the *New York Times* (February 4, 2005). "The finale resembled a thematically appropriate contrivance, rather than a carefully motivated resolution. The scenes of mourning looked repetitive, as if Ms. Monte had stretched her choreographic phrases to excessive length. Each act might have greater impact if presented as a separate item on a program with other dances in totally different moods." Other works in 2005 included *A Woman's Way (To Nancy, with Love from Tom)*, a piece that was commissioned by a man for his wife's birthday, a sponsorship that represented a new way for permanently underfunded arts initiatives to stay afloat financially. "You have to find creative ways to get people to support your work," Monte explained to Julie Bloom for the *New York Sun* (January 31, 2005). "Gifts like this are wonderful—they allow me to do my work, and support my company and the dancers."

Elisa Monte Dance celebrated its 25th anniversary in 2006 with the premiere of *Hardwood*, at the Joyce Theater in New York City. In 2007 the company toured Italy and Germany, then returned to New York City in October for revivals of *Treading*, *Pigs and Fishes*, and *Hardwood*, among other works.

Monte's company is based in New York City, where Monte lives. She has served as choreographer-in-residence at Robert Redford's Sundance Institute; Southern Methodist University in Dallas, Texas; New York University's Tisch School of the Arts; Philadanco; and the Alvin Ailey American Dance Center.

Montero, Gabriela

May 10, 1970– Classical pianist

Address: c/o Biglife Management, 67–69 Chalton St., London, England NW1 1HY

"Improvisation used to be an integral part of performing [classical music]. Mozart, Beethoven and Liszt were all virtuoso improvisers whose concerts often included ad-lib fantasies and spontaneous variations on themes called out by adoring audiences," Vivien Schweitzer wrote for the *New York Times* (September 25, 2006, on-line). "But in the 20th century, apart from the chance music of composers like John Cage, Karlheinz Stockhausen, Gyorgy Ligeti and Pierre Boulez, which includes improvisatory elements, it was largely a lost, or at least ignored art in classical music, practiced by organists but few others." Gabriela Montero, a Venezuelan pianist, is currently one of the rare classically trained artists known for her ability to improvise—a talent often in evidence in jazz venues but very rarely in symphony halls. "I was always an improviser since I was a child. It was a most natural way for me to express myself with music," Montero told Robert Siegel for the National Public Radio show *All Things Considered* (September 18, 2006, on-line). Schweitzer reported that at one of Montero's performances, an audience member requested that she play the song "I Will Survive." Montero, Schweitzer wrote, "[picked] out the first bars of Gloria Gaynor's disco hit and feminist anthem on the piano. Then she took it for a fantastic ride, threading the melody through an improvisation that dazzlingly (if improbably) morphed from Baroque counterpoint through jazzy syncopation to Mozartean Classicism." Similarly, Jeremy Eichler wrote in a review of a Montero concert for the *Boston Globe* (May 1, 2007, on-line), "The most fun was when someone near the front row shouted for 'La Cucaracha.' Montero said 'That's a great one!' and then promptly took this humble folk song about a cockroach on a grand stroll, splicing it into music that resembled Bach's 'Goldberg Variations,' dropping it by a tango club, schooling it in ragtime, and on and on."

Gabriela Montero was born on May 10, 1970 in Caracas, Venezuela, into a family that was not particularly musical. When she was seven months old, her grandmother gave her a two-octave toy piano for Christmas. "They put this piano in my crib and it became my favorite toy," Montero told Siegel. "And because my mom sang to me every night like most South American mothers, I started to pick out the melodies and play them." By the time she was about 18 months old, Montero had begun playing with both hands. "At first my parents were stunned," she told Siegel, "and then they just started to tell everybody in the neighborhood. Nobody believed them. They thought they'd gone mad." Montero soon began improvising on songs she had learned by ear. "It was like playing games and it was absolutely the most normal thing for me," she explained to Siegel. "I used to do a lot of improvisations in D minor and A minor." She received her first real piano, an upright model, when she was three. When she was four she began studying with Lyl Tiempo, a local teacher who encouraged Montero's natural talent for improvisation. Tiempo introduced Montero to the renowned Argentinean concert pianist Martha Argerich, who had herself been a child prodigy.

Montero gave her first public recital at the age of five, and at eight she made her concert debut with the Simón Bolívar National Youth Orchestra of Venezuela. Shortly thereafter the government of Venezuela offered her a scholarship to study music in the U.S. Her parents were willing to relocate for the sake of her studies, and they settled in Miami, Florida. Montero took classes with such teachers as Rosalina Sackstein and Edna Golansky but became unenthusiastic about playing after one of her instructors discouraged her from improvising. "She told me [my improvising] was not serious, nothing very special. She said there was only one pianist I should listen to, and try to play like, and that was Claudio Arrau. It went completely against my spirit," Montero told Peter Aspden for the *Financial Times* (March 11, 2006). (Montero, who has related the tale to many journalists, has never revealed who gave her that advice; some reporters have suggested that it must have been Sackstein, who once studied under Arrau.)

Montero stopped improvising and, as Aspden wrote, "submitted to the strictures of a proper classical-music training." She found herself deeply unhappy. "I felt this sense of panic," she told Aspden. "I would cry on my way to the lessons." Still, she got much positive feedback for her playing. In 1983 she won the American Music Scholarship Association (AMSA) World Piano Competition for Young Artists, and the next year she claimed the top prize at the Music Teachers National Association's (MTNA) Baldwin Keyboard Competition. In 1987 she triumphed at the Palm Beach Invitational International Piano Competition. By the age of 18, however, Montero had decided to stop playing altogether. She spent the next two years traveling, first to Caracas, then in the U.S., and later in Canada and Europe. (She recently estimated that she has moved more than 30 times.) "You have to live life. You can't be stuck in a practice room," she told Siegel. "If you haven't lived through . . . major changes and even crisis and . . . joys and disappointments, you don't have a story to tell."

In 1990, ending her absence from the piano, Montero moved to London, England, to attend the Royal Academy of Music. Studying under the renowned teacher Hamish Milne, she felt her passion for playing classical music revive. "Hamish really inspired me, and he gave me a completely different focus on music than I'd previously had," she told *BBC Music Magazine* (August 2005, online). Montero also took lessons from Andrzej Esterházy and participated in master classes with the classical pianists András Schiff and Tamás Vásáry. While at the academy she won the Christian Carpenter Prize and the Anna Instone Memorial Award. She graduated from the Royal Academy of Music with honors in 1993.

In March 1995 Montero was among 14 native-born or naturalized American pianists to participate in the National Chopin Competition, which has been held every five years (since 1975) in Miami; the top four contestants are awarded cash prizes, concert appearances at venues throughout the world, and a chance to represent the country at the International Chopin Competition. Montero finished in fourth place and was awarded a $3,500 cash prize. In October 1995 she competed in the International Chopin Competition, which is held every five years, in Warsaw, Poland. Montero's international career was launched following her third-place victory in Poland, behind Philippe Giusiano of France and Alexei Sultanov of Russia. (The men shared second place; no first-place winner was chosen that year by the notoriously exacting judges.) Montero's bronze-medal win included a cash prize of $15,000.

After the competition Montero embarked on a concert tour of Japan and Taiwan with the Warsaw Philharmonic Orchestra and its conductor, Kazimierz Kord. She also performed at the International Chopin Festival (1996), in Poland; the inaugural Miami International Festival of Discovery (1998), in Florida; the Lachine Festival (1999), in Montreal, Quebec (as part of an international tribute to commemorate the 150th anniversary of Chopin's death); and the Old First Church Concert (2000), in San Francisco, California. In a review of the last-named concert for the *San Francisco Classical Voice* (February 25, 2000, on-line), John McCarthy wrote, "Several of the [Chopin pieces played] are so familiar that even the most casual listener can whistle the tunes. [But] Montero's refreshing spirit breathed life into a repertoire that is often trivialized by novelty and cliché." During that period Montero also recorded two discs for the newly established Palexa Records: *Gabriela Montero: En concert à Montreal* (1998), a live recording, and *Frédéric Chopin: Oeuvres pour piano* (1999).

Despite such successes, Montero continued to harbor mixed feelings regarding a career in music. Twice divorced and the mother of two children, she periodically stopped playing. "A life in music takes such commitment," she told Stuart Isacoff for *Playbill Arts* (March 21, 2006, on-line). "It's especially tough when you are a single mom, like me." In 2001 she paid a visit to Martha Argerich, who was playing a concert in Montreal. Like Montero, Argerich had also raised children as a single mother and endured self-imposed periods when she never played the piano. "I wanted to talk to her about being a mother, being a woman, being an artist. You know, I was still very confused," Montero told Morley Safer for the CBS television show *60 Minutes* (December 3, 2006). After Argerich's concert she and Montero visited a local barroom with a piano, where Montero reluctantly gave an impromptu—and career-affirming—performance. "[Argerich] asked to hear me [play]," Montero told Isacoff. "I said, 'No, let's just have coffee.' But she insisted. . . . I ran through some standard repertoire and also improvised. Her enthusiasm and encouragement were unbelievable. Something in that moment transformed my life."

Argerich, whom many consider one of the most accomplished pianists in the world, was fiercely supportive of Montero. She convinced the younger pianist that it was possible to combine a music career with motherhood and that her skill for improvisation was a valuable asset. In November 2001, at Argerich's invitation, Montero performed at the annual Martha Argerich Music Festival, in Buenos Aires, Argentina. She also performed with Argerich at the 2002 Lugano Festival, which is part of the Progetto Martha Argerich (Martha Argerich

Project), a chamber-music festival held annually in Lugano, Switzerland.

In February 2004 Montero was named a rising star by the French music publication *Le Monde de la Musique.* Later that year she signed with a major record label, EMI Classics. *Gabriela Montero: Chopin, Falla, Ginastera, Granados, Liszt, Rachmaninov, Scriabin*, her first recording for the label, was released in 2005. It consists of two discs, one of which is devoted to her improvisations. "The main attraction here is the second half of the two-disc set . . . on which Montero takes off on 12 short improvisations on specific pieces—including two of the compositions on the first half—and on generic styles," Richard S. Ginell wrote for the *Los Angeles Times* (October 9, 2005). "Hers is the rare and welcome case where a musician's natural impulse to invent was not stifled by pedantic teachers." John von Rhein wrote for the *Chicago Tribune* (November 4, 2005), "The evidence of this debut album suggests she is a formidable talent very much in the Argerich mold. . . . Which is not to say she [merely] copies her famous mentor: There is individuality aplenty here, too, and a willingness to take risks that puts her in a special class of ascending pianists."

In March 2006 Montero was invited to play with the New York Philharmonic, under the famed conductor Lorin Maazel. Anthony Tommasini wrote of that concert for the *New York Times* (March 24, 2006, on-line), "Ms. Montero's playing had everything: crackling rhythmic brio, subtle shadings, steely power in climactic moments, soulful lyricism in the ruminative passages and, best of all, unsentimental expressivity. That she is also a tall, dark, and lovely young woman can only help her career." Jay Nordlinger, in a review for the *New York Sun* (March 24, 2006), called her debut with the Philharmonic "most impressive" and continued, "You could tell there was something good about her when she played her opening octaves: solidly, confidently, into the keys. In fact, everything about this pianist would prove confident. She played with extraordinary rhythmic assurance. . . . Her musicality could be seen in her phrasing (natural and shrewd). She played with a combination of solidity and fluidity—an exceptional combination to have. And her technique? So assured as to be demonic."

Montero's second album on the EMI Classics label was recorded at the legendary Abbey Road Studios, in London. *Bach and Beyond*, inspired by 12 of the composer Johann Sebastian Bach's most celebrated works, was released in September 2006 to glowing reviews. John Terauds, for example, wrote for the *Toronto Star* (December 28, 2006), "Montero brings a contemporary twist to the music that may get a new generation of listeners interested in Baroque-era masterpieces." Immediately after that album reached stores, Montero embarked on a U.S. tour, performing at venues considered unconventional for a classical artist, including the Black Orchid, a nightclub in Chicago, Illinois, and Joe's Pub, a live-music club in New York City. "I'm sure if Mozart were here today, he'd be visiting all the jazz bars in New York, eager to learn new harmonies," Montero told Howard Kissel for the New York *Daily News* (September 10, 2006).

Montero has designed a popular format for her performances. During the first half of each, she plays classical pieces as they were originally written; the second half features improvisations—often spontaneous variations on songs or themes called out by the audience. "Ninety-eight percent of the people who listen to me improvise love it—something real is happening, and they're a part of it . . . ," she told Kissel. "Why do the 2 [percent]—the intellectuals, the critics—disagree? One reason is this sense that the work of the great composers came out of suffering. With improvisation, there's no suffering. It's about joy, about freedom. I think critics prefer the idea of suffering." She concluded, "Even when I'm not improvising I'm conscious that the better we integrate the celebratory and emotional aspects, the more the public will see that classical music is as exciting, as passionate, as engrossing as other types of music." On her album *Baroque* (2007), Montero gave her renditions of classic Baroque pieces, among them improvisations on Johann Pachelbel's famous Canon in D major. In 2007 she also began to offer live improvisations on the Internet, available for downloading from her Web site.

Gabriela Montero lives in the Park Slope section of Brooklyn, New York, with her two daughters.

Morgan, Tracy

Nov. 10, 1968– Actor; comedian

*Address: c/o Gersh Agency, 232 N. Canon Dr.,
Beverly Hills, CA 90210*

"I try to keep the 'fun' in funny," the comedian Tracy Morgan joked to Jae-Ha Kim for the *Chicago Sun-Times* (November 7, 2003). "When you take the 'fun' out, you just have 'ny,' and I never want to be 'ny.'" Known for the dead-on impressions and zany character sketches he performed for seven years on the comedy-variety show *Saturday Night Live* (*SNL*), Morgan is currently winning praise in a (somewhat) more sedate role as the demanding comic actor Tracy Jordan on NBC's hit comedy *30 Rock*. His character's diva-like turns aside, the premise of the show has a firm basis in reality: executive-produced by *SNL* creator Lorne Michaels, created by—and starring—the former *SNL* head writer Tina Fey, *30 Rock* clearly draws on the shared experiences of Morgan, Fey, and Michaels on the esteemed late-night television show filmed before a live audience. Morgan's career, in fact, has largely involved performing before live crowds. After getting his start at Harlem's Uptown Comedy Club, Morgan began appearing regularly on the HBO channel's *Def Comedy Jam*. In the mid-1990s he parlayed one of his stand-up characters into a recurring role on the TV sitcom *Martin*. But even with his current success in prime-time television, with *30 Rock*, Morgan remains best-known for his work on *Saturday Night Live*, on which he portrayed everyone from the real-life figures Maya Angelou and Mike Tyson to his beloved fictional creations Astronaut Jones and the nature guide Brian Fellow.

Tracy Morgan was born on November 10, 1968 in the New York City borough of the Bronx and grew up in Brooklyn. He was still a small child when his father, a musician who performed stand-up comedy while serving in the U.S. Army in Vietnam, first encouraged him to develop his comic streak, instructing the boy in the art of "joning"—or trading insults. "One day he sat me on his lap and made me jones on somebody, and that was my very first joke," Morgan recalled to Bruce Fretts for *Entertainment Weekly* (December 5, 2003). Morgan's parents separated when he was six, his father leaving Morgan's mother and her five children. "One of the reasons why I got so funny is because, out of all my siblings, I think I took it the hardest," Morgan explained to Frazier Moore for the Associated Press (December 11, 2003). "My sense of humor was a defense mechanism." In interviews Morgan has often described his tendency to joke as a defense against various difficulties in his life—most notably his parents' separation and his brother's cerebral palsy. "[Comedy] became my defense mechanism and when I got older, it became my craft," Morgan reflected to Erika Gonzalez for the *Rocky Mountain News* (March 2, 2005). He also told Gonzalez, "I've been around it my whole life. I don't know anything else."

While Morgan was still in high school, his girlfriend, Sabina, became pregnant with their first child. Four credits short of graduating from DeWitt Clinton High School, in the Bronx, Morgan dropped out to try to support his new family through a variety of jobs; those included some of the illegal activities so prevalent in the Brooklyn housing project where he grew up. "I did some things I'm not proud of. I tried my little hand at drug dealing, but that wasn't me," he told Fretts. After a few years of struggling to support Sabina and their child, Morgan went out with his friends one night to the Uptown Comedy Club, in the Harlem section of New York City. "I saw people doing stand-up and I just thought, 'I can do that,'" he recalled to Gonzalez. Morgan returned to the club for a stand-up comedy workshop; four months later he appeared as a featured act on *Uptown Comedy Club*, a 1992 nationally syndicated television show inspired by the club. Morgan "could've wound up like a lot of other people—in jail or dead," the television producer David M. Israel told Fretts. "Comedy was his saving grace." That same year Morgan became a regular on HBO's *Def Comedy Jam*, where he met Martin Lawrence, a successful comedian who would become instrumental in Morgan's career. "He was the one that actually taught me the business," Morgan told Gonzalez of Lawrence. "He told me about the right business choices to make to keep yourself around in the game." In 1994 Lawrence cast Morgan in a recurring role on Lawrence's television show *Martin*; he appeared in six episodes as Hustleman, a character he had first introduced during his days of performing in Harlem. In 1996 Morgan made his film debut, playing a bartender in the Lawrence vehicle *A Thin Line Between Love and Hate*.

Most importantly, though, Lawrence introduced Morgan to Lorne Michaels, the creator and producer of *Saturday Night Live*, a long-running comedy-variety television show that has become an institution of late-night television. The show is responsible for launching the careers of famous comic actors including Bill Murray, Mike Myers, Adam Sandler, David Spade, Chris Rock, and Eddie Murphy. The success of the African-Americans Rock and Murphy aside, *Saturday Night Live* has been frequently criticized for a lack of diversity in its cast, a complaint voiced by Morgan. "It's a white program," Morgan told Jim Carnes for the *Sacramento Bee* (July 22, 2005). "It is what it is. It's been that way for 30 years." Those sentiments notwithstanding, Morgan joined the cast of the show in 1996. He attributed the program's eventual embrace of diversity to changes in the nation itself: "Look at society today," he told Carnes. "Hip-hop is at the top of the charts. [The show] had no choice but to change. Times are changing." Appearing mostly in minor parts at the beginning of his tenure on *Saturday Night Live*, Morgan had become a featured star by the end of his time on the program, known for over-the-top sketches in which he played such characters as Brian Fellow, the practically illiterate host of the fake documentary-style television show *Brian Fellow's Safari Planet*. Other notable characters portrayed by Morgan included Astronaut Jones, a space explorer who romanced female aliens; Bronx superintendent Dominican Lou; and Woodrow the Homeless Guy, who, in a particularly memorable sketch, attempted to woo guest star Britney Spears. Morgan was also famous for his pitch-perfect impressions of a wide range of real-life figures, including Aretha Franklin, Harry Belafonte, Maya Angelou, Samuel L. Jackson, Mike Tyson, and Star Jones. "I learned how to be patient," he told Fretts of his gradual rise in status on the program, a process that has often frustrated other cast members. "And when my shot came, I took full advantage of it." In 2004 *Saturday Night Live* aired the compilation installment "The Best of Tracy Morgan," an honor few cast members receive. "That was monumental for me and my career because that means I'm in the books," Morgan told Kim. "I'm grateful for that." During his time at *SNL*, Morgan also made several film appearances, most notably in *30 Years to Life* (2001), *Jay and Silent Bob Strike Back* (2001), and *Head of State* (2003). In 2002 he began a recurring role as the voice of the character Spoonie Love on *Crank Yankers*, broadcast on Comedy Central.

After seven years of playing wacky characters on *SNL*, Morgan left the ensemble show to play a character who more closely resembled himself. On *The Tracy Morgan Show*, which premiered on NBC in 2003, Morgan played Tracy Mitchell, a Brooklyn mechanic and family man. "I've played outrageous characters my whole career," Morgan told Fretts. "People don't know this part of me." Many critics questioned Morgan's ability to move from being part of an ensemble to headlining his own television show, as few *SNL* alumni had successfully made the transition from characterizations of ridiculous figures to sincere portrayals of three-dimensional people. "*SNL* hasn't had a ton of success with crossovers to sitcom stars," Israel, who served as the executive producer of Morgan's show, told Fretts. "But people are going to be surprised by Tracy's warmth and depth." Morgan was confident in his own abilities as a leading man, especially since he would be playing a character in which he felt personally invested. "This character is close to me," he told Fretts. "The only difference is in real life, it takes more than 22 minutes to solve problems." Critics, however, overwhelmingly panned *The Tracy Morgan Show*. In a review for the *Boston Globe* (December 2, 2003), Matthew Gilbert wrote that the show fell short of Morgan's goal of presenting an old-fashioned family program. "The former *Saturday Night Live* comic brings his overstimulated-child shtick to series TV," Gilbert wrote. "Playing the immature father of two boys . . . Morgan spends the half-hour mugging and yelling his way through adolescent mishaps and juvenile one-liners." The show in general, Gilbert wrote, "is familiar, harmless, and loud. It represents yet another mediocre American family comedy with predictable gags and cute kids." The show was canceled after one season, leaving Morgan ambivalent about a career in television. "I'm proud of what we did on my show, but it came about at a time when reality TV was all that was making it. It's like they put television on autopilot," he told Carnes. "I don't know about doing more television. Maybe in the future, we'll try again. But once you've done *Saturday Night Live*, that's basically the top ticket, you know?"

For the next two years, Morgan focused on creating a new persona—not that of a wacky *SNL*-style comic actor or a wholesome father but, rather, an adult with a mature sense of humor. "I've rededicated myself to stand-up. That's what I'm focused on. That's the foundation of my career," he told Carnes. Touring the country, Morgan took on a style of humor that his fans, who knew him for playing such harmless characters as the animal lover Brian Fellow, may not have been expecting. "My stand-up is adult-rated. . . . I'm an adult, I'm 35 years old, I've lived some life and I just want to talk about it," he told Mark McGuire for the Albany, New York, *Times Union* (March 25, 2004). "It's not always politically correct, but it is going to show the adult side of me." Touring relentlessly, Morgan was quick to assert that he did not consider himself to be on the level of his idols in comedy, who included Bill Cosby and Chris Rock—at least not yet. He told McGuire, "I don't consider myself a comedian yet. You have to be doing this at least 20 years, 22 years. I'm just a stand-up." Meanwhile, Morgan continued to appear in the occasional film, such as *The Longest Yard* (2005) and *Little Man* (2006).

Morgan made his way back to the small screen in 2006, with a co-starring role in the NBC hit comedy *30 Rock*. Created by—and starring—Morgan's *SNL* co-star Tina Fey and executive-produced by *SNL*'s creator, Lorne Michaels, *30 Rock* is a situation comedy focusing on the lives of several characters working at NBC's headquarters, 30 Rockefeller Plaza, in New York. Fey plays the head writer of a comedy-variety show much like *Saturday Night Live*; Alec Baldwin appears as an NBC executive; and Morgan plays the temperamental star of the show-within-a-show. "I'm just playing an unstable comedian," he told R. D. Heldenfels for the *Akron (Ohio) Beacon Journal* (June 4, 2006) of the part. "I could be playing me." Although Baldwin's performance garnered the most critical raves, Morgan received his share of praise. "*30 Rock* is amusing enough before Morgan makes his entrance, but it's much funnier after his arrival," Rob Owen wrote for the *Pittsburgh Post-Gazette* (October 8, 2006). Critics especially pointed to Morgan's deft negotiation of the show's tricky racial humor. "*SNLer* Tracy Morgan does a Martin Lawrence/Tracy Morgan parody: the out-of-control black man," Ken Tucker wrote for *Entertainment Weekly* (October 11, 2006). "He'd be insufferable were he not so funny, and so willing to make potentially racist setups occasionally pay off with lovable harmlessness." Despite being critically well-received, the show got off to a rocky start with viewers. NBC stuck by the show, however, moving it from its original Wednesday night position to a Thursday slot, attempting to reestablish the network's two-hour block of comedy on that night, once touted as "Must See TV." The show made "best of 2006" lists in *Entertainment Weekly*, the *New York Daily News*, and *Los Angeles Weekly*, with other publications giving it consistently good reviews. On December 1, 2006 NBC announced that it would commit to a full season of the show; the contract was renewed for the 2007–08 season. In 2008 Morgan is also set to appear in the TV comedies *Deep in the Valley* and *First Sunday*.

Morgan and his wife, Sabina, live in New York City; they have three sons, Tracy, Malcolm, and Gitrid. "If I had my way, I wouldn't want any of my kids to follow me into show business," Morgan told Kim. "It's rough." On December 2, 2005 Morgan was arrested in Hollywood, California, on a charge of impaired driving. He pleaded no contest to that misdemeanor charge and was sentenced to 36 months' probation, a $390 fine, and mandatory attendance of an alcohol-education program. On November 28, 2006 he was arrested in New York City on charges of driving while intoxicated. After pleading guilty to that charge, in February 2007, Morgan—who had violated the probation imposed after the Los Angeles sentencing—was ordered to wear for 90 days a Secure Continuous Remote Alcohol Monitoring (SCRAM) device, which detects alcohol vapors through the skin. The following September Morgan was ordered to wear the device for another 80 days, after he admitted to having consumed alcohol the previous month. "I'm not a goody goody," he told Gonzalez in March 2005 (before either arrest) in response to reports in the press about his frequent partying. "I'm a stand-up. I like to have fun."

Moulitsas Zúniga, Markos ("Kos")

(moo-LEE-tsahs ZOO-nee-gah, MAR-kohs)

Sep. 11, 1971– Blogger; social activist; writer

Address: Daily Kos, P.O. Box 3327, Berkeley, CA 94703

For four days in June 2006, a group of highly important figures in the Democratic Party gathered at a convention in Las Vegas, Nevada, to meet with a group of their most influential constituents. Harry Reid, then the U.S. Senate minority leader, and Mark Warner, a former governor of Virginia and potential presidential candidate, were the first to confirm their presence on the list of attendees, and other big names soon followed. General Wesley Clark, a former—and possibly future—presidential candidate, Iowa governor and potential presidential candidate Tom Vilsack, U.S. senator Barbara Boxer of California, New Mexico governor Bill Richardson, and Howard Dean, a former presidential candidate and currently the Democratic National Committee chairman, were all in attendance. The politicians had not come to meet with a labor union, environmental group, or other traditionally influential segment of voters. They were in Las Vegas to meet 900 left-wing bloggers, all of whom had descended on the city at the urging of one man, Markos Moulitsas Zúniga, the creator of the most widely read political blog in the country, Daily Kos. Currently boasting up to 600,000 Internet visits per day, Daily Kos is at the forefront of a movement to reorganize the Democratic Party, and politics in general, by moving a measure of

Courtesy of Markos Moulitsas Zúniga

Markos ("Kos") Moulitsas Zúniga

power away from the seat of national government, in Washington, D.C., and spreading it across the country through the Web. "The whole phenomenon has overturned the traditional understanding of how groups organize themselves to affect politicians," Ryan Lizza wrote for the *New Republic* (June 26, 2006). As the de facto leader of this phenomenon, christened the "netroots movement," Moulitsas has risen to a position of enormous political influence in just a few years—using only a computer. In its current form, Daily Kos, an interactive Web site, allows anyone with Internet access to post a "diary" on the site; readers rate the diaries, and those with the highest recommendations appear most prominently. Daily Kos bloggers who support particular politicians can reach up to 600,000 people per day with their endorsements, making it worth the Democrats' while to put in personal appearances at conventions such as the one in Las Vegas. While other left-wing political blogs also hold sway, Daily Kos is by far the most influential in the netroots movement. "I don't have any illusions that I'm a great writer," Moulitsas said to *Current Biography*, explaining his success. "The skill that I do have is being able to organize communities, and that's why Daily Kos has crushed any other political blog out there."

Blogs—short for "Web logs"—are a relatively new medium. The veteran journalist Mickey Kaus is widely credited with inventing the blog in 1999, when he began a political diary posted on the online magazine *Slate*. The form soon took off, with people creating blogs on topics from politics to home improvement to motherhood. Blogs and bloggers are part of a culture separate from journalism or other forms of more traditional media: the language is more casual, the effects are more immediate, and, most importantly in the political realm, the blogger is not expected to conform to standards of objectivity. As a leader in that increasingly influential field, Moulitsas has gained legions of followers as well as his share of critics. He is known for a polarizing personality that has made him a multitude of enemies among both Republicans and the mainstream media. In an article for the *New York Times* (September 26, 2004), Matthew Klam described Moulitsas as "cruel and superior," and while Benjamin Wallace-Wells noted in the *Washington Monthly* (January-February 2006) that Moulitsas is "extremely smart," he also went on to call the blogger "intense and high-strung" as well as "irascible, self-contradictory, often petty, always difficult." Those within the blog world itself, however, tend to speak favorably of Moulitsas. "Kos is the platonic ideal of a blogger; he posts all the time, he interacts with his readers," Ana Marie Cox, formerly a political blogger, told Klam. Alex S. Jones, director of Harvard University's Shorenstein Center on the Press, Politics, and Public Policy, expressed a theory about the level of examination now leveled at Moulitsas, one that has little to do with his personality and everything to do with the revolutionary changes in blogging over the past couple of years. "The blogosphere has always been mainly about scrutinizing everybody else and expressing violent opinions about them," Jones told Michael Grynbaum for the *Boston Globe* (July 6, 2006). "Kos is a very powerful blog, so in that sense it's taken on the vulnerability of one of the [political] leaders."

Markos Moulitsas Zúniga was born September 11, 1971 in Chicago, Illinois, to Markos Moulitsas, an ethnic Greek, and Maria Zúniga, who came from El Salvador. (In keeping with Spanish custom, his first name is followed by his father's surname—by which Moulitsas is known—and then his mother's surname.) His father was a furniture salesman, his mother a secretary. Moulitsas has a younger brother, Alexander, who is a graphic designer. In 1975, the year Alexander was born, the family moved to El Salvador during that country's brutal civil war, in which anti-Communist government forces had the backing of the United States. Living in an environment where gunshots and explosions were everyday occurrences deeply affected Moulitsas's views on war—and on recent U.S. policy regarding armed conflict. In the U.S., "war is a video game," he told Kara Platoni for the *East Bay Express* (December 15, 2004). "I've seen firsthand the ravages of war and the hatred, and just the notion that politics can be a life or death issue." In 1980, when Moulitsas was nine years old, his parents received an envelope containing photographs of him and his brother boarding a bus to school, a threatening gesture from the rebel troops who wanted to use the Moulitsases' house as headquarters. The family left El Salvador soon afterward and returned to the Chicago area, this time to Schaumburg, a suburb of the city.

After nine years of speaking mostly Spanish, and five years in a war-torn country, Moulitsas found the transition to life in the U.S. to be difficult. For the first two years after his family's return, Moulitsas attended a bilingual program at Schaumburg Elementary School. In fourth grade he switched to an all-English curriculum at another school, Thomas Dooley. He described his time there—and, subsequently, at Robert Frost Junior High School and Schaumburg High School—to *Current Biography*: "What was tough for me, of course, was I had the funny accent, and I looked younger [than] my age." Those years, he added, were "pretty miserable." While in high school Moulitsas began taking piano lessons; playing the piano became a passion that provided an escape from the challenges of school and led him to consider a career as a professional musician. His ambitions were not limited to music, though. "I wanted to be everything when I grew up," he told *Current Biography*. "I wanted to be president of the United States."
